路博邁投資基金 (Neuberger Berman Investment Funds plc)

(係依 2011 年歐洲共同體 (可轉讓證券集合投資事業) 規則 (含修正)，經愛爾蘭中央銀行授權且依愛爾蘭法律設立，具可變資本之投資公司，其係傘型基金，旗下包含責任各自分離之子基金)

截至 2024 年 12 月 31 日為止之年報及查核財務報表

致路博邁投資基金成員之獨立查核會計師報告

財務報表之查核報告

意見

本所業已查核路博邁投資基金（「本公司」）截至 2024 年 12 月 31 日止之財務報表，包含資產負債表、損益表、可買回參與股份持有人淨資產變動表以及財務報表之附註，包括附註 1 所陳述之政策。編製過程中所適用之財務報告架構係依據愛爾蘭法及由英國財務匯報局發布適用於英國及愛爾蘭共和國之 FRS102 財務報告準則。

依本所之意見，本財務報表：

- 提供本公司截至 2024 年 12 月 31 日之資產、負債及財務狀況，及該年度終了時之利得之真實且公平之觀點；
- 已依適用於英國及愛爾蘭共和國之 FRS102 財務報告準則妥適編製；及
- 已依 2014 年公司法、2011 年歐洲共同體（可轉讓證券集合投資事業）規則及 2013 年中央銀行（監管與執行）法 2019 年規範（第 48(1)條）（可轉讓證券集合投資事業）之規定妥適編製。

意見之基礎

本所根據國際查核標準（愛爾蘭）（「ISAs（愛爾蘭）」）及適用法律進行查核。本所依此等標準之責任在本報告「查核會計師查核財務報表之責任」乙節有進一步描述。根據與本所在愛爾蘭查核財務報表相關之愛爾蘭道德準則，包括愛爾蘭審計及會計監督管理局（「IAASA」）所發布之道德準則，本所與本公司互為獨立，且本所已依據該規定符合本所其他之道德責任。

本所相信，本所已取得充分且適當之查核證據，作為本所意見之基礎。

與持續經營相關之結論

在查核財務報表時，本所得出結論認為，董事以持續經營為會計基礎而編制財務報表之運用為妥適的。

根據本所已完成之工作，本所並未辨識出與事件或條件相關的重大不確定性，而可能單獨或共同在財務報表經授權發布日後之至少 12 個月內，對本公司繼續採取持續經營之能力產生重大懷疑。

本所的責任以及董事在持續經營方面的責任，已於本報告的相關章節中進行了說明。然而，由於並非所有未來事件或情況都可以被預測，因此本聲明並非關於公司持續經營能力之保證。

其他資訊

董事負責其他資訊。其他資訊構成年報中所載財務報表與本會計師查核報告以外之資訊。本所對於財務報表之意見並不包含其他資訊，且除非本報告另有明確陳述，本所就此並未出具任何保證之結論。

本所之責任為閱讀其他資訊，並藉此考量其他資訊是否與財務報表或本所於查核過程中所知悉者有重大不符，或所呈現者為重大不實陳述。若本所辨識出該重大不符或顯然重大不實陳述，本所應判斷是否財務報告有重大不實陳述或其他資訊之重大不實陳述。如基於本所已執行之工作，本所認為其他資訊有重大不實陳述，本所應陳報該事實。

本所就此並無陳報事項。

對 2014 年公司法要求之其他事項之意見

依本所意見，僅基於查核過程中已執行之工作，本所為以下報告：

- 董事報告中所提供與截至本會計年度終了之財務報告期間相同之資訊與財務報告一致；
- 董事報告業依據適用之法律規定。

本所已取得所有依本所最佳所知所信認為進行本查核目的所必要之資訊及說明。

依本所意見，本公司之會計記錄足夠使財務報表進行即時且適當的查核，且財務報告與會計記錄一致。

本所應報告之例外事項

基於在查核過程中取得之對本公司及其環境之認識及了解，本所並未發現董事報告有重大不實陳述。

2014 年公司法要求本所向您報告，就本所意見，本公司是否有任何未遵循公司法第 305 條至 312 條規定有關董事報酬或交易之揭露。本所就此並無陳報事項。

個別責任

董事對財務報表之責任

如第 35 頁就董事責任聲明有更完整之說明，董事根據應適用之財務報告架構負責編製，並使此等財務報表就呈現真實且公平之觀點能被接受，以及就其認為為確保所編製之財務報表並無重大不實陳述（不論是由詐欺或錯誤引起）而必要之內部控制負責。

編製財務報表時，除非管理階層有意清算本公司或停止營運，或現實上已無其他選項而僅得如此，董事負責評估公司繼續採取持續經營、揭露與持續經營有

關之事項（如有適用），並以持續經營為會計基礎之能力。

查核會計師查核財務報表之責任

本所目標係就財務報表整體是否存在重大不實陳述一事取得合理確信，無論重大不實陳述係因詐欺或錯誤所致，並出具查核會計師報告，其中包含本所之意見。合理確信是高度的確信，但不能保證根據 ISAs（愛爾蘭）所進行的查核總是能發現所有重大不實陳述的存在。不實陳述可能是因詐欺或錯誤所致，若其單獨或整體可合理預期會影響財務報表使用者的經濟決策時，則可視為重大。

對本所查核財務報表之責任的進一步說明置放於 IAASA 網站：

http://www.iaasa.ie/getmedia/b2389013-1cf6-458b-9b8f-a98202dc9c3a/Description_of_auditors_responsibilities_for_audit.pdf。

此說明構成本查核報告之一部分。

個別責任（接續）

本所查核報告依 2014 年公司法第 391 條僅向本公司全體成員為之。本所之查核工作業已完成，故本所得向本公司成員說明本所應在查核報告向其說明之事務而無其他目的。在法律容許之最大範圍內，本所對本所之查核工作、本報告及本所形成之意見，不接受或承擔對本公司及本公司全體成員以外之其他人之責任。

General Information

The following information is derived from and should be read in conjunction with the full texts and definitions section of the Prospectus.

Neuberger Berman Investment Funds plc (the “Company”) is an investment company with variable capital incorporated in Ireland on 11 December 2000 under registration number 336425 as a public limited company pursuant to the Companies Act 2014 (as amended). The Company has been authorised by the Central Bank of Ireland (the “Central Bank”) as an Undertaking for Collective Investment in Transferable Securities pursuant to the provisions of the European Communities (Undertakings for Collective Investment in Transferable Securities) Regulations, 2011 as amended (the “UCITS Regulations”). The Company is constituted as an umbrella fund insofar as its share capital is divided into different series of shares with each series of shares representing a separate investment portfolio of assets (each a “Portfolio”). Shares of any Portfolio may be divided into different classes to accommodate different subscription and/or redemption provisions and/or dividend and/or charges and/or fee arrangements and/or currencies including different total expense ratios. As detailed in the “Management and Administration” section of the Prospectus, the Directors have appointed Neuberger Berman Asset Management Ireland Limited (“NBAMIL”) on 1 July 2021 as the Manager to provide the day to day management of the business affairs of the Company in accordance with the requirements of the Central Bank.

At 31 December 2024, the Company was comprised of fifty separate portfolios of investments (“Portfolios”), each of which is represented by a multiple series of Redeemable Participating Shares. These are set out in the table below:

*First day of operations.

**Please refer to Appendix VIII for a details of Sustainable Finance Disclosure Regulation.

¹ Portfolio authorised by the Hong Kong Securities and Futures Commission (the "SFC") and hence may be offered to the public of Hong Kong.

² Portfolio not authorised by the SFC and not available to Hong Kong investors.

The Company has segregated liability between its Portfolios and accordingly any liability incurred on behalf of or attributable to any Portfolio shall be discharged solely out of the assets of that Portfolio.

Neuberger Berman Macro Opportunities FX Fund (or "Macro Opportunities FX"), Neuberger Berman Global Diversified Income FMP – 2024 (or "Global Diversified Income FMP – 2024") and Neuberger Berman Global Real Estate Securities Fund (or "Global Real Estate Securities") liquidated on 8 February 2024, 28 June 2024 and 31 December 2024, respectively, and are therefore no longer available for subscription. Neuberger Berman Uncorrelated Trading Fund, Neuberger Berman Global High Yield Sustainable Action Fund, Neuberger Berman Multi-Asset Income Fund, Neuberger Berman Emerging Markets Select Equity Fund and Neuberger Berman Absolute Return Multi Strategy Fund liquidated during the prior reporting years and are therefore no longer available for subscription. Neuberger Berman Diversified Currency Fund, Neuberger Berman Multi-Style Premia Fund and Neuberger Berman Global Equity Index PutWrite Fund liquidated during the prior reporting years and were revoked by the Central Bank on 9 August 2024.

Please refer to Appendix VII for a full list of the Managers, Sub-Investment Managers and Sub-Advisers for each Portfolio.

Please refer to Appendix VIII for details of Sustainable Finance Disclosure Regulation.

Investment objectives and list of active share classes of the Portfolios that were available for investment as at 31 December 2024 are as follows:

General Information (Continued)

Asia Responsible Transition Bond

The investment objective of Asia Responsible Transition Bond (formerly: "Responsible Asian Debt – Hard Currency") (the "Portfolio") is to achieve an attractive level of risk adjusted total return (income plus capital appreciation) from hard currency-denominated debt issued in Asian countries.

The Portfolio seeks to achieve its objective by investing primarily in debt securities and money market instruments which are issued by governments of, government agencies or corporate issuers which have their head office or exercise an overriding part of their economic activity in Asian countries and which are denominated in hard currency. For the purposes of the Portfolio, hard currency is defined as US Dollar, Euro, Sterling, Japanese Yen and Swiss Franc. Investors should note that public issuers include corporate issuers that are, either directly or indirectly, 100% government-owned.

The following are the active share classes in the Portfolio at year end (referred to herein as the "year end" or "year ended"):

<i>Share Class Name</i>	<i>Share Class Launch Date</i>	<i>Currency</i>
USD A (Monthly) Distributing Class ¹	30 June 2015	USD
USD A Accumulating Class ¹	30 June 2015	USD
USD C1 Accumulating Class	15 October 2019	USD
USD I Accumulating Class	30 June 2015	USD
USD I Distributing Class	30 June 2015	USD
USD I4 (Monthly) Distributing Class	23 September 2022	USD
USD I4 Accumulating Class	23 September 2022	USD
USD M Accumulating Class	14 August 2019	USD
USD X (Monthly) Distributing Class	23 September 2022	USD
USD X Accumulating Class	8 June 2021	USD
USD Z Accumulating Class	12 December 2022	USD

¹Authorised for public distribution in Hong Kong.

China A-Share Equity

The investment objective of China A-Share Equity (the "Portfolio") is to achieve long-term capital appreciation primarily through investment in a portfolio of China A Share equity holdings that provide exposure to economic development in the People's Republic of China (the "PRC").

The Portfolio seeks to achieve its investment objective by investing directly in China A Shares through the Stock Connects and through the Quota, and indirectly, mainly through investments in equity-linked securities issued by international investment banks and also through equity and debt securities which may be issued by entities which are managed by affiliates of the Sub-Investment Manager.

The following are the active share classes in the Portfolio at year end:

<i>Share Class Name</i>	<i>Share Class Launch Date</i>	<i>Currency</i>
CNY I Accumulating Class	28 July 2020	CNY
USD I Accumulating Unhedged Class	28 July 2020	USD
USD I Distributing Unhedged Class	28 July 2020	USD

China Bond

The investment objective of China Bond (the "Portfolio") is to achieve an attractive level of risk adjusted total return (income plus capital appreciation) by primarily investing in fixed income instruments issued in the Chinese local currency markets.

The Portfolio seeks to achieve its objective by investing primarily in debt securities and money market instruments which are issued within the PRC by PRC government, PRC government agencies or corporate issuers which have their head office or exercise an overriding part of their economic activity in the PRC and which are denominated in or are exposed to the currency of the PRC via the RQFII (Renminbi Qualified Foreign Institutional Investor) Quota. For the purposes of the Portfolio, investors should note that public issuers include corporate issuers that are, either directly or indirectly, 100% government-owned.

General Information (Continued)

China Bond (continued)

The following are the active share classes in the Portfolio at year end:

<i>Share Class Name</i>	<i>Share Class Launch Date</i>	<i>Currency</i>
CNY A (Monthly) Distributing Class ¹	4 November 2020	CNY
CNY I Distributing Class ¹	8 June 2018	CNY
CNY Z Accumulating Class	8 September 2015	CNY
SGD A (Monthly) Distributing Unhedged Class	12 March 2019	SGD
USD I Accumulating Unhedged Class	8 September 2015	USD
USD Z Accumulating Class	29 March 2019	USD
USD Z Accumulating Unhedged Class	10 April 2018	USD

¹Authorised for public distribution in Hong Kong.

China Equity

The investment objective of China Equity (the "Portfolio") is to achieve an attractive level of total return (income plus capital appreciation) from the Greater China equity market. The Portfolio seeks to achieve this objective by investing primarily in equity and equity-linked securities which are listed or traded on recognised markets and issued by companies that:

- are incorporated or organised under the laws of, or that have a principal office in, the People's Republic of China ("PRC"), Hong Kong Special Administrative Region ("SAR"), Macau SAR or Taiwan (the "Greater China Region");
- generally derive a majority of their total revenue or profits from (a) goods that are produced or sold, (b) investments made, or (c) services performed, in the Greater China Region; or
- generally hold a majority of their assets in the Greater China Region (each a "Greater China Company").

The Portfolio may also invest in hybrid securities and equity-related securities, such as convertible debentures, convertible preferred stock, debt instruments with warrants attached, including financial derivative instruments ("FDI"), which are issued by or give exposure to the performance of Greater China Companies.

For the avoidance of doubt, the Portfolio may invest in securities as described herein and which are issued by or giving exposure to Greater China Companies listed or traded on recognised markets located outside of the Greater China Region, including, without limitation, in the United States, the United Kingdom, Singapore and Japan.

The Portfolio invests primarily in mid and large capitalisation companies.

Green Court Capital Management Limited, the Non-Affiliated Sub-Adviser, employs a research intensive, fundamental-driven and bottom-up approach. Ongoing assessments of macroeconomic and market factors augment the stock-picking discipline. The investment approach is discretionary in nature and is designed to consider multiple drivers and investment strategies over different time horizons.

The Portfolio is primarily constructed by taking under and overweight positions to the market benchmark MSCI China Index. Decisions on whether the Portfolio's positions will be under or overweight relative to the benchmark are primarily driven by valuation, quality of valuation and macroeconomic factors, including such variables as opportunities for growth, competitive advantages and risk characteristics, over short-, medium- and long-term investment horizons but the requirements of the Central Bank in respect of concentration limits as set out in the "Investment Restrictions" section of the Prospectus will supersede these factors where relevant.

General Information (Continued)

China Equity (continued)

The following are the active share classes in the Portfolio at year end:

<i>Share Class Name</i>	<i>Share Class Launch Date</i>	<i>Currency</i>
CHF I Accumulating Class	31 July 2015	CHF

USD U Accumulating Class	27 June 2014	USD
USD Z Accumulating Class	1 August 2014	USD

¹Authorised for public distribution in Hong Kong.

Climate Innovation

The investment objective of Climate Innovation (the "Portfolio") is to achieve long-term capital appreciation through investing primarily in a portfolio of global equity holdings, focusing on companies that are involved in or derive benefit from climate innovation related technologies and/or activities.

The Portfolio will seek to achieve its objective by primarily investing in equity securities that are listed or traded on recognised markets globally (which may include Emerging Market Countries) and issued by companies across all market capitalisations and economic sectors. The Portfolio may invest in companies of any market capitalisation.

The following are the active share classes in the Portfolio at year end:

CLO Income

The investment objective of CLO Income (the "Portfolio") is to achieve an attractive level of total return (a combination of capital appreciation and income) by investing primarily in USD and EUR denominated floating rate collateralised loan obligations ("CLO") mezzanine debt securities and also in US high yield debt securities which are listed or traded on recognised markets.

The Portfolio seeks to achieve its objective through a disciplined investment process, which seeks to identify CLO mezzanine debt securities which are backed by an underlying portfolio of loans with a higher portfolio score.

Commodities

The investment objective of Commodities (the "Portfolio") is to achieve an attractive level of total return (income plus capital appreciation) by seeking exposure to a broad range of commodities.

The Portfolio seeks to achieve its objective by seeking exposure to a broad range of commodities groups, including energy, precious metals, industrials metals, livestock, softs and agriculture.

The Portfolio will seek to obtain this exposure through a blend of investments including, primarily, investment in commodity-related financial derivative instruments ("FDI"); direct investment in the equities and equity-related securities (namely, common and preferred stock, ADRs and GDRs) of commodity-related companies. The Portfolio may also seek to achieve exposure to commodities by investing in units or shares of collective investment schemes, including exchange traded funds ("ETFs") and other Portfolios of the Company, where such investment provides commodity exposure consistent with the investment policy of the Portfolio.

Corporate Hybrid Bond

The investment objective of Corporate Hybrid Bond (the “Portfolio”) is to achieve an attractive level of total return (income plus capital appreciation).

The Portfolio seeks to achieve its objective by investing primarily in investment grade and sub-investment grade corporate hybrid bonds. The Portfolio seeks to use fundamental bottom-up analysis principles in selecting securities for investment, meaning that the analysis done by Neuberger Berman Investment Advisers LLC (the “Sub-Investment Manager”) will focus on the strengths of individual securities as opposed to the selection of securities by reference to broader themes, such as industries.

The analysis of the strength of a security is specific to the individual security itself, as opposed to having regard to broader themes e.g. the credit rating of the security is analysed relative to its proposed yield. The Portfolio focuses on securities which are listed or traded on recognised markets globally, and not limited by industry or sector. The Portfolio may rotate its exposure to geographic regions and countries and between sectors and issuers, based on economic or regional fundamentals, such as the valuation of each security relative to other similar securities. The Portfolio may have medium levels of volatility due to its investments in subordinated debt and/or below investment grade securities.

Developed Market FMP – 2027

The investment objective of Developed Market FMP – 2027 (the “Portfolio”) is to maximise current income over the term of the Portfolio, by investing in a diversified mix of global fixed income securities, including high income securities.

The Portfolio seeks to achieve its investment objective primarily by investing in debt securities and money market instruments, including through the use of FDI, issued by governments and their agencies and corporations worldwide.

Securities will typically be dealt or traded on recognised markets globally without any particular focus on any one industrial sector. Securities may be rated investment grade or below by a Recognised Rating Agency or may also be unrated.

EMD Corporate – Social and Environmental Transition

The investment objective of EMD Corporate – Social and Environmental Transition (formerly: “Sustainable Emerging Market Corporate Debt”) (the “Portfolio”) is to achieve an attractive level of risk adjusted total return (income plus capital appreciation) from debt issued in emerging market countries.

The Portfolio seeks to achieve this objective by investing primarily in debt securities and money market instruments issued by corporate issuers which have their head office or exercise an overriding part of their economic activity in emerging market countries, which may be denominated in Hard Currency or the currencies of such emerging market countries. For the purposes of the Portfolio, “Hard Currency” is defined as US Dollar, Euro, Sterling, Japanese Yen and Swiss Franc.

Emerging Market Debt – Hard Currency

The investment objective of Emerging Market Debt – Hard Currency (the “Portfolio”) is to achieve an attractive level of risk adjusted total return (income plus capital appreciation) from hard currency-denominated debt issued in emerging market countries.

The Portfolio seeks to achieve this objective by investing primarily in debt securities and money market instruments issued by public or private issuers in emerging market countries which are denominated in hard currency. For the purposes of the Portfolio, “Hard Currency” is defined as US Dollar, Euro, Sterling, Japanese Yen and Swiss Franc and investors should also note that public issuers include corporate issuers that are, either directly or indirectly, 100% government-owned.

Emerging Market Debt Sustainable Investment Grade Blend

The investment objective of Emerging Market Debt Sustainable Investment Grade Blend (the "Portfolio") is to achieve an attractive level of total return from a blend of investment grade rated hard and local emerging market currency denominated debt, issued by sovereigns, quasi-sovereigns, sub-sovereigns and corporate credits in emerging market countries that meet the sustainable criteria defined within the "Sustainable Investment Criteria" section of the Prospectus (the "Sustainable Criteria").

The Portfolio seeks to achieve its objective by investing primarily in investment grade debt securities and money market instruments which are issued by governments of, government agencies in or corporate issuers which have their head office or exercise an overriding part of their economic activity in emerging market countries and which are denominated in or are exposed to the currencies of such emerging market countries ("local currency") or denominated in Hard Currency. For the purposes of the Portfolio, "Hard Currency" means US Dollar, Euro, Sterling, Japanese Yen, and Swiss Franc.

General Information (Continued)

Emerging Markets Equity

The investment objective of Emerging Markets Equity (the “Portfolio”) is to achieve long-term capital growth. The Portfolio seeks to achieve this objective by investing primarily in equity and equity-linked securities which are listed or traded on recognised markets globally and issued by companies that:

- trade principally on a recognised stock exchange in emerging market countries;
- are organised under the laws of and have a principal office in emerging market countries; or
- derive 50% or more of their total revenues from, and/or have 50% or more of their total assets in, goods produced, sales made, profits generated or services performed in emerging market countries. The Portfolio may also invest in other collective investment schemes, which provide exposure to such securities, subject to a maximum of 10% of the Portfolio's Net Asset Value.

Neuberger Berman Investment Advisers LLC (the “Sub-Investment Manager”) uses a fundamental bottom-up, research-driven securities selection approach focusing on high return businesses while factoring in economic, legislative and business developments to identify countries and economic sectors (such as Energy, Financials, Health Care, Telecommunication Services and Utilities) that it believes may be particularly attractive.

The Sub-Investment Manager seeks to invest in companies that it believes have sustainable free cash flow growth and are trading at attractive valuations. The Portfolio seeks to reduce risk by diversifying among many industries within the countries and economic sectors it identifies, and it generally intends to remain diversified across countries and geographical regions.

General Information (Continued)

Euro Bond

The investment objective of Euro Bond (formerly: “Euro Opportunistic Bond”) (the “Portfolio”) is to achieve an attractive level of total return (income plus capital appreciation) by investing in a diversified mix of Euro-denominated fixed and floating rate debt securities.

The Portfolio seeks to achieve its investment objective through a disciplined investment process investing in Euro-denominated bonds across a variety of sectors and maturities, utilising a combination of top-down and bottom-up strategies to identify multiple sources of value. Top down strategies focus on macroeconomic considerations, country and sector analysis. Bottom up strategies evaluate the characteristics of individual instruments or issuers.

The following are the active share classes in the Portfolio at year end:

<i>Share Class Name</i>	<i>Share Class Launch Date</i>	<i>Currency</i>
EUR A Accumulating Class	19 September 2024	EUR

Euro Bond Absolute Return

The investment objective of Euro Bond Absolute Return (the “Portfolio”) is to generate positive absolute returns over a market cycle (typically 3-5 years), irrespective of market conditions with a moderate level of volatility. It aims to achieve this by implementing an unconstrained strategy combining long and synthetic short positions in a diversified portfolio of predominantly Euro-denominated debt securities.

The Portfolio seeks to achieve its investment objective through a disciplined investment process utilising a combination of top-down and bottom-up strategies to identify multiple sources of value. Top down strategies focus on macroeconomic considerations, country and sector analysis. Bottom up strategies evaluate the characteristics of individual instruments or issuers.

The following are the active share classes in the Portfolio at year end:

European Sustainable Equity

The investment objective of European Sustainable Equity (the "Portfolio") is to achieve a minimum excess annualised return of 2% over the Benchmark (the MSCI Europe Index (Total Return, Net of Tax, EUR)) before fees over a 3-5 year investment horizon from investing primarily in a portfolio of European equity holdings that comply with the Sustainable Criteria (as set out in the Prospectus).

Investors should note that the target return is not guaranteed over the investment horizon, a 12-month or any period and the Portfolio's capital is at risk. Investors should also note that, over the course of the investment horizon, there may be significant periods of time during which the performance of the Portfolio will deviate from the targeted return and the Portfolio may experience periods of negative return. There can be no guarantee that the Portfolio will ultimately achieve its investment objective.

Event Driven

The investment objective of Event Driven (the “Portfolio”) is to generate positive market neutral, absolute risk adjusted returns with low correlation to broader equity markets through utilising event driven strategies.

The Portfolio seeks to achieve its investment objective by taking both long and synthetic short positions in global equity securities utilising event driven strategies. Event driven strategies are based on announced or anticipated events or a series of events and on investing in the securities of companies that could be affected by the occurrence of such events. The Portfolio will take exposure to equity securities that are listed or traded on recognised markets in developed markets, and that are subject to or expected to be subject to corporate events including and not limited to mergers, takeover bids, exchange offers, tender offers, spin-offs, proxy fights, liquidations, recapitalisations, corporate restructurings, litigation, legislation or regulatory events, or post-bankruptcy situations. The Portfolio will take long positions in respect of equity securities that it expects to increase in value as a result of such events and take synthetic short positions in respect of equity securities that it expects to decrease in value as a result of such events.

The following are the active share classes in the Portfolio at year end:

Share Class Name	Share Class Launch Date	Currency
EUR I Accumulating Class	17 January 2023	EUR
EUR I5 Distributing Class	20 May 2024	EUR
GBP I5 Accumulating Class	26 October 2022	GBP

JPY I Accumulating Class	25 October 2024	JPY
USD I Accumulating Class	26 October 2022	USD
USD I5 Accumulating Class	26 October 2022	USD

Global Bond

The investment objective of Global Bond (the “Portfolio”) is to achieve an attractive level of total return (income plus capital appreciation) from global fixed income markets.

The Portfolio seeks to achieve this objective by investing primarily in:

- Investment grade debt securities issued by governments and agencies from Organisation for Economic Co-operation and Development (“OECD”) countries; and
- Investment grade debt securities issued by corporations, which have their head office or exercise an overriding part of their economic activity in OECD countries.

General Information (Continued)

Global Bond (continued)

All securities will be listed, dealt or traded on recognised markets without any particular focus on any one industrial sector.

There are four main differentiating factors that set the Portfolio's approach:

- Diversification through the use of multiple uncorrelated alpha sources;
- Active FX management;
- Integrated Global Macro Overlay; and
- Proprietary risk management systems.

In addition, the Manager and the Sub-Investment Manager conduct analysis of data and seeks to exploit opportunities across multiple time horizons. Central to the investment philosophy is the Manager's and the Sub-Investment Manager's qualitative judgment, which is exercised at all stages of the investment process. This discretion enables it to take into account information and events that cannot be readily quantified, for example political events, shifts in regulatory regimes or the effects of market positioning and hedging.

The following are the active share classes in the Portfolio at year end:

USD M Accumulating Class	2 July 2018	USD
USD Z Accumulating Class	20 January 2017	USD

Global Equity Megatrends

The investment objective of Global Equity Megatrends (the "Portfolio") is to achieve long-term capital appreciation through investment in a portfolio of equity holdings that are exposed to global long-term themes.

The Portfolio seeks to achieve its objective by investing primarily in equity securities that are listed or traded on recognised markets globally (which may include emerging market countries) and issued by companies across all market capitalisations and industrial sectors.

Global Flexible Credit Income

The investment objective of Global Flexible Credit Income (the “Portfolio”) is to maximise total return from current income and long-term capital appreciation by investing in a diversified mix of global fixed rate and floating rate debt securities, including high income securities.

The Portfolio seeks to achieve its investment objective primarily by investing in debt securities and money market instruments, including through the use of FDI, issued by governments and their agencies and corporations worldwide including within Emerging Markets. Securities will typically be dealt or traded on recognised markets globally without any particular focus on any one industrial sector. Securities may be rated investment grade or below by a recognised rating agency.

General Information (Continued)

Global High Yield Engagement

The investment objective of Global High Yield Engagement (formerly: “Global High Yield SDG Engagement”) (the “Portfolio”) is to achieve an attractive level of total return (income plus capital appreciation) from the global high yield fixed income market.

The Portfolio seeks to achieve its objective by investing primarily in:

- US dollar and non-US dollar denominated high yield fixed income securities that are issued or guaranteed by corporate issuers of any industrial sector; and
- short duration, high yield fixed income securities issued by governments and agencies globally that are primarily denominated in US dollars located throughout the world that are listed, dealt or traded on recognised markets.

The Portfolio will invest primarily in securities denominated in the currencies included in the BofA Merrill Lynch Global High Yield Constrained Index (USD Hedged Total Return).

In addition, the Portfolio may also invest in securities of companies located in and governments of emerging market countries, which may involve additional risk, relative to investment in more developed economies.

The following are the active share classes in the Portfolio at year end:

<i>Share Class Name</i>	<i>Share Class Launch Date</i>	<i>Currency</i>
AUD I Distributing Class	3 May 2022	AUD
AUD I4 Accumulating Class	12 February 2024	AUD

USD X Accumulating Class	10 November 2020	USD
USD Z Accumulating Class	4 August 2016	USD

Global Investment Grade Credit

The investment objective of Global Investment Grade Credit (the “Portfolio”) is to achieve a target average return of 1% over the Benchmark (Bloomberg Barclays Global Aggregate Corporate Index (Total Return, Hedged USD)) before fees over a market cycle (typically 3 years) from investing primarily in investment grade corporate fixed income securities globally.

Investors should note that the target return is not guaranteed over a market cycle, a 12-month or any period and the Portfolio’s capital is at risk. Investors should also note that, over the course of a market cycle, there may be significant periods of time during which the performance of the Portfolio will deviate from the targeted return and the Portfolio may experience periods of negative return. There can be no guarantee that the Portfolio will ultimately achieve its investment objective.

General Information (Continued)

Global Investment Grade Credit (continued)

The Portfolio will invest primarily in investment grade fixed income securities issued by corporations, which have their head office or exercise an overriding part of their economic activity in OECD countries. The Portfolio will seek to use fundamental, bottom-up analysis principles in selecting securities for investment, meaning that the Manager's and the Sub-Investment Manager's analysis will focus on the strengths of individual securities as opposed to the selection of securities by reference to broader themes, such as industries. For example the credit rating of the security will be analysed relative to its proposed yield and the characteristics of the security will be analysed to determine cash flow predictability, using such factors including the issuer's cash flow profile, debt and leverage.

The Portfolio will focus on securities which are listed or traded on recognised markets globally, and is not limited by industry or sector. The Portfolio may rotate its exposure to geographic regions and countries and between sectors and issuers, based on economic or regional fundamentals, such as the valuation of each security relative to other similar securities.

The following are the active share classes in the Portfolio at year end:

<i>Share Class Name</i>	<i>Share Class Launch Date</i>	<i>Currency</i>
EUR I Accumulating Class	27 July 2023	EUR
GBP P Distributing Class	25 July 2024	GBP
GBP X Distributing Class	6 September 2024	GBP
USD I Accumulating Class	1 September 2021	USD
USD X Accumulating Class	1 September 2021	USD
USD Z Accumulating Class	1 September 2021	USD

Global Opportunistic Bond

The investment objective of Global Opportunistic Bond (the "Portfolio") is to achieve an attractive level of total return (income plus capital appreciation) by opportunistically investing in a diversified mix of fixed rate and floating rate debt securities globally under varying market environments.

The Portfolio seeks to achieve its objective by investing primarily in debt securities and money market instruments issued by governments and their agencies and corporations worldwide. Securities will be listed, dealt or traded on recognised markets globally without any particular focus on any one industrial sector. Securities may be rated investment grade or below by a recognised rating agency. On an ancillary basis, the Portfolio may hold preferred stocks issued by public or corporate issuers.

The following are the active share classes in the Portfolio at year end:

<i>Share Class Name</i>	<i>Share Class Launch Date</i>	<i>Currency</i>
EUR I Accumulating Class	27 November 2020	EUR
GBP P Accumulating Class	16 January 2020	GBP
USD A Accumulating Class	22 September 2017	USD

USD I Distributing Class	20 December 2016	USD
USD I2 Accumulating Class	23 April 2018	USD
USD I2 Distributing Class	24 October 2024	USD
USD Z Accumulating Class	16 May 2019	USD

General Information (Continued)

Global Sustainable Equity

The investment objective of Global Sustainable Equity (the “Portfolio”) is to achieve a minimum excess annualised return of 2% over the Benchmark (The MSCI World Index (Total Return, Net of Tax, USD)) before fees over a 3-5 year investment horizon from investing primarily in a portfolio of global equity holdings that comply with Sustainable Criteria (as set out in the Prospectus).

Investors should note that the target return is not guaranteed over the investment horizon, a 12-month or any period and the Portfolio’s capital is at risk. Investors should also note that, over the course of the investment horizon, there may be significant periods of time during which the performance of the Portfolio will deviate from the targeted return and the Portfolio may experience periods of negative return. There can be no guarantee that the Portfolio will ultimately achieve its investment objective.

The Portfolio will seek to achieve its objective by investing primarily in equity securities that are listed or traded on recognised markets globally (which may include emerging market countries) and issued by companies across all market capitalisations and industrial sectors.

The Portfolio will invest primarily in equity securities issued by companies whose behaviours, processes and operations contribute to system-level progress towards environmental and social objectives, such as: access to healthcare, sustainable consumption (which is the use of products, energy and services so as to minimise the environmental impact of such use) and conscious consumers, access to information and the digital revolution, energy transition and industrial innovation, resource efficiency, human capital development, fintech and financial inclusion (which is the availability and equality of opportunities to access financial services). In seeking to achieve the Portfolio’s investment objective, the Sub-Investment Manager invests in high quality companies, which (i) provide attractive sustainable products or services, (ii) demonstrate a commitment to sustainability in their operations, and (iii) are economically competitive, as described in greater detail below.

The Sub-Investment manager will pursue an investment process which will embed analysis of “best in class” companies within an investment universe of listed equity securities issued by companies primarily from developed market countries globally, from both a financial and an Environmental, Social, and Governance (“ESG”) perspective. The financial and ESG analysis will enable the Sub-Investment Manager to evaluate and identify companies that are deemed “best in class” in terms of their performance on financial and ESG factors.

Global Value

The investment objective of Global Value (formerly: “Global Sustainable Value”) (the “Portfolio”) is to achieve long term capital growth.

The Portfolio seeks to achieve its objective by investing primarily in equity securities issued by companies that are listed or traded on recognised markets globally (which may include emerging market countries).

Research identifies investment themes (i.e. characteristics of stocks that are believed to be systematically linked to the generation of better than average returns). Investment themes are used to assess the characteristics of security issuers and drive stock selection. Themes include, but are not limited to, the valuation, earnings quality, price dynamics and sentiment of each issue.

High Yield Bond

The investment objective of High Yield Bond (the "Portfolio") is to achieve an attractive level of total return (income plus capital appreciation) from the high yield fixed income market. The Portfolio seeks to achieve this objective by investing primarily in:

- high yield fixed income securities issued by US and foreign corporations, which, respectively, have their head office or exercise an overriding part of their economic activity in the US; and
- high yield fixed income securities issued by governments and agencies in the US that are primarily denominated in US Dollars, that are listed, dealt or traded on recognised markets.

In addition, although the Portfolio concentrates its investments in the US, the Portfolio may also invest in securities of companies located in and governments of emerging market countries, which may involve additional risk, relative to investment in more developed economies.

InnovAsia

The investment objective of InnovAsia (formerly: “InnovAsia 5G”) (the “Portfolio”) is to invest primarily in a portfolio of equity holdings, focusing on companies that are involved in or derive benefit from Innovative Technologies (as defined below).

The Portfolio will seek to achieve its objective by investing primarily in equity securities which are listed or traded on recognised markets globally (which may include emerging market countries) and issued by companies across all market capitalisations and economic sectors with innovative technologies or business models that:

- are incorporated or organised under the laws of a country in Asia, or that have a principal office in Asia;
- generally derive a majority of their incremental growth from (a) goods that are produced or sold, (b) investments made, or (c) services performed, in Asia; or
- generally hold a majority of their assets in Asia.

The Portfolio may invest in companies of any market capitalisation but shall typically invest in companies that have market capitalisation greater than USD 500 million at time of purchase.

In seeking to achieve the Portfolio’s investment objective, the Sub-Investment Managers pursue the following investment process (which is described in further detail below) to identify a universe of companies that offer exposure to disruptive technologies, innovative business models with a relatively low penetration rate in Asia or which are in a relatively early growth phase as well as long-term, structural trends and themes such as 5G/internet of things, (including but not limited to data infrastructure, connected devices or advanced semiconductors), digital lifestyle (including but not limited to healthcare, education or internet and consumer) and industrial innovations (including but not limited to robotics, clean tech or smart logistics) (“Innovative Technologies”):

General Information (Continued)

InnovAsia (continued)

- Qualitative business analysis: to identify companies which are key enablers of Innovative Technologies, as well as companies that are well-positioned to benefit from new business models related to Innovative Technologies;
- Quantitative screening: to identify stocks that the Sub-Investment Managers believe may be too illiquid or have too small a market capitalisation;
- Strategic valuation and analysis: in-depth research and analysis of companies, including of company/business models, quality of management, competitive strength and record of success which is determined by reference to existing financial data (e.g., market share data); and
- Security selection and portfolio construction: to select companies with the ability to provide solutions to drive Innovative Technologies that the Sub-Investment Managers believe have significant capital appreciation potential over three to five years and determine entry and exit price targets based on current market prices for the securities and the preceding analysis, that guide buy and sell decisions.

Japan Equity Engagement

The investment objective of Japan Equity Engagement (the "Portfolio") is to achieve a target average return of 3% over the MSCI Japan Small Cap Net Index before fees over a market cycle (typically 3 years).

The Portfolio seeks to achieve its investment objective by primarily investing in equity securities issued by small and mid capitalisation companies which have either their head office or exercise an overriding part of their economic activity in Japan and that are listed or traded on recognised markets globally.

General Information (Continued)

Next Generation Space Economy

The investment objective of Next Generation Space Economy (the “Portfolio”) is to achieve long-term capital appreciation through investing primarily in a portfolio of global equity holdings that are involved in or derive benefit from the Next Generation Space Economy.

The Portfolio seeks to achieve its investment objective by investing primarily in equity securities that are listed or traded on recognised markets globally (which may include emerging market countries) and issued by companies across all market capitalisations and economic sectors. The Portfolio may invest in companies of any market capitalisation but shall typically invest in companies that have market capitalisation greater than USD 500 million at time of purchase.

The following are the active share classes in the Portfolio at year end:

<i>Share Class Name</i>	<i>Share Class Launch Date</i>	<i>Currency</i>
EUR A Accumulating Unhedged Class	30 October 2024	EUR
EUR I3 Accumulating Unhedged Class	10 May 2022	EUR

USD A Accumulating Class ¹	30 October 2024	USD
USD I Accumulating Class	10 May 2022	USD

¹Authorised for public distribution in Hong Kong.

Short Duration Emerging Market Debt

The investment objective of Short Duration Emerging Market Debt (the “Portfolio”) is to achieve a stable income and return by investing in a diversified selection of Hard Currency-denominated short duration sovereign and corporate debt issued in emerging market countries. For the purposes of the Portfolio, “Hard Currency” is defined as US Dollar, Euro, Sterling, Japanese Yen and Swiss Franc.

The Portfolio seeks to achieve this objective by investing primarily in short duration debt securities and money market instruments issued by public or corporate issuers which have their head office, or exercise an overriding part of their economic activity, in emerging market countries and which are denominated in Hard Currency. Investors should also note that corporate issuers that are, either directly or indirectly, 100% government-owned are considered to be public issuers. With the exception of permitted investments in transferable securities and money market instruments which are unlisted, all securities invested in by the Portfolio will be listed, dealt or traded on recognised markets globally, without any particular focus on any one industrial sector or region.

Investments in securities issued by companies located in, and governments and government agencies of, emerging markets countries may involve additional risk, relative to investments in more developed economies.

Short Duration Euro Bond

The investment objective of Short Duration Euro Bond (formerly: “Ultra Short Term Euro Bond”) (the “Portfolio”) is to achieve an attractive level of outperformance over the Euro cash return over a period of 1 year irrespective of the market environment by taking exposure to a diversified mix of short-term Euro-denominated fixed and floating rate debt securities.

The Portfolio seeks to achieve its investment objective through a disciplined investment process investing in Euro-denominated bonds across a variety of sectors and maturities, utilising a combination of top-down and bottom-up strategies to identify multiple sources of value. Top down strategies focus on macroeconomic considerations, country and sector analysis. Bottom up strategies evaluate the characteristics of individual instruments or issuers.

Short Duration High Yield Engagement

The investment objective of Short Duration High Yield Engagement (formerly: “Short Duration High Yield SDG Engagement”) (the “Portfolio”) is to generate high current income by investing in short-duration high yield fixed income securities.

The Portfolio seeks to achieve this objective by investing primarily in short duration high yield bonds issued by:

- US and non-US corporations, which, respectively, have their head office or exercise an overriding part of their economic activity in the US; and
- governments and agencies in the US that are primarily denominated in US dollars that are listed, dealt or traded on recognised markets without any particular focus on any one industrial sector.

General Information (Continued)

Short Duration High Yield Engagement (continued)

In addition, although the Portfolio will concentrate its investments in the US or other Organisation for Economic Co-operation and Development (“OECD”) countries, the Portfolio may also invest in securities of companies located in and governments of emerging market countries, which may involve additional risk, relative to investment in more developed economies.

General Information (Continued)

Strategic Income

The investment objective of Strategic Income (the "Portfolio") is to maximise total return from high current income and long-term capital appreciation by opportunistically investing in a diversified mix of fixed rate and floating rate debt securities under varying market environments.

The Portfolio seeks to achieve this objective by investing primarily in debt securities issued by US corporations or by the US government and its agencies. Such securities will be listed, dealt or traded on recognised markets and may be rated investment grade or below investment grade or non-rated by recognised rating agencies.

The following are the active share classes in the Portfolio at year end:

Sustainable Asia High Yield

The investment objective of Sustainable Asia High Yield (the "Portfolio") is to outperform the JP Morgan JESG JACI High Yield Index (Total Return, USD) before fees over a market cycle (typically 3 years) by primarily investing in below investment grade rated Hard Currency-denominated debt instruments issued in Asian countries that comply with the Sustainable Criteria.

Investors should note that the target return is not guaranteed over a market cycle, a 12-month or any period and the Portfolio's capital is at risk. Investors should also note that, over the course of a market cycle, there may be significant periods of time during which the performance of the Portfolio will deviate from the targeted return and the Portfolio may experience periods of negative return. There can be no guarantee that the Portfolio will ultimately achieve its investment objective.

The Portfolio will invest primarily in below investment grade rated Hard Currency-denominated debt securities and money market instruments which are issued by governments or government agencies of, or corporate issuers which have their head office or exercise an overriding part of their economic activity in, Asian countries and which are consistent with the Portfolio's objective of promoting environmental and social characteristics. For the purposes of the Portfolio, Hard Currency is defined as US Dollar, Euro, Sterling, Japanese Yen and Swiss Franc. Investors should note that public issuers include corporate issuers that are, either directly or indirectly, 100% government-owned.

With the exception of permitted investments in transferable securities and money market instruments which are unlisted, all securities invested in by the Portfolio will be listed, dealt or traded on recognised markets globally, without any particular focus on any one industrial sector.

In determining the investments which the Portfolio will make, the Manager and the Sub-Investment Manager will prioritise issuers which:

- have a lower carbon emission intensity. The Portfolio aims to achieve a carbon emission intensity reduction of at least 30% compared to that of the broader Asia high yield debt investment universe, represented by the JPMorgan Asian Credit High Yield Index (the "Index"); and
- demonstrate better environmental, social and governance ("ESG") practices. The Portfolio aims to achieve a higher ESG score as compared to the broader Asia high yield debt investment universe, represented by the Index, based on third party ESG scores from an established external provider.

General Information (Continued)

Sustainable Asia High Yield (continued)

The objective of lower carbon emission intensity is with a view to achieving the long-term global warming objectives of the Paris Agreement.

In addition, the Portfolio will make meaningful allocations to environmental, social and sustainability-labelled fixed income securities and, as a result, will have a higher exposure to such securities as compared to the Index, dependent on market opportunities.

The following are the active share classes in the Portfolio at year end:

Share Class Name	Share Class Launch Date	Currency
USD A (Monthly) Distributing Class ¹	13 December 2021	USD
USD A Accumulating Class ¹	13 December 2021	USD
USD I Accumulating Class	13 December 2021	USD
USD Z Accumulating Class	21 January 2022	USD
USD Z Distributing Class	22 March 2022	USD

Sustainable Emerging Market Debt - Hard Currency

The investment objective of Sustainable Emerging Market Debt - Hard Currency (the "Portfolio") is to outperform the Benchmark (JPMorgan ESG EMBI Global Diversified Index (Total Return, USD)) before fees over a market cycle (typically 3 years) by investing primarily in Hard Currency-denominated debt securities issued in emerging market countries that comply with the Sustainable Investment Criteria, as defined in the Prospectus.

The Portfolio seeks to achieve this objective by investing primarily in debt securities and money market instruments issued by public or private issuers in emerging market countries which are denominated in hard currency and which are consistent with the Portfolio's sustainability objective. For the purposes of the Portfolio, hard currency is defined as US Dollar, Euro, Sterling, Japanese Yen and Swiss Franc and investors should also note that public issuers include corporate issuers that are, either directly or indirectly, 100% government-owned.

The following are the active share classes in the Portfolio at year end:

Tactical Macro

The investment objective of Tactical Macro (the "Portfolio") is to achieve positive returns regardless of the market environment by identifying market pricing imbalances across a broad range of asset classes, markets and regions in a highly risk-managed framework.

The Portfolio seeks to achieve this objective by identifying key aspects of the macro environment to develop a universe of investment theses, based on the Sub-Investment Manager's analysis of key aspects of the macro environment which are considered in order to select investments.

The following are the active share classes in the Portfolio at year end:

General Information (Continued)

Uncorrelated Strategies

The investment objective of Uncorrelated Strategies (the “Portfolio”) is to seek capital appreciation with an emphasis on absolute returns from a diversified portfolio of uncorrelated investment strategies.

The Portfolio seeks to achieve its objective by allocating its assets to fully discretionary investment advisers, which employ a variety of investment strategies and will invest globally without a focus on any particular industrial sector.

US Equity

The investment objective of US Equity (the “Portfolio”) is to achieve long term capital appreciation.

The Portfolio seeks to achieve its objective principally by taking long positions in equity and equity-linked securities, listed or traded on recognised markets in the US. The Portfolio may also but to a lesser extent take long positions in equity and equity-linked securities which are listed or traded on recognised markets located in the countries which comprise the MSCI All Country World Index (which may include emerging market countries).

US Equity Premium

The Investment objective of US Equity Premium (formerly: "US Equity Index PutWrite") (the "Portfolio") is to seek long term growth of capital and income generation.

The Portfolio seeks to achieve its goal primarily through a strategy of writing collateralised put options on global equity indices and exchanged traded funds ("ETFs") providing exposure to US equity indices, such as the S&P 500 and Russell 2000. The put options will be traded on recognised markets.

General Information (Continued)

US Long Short Equity

The investment objective of US Long Short Equity (the “Portfolio”) is to seek long term capital appreciation with a secondary objective of principal preservation.

The Portfolio seeks to achieve its objective by taking long and synthetic short positions in equity and equity-linked securities, including Exchange Traded Funds (“ETFs”) listed or traded in US equity markets. The Portfolio may also, but to a lesser extent take long and synthetic short positions in equity, equity-linked securities and ETFs which are listed or traded on recognised markets located in the countries comprising the MSCI All Country World Index (which may include emerging market countries). Investments generally include those companies across all industrial sectors with a market capitalisation of at least USD 250 million measured at the time of initial investment.

US Multi Cap Opportunities

The investment objective of US Multi Cap Opportunities (the “Portfolio”) is to achieve capital growth through the selection of investments using systematic, sequential research. The Portfolio seeks to achieve this objective by Neuberger Berman Investment Advisers LLC (the “Sub-Investment Manager”) using systematic, sequential research in identifying potential investments. Investment selection is the result of both quantitative and qualitative analysis in an effort to identify companies that are believed to have the potential to increase in value. This potential may be realised in many ways, some of which include: free cash flow generation, product or process enhancements, margin increases and improved capital structure management.

US Real Estate Securities

The investment objective of US Real Estate Securities (the "Portfolio") is to achieve total return through investments in real estate securities, emphasising both capital appreciation and current income. The Portfolio seeks to achieve this objective by investing in a concentrated portfolio principally in securities (including convertible bonds) issued by real estate investment trusts ("REITs"). It should be noted that the Portfolio does not acquire any real estate directly.

US Small Cap

The investment objective of US Small Cap (the "Portfolio") is to achieve capital growth through the selection of investments applying analysis of company key metrics and macro economic factors. The Portfolio seeks to achieve this objective by investing primarily in equity securities issued by small-capitalisation companies which have their head office or exercise an overriding part of their economic activity in the US and that are listed or traded on recognised markets.

The Portfolio seeks to identify undervalued companies whose current market share and balance sheet are strong and whose financial strength is largely based on existing business lines rather than on projected growth.

General Information (Continued)

US Small Cap (continued)

Factors in identifying such companies include:

- above-average returns;
- an established market niche;
- circumstances that may make it difficult for new competitors to enter the market;
- an ability to finance their own growth; and
- sound future business prospects.

The following are the active share classes in the Portfolio at year end:

US Small Cap Intrinsic Value

The investment objective of US Small Cap Intrinsic Value (the "Portfolio") is to achieve long term capital growth.

The Portfolio seeks to achieve its objective by investing primarily in equity securities issued by small-capitalisation companies which have their head office or exercise an overriding part of their economic activity in the US and that are listed or traded on recognised markets in the US. The Portfolio's investment in small capitalisation companies will not be restricted by sector or industry.

Directors' Report

The Directors present herewith their annual report and audited financial statements for Neuberger Berman Investment Funds plc (the "Company") for the year ended 31 December 2024 and comparatives for the year ended 31 December 2023.

Statement of Directors' Responsibilities

The Directors are responsible for preparing the annual report and the financial statements in accordance with applicable Irish Law and Generally Accepted Accounting Practice in Ireland including the Financial Reporting Standards ("FRS") 102: 'The financial reporting standard applicable in the UK and Republic of Ireland' issued by the Financial Reporting Council and published by the Chartered Accountants Ireland.

Under Irish law, the Directors shall not approve the financial statements unless they are satisfied that they give a true and fair view of the Company's assets, liabilities and financial position as at the end of the financial year and the profit or loss of the Company for the financial year.

In preparing these financial statements, the Directors are required to:

- select suitable accounting policies and then apply them consistently;
- make judgements and estimates that are reasonable and prudent;
- state whether the financial statements have been prepared in accordance with applicable accounting standards and identify the standards in question, subject to any material departures from those standards being disclosed and explained in the notes to the financial statements; and
- prepare the financial statements on the going concern basis unless it is inappropriate to presume that the Company will continue in business.

The Directors are responsible for keeping adequate accounting records that are sufficient to:

- correctly record and explain the transactions of the Company;
- enable, at any time, the assets, liabilities, financial position and profit or loss of the Company to be determined with reasonable accuracy; and
- enable the Directors to ensure that the financial statements comply with Financial Reporting Standard ("FRS") 102: The financial reporting standard applicable in the UK and Republic of Ireland, the European Communities (Undertakings for Collective Investment in Transferable Securities) Regulations, 2011 as amended (the "UCITS Regulations"), Irish statute comprising the Companies Act 2014 (as amended) and the Central Bank (Supervision and Enforcement) Act 2013 (Section 48 (1)) (Undertakings for Collective Investment in Transferable Securities) Regulations 2019 (the "Central Bank UCITS Regulations") and enable those financial statements to be audited.

The Directors are also responsible for safeguarding the assets of the Company and hence for taking reasonable steps for the prevention and detection of fraud and other irregularities.

Under the UCITS Regulations, the Directors are required to entrust the assets of the Company to a depositary for safe-keeping. In carrying out this duty, the Company has declared custody of the Company's assets to Brown Brothers Harriman Trustee Services (Ireland) Limited (the "Depositary").

Relevant Audit Information Statement

The Directors in office at the date of this report have each confirmed that:

- as far as he/she is aware, there is no relevant audit information of which the Company's auditor is unaware; and
- he/she has taken all the steps that he/she ought to have taken as a Director in order to make himself/herself aware of any relevant audit information and to establish that the Company's auditor is aware of that information.

Directors' Compliance Statement

It is the policy of the Company to comply with its relevant obligations (as defined in the Companies Act 2014 (as amended)). As required by Section 225(2) of the Companies Act 2014 (as amended), the Directors acknowledge that they are responsible for securing the Company's compliance with the relevant obligations. The Directors have drawn up a compliance policy statement as defined in Section 225(3)(a) of the Companies Act 2014 (as amended) and a compliance policy which refers to the arrangements and structures that are in place and which are, in the Directors' opinion, designed to secure material compliance with the Company's relevant obligations. In discharging their responsibilities under Section 225, the Directors relied upon, among other things, the services provided, advice and/or representations from third parties whom the Directors believe have the requisite knowledge and experience in order to secure material compliance with the Company's relevant obligations.

Directors' Report (Continued)

Accounting records

The Directors are responsible for ensuring that adequate accounting records as outlined in Section 281 of the Companies Act 2014 (as amended) are maintained by the Company. To achieve this, the Directors have appointed a service organisation Brown Brothers Harriman Fund Administration Services (Ireland) Limited (the "Administrator"). The Company's accounting records are retained at the Administrator's office at 30 Herbert Street, Dublin 2.

Principal Activities and Review of Business

The Company is an investment company with variable capital incorporated in Ireland on 11 December 2000 as a public limited company. The Company was authorised by the Central Bank as an Undertaking for Collective Investment in Transferable Securities pursuant to the UCITS Regulations. The objective of the Company is the collective investment in transferable securities and other liquid financial assets of capital raised from the public, operating on the principle of risk spreading in accordance with the UCITS Regulations.

The Company is structured as an umbrella fund with segregated liability between Portfolios in that the Directors may from time to time with the prior approval of the Central Bank, issue different series of shares representing separate Portfolios. The assets of each Portfolio are invested in accordance with the investment objectives applicable to such Portfolio as outlined in the general information section of these Financial Statements. Each Portfolio bears its own liabilities and none of the Company, any of the service providers appointed to the Company, the Directors, any receiver, examiner or liquidator, nor any other person will have access to the assets of a Portfolio in satisfaction of a liability of any other Portfolio.

As at 31 December 2024 fifty constituent Portfolios were in existence, which are listed in the General Information section of this Annual Report.

Results for the Year and Assets, Liabilities and Financial Position at 31 December 2024

A detailed review of the year and factors which contributed to the performance for the year is included in the Investment Manager's reports. Details of the assets, liabilities and financial position of the Company and results for the year ended 31 December 2024 are set out in the Balance Sheet and Profit and Loss Account for each Portfolio.

Directors

The names and nationalities of the persons who served as Directors at any time during the year ended 31 December 2024 are set out below:

Gráinne Alexander**	Irish
Michelle Green*	British
Naomi Daly***	Irish
Alex Duncan* (resigned on 26 November 2024)	British
Mary Brady* (appointed on 3 February 2025)	Irish

*Non-Executive Director

**Independent, Non-Executive Director

***Independent, Non-Executive Director and Chairperson

Directors' and Secretary's Interests

As at 31 December 2024, Ms. Michelle Green is a Director of the Company and also a Director and an employee of Neuberger Berman Europe Limited ("NBEL"), the Sub-Investment Manager and Distributor of the Company. Ms. Mary Brady was appointed as Director of the Company on 3 February 2025. Ms. Gráinne Alexander and Ms. Mary Brady are also Directors of NBAMIL.

None of the Directors, the Company Secretary, or their families holds or held any beneficial interests in the Company at 31 December 2024 or during the year (2023: Nil).

Transactions Involving Directors

There are no contracts or arrangements of any significance in relation to the business of the Company in which the Directors or the Company Secretary had any interest as defined in the Companies Act 2014 (as amended) at any time during the year ended 31 December 2024 other than those disclosed in note 10 of these Financial Statements.

Connected Persons

In accordance with the Central Bank's UCITS Regulation 43(1), any transaction carried out with the Company by the Manager, the Depositary, the Investment Adviser and/or associated or group companies of these entities ("connected persons") must be carried out as if negotiated at arm's length. Such transactions must be in the best interest of the shareholders of the Company.

Directors' Report (Continued)

Transactions Involving Directors (continued)

The Board of Directors of the Company (the "Board") is satisfied that (i) there are arrangements (evidenced by written procedures) in place to ensure that the obligations set out above are applied to all transactions with connected parties; and (ii) transactions with connected parties entered into during the period complied with these obligations.

Political Donations

There were no political donations made during the year ended 31 December 2024 (2023: Nil).

Risk Management Objectives and Policies

Each Portfolio is invested in accordance with the investment objectives and policies applicable to the Portfolio as set out in detail in the Prospectus. Investment in each Portfolio carries with it a degree of risk including, but not limited to, the risks referred to in note 12 of these Financial Statements.

Dividends and Retention

The dividend distributions declared and paid during the year are disclosed in the Profit and Loss Account under Finance Costs.

Future Developments

The Company will continue to pursue its investment objective as set out in the Directors' Report.

Other Matters

During 2024 and 2025, financial market conditions that impacted the Company continued to be subject to significant fluctuations in market volatility, including but not limited to, interest rates, foreign exchange, equity prices, commodity prices, credit spreads, implied volatilities and asset correlations. It is worth noting that 2024 was characterised by an unprecedented number of general elections across developed and emerging countries, which could have added to shorter term volatility around those events and their outcomes. 2025 to date has seen rapid market movements in respect of equity markets and bond yields, arising from the trade wars and tariffs initiated by the US government. The Company is continuing to actively monitor market conditions and potential associated impacts. The new US administration's policies on the Middle East, Ukraine/Russia and trade tariffs may further influence commodities, equity prices and market volatility throughout the remainder of 2025. In addition, diverging monetary policies in the major currency blocs will be closely monitored as they will be important for bond prices and exchange rates. The Company's direct exposure to Israeli activity and Russia-Ukraine was, and remains, insignificant.

Audit Committee

The Company has an established audit committee. Ms. Gráinne Alexander, Ms. Naomi Daly and Ms. Mary Brady are members of the Board of Directors of the Company and are part of the audit committee. Until 26 November 2024 Mr. Alex Duncan was part of the audit committee. Additionally, Mr. John M. McGovern, an employee of Neuberger Berman LLC, was appointed to the audit committee on 17 August 2023.

Significant Events During the Year

Significant events during the year are set out in note 21 of these Financial Statements.

Significant Events Since the Year End

Significant events since the year end are set out in note 22 of these Financial Statements.

Independent Auditors

The Directors appointed the Independent Auditors, Ernst & Young, Chartered Accountants, in 2000 to audit the financial statements for the year ended 31 December 2001 and subsequent financial periods.

The Independent Auditors have indicated their willingness to continue in office in accordance with Section 383(2) of the Companies Act 2014 (as amended).

Corporate Governance

The Company is subject to and complies with Irish statute comprising the Companies Act 2014 (as amended) and with the UCITS Regulations. The Company does not apply additional requirements in addition to those required by the above. Each of the service providers engaged by the Company is subject to their own corporate governance requirements.

Directors' Report (Continued)

Corporate Governance (continued)

Financial Reporting Process - Description of Main Features

The Directors are responsible for establishing and maintaining adequate internal control and risk management systems of the Company in relation to the financial reporting process. Such systems are designed to manage rather than eliminate the risk of failure to achieve the Company's financial reporting objectives and can only provide reasonable and not absolute assurance against material misstatement or loss.

The Directors have established processes regarding internal control and risk management systems to ensure its effective oversight of the financial reporting process. These include appointing the Administrator to maintain the accounting records of the Company independently of the Manager and the Depositary. The Administrator is required under the terms of the administration agreement to maintain adequate accounting records on behalf of the Company. To that end the Administrator performs regular reconciliations of its records to those of the Depositary. The Administrator is also contractually obliged to prepare for review and approval by the Directors the annual report including financial statements intended to give a true and fair view and the interim report and unaudited abridged financial statements.

The Directors evaluate and discuss significant accounting and reporting issues as the need arises. From time to time the Directors also examine and evaluate the Administrator's financial accounting and reporting routines and monitor and evaluate the external auditors' performance, qualifications and independence. The Administrator has operating responsibility in respect of its internal controls in relation to the financial reporting process and the Administrator's report to the Directors.

Risk Assessment

The Directors are responsible for assessing the risk of irregularities whether caused by fraud or error in financial reporting and ensuring the processes are in place for the timely identification of internal and external matters with a potential effect on financial reporting. The Directors have also put in place processes to identify changes in accounting rules and recommendations and to ensure that these changes are accurately reflected in the Company's financial statements.

The Manager completes in depth reviews of the Financial Statements to ensure that all of the content included is accurate. Should a discrepancy be identified, the Manager would report this to the Board of Directors at the next board meeting, or immediately where the discrepancy is deemed material. Changes in accounting rules and standards are monitored by the Manager and the Company's Administrator; all changes are reported to the Board periodically.

The Manager liaises with the Company's Administrator to ensure that all changes in accounting rules and standards are reflected in the financial statements in a timely manner. The Manager also has regular dialogue with the Company's Auditors.

Control Activities

The Administrator maintains control structures to manage the risks over financial reporting. These control structures include appropriate division of responsibilities and specific control activities aimed at detecting or preventing the risk of significant deficiencies in financial reporting for every significant account in the financial statements and the related notes in the Company's annual report. Examples of control activities exercised by the Administrator include analytical review procedures, reconciliations and automatic controls in IT systems. Prices not available from independent sources are typically valued by the Manager using methods the Directors have approved in the good-faith belief that the resulting valuation will reflect the fair value of the security.

Diversity

With respect to diversity, the Company has no employees and the only individuals engaged directly by it are the Directors. When there is a vacancy on the Board, the objective is to ensure that the Board is diversified with an appropriate mix as regards age, gender, race and educational/professional backgrounds, while achieving compliance by all individuals with regulatory requirements and an overall composition with the requisite experience and skills.

Information and Communication

The Company's policies and the Directors' instructions with relevance for financial reporting are updated and communicated via appropriate channels, such as e-mail, correspondence, telephone and meetings to ensure that all financial reporting information requirements are met in a complete and accurate manner.

Monitoring

The Directors receive regular presentations and review reports from the Depositary, Manager and Administrator. The Directors also have an annual process to ensure that appropriate measures are taken to consider and address the shortcomings identified and measures recommended by the independent auditors.

Directors' Report (Continued)

Corporate Governance (continued)

Capital Structure

No person has a significant direct or indirect holding of securities in the Company. No person has any special rights of control over the Company's share capital. There are no restrictions on voting rights. With regard to the appointment and replacement of Directors, the Company is governed by its Articles of Association, Irish statute comprising the Companies Act 2014 (as amended) and with the UCITS Regulations as applicable to investment funds. The Articles of Association themselves may be amended by special resolution of the Shareholders.

Powers of the Directors

The Directors are responsible for managing the business affairs of the Company in accordance with the Articles of Association. The Directors may delegate certain functions to the Administrator and other parties, subject to the supervision and direction by the Directors. The Directors have appointed the Manager to provide the day to day management of the Company's business affairs and have for this purpose delegated certain of their duties and powers to the Manager. The Directors will receive periodic reports from the Manager detailing, inter alia, its review of the performance of the Company and the Portfolios and providing an analysis of their respective investment portfolios. The Manager will also provide such other information as may from time to time be reasonably required by the Directors for the purposes of such meetings. The Directors have appointed the Depositary in respect of the safekeeping of the Company's assets. Consequently, none of the Directors is an executive Director.

The Articles of Association provide that the Directors may exercise all the powers of the Company to borrow money, to mortgage or charge its undertaking, property or any part thereof and may delegate these powers to the Manager.

Shareholder Meetings

The Annual General Meeting of the Company will be held in Ireland, normally during the month of June or such other date as the Directors may determine. Notice convening the Annual General Meeting in each year at which the audited financial statements of the Company will be presented (together with the Directors' and Auditors' Reports of the Company) will be sent to Shareholders at their registered addresses not less than twenty one clear days before the date fixed for the meeting. Other general meetings may be convened from time to time by the Directors in such manner as provided by Irish law.

Each of the shares entitles the holder to attend and vote at meetings of the Company and of the Portfolio represented by those shares. All votes shall be cast by a poll of Shareholders present in person or by proxy at the relevant Shareholder meeting or by unanimous written resolution of the Shareholders. No class of shares confers on the holder thereof any preferential or pre-emptive rights or any rights to participate in the profits of any other share class or any voting rights in relation to matters relating solely to any other share class.

Any resolution to alter the class rights of the shares requires the approval of three-fourths of the holders of the shares represented or present and voting at a general meeting of the class. The quorum for any general meeting of the class convened to consider any alteration to the class rights of the shares shall be present in person or by proxy two or more persons holding shares issued in that class. In the event that a quorum is not present at a meeting and the meeting is adjourned, the quorum for the adjourned meeting shall be one Shareholder present in proxy or person.

Each of the shares other than subscriber shares entitle the Shareholder to participate equally (subject to any differences between fees, charges and expenses applicable to different classes of shares) on a pro-rata basis in the profits and net assets of the Portfolio in respect of which the shares have been issued, save in the case of profits declared prior to becoming a Shareholder.

Subscriber shares entitle the Shareholders holding them to attend and vote at all general meetings of the Company but do not entitle the holders to participate in the profits or net assets of the Company except for a return of capital on a winding up.

Composition and Operation of Board and Committees

After the resignation of Alex Duncan on 26 November 2024, until the appointment of Mary Brady on 3 February 2025 there were three Directors, all of whom were non-executive Directors. Ms. Michelle Green is a Director and an employee of NBEL, the Sub-Investment Manager and Distributor of the Company. Ms. Gráinne Alexander and Ms. Mary Brady are Directors of NBAMIL, the Manager of the Company. The Articles of Association do not provide for retirement of Directors by rotation. However, the Directors may be removed by the shareholders by ordinary resolution in accordance with the procedures established under the Irish Companies Act 2014 (as amended). The Board meets at least quarterly. Other than the Audit Committee, there are no permanently authorised sub-committees of the Board.

The Board has satisfied itself that the Directors have sufficient time to fully discharge their duties and disclose in writing to the Board their other commitments, including other CIS directorships and non Fund directorships.

Directors' Report (Continued)

Corporate Governance (continued)

Irish Funds Corporate Governance Code

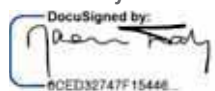

The Irish Funds ("IF") has published a corporate governance code ("IF Code") that may be adopted on a voluntary basis by Irish authorised collective investment schemes. It should be noted that the IF Code reflects existing corporate governance practices imposed on Irish authorised collective investment schemes, as noted above. If the IF Code is adopted on a voluntary basis, it can be referred to in the disclosures made in the Directors' Report in compliance with the provisions of the Irish Companies Act 2014 (as amended).

With effect from 1 January 2013, the Board voluntarily adopted the Corporate Governance Code for Irish Domiciled Collective Investment Schemes as published by the IF, as the Company's corporate governance code.

Report of the Depositary to the Shareholders

We have enquired into the conduct of Neuberger Berman Investment Funds plc (the “Company”) for the year ended 31 December 2024, in our capacity as Depositary to the Company.

This report including the opinion has been prepared for and solely for the Shareholders in the Company as a body, in accordance with Part 5 of the European Communities (Undertakings for Collective Investment in Transferable Securities) Regulations 2011, as amended, (the ‘UCITS Regulations’), and for no other purpose. We do not, in giving this opinion, accept or assume responsibility for any other purpose or to any other person to whom this report is shown.

Responsibilities of the Depositary

Our duties and responsibilities are outlined in Part 5 of the UCITS Regulations. One of those duties is to enquire into the conduct of the Company in each annual accounting period and report thereon to the shareholders.

Our report shall state whether, in our opinion, the Company has been managed in that period in accordance with the provisions of the Company’s Memorandum and Articles of Association and the UCITS Regulations. It is the overall responsibility of the Company to comply with these provisions. If the Company has not so complied, we as Depositary must state why this is the case and outline the steps which we have taken to rectify the situation.

Basis of Depositary Opinion

The Depositary conducts such reviews as it, in its reasonable opinion, considers necessary in order to comply with its duties as outlined in Part 5 of the UCITS Regulations and to ensure that, in all material respects, the Company has been managed (i) in accordance with the limitations imposed on its investment and borrowing powers by the provisions of the constitutional documentation and the appropriate regulations and (ii) otherwise in accordance with the Company’s constitutional documentation and the appropriate regulations.

Opinion

In our opinion, the Company has been managed during the year, in all material respects:

- (i) in accordance with the limitations imposed on the investment and borrowing powers of the Company by the Memorandum & Articles of Association, the UCITS Regulations and the Central Bank (Supervision and Enforcement) Act 2013 (Section 48(1)) (Undertakings for Collective Investment in Transferable Securities) Regulations 2019 (‘the Central Bank UCITS Regulations’); and
- (ii) otherwise in accordance with the provisions of the Memorandum & Articles of Association, the UCITS Regulations and the Central Bank UCITS Regulations.

Brown Brothers Harriman Trustee Services (Ireland) Limited
30 Herbert Street

Ireland

Date: 16 April 2025

Independent Auditors' Report to the Members of Neuberger Berman Investment Funds Plc

Report on the audit of the financial statements

Opinion

We have audited the financial statements of Neuberger Berman Investment Funds plc ('the Company') for the year ended 31 December 2024, which comprise the Balance Sheets, the Profit and Loss Accounts, the Statements of Changes in Net Assets Attributable to Holders of Redeemable Participating Shares and notes to the financial statements, including policies set out in note 1. The financial reporting framework that has been applied in their preparation is Irish Law and FRS 102 The Financial Reporting Standard applicable in the UK and Republic of Ireland issued in the United Kingdom by the Financial Reporting Council.

In our opinion the financial statements:

- give a true and fair view of the assets, liabilities and financial position of the company as at 31 December 2024 and of its profit for the year then ended;
- have been properly prepared in accordance with FRS 102 The Financial Reporting Standard applicable in the UK and Republic of Ireland; and
- have been properly prepared in accordance with the requirements of the Companies Act 2014, the European Communities (Undertakings for Collective Investment in Transferable Securities) Regulations, 2011, and the Central Bank (Supervision and Enforcement) Act 2013 (Section 48(1)) (Undertakings for Collective Investment in Transferable Securities) Regulations 2019.

Basis for opinion

We conducted our audit in accordance with International Standards on Auditing (Ireland) (ISAs (Ireland)) and applicable law. Our responsibilities under those standards are further described in the Auditor's Responsibilities for the Audit of the Financial Statements section of our report. We are independent of the Company in accordance with ethical requirements that are relevant to our audit of financial statements in Ireland, including the Ethical Standard issued by the Irish Auditing and Accounting Supervisory Authority (IAASA), and we have fulfilled our other ethical responsibilities in accordance with these requirements.

We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our opinion.

Conclusions relating to going concern

In auditing the financial statements, we have concluded that the directors' use of the going concern basis of accounting in the preparation of the financial statements is appropriate.

Based on the work we have performed, we have not identified any material uncertainties relating to events or conditions that, individually or collectively, may cast significant doubt on the Company's ability to continue as a going concern for a period of at least twelve months from the date when the financial statements are authorised for issue.

Our responsibilities and the responsibilities of the directors with respect to going concern are described in the relevant sections of this report. However, because not all future events or conditions can be predicted, this statement is not a guarantee as to the company's ability to continue as a going concern.

Other information

The directors are responsible for the other information. The other information comprises the information included in the annual report other than the financial statements and our auditor's report thereon. Our opinion on the financial statements does not cover the other information and, except to the extent otherwise explicitly stated in our report, we do not express any form of assurance conclusion thereon.

Independent Auditors' Report to the Members of Neuberger Berman Investment Funds Plc (Continued)

Other information (continued)

Our responsibility is to read the other information and, in doing so, consider whether the other information is materially inconsistent with the financial statements or our knowledge obtained in the audit or otherwise appears to be materially misstated. If we identify such material inconsistencies or apparent material misstatements, we are required to determine whether there is a material misstatement in the financial statements or a material misstatement of the other information. If, based on the work we have performed, we conclude that there is a material misstatement of this other information, we are required to report that fact.

We have nothing to report in this regard.

Opinions on other matters prescribed by the Companies Act 2014

In our opinion, based solely on the work undertaken in the course of the audit, we report that:

- the information given in the directors' report for the financial year ended for which the financial statements are prepared is consistent with the financial statements; and
- the directors' report has been prepared in accordance with applicable legal requirements.

We have obtained all the information and explanations which, to the best of our knowledge and belief, are necessary for the purposes of our audit.

In our opinion the accounting records of the Company were sufficient to permit the financial statements to be readily and properly audited and the financial statements are in agreement with the accounting records.

Matters on which we are required to report by exception

Based on the knowledge and understanding of the company and its environment obtained in the course of the audit, we have not identified material misstatements in the directors' report.

The Companies Act 2014 requires us to report to you if, in our opinion, the disclosures required by sections 305 to 312 of the Act, which relate to disclosures of directors' remuneration and transactions are not complied with by the Company. We have nothing to report in this regard.

Respective responsibilities

Responsibilities of directors for the financial statements

As explained more fully in the directors' responsibilities statement set out on page 35, the directors are responsible for the preparation of the financial statements in accordance with the applicable financial reporting framework that give a true and fair view, and for such internal control as they determine is necessary to enable the preparation of financial statements that are free from material misstatement, whether due to fraud or error.

In preparing the financial statements, the directors are responsible for assessing the Company's ability to continue as a going concern, disclosing, as applicable, matters related to going concern and using the going concern basis of accounting unless management either intends to liquidate the Company or to cease operations, or has no realistic alternative but to do so.

Auditor's responsibilities for the audit of the financial statements

Our objectives are to obtain reasonable assurance about whether the financial statements as a whole are free from material misstatement, whether due to fraud or error, and to issue an auditor's report that includes our opinion. Reasonable assurance is a high level of assurance, but is not a guarantee that an audit conducted in accordance with ISAs (Ireland) will always detect a material misstatement when it exists. Misstatements can arise from fraud or error and are considered material if, individually or in the aggregate, they could reasonably be expected to influence the economic decisions of users taken on the basis of these financial statements.

A further description of our responsibilities for the audit of the financial statements is located on the IAASA's website at:

http://www.iaasa.ie/getmedia/b2389013-1cf6-458b-9b8f-a98202dc9c3a/Description_of_auditors_responsibilities_for_audit.pdf.

This description forms part of our auditor's report.

Independent Auditors' Report to the Members of Neuberger Berman Investment Funds Plc (Continued)

Respective responsibilities (continued)

The purpose of our audit work and to whom we owe our responsibilities

Our report is made solely to the Company's members, as a body, in accordance with section 391 of the Companies Act 2014. Our audit work has been undertaken so that we might state to the Company's members those matters we are required to state to them in an auditor's report and for no other purpose. To the fullest extent permitted by law, we do not accept or assume responsibility to anyone other than the Company and the Company's members, as a body, for our audit work, for this report, or for the opinions we have formed.

Independent Auditors' Report to the Directors of Neuberger Berman Investment Funds Plc

The Directors
Neuberger Berman Investment Funds plc

Opinion

We have audited the financial statements of Neuberger Berman Investment Funds plc (the "Company"), which comprise the Balance Sheet, including the Schedule of Investments, as of December 31, 2024, and the related Profit and Loss Account and Statement of Changes in Net Assets Attributable to Holders of Redeemable Participating Shares, for the year then ended, and the related notes (collectively referred to as the "financial statements").

In our opinion, the accompanying financial statements present fairly, in all material respects, the Balance Sheet of the Company at December 31, 2024, and the results of its operations and changes in its net assets for the year then ended in accordance with accounting principles including FRS 102 The Financial Reporting Standard applicable in the UK and Republic of Ireland (Irish Generally Accepted Accounting Practice).

Basis for Opinion

We conducted our audit in accordance with auditing standards generally accepted in the United States of America (GAAS). Our responsibilities under those standards are further described in the Auditor's Responsibilities for the Audit of the Financial Statements section of our report. We are required to be independent of the Company and to meet our other ethical responsibilities in accordance with the relevant ethical requirements relating to our audit. We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our audit opinion.

Responsibilities of Management for the Financial Statements

Management is responsible for the preparation and fair presentation of the financial statements in accordance with Accounting Standards including FRS 102 The Financial Reporting Standard applicable in the UK and Republic of Ireland (Irish Generally Accepted Accounting Practice), and for the design, implementation, and maintenance of internal control relevant to the preparation and fair presentation of financial statements that are free of material misstatement, whether due to fraud or error.

In preparing the financial statements, management is required to evaluate whether there are conditions or events, considered in the aggregate, that raise substantial doubt about the Company's ability to continue as a going concern for one year after the date that the financial statements are available to be issued.

Auditor's Responsibilities for the Audit of the Financial Statements

Our objectives are to obtain reasonable assurance about whether the financial statements as a whole are free of material misstatement, whether due to fraud or error, and to issue an auditor's report that includes our opinion. Reasonable assurance is a high level of assurance but is not absolute assurance and therefore is not a guarantee that an audit conducted in accordance with GAAS will always detect a material misstatement when it exists. The risk of not detecting a material misstatement resulting from fraud is higher than for one resulting from error, as fraud may involve collusion, forgery, intentional omissions, misrepresentations, or the override of internal control. Misstatements are considered material if there is a substantial likelihood that, individually or in the aggregate, they would influence the judgment made by a reasonable user based on the financial statements.

In performing an audit in accordance with GAAS, we:

- Exercise professional judgment and maintain professional skepticism throughout the audit.
- Identify and assess the risks of material misstatement of the financial statements, whether due to fraud or error, and design and perform audit procedures responsive to those risks. Such procedures include examining, on a test basis, evidence regarding the amounts and disclosures in the financial statements.
- Obtain an understanding of internal control relevant to the audit in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the Company's internal control. Accordingly, no such opinion is expressed.
- Evaluate the appropriateness of accounting policies used and the reasonableness of significant accounting estimates made by management, as well as evaluate the overall presentation of the financial statements.
- Conclude whether, in our judgment, there are conditions or events, considered in the aggregate, that raise substantial doubt about each Fund's ability to continue as a going concern for a reasonable period of time.

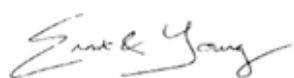

We are required to communicate with those charged with governance regarding, among other matters, the planned scope and timing of the audit, significant audit findings, and certain internal control-related matters that we identified during the audit.

Independent Auditors' Report to the Directors of Neuberger Berman Investment Funds Plc (Continued)

Other Information

Management is responsible for the other information. The other information comprises the information included in the annual report but does not include the financial statements and our auditor's report thereon. Our opinion on the financial statements does not cover the other information, and we do not express an opinion or any form of assurance thereon.

In connection with our audit of the financial statements, our responsibility is to read the other information and consider whether a material inconsistency exists between the other information and the financial statements, or the other information otherwise appears to be materially misstated. If, based on the work performed, we conclude that an uncorrected material misstatement of the other information exists, we are required to describe it in our report.

Asia Responsible Transition Bond – Investment Manager's Report

For the 12-month reporting period ended 31 December 2024, the total return for the USD I Accumulating Class was 5.49%. Over the same period, the benchmark index, the JP Morgan Asia Credit Index (Total Return, USD) (the Index), returned 5.72%. (Performance for all share classes is provided in Appendix II. Performance data quoted represent past performance and do not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any.)

Macroeconomic, market and asset class conditions during the reporting period

- In 2024, Asia credit bonds delivered yet another robust positive performance, driven by a conducive macroeconomic environment. The commencement of the Federal Reserve's easing cycle, resilient global growth and strong fundamentals within the Asian markets, coupled with supportive technical factors, led to a material tightening of credit spreads over the year. Several special situations, such as the successful restructuring of bonds issued by Sri Lanka government and Vedanta, also added to the total returns for the Portfolio.

What affected the Portfolio's performance during the reporting period

- Contributors to relative returns:
 - On the back of India's resilient macroeconomic environment, our overweight in India resulted in allocation outperformance, which was further enhanced by strong performance of Vedanta bonds.
 - Sri Lanka made good progress towards restructuring efforts, which positively impacted our overweight positions in that country's bonds.
 - Our security selection within Indonesia's sovereign and quasi-sovereign issuers and overweight positions in Medco Energi bonds contributed positively to relative returns.
- Detractors from relative returns:
 - The outperformance of Pakistan bonds detracted from relative performance given our underweight positioning earlier in the year.
 - Our overweight allocation to New World Development bonds contributed negatively as well, on the back of liquidity concerns and management changes.
 - Our underweight to Macau gaming names which are excluded due to the fund's responsible and transition specific policies.

Overview of investment activities during the reporting period

- India remains the Portfolio's largest overweight in terms of country market weight allocation. In India, the Portfolio continues to have an overweight in Financials and Utilities (Renewables).
- Over the reporting period, the Portfolio has gradually increased exposure to China, Hong Kong, and Pakistan, amongst others.
- The Portfolio stayed underweight in Philippines due to lofty valuations and in China due to structural growth concerns.

Asian emerging markets debt remains a compelling investment opportunity underpinned by improving credit quality across the market, as well as having a tailwind of limited net issuances and higher all-in yield. Going into 2025, we maintain a tactically cautious stance given the weakness in China growth and the likely rise in geopolitical/trade uncertainties in the near term; however, we believe Asian entities are well positioned to ride out the short-term volatility and would look to take advantage of the opportunities that will arise.

China A-Share Equity – Investment Manager's Report

For the 12-month reporting period ended 31 December 2024, the total return for the CNY I Accumulating Class was 3.81%. Over the same period, the benchmark index, the MSCI China A Onshore Index (Total Return, Net, CNY) (the Index), returned 14.85%. (Performance for all share classes is provided in Appendix II. Performance data quoted represent past performance and do not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any.)

Macroeconomic, market and asset class conditions during the reporting period

- The China A-Share market experienced volatility, with rapid declines and recoveries occurring from the beginning of the year through September. Investors cheered late September's comprehensive and coordinated policy shifts for several weeks, but the market resumed its volatility by the fourth quarter.
- During the first three quarters, China's GDP grew by 4.8%, falling short of expectations. However, due to policy interventions in September, GDP goals of around 5% were anticipated to be achieved for the full year.
- The Consumer Price Index forecast continued to point downward, reflecting low capacity utilisation and persistent deflationary pressures. Demand for real estate has contracted notably, and growth in consumption slowed. The macro environment was further complicated by external factors such as the US election. Renewed fears of a potential tariff war added to the uncertainty and challenges facing the Chinese economy.
- Financials, Consumer Discretionary and Utilities sectors outperformed in 2024, while Health Care, Consumer Staples and Real Estate lagged.

What affected the Portfolio's performance during the reporting period

- Contributors to relative returns:
 - Stock selection within Industrials contributed most to relative returns.
 - An overweight to consumer discretionary, especially the auto and home appliance sector, also contributed.
- Detractors from relative returns:
 - The Portfolio underperformed in the second half of the year, given under-representation in sectors like AI, Semiconductors and Software.
 - An underweight to small caps, which outperformed in the fourth quarter.
 - Stock selection in IT, Financials and Materials, and an overweight to Consumer Staples also detracted.

Overview of investment activities during the reporting period

- We sought domestic growth via high-quality companies across the market cap spectrum, including Quality Compounders, which are high-quality, high return on equity (ROE) names with steady cash flows and strong corporate governance, concentrated among Consumer and Health Care names.
- We also focused on Secular Growth Beneficiaries, companies positioned to benefit from longer-term domestic secular growth, supported by policies and trends, such as high-quality renewables, consumer electronics, AI and robotics names.

China appears to have initiated a structural economic transition toward growth driven by domestic demand, value-added exports, and advanced technologies. Our focus during this transition is twofold. We see opportunities in best-in-class companies with stable cash flows and attractive dividends, particularly in the Consumer, Commodities and Financial sectors; and in high-quality, high-growth companies that benefit from government policy support, particularly within electric vehicle and artificial intelligence supply chains, as well as in consumer electronics and renewables.

China Bond – Investment Manager's Report

For the 12-month reporting period ended 31 December 2024, the total return for the CNY I Distributing Class was 3.68%. Over the same period, the benchmark index, the FTSE Chinese Government and Policy Bank Bond 0-1 Year Select Index (Total Return, CNY) (the Index), returned 2.15%. (Performance for all share classes is provided in Appendix II. Performance data quoted represent past performance and do not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any.)

Macroeconomic, market and asset class conditions during the reporting period

- The National People's Congress (NPC) kept the growth target unchanged at "around 5%" for 2024. However, limited forceful signals were seen by policymakers. Housing data remained tepid and consumption slowed further. As a result, policymakers showed increased urgency in implementing more proactive macroeconomic strategies to support the economy's growth path, including more aggressive fiscal and monetary policies.
- With the macro backdrop, China rates have rallied significantly amid structural growth concerns. Despite the sharp movement in rates, credit spreads did not tighten as much, resulting in a normalisation of credit spreads.

What affected the Portfolio's performance during the reporting period

- Contributors to relative returns:
 - Onshore credit bonds were positive contributors as rates and credit spreads rallied across the board.
 - Offshore credit bonds were positive contributors due to attractive yield differentials and spread compression.
- Detractor from relative returns:
 - Our onshore convertible bonds were the main detractor due to poor investor sentiments and lackluster performance in the equity markets.

Overview of investment activities during the reporting period

- We added duration over the course of the year, mostly in onshore rates, in both the front-end and back-end part of the curve.
- In the second half of the year, we increased our allocation to onshore credit bonds during a period of widening credit spread.
- We reduced our onshore convertible bonds positions over the course of the year as we remained bearish on the macro outlook.
- Apart from the tight onshore credit spreads, the rates differentials between CNY and USD stayed significantly wide, this resulted in an attractive relative value proposition for Chinese USD credits.

Traditional economic drivers, such as the real estate sector, remain challenged, and in our view, rising geopolitical tensions further complicate the sluggish growth backdrop. In the near term, Asia, particularly China, will likely bear the brunt of trade tariffs that could potentially be implemented by the new Trump administration. Coupled with Beijing's reluctance to reflate the economy decisively, there may be increasing uncertainty around the growth profile in China.

China Equity – Investment Manager's Report

For the 12-month reporting period ended 31 December 2024, the total return for the USD I Accumulating Class was 18.77%. Over the same period, the benchmark index, the MSCI China All Shares Index (Total Return, Net, USD) (the Index), returned 16.38%. (Performance for all share classes is provided in Appendix II. Performance data quoted represent past performance and do not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any.)

Macroeconomic, market and asset class conditions during the reporting period

- Greater China equities remained volatile across both the onshore and offshore markets, with a sharp correction in early 2024, followed by a swift rebound after a flurry of supportive policies were rolled out to stabilise the housing market and shore up investor confidence.
- Chinese equity markets underwent another correction at the end of May as high-frequency data indicated the pace of economic recovery remained slow. However the pivot in top leadership's policy stance in late September fueled a strong rally as policymakers intensified monetary and fiscal stimulus efforts.
- While the optimism quickly faded in mid-October as investors await further details on stimulus measures, Greater China equity markets ended the year with positive gains after a three-year correction.

What affected the Portfolio's performance during the reporting period

- Contributors to relative returns:
 - Main contributors to performance relative to the Index included Consumer Discretionary (stock selection in hotels, restaurants & leisure and household durables), Health Care (stock selection in biotechnology) and Communication Services (stock selection in interactive media & services).
- Detractors from relative returns:
 - Main detractors from performance relative to the Index included Financials (significant underweight), Materials (significant overweight and stock selection in chemicals) and Industrials (stock selection in air freight & logistics).

Overview of investment activities during the reporting period

- The Portfolio's exposure to Industrials had the largest increase from 12.42% to 18.09%, followed by Financials which increased from 6.80% to 12.38%.
- The Portfolio's exposure to Materials had the largest decrease from 15.72% to 8.64%, followed by Consumer Staples which decreased from 7.59% to 1.94%.

In our view, China's economic growth will continue to be supported by domestic policy stimulus. The policy easing since late September represents a fundamental shift in the top leadership's stance on domestic economic conditions, including an acceptance of the challenges that the Chinese economy faces and a comprehensive playbook of how to best address them going forward. The recent Central Economic Working Conference indicated incrementally larger consumption support, faster housing inventory digestion and more efforts on promoting central-local fiscal reforms. To that end, further stimulus details and more explicit fiscal support are anticipated to be announced at the annual parliamentary 'Two Sessions' meeting in March 2025 when policymakers tend to provide more details on economic targets and growth guidance. While equity markets may remain volatile given potential tariff hikes and sanction risks on China under the new US administration, we believe procyclical support measures can mitigate near-term risks in the economy as the policies take effect. In turn, this should enable our portfolio companies to deliver an improving earnings outlook.

Climate Innovation – Investment Manager's Report

For the 12-month reporting period ended 31 December 2024, the total return for the USD I Accumulating Class was 4.12%. Over the same period, the benchmark index, the MSCI All Country World Index (Total Return, Net of Tax, USD) (the Index), returned 17.49%. (Performance for all share classes is provided in Appendix II. Performance data quoted represent past performance and do not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any.)

Macroeconomic, market and asset class conditions during the reporting period

- In 2024, the US clean energy sector experienced a mix of macroeconomic signals, regulatory shifts, geopolitical challenges and sector-specific developments. The year began with positive momentum, fueled by policy support such as the US International Trade Commission's reversal of tariffs on aluminum extrusion imports, which benefited utility-scale projects. Strong earnings from a number of companies highlighted the sector's resilience and commitment to financial targets.
- Technological advancements played a pivotal role, with innovations in clean technologies, such as liquid cooling and virtual power plants, driving market optimism. Despite facing challenges from potential policy changes in China and regulatory hurdles affecting small modular reactor complexes, the sector maintained its growth trajectory. Regulatory changes also played a key role, with new emissions standards and incentives for green investments, alongside a US Senate bill to streamline nuclear reactor permitting and the introduction of hydrogen tax credits which indicated a supportive policy environment.
- Towards the end of the year policy uncertainty loomed as US president-elect Donald Trump expressed intentions to repeal the Inflation Reduction Act, potentially impacting clean energy incentives. While we believe a full repeal is unlikely, changes could include the phaseout of renewable energy tax credits or lowering the credit amount. However, long-term investment in renewables is anticipated to continue to meet electricity demand and carbon reduction goals.

What affected the Portfolio's performance during the reporting period

- Contributors to relative returns:
 - Security selection within the Industrials sector.
 - Underweight to Consumer Staples, Energy and Healthcare versus the Index
- Detractors from relative returns:
 - Security selection within the IT sector.
 - Overweight to the Industrials and Materials sectors versus the Index.

Overview of investment activities during the reporting period

- Additions and new positions were initiated in companies across various sectors, including Renewable Energy, Industrials, and Heavy Industries. The focus was on companies delivering technological innovations, as well as those we believed would benefit from the industrial/auto cycles bottoming out, aiming to capture broad-based growth driven by regulatory support.
- Positions were exited in companies where relative risk/reward was deemed less favourable or where specific market or sector challenges persisted.

We continue to see this as a critical enabler of global decarbonisation, with the confluence of policy intervention, societal mores, and technological capability driving material investment opportunities. In many industries, successfully capturing technologies and commercial differentiation help to determine which companies thrive and which will be left behind. This Portfolio seeks to invest in the global leaders in decarbonisation across the technology maturity curve.

CLO Income – Investment Manager's Report

For the 12-month reporting period ended 31 December 2024, the total return for the USD I Accumulating Class was 17.40%. Over the same period, the ICE BofA US Dollar 3-Month Deposit Offered Rate Constant Maturity Index (the Index), returned 5.47%. (Performance for all share classes is provided in Appendix II. Performance data quoted represent past performance and do not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any.)

Macroeconomic, market and asset class conditions during the reporting period

- Higher quality Collateralised Loan Obligation (CLO) BB debt spreads began 2024 in the Secured Overnight Financing Rate (SOFR) +675 basis points (bps) context, as the market gravitated to a "soft landing" economic scenario.
- With tighter CLO liability costs due to lower CLO debt spreads, CLO new issuance accelerated early in the year, with the pace of new issue supply initially limiting incremental spread tightening through February, with CLO BB debt spreads generally stable in the SOFR 650bps area.
- Through July, as US economic data implied a lower probability of near-term rate cuts by the Federal Reserve (Fed), fixed income investors increasingly gravitated to floating rate products, including CLO debt, which led to additional spread tightening as the significant demand more than offset the record pace of gross CLO issuance. As of July, CLO BB debt spreads had declined into the SOFR 540bps area.
- In early August, CLO debt spreads widened on the heels of a weaker than expected nonfarm payrolls report in the US, which led to increasing economic concerns, and an increasing focus on the pace of rate cuts by the Fed. CLO BBs initially declined by approximately two points following the weaker report, but quickly converged with July month-end levels by September.
- Subsequently, CLO debt spreads tightened into year-end, which was exacerbated by the elections held in the US, with the new administration expected to institute policies that could accelerate domestic growth, which could lead to slightly elevated inflation. As a result, investors gravitated into floating-rate products, such as CLO debt. By year-end, CLO BB spreads tightened to the SOFR 480bps area.
- In 2024, USD CLO new issue volumes were \$164 billion – an annual record. CLO new issuance was supported by significant spread tightening in CLO debt spreads over the course of the year.
- The trailing 12M par-weighted default rate for the Morningstar LSTA US Leveraged Loan Index as of year-end was 0.91%, down 62bps from the prior year-end.

What affected the Portfolio's performance during the reporting period

- Contributors to relative returns:
 - Security selection within USD CLO mezzanine debt market
 - Allocation to EUR single B CLO debt
- Detractors from relative returns:
 - Allocation to USD high yield market

Overview of investment activities during the reporting period

- Net inflows during the year were deployed into a mix of USD and EUR CLO BBBs, BBs and single Bs, in the primary and secondary markets.
- The Portfolio's exposure is balanced with 46% of CLO holdings in USD CLOs and 54% in EUR CLOs.

With respect to relative value versus high yield, CLO BB spreads finished 2024 near the long-term historical average versus high yield OAS, with a spread basis of approximately 340bps.

Commodities – Investment Manager's Report

For the 12-month reporting period ended 31 December 2024, the total return for the USD I Accumulating Class was 6.30%. Over the same period, the Bloomberg Commodity Index (the Index), returned 5.38%. (Performance for all share classes is provided in Appendix II. Performance data quoted represent past performance and do not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any.)

Macroeconomic, market and asset class conditions during the reporting period

- US equities advanced in 2024, supported by strong growth from large cap tech stocks. The decisive US presidential election buoyed stocks into the end of the year. Investors are optimistic that Trump's policies will boost growth.
- The Federal Reserve (Fed) lowered interest rates by 75 basis points (bps) during the year. However, the Fed has reduced the number of interest rate cuts anticipated for 2025 due to persistently high inflation.
- The Bloomberg US Aggregate Bond Index increased by 1.25% and the Index increased by 5.38%.
- Precious metals, softs and livestock rallied while energy, industrial metals and agricultural commodities were close to flat.

What affected the Portfolio's performance during the reporting period

- Contributors to relative returns:
 - Overweight in cocoa which saw price increases. Cocoa is a scarce commodity with years of underinvestment in trees, coupled with production losses from weather and disease. Despite price jumps, demand has remained strong.
 - Underweight natural gas contributed positively as prices declined. Increased production from previous high prices and normal weather without significant heat waves or hurricanes drove this decline.
- Detractors from relative returns:
 - The underweight in coffee contributed negatively as prices jumped. Coffee surged to the highest level since 1977 amid poor crop conditions in Brazil and Vietnam. Shortages of the cheaper Robusta bean have spilled over into Arabica, the variant we trade.
 - The underweight in silver as prices rose. Our strategy invests minimally in silver due to its illiquidity and volatility, which don't align with our goals. For wealth preservation, we favour gold for its stability, geopolitical sensitivity, and liquidity.

Overview of investment activities during the reporting period

In 2024, the commodity strategy navigated a landscape shaped by several emerging risks, which presented both challenges and opportunities within the commodity markets:

- Sector Allocation: we underweighted coffee, decreasing exposure, which rallied to the highest since 1977. Risk was reallocated to cocoa (off-benchmark), which became the largest contributor to returns. We overweighted soybean oil, increasing exposure, while soymeal and platinum group metals (PGMs) detracted from performance, driven by trend and valuation factors. Additionally, we were overweight in cattle complex and energy (driven by trend, carry and valuations), and underweight in natural gas, soybeans and wheat which provided value.
- Curve positioning: further out positioning bets in agriculture were beneficial. Gas oil and heating oil curve positions were the largest detractors.
- Frequent rebalancing slightly reduced value, as reallocating risk in platinum group metals proved detrimental.

In a Trump 2.0 era and amid macroeconomic shifts, commodities are set to benefit. Underinvestment has left supply chains fragile, as seen in reduced oil reserves and tightness in green metal mining and oil refining. Rising global demand, AI energy needs, and geopolitical uncertainty bolster commodities as a strategic hedge. Inflation enhances their appeal, making commodities a proactive strategy for diversification, unlocking significant returns and driving future success in 2025 and beyond.

Corporate Hybrid Bond – Investment Manager's Report

For the 12-month reporting period ended 31 December 2024, the total return for the EUR I Accumulating Class was 9.03%. Over the same period, the benchmark index, the ICE BofA Global Hybrid Non-Financial 5% Constrained Custom Index (Total Return, Hedged, Euro) (the Index), returned 10.29%. (Performance for all share classes is provided in Appendix II. Performance data quoted represent past performance and do not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any.)

Macroeconomic, market and asset class conditions during the reporting period

- 2024 market moves were led primarily by continued, above expectation economic data (notably in the US), mixed inflationary prints with the US and UK lagging European progress, new governments in both the UK and US and continued geopolitical tensions across Russia/Ukraine and Gaza.
- Risk assets performed strongly in fixed income markets over 2024 with European high yield the top performer, whilst global investment grade and emerging market (EM) debt also returned positively.
- Hybrid markets performed strongly over the year, outperforming investment grade markets and posting similar returns to European high yield.

What affected the Portfolio's performance during the reporting period

- Contributors to relative returns:
 - Security selection was the primary contributor to relative returns (54 basis points (bps)). Within this, Heimstaden Bostad was the top performer to both absolute (205bps) and relative returns (216bps). Telecom names such as British Telecom and Vodafone, and Energy names such as Enbridge and APA Infrastructure (a relatively new issuer we accessed through the primary market), all added meaningfully from a security selection perspective.
 - Our focus over the long-run remained on bottom-up credit selection, an approach being additive to performance.
- Detractors from relative returns:
 - The primary detractor from relative returns was sector allocation (-79bps), with close to all of our underperformance coming from our underweight to Real Estate (-87bps). At a sector level, we remained cautious given what are in our view, challenging fundamentals in the Real Estate sector. While the market has been reacting to macroeconomic signals, buying real estate bonds with the recent rate cuts, we have maintained our focus on a more comprehensive credit view.

Overview of investment activities during the reporting period

- Over the year we took risk-off in the strategy, seeing more relative value in defensive issuers and issues (primarily through shorter call instruments).
- We maintained overweights in Utilities & Telecoms, and reduced our short in Energy (albeit still remain selective in that space).
- The primary market reached record highs, significantly surpassing 2023 levels, which we leveraged frequently over the year to add either a) new issues to the Portfolio and/or the hybrid market or b) add to the Portfolio favourably priced existing issuers from the primary market.

Going into 2025, we anticipate credit markets to remain relatively intact despite falling growth outlooks across the US and Europe, fairly reflected by tight spread levels going into year end. Within this, investment grade hybrid issuers which encompass our investable universe should be particularly well positioned, supported by (a) their high credit quality and (b) their primarily defensive, non-cyclical nature (with Utilities and Telecoms, for example, making up ~60% of the universe). Furthermore, we aim to continue focusing on selecting the best credits, well positioned for the current market environment, capitalising on primary market issuance, and managing the Portfolio within a robust risk management framework.

Developed Market FMP - 2027 – Investment Manager's Report

For the 12-month reporting period ended 31 December 2024, the total return for the USD I Accumulating Class was 5.10%. (Performance for all share classes is provided in Appendix II. Performance data quoted represent past performance and do not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any.)

Macroeconomic, market and asset class conditions during the reporting period

- As inflation moderated closer to the Federal Reserve's (Fed) 2% target, the hiking cycle was put on pause until September when the Fed cut rates by 50 basis points (bps). Then the Fed cut rates by 25bps each in November and December. Other major central banks also cut policy rates in 2024 as growth slowed and inflation came down.
- There were some pockets of interest rate and market volatility throughout the year and particularly in the fourth quarter. In December, with the Fed's hawkish rate cut and uncertainty around future policy shifts from the incoming Trump administration, the market increasingly priced a moderation in future rate cuts and US government yields moved higher across the curve in the final month of the year. For the full year, 10-year developed market sovereign yields also moved higher across the board.
- Credit spreads broadly tightened over the period, reflecting better than expected economic performance, stable fundamentals and steady demand for credit assets. US investment grade, US high yield and US floating rate loan credit spreads tightened by 19bps, 47bps and 66bps, respectively. Global aggregate corporate spreads also tightened by 26bps.

What affected the Portfolio's performance during the reporting period

- Contributors to returns:
 - The Portfolio's investment grade and high yield corporate exposures delivered broad-based performance
- Detractors from returns:
 - There were no material detractors from a fixed income sector perspective

Overview of investment activities during the reporting period

- The Portfolio was invested across corporate industries, rating cohorts and developed markets countries.
- At the end of the reporting period, the Portfolio was approximately 80% investment-grade rated and 20% below-investment grade.

With inflation trends improving and central banks' interest rate cuts either on pause or more moderate in 2025, we believe that economic growth outcomes may become increasingly important drivers of fixed income returns. We anticipate that the bifurcation in credit markets favouring quality may persist. Overall, we believe that 2025 could be a rewarding time for global bond investors that focus on fundamentals and selectivity in building Portfolios.

EMD Corporate – Social and Environmental Transition – Investment Manager's Report

For the 12-month reporting period ended 31 December 2024, the total return for the USD I Accumulating Class was 8.50%. Over the same period, the benchmark index, the JP Morgan JESG CEMBI Broad Diversified Index (Total Return, USD) (the Index), returned 7.79%. (Performance for all share classes is provided in Appendix II. Performance data quoted represent past performance and do not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any.)

Macroeconomic, market and asset class conditions during the reporting period

- In 2024, US inflation and monetary policy were the key drivers of the bond market. The US 10-year bond yield rose from 3.9% to finish the year at 4.6%, with significant volatility in between.
- Geopolitical events also affected the market, especially in April when Middle East tensions escalated. October saw market stress due to inflation and fiscal policy concerns amid a potential Republican wave, but a market rally followed the election, driven by expectations of deregulation and growth-friendly policies. Markets stumbled in December as the Federal Reserve took a more hawkish stance despite cutting rates, while US exceptionalism pushed the US dollar to its strongest annual close since 2001.

What affected the Portfolio's performance during the reporting period

- Contributors to relative returns:
 - Key performance came from overweight exposure and positioning in Argentina, security selection in Chile, India, and Mexico.
 - By sector, security selection in technology, media, telecommunications (TMT), Financials, and Industrials.
- Detractors from relative returns:
 - By country, the main detractors were security selection in China and Colombia.
 - By sector, positioning in Real Estate, Transport and Consumer names.

Overview of investment activities during the reporting period

- We shifted our exposure in Industrials from underweight to overweight. We reduced the underweight in TMT and infrastructure and moved to neutral from underweight in the Real Estate sector. We moved further underweight in Financials.
- By country, key changes included adding exposure to Argentina, Brazil, and India while also reducing our underweight to South Africa. We trimmed our overweight to the UAE. We moved to an underweight position in China and Thailand and further underweight in South Korea.

We believe the emerging markets (EM) debt asset class is set to benefit from steady global growth, easing monetary policies, and stronger growth prospects for EM. However, the US government's policy changes pose risks of trade protectionism and create uncertainty around US rates. Despite these challenges, EM credit fundamentals are improving, with net rating upgrades at a decade high for corporates and sovereigns and EM corporate defaults dropping from 3.3% to 2.7%. While valuations have become relatively expensive in parts of the asset class, especially in investment grade credits, we continue to see opportunities for spread compression within the high yield space.

Emerging Market Debt – Hard Currency – Investment Manager's Report

For the 12-month reporting period ended 31 December 2024, the total return for the USD I Accumulating Class was 13.13%. Over the same period, the benchmark index, the JP Morgan EMBI Global Diversified Index (Total Return, USD) (the Index), returned 6.54%. (Performance for all share classes is provided in Appendix II. Performance data quoted represent past performance and do not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any.)

Macroeconomic, market and asset class conditions during the reporting period

- In 2024, US inflation and monetary policy were the key drivers of the bond market. The US 10-year bond yield rose from 3.9% to finish the year at 4.6%, with significant volatility in between.
- Geopolitical events also affected the market, especially in April when Middle East tensions escalated. October saw market stress due to inflation and fiscal policy concerns amid a potential Republican wave, but a market rally followed the election, driven by expectations of deregulation and growth-friendly policies. Markets stumbled in December as the Federal Reserve took a more hawkish stance despite cutting rates, while US exceptionalism pushed the US Dollar to its strongest annual close since 2001.
- The year marked the completion of debt restructuring processes for Zambia, Ukraine, Ghana, and Sri Lanka, indicating some normalisation after the 2020-23 default wave.

What affected the Portfolio's performance during the reporting period

- Contributors to relative returns:
 - Country allocation, driven by overweight allocations to higher yielding markets, particularly Argentina, Sri Lanka, Ecuador, and El Salvador.
 - Security selection via euro-denominated bonds in Ivory Coast and Peru.
- Detractors from relative returns:
 - Absence from Pakistan, supported by International Monetary Fund policies.
 - Overweight allocation to Colombia, which faced political and fiscal challenges.

Overview of investment activities during the reporting period

- The Portfolio maintained a high yield bias over investment grade (IG) credits, and exposure to defaulted bonds in Zambia, Ukraine, Ghana, and Sri Lanka, which were restructured in the second half of the year.
- Recent trading focused on reducing risk following strong asset class performance. We moved underweight in Indonesia, Panama, and Uzbekistan, and reduced overweights in Angola, Argentina, and Egypt. Additionally, we reduced our positions in Romania on supply and fiscal risks ahead of elections.
- We added to exposures in Costa Rica, El Salvador, Ivory Coast, Nigeria, and Turkey due to positive reform outlooks, fiscal consolidation and rating upgrades.
- Allocation to EUR-denominated bonds and corporate bonds was 15.4% and 11.1% respectively at the end of the reporting period.

The emerging markets (EM) debt asset class is set to benefit from steady global growth, easing monetary policies, and stronger growth prospects for EM. However, the US government's policy changes pose risks of trade protectionism and create uncertainty around US rates. Despite these challenges, EM credit fundamentals are improving, with rating upgrades at a decade high for corporates and sovereigns. While valuations for IG and BB-rated components appear expensive, in our view, B-rated and lower-rated segments still offer value. Opportunities exist for spread compression, particularly in specific issuers and off-benchmark bonds within the BB-rated segment.

Emerging Market Debt – Local Currency – Investment Manager's Report

For the 12-month reporting period ended 31 December 2024, the total return for the USD I Accumulating Class was -3.36%. Over the same period, the benchmark index, the JP Morgan GBI Emerging Markets Global Diversified Index (Total Return, Unhedged, USD) (the Index), returned -2.38%. (Performance for all share classes is provided in Appendix II. Performance data quoted represent past performance and do not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any.)

Macroeconomic, market and asset class conditions during the reporting period

- The year 2024 saw a resilient global economy and the start of rate cut cycles by the Federal Reserve, European Central Bank and other major Central Banks. Global bond yields saw some renewed upward pressures as the market assessed risks around the inflation trajectory and fiscal policies.
- Emerging markets (EM) faced headwinds from a strong US dollar, and from greater uncertainty around US trade policies on the back of the US election outcome.
- South Africa was the best performing index country over the period, followed by the Dominican Republic, while Brazil and Mexico were the worst performers.

What affected the Portfolio's performance during the reporting period

- Contributors to relative returns:
 - The overweight in Turkish lira and the overweight in the long-end of the curve in South Africa.
 - Off-benchmark exposures in Egypt and Argentina.
- Detractors from relative returns:
 - Currency and rates overweights across Brazil and Mexico.
 - The underweight in Thai baht and the overweight duration in Czech Republic.

Overview of investment activities during the reporting period

- We turned more cautious on EM FX risk and reduced exposure to Asian currencies in particular on expectations of greater geopolitical risks and slower growth in the region. We added exposure in Turkish lira amid the turn towards more orthodox monetary policies, and to opportunities in frontier currencies.
- We maintained an overweight duration throughout the year and added duration in Asian countries such as China and India, while reducing duration in Latin America where we see more limited scope for policy easing in the near term.

The EM debt asset class should benefit from a backdrop of slower but not recessionary global growth, easier monetary policy, and a robust growth pickup for emerging vs. developed countries. In China, new rounds of policy stimulus should remove tail risks of a hard landing, even though we do not foresee a major rebound in growth. The change in government in the US presents risks around trade protectionism, especially for some of the more open economies in Asia and Eastern Europe. It also brings more uncertainty regarding the path for US rates ahead, with potential spillovers to EM local rates and currencies. EM inflation is expected to decrease further on average this year, which should provide room for most central banks to maintain a bias towards easing monetary policy. However, there are regional variations, with certain countries in Latin America facing challenges in fully achieving disinflation. Real yield valuations look attractive in local rates markets on average, and we maintain an overweight stance in local duration. We anticipate higher near-term volatility for EM currencies, as more details emerge around US trade and fiscal policies under the second Trump administration. In the medium-term however, EM currencies should be supported by robust EM macro fundamentals, while valuations are also looking more compelling following the pullback in recent months.

Emerging Market Debt Blend – Investment Manager's Report

For the 12-month reporting period ended 31 December 2024, the total return for the USD I Accumulating Class was 2.89%. Over the same period, the benchmark index, a blend comprised of a 50% weighting to the JP Morgan GBI Emerging Markets Global Diversified Index (Total Return, Unhedged, USD), a 25% weighting to the JP Morgan EMBI Global Diversified Index (Total Return, USD), and a 25% weighting to the JP Morgan CEMBI Diversified Index (Total Return, USD) (the Index), returned 2.21%. (Performance for all share classes is provided in Appendix II. Performance data quoted represent past performance and do not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any).

Macroeconomic, market and asset class conditions during the reporting period

- The year 2024 saw a resilient global economy and the start of rate cut cycles by major Central Banks. Global bond yields saw renewed upward pressures during the year as the market assessed risks around the inflation trajectory and fiscal policies. Emerging markets (EM) faced headwinds from a strong US dollar.
- Geopolitical events also affected the market, especially in April when Middle East tensions escalated.
- The year marked the completion of debt restructuring processes for Zambia, Ukraine, Ghana, and Sri Lanka, indicating some normalisation after the 2020-23 default wave.

What affected the Portfolio's performance during the reporting period

- Contributors to relative returns:
 - Hard currency sovereign countries driven by overweights to higher yielding markets, such as Argentina, Sri Lanka, Ecuador, and El Salvador. Security selection via euro-denominated bonds.
 - Bottom up positioning in local currency including the overweight Turkish lira, the overweight in the long-end of the curve in South Africa, and off-benchmark exposure in Egypt.
 - Bottom up positioning in corporates across Technology, Media and Telecom, Oil & Gas and Financials sectors.
 - Tactical positioning in developed market interest rate duration, short EM FX and euro positions.
- Detractors from relative returns:
 - Overweight to local currency relative to hard currency as hard currency markets outperformed in the period.
 - Bottom up positioning in local currency from currency and rates overweights across Brazil and Mexico, underweight to the Thai baht, and overweight duration in Czech Republic.
 - Bottom up positioning in corporates across the Real Estate and Transport sectors.

Overview of investment activities during the reporting period

- Tactically moved the relative exposure from overweight local currency for most of the year, funded by an underweight to hard currency, to underweight both hard currency and local currency at year end.
- Hard currency maintained a high yield bias over investment grade sovereigns. Within corporates, we increased exposure to the Utilities and Commodities sectors while trimming Financials.
- Local currency maintained an overweight duration throughout the year. We turned more cautious on EM FX risk over the year.

The EM debt asset class should benefit from a backdrop of slower but not recessionary global growth, easier monetary policy, and a robust growth pickup for emerging vs. developed countries. In China, new rounds of policy stimulus should remove tail risks of a hard landing, even though we do not foresee a major rebound in growth. The change in government in the US presents risks around trade protectionism, especially for some of the more open economies in Asia and Eastern Europe. It also brings more uncertainty regarding the path for US rates ahead, with potential spillovers to EM local rates and currencies. EM inflation is also expected to decrease further on average this year, which should provide room for most central banks to maintain a bias towards easing monetary policy. EM credit fundamentals are also improving, with rating upgrades at a decade high for corporates and sovereigns.

Emerging Market Debt Sustainable Investment Grade Blend – Investment Manager's Report

For the 12-month reporting period ended 31 December 2024, the total return for the USD I Accumulating Class was -0.36%. Over the same period, the blended benchmark, comprised of a one-third weighting to the JP Morgan GBI Emerging Markets Global Diversified Investment Grade 15% Cap Index (Total Return, Unhedged, USD) and a two-thirds weighting to the JP Morgan EMBI Global Diversified Investment Grade Index (Total Return, USD) (the Index), returned -0.24%. (Performance for all share classes is provided in Appendix II. Performance data quoted represent past performance and do not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any).

Macroeconomic, market and asset class conditions during the reporting period

- The year 2024 saw a resilient global economy and the start of rate cut cycles by major Central Banks. Global bond yields saw renewed upward pressures during the year as the market assessed risks around the inflation trajectory and fiscal policies. Emerging markets (EM) faced headwinds from a strong US dollar.
- Geopolitical events also affected the market, especially in April when Middle East tensions escalated.

What affected the Portfolio's performance during the reporting period

- Contributors to relative returns:
 - Bottom-up positioning in hard currency sovereign countries including supranationals, security selection in the Philippines and Kazakhstan, as well as euro-denominated bonds.
 - Bottom-up positioning in local market currencies including the Polish zloty, Romanian leu, and Malaysian ringgit.
 - Tactical positioning in developed market interest rate duration and short EM FX and euro positions.
- Detractors from relative returns:
 - Bottom-up positioning in local currency particularly from the FX and duration overweight in Mexico, duration underweight in China, and duration overweights in Chechia and Indonesia.

Overview of investment activities during the reporting period

- Tactically moved the relative exposure from overweight local currency for most of the year, funded by an underweight to hard currency, to underweight both hard currency and local currency at year end.
- Hard currency trading activity focused on reducing risk, increased exposure to the Middle East, reduced exposure to Romania, Kazakhstan, Panama and Indonesia.
- Local currency maintained an overweight duration throughout the year. We turned more cautious on EM FX risk over the year.

The EM debt asset class should benefit from a backdrop of slower but not recessionary global growth, easier monetary policy, and a robust growth pickup for emerging vs. developed countries. In China, new rounds of policy stimulus should remove tail risks of a hard landing, even though we do not foresee a major rebound in growth. The change in government in the US presents risks around trade protectionism, especially for some of the more open economies in Asia and Eastern Europe. It also brings more uncertainty regarding the path for US rates ahead, with potential spillovers to EM local rates and currencies. EM inflation is also expected to decrease further on average this year, which should provide room for most central banks to maintain a bias towards easing monetary policy. EM credit fundamentals are also improving, with rating upgrades at a decade high for corporates and sovereigns.

Emerging Markets Equity – Investment Manager's Report

For the 12-month reporting period ended 31 December 2024, the total return for the USD I Accumulating Class was 19.51%. Over the same period, the benchmark index, the MSCI Emerging Markets Index (Total Return, Net of Tax, USD) (the Index), returned 7.50%. (Performance for all share classes is provided in Appendix II. Performance data quoted represent past performance and do not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any).

Macroeconomic, market and asset class conditions during the reporting period

- Emerging Markets (EM) equity benchmarks posted positive results, but ended the year trailing the developed markets, as represented by the MSCI World Index.
- EM equities were volatile, primarily for external reasons including delays in reducing US interest rates, and the US election, with its threatened return to tariffs on imported goods, but also as investors awaited supportive government policies in China that still lacked detail at year end.
- By sector, enthusiasm about artificial intelligence spending made Information Technology the top Index sector, with semiconductors and related industries in that space especially strong. The Materials sector declined most this year. IT-linked Taiwan was the top performing market in the Index this year, and stimulus announcements in China in September boosted the largest Index component market. Egypt declined most for the period, just below Brazil, hampered by government spending policy concerns.

What affected the Portfolio's performance during the reporting period

- Contributors to relative returns:
 - Stock selection was the most significant contributor to the Portfolio's outperformance, with sector allocation also positive. IT holdings were the most significant followed by Consumer Discretionary and Industrials.
 - By country, holdings based in India, Taiwan and Brazil added most value.
- Detractors from relative returns:
 - By sector, stock selection in Financials, Consumer Staples and Utilities.
 - Geographically, China was the Portfolio's largest headwind, with stock selection and an underweight contributing. A non-Index Argentinian holding, a global IT services name, also detracted.

Overview of investment activities during the reporting period

- Given potential headline risks from US and Chinese government policy uncertainty, the Portfolio is oriented toward idiosyncratic global growth areas. For example, within Industrials, our largest overweight, the team believes electrical equipment firms that supply grid and data centers throughout EM offer opportunity. Our largest underweight is Financials, given the lack of a uniformly strong economic impulse.
- The Portfolio is underweight in China, generally avoiding tariff-exposed Chinese exporters in favor of companies whose growth is driven by domestic demand. Our largest overweight is India, where we see numerous attractive stock-specific opportunities across the market cap spectrum.

Looking forward, the team believes that by attempting to avoid areas that are prone to headline risks in favor of niche growth areas, the Portfolio is well positioned to navigate the current market backdrop.

Euro Bond – Investment Manager's Report

For the 12-month reporting period ended 31 December 2024, the total return for the EUR I Accumulating Class was 5.75%. Over the same period, the Bloomberg Euro Aggregate Index (Total Return, Hedged, EUR) (the Index), returned 2.73%. (Performance for all share classes is provided in Appendix II. Performance data quoted represent past performance and do not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any.)

Macroeconomic, market and asset class conditions during the reporting period

- 2024 market moves were led primarily by stronger-than-expected economic data (notably in the US), mixed inflationary trends—with the US and UK lagging European in making progress, new governments in both the UK and US, and continued geopolitical tensions across Russia/Ukraine and Gaza.
- Risk assets performed strongly in fixed income markets over 2024, with European high yield as the top performer whilst global investment grade and emerging market -debt also delivered positive returns.
- European investment grade credit, Sovereign and Securitised markets—which together constitute the majority of the investable universe for the strategy—also posted positive returns.

What affected the Portfolio's performance during the reporting period

- Contributors to relative returns:
 - Credit selection was the key driver in the strong relative returns over the year, notably from our REITs/broader financials exposure, whilst our overweights in both these areas (and credit more broadly) further enhanced the impact of these decisions as spreads tightened and fundamentals across portfolio positions reported well over the year.
 - Duration and curve positioning both also added to relative returns over the year, as we took profit on our short position in the third quarter following the pullback in rates.
- Detractors from relative returns:
 - Security selection (across sub asset classes), sector allocation, duration and curve positioning were all positive for the fund, with no major detractors over the year.

Overview of investment activities during the reporting period

- Over the year, we continued to participate in primary market deals, and capitalise on mispricings at both a credit and rates level; both of which contributed meaningfully to positive returns over the year.
- Our credit positions were consistent drivers in returns and we took profit on some of these toward the end of the year.
- Our short positioning from a duration perspective added returns, which we then took off at the end of the third quarter following the pull back in rate markets. We remained active over the year in this regard.

In our view, 2025 is likely to begin as 2024 ended: rates may be volatile as global inflation proves to be sticky and central bank decisions will be data dependent, appetite for risk is expected to be high, and the overall demand for bonds will be supported by the above-average level of "all in yields" (risk free rates + spreads) available in the market. With spreads near all-time lows, we anticipate volatility and dispersion to increase in 2025, as the new, higher interest rate environment is likely to begin impacting issuer's balance sheets in a negative (and importantly, varying) way. Based on these views, we believe that in 2025 it will be even more important than usual to focus on fundamentally strong issuers/sectors/countries and to avoid issuers with weak financial profiles (e.g. higher leverage, less sustainable cash flows etc.), when current spreads are not wide enough to compensate us for the risk we are taking.

Euro Bond Absolute Return – Investment Manager's Report

For the 12-month reporting period ended 31 December 2024, the total return for the EUR I Accumulating Class was 8.17%. Over the same period, the ICE BofA 0-1 Year AAA Euro Government Index (Total Return, EUR) (the Index), returned 3.50%. (Performance for all share classes is provided in Appendix II. Performance data quoted represent past performance and do not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any.)

Macroeconomic, market and asset class conditions during the reporting period

- 2024 market moves were led primarily by stronger-than-expected economic data (notably in the US), mixed inflationary trends—with the US and UK lagging European in making progress, new governments in both the UK and US, and continued geopolitical tensions across Russia/Ukraine and Gaza.
- Risk assets performed strongly in fixed income markets over 2024, with European high yield as the top performer whilst global investment grade and emerging market -debt also delivered positive returns.
- European investment grade credit, Sovereign and Securitised markets—which together constitute the majority of the investable universe for the strategy—also posted positive returns.

What affected the Portfolio's performance during the reporting period

- Contributors to relative returns:
 - Positive returns over the year were generated through a combination of income (350 basis points (bps)), spread moves (320bps) and curve moves (70bps)
- Detractors from relative returns:
 - The primary detractor from performance was duration moves. This was however, dampened to a degree by our active positioning, in particular over the first half of 2024.

Overview of investment activities during the reporting period

- Over the year, we continued to participate in primary market deals, and capitalise on mispricings at both a credit and rates level; both of which contributed meaningfully to positive returns over the year.
- Our credit positions were consistent drivers in returns and we took profit on some of these toward the end of the year.
- Our short positioning from a duration perspective negated some negative returns, which we then took off at the end of the third quarter following the pull back in rate markets. We remained active over the year in this regard.

In our view, 2025 is likely to begin as 2024 ended: rates may be volatile as global inflation proves to be sticky and central bank decisions will be data dependent, appetite for risk is expected to be high, and the overall demand for bonds will be supported by the above-average level of "all in yields" (risk free rates + spreads) available in the market. With spreads near all-time lows, we anticipate volatility and dispersion to increase in 2025, as the new, higher interest rate environment is likely to begin impacting issuer's balance sheets in a negative (and importantly, varying) way. Based on these views, we believe that in 2025 it will be even more important than usual to focus on fundamentally strong issuers/sectors/countries and to avoid issuers with weak financial profiles (e.g. higher leverage, less sustainable cash flows etc.), when current spreads are not wide enough to compensate us for the risk we are taking.

European High Yield Bond – Investment Manager's Report

For the 12-month reporting period ended 31 December 2024, the total return for the EUR I Accumulating Class was 9.35%. Over the same period, the benchmark index, the ICE BofA European Currency Non-Financial High Yield 3% Constrained Index (Total Return, EUR) (the Index), returned 8.57%. (Performance for all share classes is provided in Appendix II. Performance data quoted represent past performance and do not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any.)

Macroeconomic, market and asset class conditions during the reporting period

- The European high yield market finished 2024 with solid returns driven by resilient economic growth and moderating inflation. Credit spreads broadly tightened over the period, reflecting better than expected economic performance, stable fundamentals and steady demand for credit assets.
- High yield issuers' aggregate fundamentals of Earnings Before Interest, Tax, Depreciation and Amortisation (EBITDA) growth, free cash flow, interest coverage and leverage remained in somewhat favourable ranges and earnings season overall came in better than feared.
- While the default rate is up from the lows in 2022, we anticipate default rates in 2025 to remain in a range that is around the long-term average. This outlook is based on our bottom-up assessment of issuers, and driven by the higher-quality ratings mix in European high yield (66% of issuers with credit ratings of BB), less aggressive new issuance, fewer near-term maturities, as well as an energy sector that is far healthier than in the past few cycles.

What affected the Portfolio's performance during the reporting period

- Contributors to returns:
 - From a sector perspective, positioning in Technology & Electronics, Retail and Basic Industry contributed the most.
 - From a ratings perspective, positioning in BB, BBB & above, CCC & below, and B rated issuers added the most.
- Detractors from returns:
 - From a sector perspective, positioning in Energy, Media and Consumer Goods detracted the most.
 - From a ratings perspective, top detractors included security selection in Not Rated and a slight overweight to CCC & below rated issuers.

Overview of investment activities during the reporting period

- In our high yield strategies, we rotated selectively into higher quality B's and BB's where prices remained attractive to underlying fundamentals and default expectations were low.
- Positioning in CCC's is where we had a differentiated view of the individual credits based on our proprietary ratings and analyst views on the individual credits. We also focused on swapping within industries and risk cohorts of the market to maximise resilience with pricing power and labour cost trends, where they persisted, and reduced the leverage profile of the Portfolio where possible without locking in losses.
- Our plan was to center the Portfolio primarily around BB and higher-quality B credit risk (based on our internal credit ratings) and overweight sectors that we view as resilient in the current environment.

We believe European high yield valuations are providing more-than-adequate compensation for the around average default outlook, will continue to provide durable income and are attractive compared to other fixed income alternatives. While the incoming macroeconomic data, policy uncertainty over tariffs, geopolitical concerns and overall credit cycle dynamics can move the high yield market day-to-day, our analysts and portfolio managers continue to be focused on the specific fundamentals of individual issuers, with analysts assessing the base and downside cases. We believe our bottom-up, fundamental credit research that focuses on security selection, avoiding credit deterioration, and putting only what we view as our "best ideas" into Portfolios, will position us well to take advantage of any volatility.

European Sustainable Equity – Investment Manager's Report

For the 12-month reporting period ended 31 December 2024, the total return for the EUR I Accumulating Class was 5.26%. Over the same period, the benchmark index, the MSCI Europe Index (Total Return, Net of Tax, EUR) (the Index), returned 8.59%. (Performance for all share classes is provided in Appendix II. Performance data quoted represent past performance and do not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any.)

Macroeconomic, market and asset class conditions during the reporting period

- 2024 began with strong global equity markets, driven by robust US economic growth and positive global data, with Japan notably outperforming.
- Inflation concerns persisted into the second quarter, leading to fewer expected interest rate cuts by central banks, although developed market equities delivered positive returns.
- The third quarter saw resilient equity markets as inflation decreased, aided by central bank actions and Chinese stimulus, benefiting Asia ex-Japan.
- The outcome of the US presidential election in the final quarter pressured European equities due to concerns about the threat of trade tariffs from the incoming Trump administration.

What affected the Portfolio's performance during the reporting period?

- Contributors to relative returns:
 - The result from sector allocation was positive, due to the underperformance of the underweight positions in Utilities, Materials, Real Estate and in particular Energy.
 - On a stock level, our holdings in 3i Group, Euronext, London Stock Exchange (Financials), Schneider Electric (Industrials), and Netcompany (Information Technology) contributed most to performance.
 - Stock selection in Financials and Communication Services also generated a positive result.
- Detractors from relative returns:
 - Stock selection fully explains the underperformance, with a negative contribution from our holdings in Health Care, Industrials, and Consumer Staples.
 - Our holdings in CVS Group, Tecan (Healthcare), L'Oréal (Consumer Staples), Kering (Consumer Discretionary), Alfen (Industrials), and SolarEdge (Information Technology) were the largest detractors.

Overview of investment activities during the reporting period

- We exited several holdings whose competitive position came under pressure. In the consumer sectors, we sold Kering and HelloFresh and in the clean energy sector, we exited SolarEdge and Alfen.
- The proceeds from these sales were reinvested in several new Portfolio holdings that are taking market share from incumbent players as their technological capabilities strengthen their competitive position: Spotify (Communication Services) and Sage Group (Information Technology).
- Lastly, we increased the Portfolio's exposure to a few new companies with predictable, repetitive sales growth: Compass (Consumer Discretionary), Haleon (Consumer Staples) and Diploma (Industrials).

Our equity market outlook suggests potential beyond the largest companies in the Index. With anticipated above-trend US growth and controlled inflation, investors may benefit from earnings-driven performance and a broadening out of the market leadership. We believe our Portfolio is well-positioned to benefit from this as it consists of a diversified pool of high-quality, resilient companies whose focus on sustainability reinforces their competitive advantage.

Event Driven – Investment Manager's Report

For the 12-month reporting period ended 31 December 2024, the total return for the USD I Accumulating Class was 8.15%. (Performance for all share classes is provided in Appendix II. Performance data quoted represent past performance and do not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any.)

Macroeconomic, market and asset class conditions during the reporting period

- Deal activity in 2024 has recovered significantly from the lows in 2023. However, we remain a long way from market peak or even mid-cycle M&A volumes. There is potentially much more to come as significant pent-up demand remains. While we believed the US election would prove to be a clearing event for M&A regardless of who won, the agenda of the Trump administration/Republican controlled Congress is a positive for deal making and corporate risk taking given its pro-business/de-regulatory posture. Deal flow has picked up post-election and into January.
- As we discussed earlier in the year with respect to the catalyst strategy, the opportunity set continues to be attractive as companies consider of a variety of pathways to drive equity value in an uncertain macro-economic environment. In addition to the positive backdrop for idea generation, our strict adherence to hedging both market beta and style factor exposures, enables the team to structure investments designed to extract value from these situations without a reliance on market direction or level – we expect this to continue be important for the strategy given the expectation for heightened volatility as we enter 2025.

What affected the Portfolio's performance during the reporting period

- Contributors to absolute returns:
 - While both strategies contributed positively in 2024, performance was predominately driven by the Market Neutral Catalyst strategy
 - The top five contributors to performance were FTAI Aviation (Catalyst), 3M Company (Catalyst), Apollo Global Management (Catalyst), Fiserv (Catalyst) and Williams (Catalyst)
- Detractors from absolute returns:
 - The top five detractors were Lamb Weston (Catalyst), Hess (Risk Arbitrage) BioMarin Pharmaceutical (Catalyst), Vestis (Catalyst) and Liberty Media (Catalyst)

Overview of investment activities during the reporting period

- Exposure to the merger arbitrage strategy increased steadily over the course of the year as deal flow increased. While spread levels were attractive over the course of the year, there was volatility in the space including a few deal breaks (which we were not involved) and certain transactions have taken longer to materialise thus limiting overall contribution from the strategy over the course of the year.
- In market neutral catalyst we capitalised on a number of ideas across a variety of sectors as the theses we identified played out. We have realised profits on some names and, as mentioned, continue to identify new opportunities. In a strong upward equity market, our hedging construct was generally effective through out the year as we were able to generate strong gains on a relative basis over our hedges.

We believe the outlook for event driven is attractive heading into 2025. A Trump administration should be favourable for M&A and capital markets activity as we believe his administration's policies tend to be more pro-business and should continue to encourage corporate activity. We do anticipate there to be volatility in markets, and the Trump agenda does not simply "solve" the macro-economic and geopolitical issues ahead of us. There are a lot of cross currents and uncertainties regarding both monetary and fiscal policy. Interest rates moves, currency fluctuations, uncertain tariff policies, and an opaque environment in many industries should create more volatility in sectors and individual names. At least that is our hope. We believe we have the creativity and resources to flourish in a higher volatility and more uncertain environment and are hopeful it will create meaningful differentiation between longs and shorts that we can capture in future quarters.

Global Bond – Investment Manager's Report

For the 12-month reporting period ended 31 December 2024, the total return for the USD I Accumulating Class was -1.36%. Over the same period, the benchmark index, the Bloomberg Global Aggregate Index (Total Return, Unhedged, USD) (the Index), returned -1.69%. (Performance for all share classes is provided in Appendix II. Performance data quoted represent past performance and do not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any.)

Macroeconomic, market and asset class conditions during the reporting period

- As inflation moderated closer to the Federal Reserve's (Fed) 2% target, the hiking cycle was put on pause until September when the Fed cut rates by 50 basis points (bps). Then the Fed cut rates by 25bps each in November and December. Other major central banks also cut policy rates in 2024 as growth slowed and inflation came down.
- There were some pockets of interest rate and market volatility throughout the year and particularly in the fourth quarter. In December, with the Fed's hawkish rate cut and uncertainty around future policy shifts from the incoming Trump administration, the market increasingly priced a moderation in future rate cuts and US government yields moved higher across the curve in the final month of the year. For the full year, 10-year developed market sovereign yields also moved higher across the board.
- Credit spreads broadly tightened over the period, reflecting better than expected economic performance, stable fundamentals and steady demand for credit assets. US investment grade, US high yield and US floating rate loan credit spreads tightened by 19bps, 47bps and 66bps, respectively. Global aggregate corporate spreads also tightened by 26bps.

What affected the Portfolio's performance during the reporting period

- Contributors to relative returns:
 - Security selection in and overweight exposure to global securitised credit, specifically, agency mortgage-backed securities (MBS), asset-backed securities, commercial MBS and overweights to credit risk transfers and non-agency MBS
 - Security selection in and overweight to global investment grade and overweight exposure in US rates
 - Major currencies: underweight in Chinese yuan, overweight in Swiss franc and underweight in Swedish krona
- Detractors from relative returns:
 - Underweight exposure in China rates
 - Currency underweight in Japanese yen
 - Allocation to global nominal sovereigns (which was more than offset by security selection) and exposure to emerging markets debt credit default swap derivatives

Overview of investment activities during the reporting period

- Over the period we primarily increased exposure to non-US global sovereigns and investment grade credit, and we reduced exposure to emerging markets debt, agency MBS, securitised credit and US Treasuries.
- We reduced the Portfolio's duration by approximately 0.15 of a year.

With inflation trends improving and central banks' interest rate cuts either on pause or more moderate in 2025, we believe that economic growth outcomes may become increasingly important drivers of fixed income returns. We anticipate that the bifurcation in credit markets favouring quality may persist. Overall, we believe that 2025 could be a rewarding time for global bond investors that focus on fundamentals and selectivity in building Portfolios.

Global Diversified Income FMP – 2024* – Investment Manager's Report

For the period from 1 January 2024 until the Portfolio's close on 28 June 2024, the total return for the USD I Accumulating Class was 2.79%. (Performance data quoted represent past performance and do not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any.)

Macroeconomic, market and asset class conditions during the reporting period

- Short-term developed market interest rates moved higher over the period, fueled in part by slowing progress on the inflation front and delayed easing by most major central banks.
- Global investment grade (IG) and non-investment grade credit spreads compressed over the period, reflecting solid demand for credit assets.
- Fixed income market performance was mixed over the period, with interest rate-sensitive securities generally underperforming on the back of rising interest rates.

What affected its performance during the reporting period

- Contributors to absolute returns:
 - Exposure to developed market IG credit
 - Exposure to emerging market corporates
 - Exposure to developed market high yield
- Detractors from absolute returns:
 - There were no material detractors from a sector perspective

Overview of investment activities during the reporting period

- The life cycle of the Portfolio ended 28 June 2024.
- Prior to the end of the Portfolio's life cycle, the Portfolio was invested in a diversified mix of developed market IG and high yield credit and emerging market corporates.

Looking ahead, we anticipate global growth to slow as the impact of higher prices and central bank tightening continues to be felt by consumers and businesses. In credit, while it is fair to say that spreads have been tight and risk fully valued for the corporate market, higher rates for longer have caused stresses for some overstretched issuers and sectors, giving active managers opportunity to add value.

* Portfolio liquidated on 28 June 2024.

Global Equity Megatrends – Investment Manager's Report

For the 12-month reporting period ended 31 December 2024, the total return for the USD I Accumulating Class was 23.51%. Over the same period, the benchmark index, the MSCI World Index (Total Return, Net of Tax, USD) (the Index), returned 18.67%. (Performance for all share classes is provided in Appendix II. Performance data quoted represent past performance and do not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any.)

Macroeconomic, market and asset class conditions during the reporting period

- This past year has been a constructive one for equity investors. The potential growth and productivity implications of AI enhanced animal spirits in a relatively steady investment environment.
- With little change in Ukraine, terrorist organisations in the Middle East somewhat defanged, and yearend fireworks in Syria quickly stabilised, military tensions had limited impact on global investor psychology. Although tit-for-tat economic skirmishes continued to define China-United States relations in the final days of the Biden Administration, the geopolitical dialog was largely unchanged. In many respects, maintaining the status quo supported markets in 2024.
- Global equity markets performed well in this context. Importantly, 2024 returns follow several years of solid performance, with the MSCI World index returning over 11% annually over the past five years.

What affected the Portfolio's performance during the reporting period

- Contributors to relative returns:
 - Solid investment returns in 2024 were the result of healthy participation from a broad number of Portfolio companies across different megatrends.
 - Vistra (Energy Infrastructure), Zeta Global (Smart Systems) & Criteo (Smart Systems).
- Detractors from relative returns:
 - ModivCare (Health & Wellbeing), Pets At Home (Humanisation of Pets) & Scholastic (Education).

Overview of investment activities during the reporting period

- During the past year the team initiated two new investments, Chart Industries (Energy Infrastructure) and Cisco Systems (Personalisation of Media).
- The team funded these investments primarily through new investor flows and by reducing exposure to Vistra on valuation.

Patient investors should continue to find opportunities to generate healthy returns in the years ahead. To remain patient, investing with conviction is key. The focus on risk management drives the investment team's conviction, selectively investing in (i) businesses with visible, predictable growth outlooks, because each is supported by and enabling powerful megatrends, (ii) businesses with a leadership team that the investment team is excited to partner with, and (iii) businesses that are trading at attractive multi-year valuations.

Global Flexible Credit Income – Investment Manager's Report

For the 12-month reporting period ended 31 December 2024, the total return for the USD I Accumulating Class was 8.43%. (Performance for all share classes is provided in Appendix II. Performance data quoted represent past performance and do not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any.)

Macroeconomic, market and asset class conditions during the reporting period

- As inflation moderated closer to the Federal Reserve's (Fed) 2% target, the hiking cycle was put on pause until September when the Fed cut rates by 50 basis points (bps). Then the Fed cut rates by 25bps each in November and December. Other major central banks also cut policy rates in 2024 as growth slowed and inflation came down.
- There were some pockets of interest rate and market volatility throughout the year and particularly in the fourth quarter. In December, with the Fed's hawkish rate cut and uncertainty around future policy shifts from the incoming Trump administration, the market increasingly priced a moderation in future rate cuts and US government yields moved higher across the curve in the final month of the year. For the full year, 10-year developed market sovereign yields also moved higher across the board.
- Credit spreads broadly tightened over the period, reflecting better than expected economic performance, stable fundamentals and steady demand for credit assets. US investment grade, US high-yield and US floating rate loan credit spreads tightened by 19bps, 47bps and 66bps, respectively. Global aggregate corporate spreads also tightened by 26bps.

What affected the Portfolio's performance during the reporting period

- Contributors to absolute returns:
 - Exposure to US investment grade credit, US high-yield and pan-European investment grade credit were the largest contributors
 - Exposure to collateralised loan obligations (CLOs) and US Treasuries were secondary contributors
 - Exposure to bank loans and credit risk transfer also contributed, but to a lesser degree
- Detractors from absolute returns:
 - There were no material detractors from a sector perspective

Overview of investment activities during the reporting period

- The Portfolio was invested across credit sectors, rating cohorts and geographies.
- We reduced exposure to emerging markets hard currency debt and US Treasuries, and we added exposure to non-investment grade credit, securitised credit and slightly to investment grade credit.
- The Portfolio's duration was unchanged from year-end 2024 compared to year-end 2023.

With inflation trends improving and central banks' interest rate cuts either on pause or more moderate in 2025, we believe that economic growth outcomes may become increasingly important drivers of fixed income returns. We anticipate that the bifurcation in credit markets favouring quality may persist. Overall, we believe that 2025 could be a rewarding time for global bond investors that focus on fundamentals and selectivity in building Portfolios.

Global High Yield Engagement – Investment Manager's Report

For the 12-month reporting period ended 31 December 2024, the total return for the USD I Accumulating Class was 8.56%. Over the same period, the benchmark index, the ICE BofA Global High Yield Constrained Index (Total Return, Hedged, USD) (the Index), returned 9.24%. (Performance for all share classes is provided in Appendix II. Performance data quoted represent past performance and do not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any.)

Macroeconomic, market and asset class conditions during the reporting period

- The global high yield bond market finished 2024 with solid returns driven by resilient economic growth and moderating inflation. Credit spreads broadly tightened over the period, reflecting better than expected economic performance, stable fundamentals and steady demand for credit assets.
- Outside of the higher risk Eastern European and China Property sectors, global high yield issuers' aggregate fundamentals of Earnings Before Interest, Tax, Depreciation and Amortisation (EBITDA) growth, free cash flow, interest coverage and leverage remained in somewhat favourable ranges.
- Default rates in US, Europe and other developed markets are expected to remain around average after having moved up from the all-time lows of 2022. While emerging markets (EM) defaults have risen, we are focused on select opportunities away from the higher risk regions and sectors. Our outlook for around average default risk is based on our bottom-up assessment of issuers, and driven by the higher-quality ratings mix in global high yield (60% of issuers with credit ratings of BB), less aggressive new issuance, fewer near-term maturities, as well as an energy sector that is far healthier than in the past few cycles.

What affected the Portfolio's performance during the reporting period

- Contributors to relative returns
 - From a sector perspective, positioning in Telecommunications, Technology & Electronics and Packaging contributed the most to performance over the period. From a ratings perspective, positioning in BB, B and BBB & above rated issuers added the most to performance over the period.
- Detractors from relative returns
 - From a sector perspective, positioning in Super Retail and Diversified Financial Services detracted the most from performance over the period. From a ratings perspective, CCC & below rated issuers detracted the most from performance.

Overview of investment activities during the reporting period

- In our high yield strategies, we rotated selectively into higher quality B's and BB's where prices remained attractive to underlying fundamentals and default expectations were low.
- Positioning in CCC's is where we had a differentiated view of the individual credits based on our proprietary ratings and analyst views on the individual credits. We also focused on swapping within industries and risk cohorts of the market to maximise resilience with pricing power and labor cost trends, were they persisted, and reduced the leverage profile of the Portfolio where possible without locking in losses.
- Our plan was to center the Portfolio primarily around BB and higher-quality B credit risk (based on our internal credit ratings) and overweight sectors that we viewed as resilient in the current environment.

We believe high yield valuations are providing more-than-adequate compensation for the around average default outlook, should continue to provide durable income and are attractive compared to other fixed income alternatives. While the incoming macroeconomic data, future policy uncertainty of the incoming Trump administration, geopolitical concerns and overall credit cycle dynamics can move the high yield market day-to-day, our analysts continue to be focused on the specific fundamentals of individual issuers, with analysts assessing the base and downside cases. We believe our bottom-up, fundamental credit research that focuses on security selection, avoiding credit deterioration, and putting only what we view as our "best ideas" into Portfolios, will position us well to take advantage of any volatility.

Global Investment Grade Credit – Investment Manager's Report

For the 12-month reporting period ended 31 December 2024, the total return for the USD I Accumulating Class was 4.54%. Over the same period, the Bloomberg Global Aggregate Corporate Index (Total Return, Hedged, USD) (the Index), returned 3.69%. (Performance for all share classes is provided in Appendix II. Performance data quoted represent past performance and do not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any.)

Macroeconomic, market and asset class conditions during the reporting period

- Markets ended the year with expectations that the Federal Reserve (Fed) will pursue a more gradual pace of reductions in the Federal Funds target range in 2025 given slowing progress on inflation in the second half of the year. The US election outcome with a Republican sweep in the Presidency and Congress has also resulted in uncertainty on a range of policy actions that could result in upside risks to US inflation.
- In the US, growth and the labour market slowed but were still supportive. Outside the US, the macroeconomic outlook remained less favourable. The Fed and Bank of England have continued to maintain restrictive monetary policy even though they are both expected to ease at a gradual pace in 2025. The European Central Bank continued to lower its policy rate based on more material progress on inflation and expectations that the outlook for inflation will reach its target.

What affected the Portfolio's performance during the reporting period

- Contributors to relative returns:
 - Senior unsecured bonds from real estate, banking, insurance drove outperformance
 - Subordinated Tier 2 debt from financial issuers and corporate hybrid bonds in the utility and real estate sectors
- Detractors from relative returns:
 - Communication, capital goods, and technology slightly detracted

Overview of investment activities during the reporting period

- We participated in a number of attractively priced primary new issue deals in the second half of 2024 which generated strong relative outperformance for the Portfolio.
- Portfolio duration position was maintained slightly above benchmark levels largely due to corporate bond holdings in euro and sterling credit.

Heading into 2025, we remain overweight some of the more defensive sectors like Utilities and Banking while reducing some of our exposure to higher beta and cyclical sectors. We continue to be overweight sectors that have strong fundamentals and are currently in deleveraging mode like Communication Services which we believe will continue to benefit from a moderating rate backdrop. We have started to reduce our exposure to real estate issuers given their strong relative outperformance in 2024. We have an underweight in sectors like consumer non-cyclicals that we view as being at a higher risk of using debt to finance shareholder returns via stock buybacks and merger and acquisition and trade at relatively tight valuations.

Global Opportunistic Bond – Investment Manager's Report

For the 12-month reporting period ended 31 December 2024, the total return for the USD I Accumulating Class was 2.59%. Over the same period, the benchmark index, the Bloomberg Global Aggregate Index (Total Return, Hedged, USD) (the Index), returned 3.40%. (Performance for all share classes is provided in Appendix II. Performance data quoted represent past performance and do not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any.)

Macroeconomic, market and asset class conditions during the reporting period

- As inflation moderated closer to the Federal Reserve's (Fed) 2% target, the hiking cycle was put on pause until September when the Fed cut rates by 50 basis points (bps). Then the Fed cut rates by 25 bps each in November and December. Other major central banks also cut policy rates in 2024 as growth slowed and inflation came down.
- There were some pockets of interest rate and market volatility throughout the year and particularly in the fourth quarter. In December, with the Fed's hawkish rate cut and uncertainty around future policy shifts from Trump 2.0, the market increasingly priced a moderation in future rate cuts and US government yields moved higher across the curve in the final month of the year. For the full year, 10-year developed market sovereign yields also moved higher across the board.
- Credit spreads broadly tightened over the period, reflecting better than expected economic performance, stable fundamentals and steady demand for credit assets. US investment grade, US high yield and US floating rate loan credit spreads decreased by 19bps, 47bps and 66bps, respectively. Global aggregate corporate spreads also tightened by 26bps.

What affected the Portfolio's performance during the reporting period

- Contributors to relative returns:
 - Positioning in European high yield and security selection and positioning in emerging markets hard currency debt
 - Security selection in global investment grade credit
 - Security selection in and positioning in agency mortgage-backed securities (MBS)
- Detractors from relative returns:
 - Major currencies exposure including a Japanese yen underweight, Mexican peso overweight and South Korean won overweight
 - Positioning in high yield credit default swaps (CDX) and emerging market debt CDX
 - Security selection in global nominal government bonds

Overview of investment activities during the reporting period

- Over the 12-month period we increased exposure to emerging markets debt, global government bonds and slightly to European high yield, and we reduced exposure to agency MBS, securitised and investment grade credit.
- As of year-end, we maintained an overweight duration position.

With inflation trends improving and central banks' interest rate cuts either on pause or more moderate in 2025, we believe that economic growth outcomes will become increasingly important drivers of fixed income returns. We believe that the bifurcation in credit markets favouring quality will persist. Overall, we believe that 2025 could be a rewarding time for global bond investors that focus on fundamentals and selectivity in building Portfolios.

Global Real Estate Securities* – Investment Manager's Report

For the 12-month reporting period ended 31 December 2024, the total return for the USD I Accumulating Class was -3.13%. Over the same period, the benchmark index, the FTSE EPRA/Nareit Developed Real Estate Index (Total Return, Net of Tax, USD) (the Index), returned 1.00%. (Performance for all share classes is provided in Appendix II. Performance data quoted represent past performance and do not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any.)

Macroeconomic, market and asset class conditions during the reporting period

- Global REITs rallied in the second half of 2024 as central banks cut rates and investor sentiment improved. Despite a December pullback due to the Federal Reserve's cautious stance on 2025 rate cuts, REITs closed the year with single-digit positive returns.
- US and Australia led regional performances, with healthcare and data centers sectors significantly outperforming due to heightened demand and limited supply.
- All told, MSCI All Country World Index returned 17.49% during the reporting period. In contrast, the Index returned 1.00%. Real estate securities were negatively impacted by interest rate volatility.

What affected the Portfolio's performance during the reporting period

- Contributors to relative returns:
 - Security selection within the Health Care sector
 - Security selection within the Other Specialty REITs sector
 - Underweights to Sweden and Australia
- Detractors from relative returns:
 - Security selection within the Office sector
 - Security selection within the Residential sector
 - Overweights to Belgium and Canada

Overview of investment activities during the reporting period

- While the Portfolio's sector positioning was mainly driven by bottom-up stock selection, over the reporting period its largest overweight allocations versus the Index were in the Infrastructure REITs and Residential sectors. In contrast, the Portfolio's largest sector underweights relative to the Index were in the Office and Hotel and Lodging REITs sectors.
- The largest country overweights were in Canada and Spain, and the largest underweights were in the US and Sweden.

The Portfolio closed on 31 December 2024. We thank you for the opportunity to help you meet your financial needs.

* Portfolio liquidated on 31 December 2024.

Global Sustainable Equity – Investment Manager's Report

For the 12-month reporting period ended 31 December 2024, the total return for the USD I Accumulating Class was 7.69%. Over the same period, the benchmark index, the MSCI World Index (Total Return, Net of Tax, USD) (the Index), returned 18.67%. (Performance for all share classes is provided in Appendix II. Performance data quoted represent past performance and do not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any.)

Macroeconomic, market and asset class conditions during the reporting period

- 2024 began with strong global equity markets, driven by robust US economic growth and positive global data, with Japan notably outperforming.
- Inflation concerns persisted into the second quarter, leading to fewer expected interest rate cuts by central banks, although developed market equities delivered positive returns.
- The third quarter saw resilient equity markets as inflation decreased, aided by central bank actions and Chinese stimulus, benefiting Asia ex-Japan.
- The outcome of the US presidential election in the final quarter boosted US equities, while emerging markets faced challenges from US dollar strength and concerns about the threat of trade tariffs.

What affected the Portfolio's performance during the reporting period

- Contributors to relative returns:
 - The result from sector allocation was positive due to the outperformance of Communication Services and Financials, both overweighted, as well as the underperformance of Utilities, Materials, Real Estate and in particular Energy, which were all underweighted.
 - On a stock level, our holdings in 3i Group (Financials), Amazon.com (Consumer Discretionary), Netflix (Communication Services) and Recruit (Digital Enterprise) contributed the most.
- Detractors from relative returns:
 - Stock selection fully explains the underperformance, with a negative contribution from Information Technology, Consumer Staples, Consumer Discretionary and Industrials.
 - Our holdings in Nestlé, Estée Lauder (Consumer Staples), Nike (Consumer Discretionary), Alfen (Industrials), SolarEdge, Adobe and the underweight in Nvidia (Information Technology) were the largest detractors.

Overview of investment activities during the reporting period

- We exited several holdings whose competitive position came under pressure. In consumer, we sold HelloFresh, Ulta Beauty and Estée Lauder and in the clean energy sector, we exited SolarEdge and Alfen.
- The proceeds from these sales were reinvested in several new Portfolio holdings that are taking market share from incumbent players as their technological capabilities strengthen their competitive position: Uber (Industrials), Kinsale, Costar (Financials) and Spotify (Communication Services).
- Lastly, we increased the Portfolio's exposure to the semiconductor sector, which is seeing strong growth from the rise of AI. We initiated positions in Nvidia, Broadcom, and TSMC.

Our equity market outlook suggests potential beyond the largest companies in the Index. With anticipated above-trend US growth and controlled inflation, investors may benefit from earnings-driven performance and a broadening out of the market leadership. We believe our Portfolio is well-positioned to benefit from this as it consists of a diversified pool of high-quality, resilient companies whose focus on sustainability reinforces their competitive advantage.

Global Value – Investment Manager's Report

For the 12-month reporting period ended 31 December 2024, the total return for the USD I Accumulating Class was 9.95%. Over the same period, the MSCI All Country World Value Index (Total Return, Net of Tax, USD) (Primary Index) and the MSCI All Country World Index (ACWI) (Total Return, Net of Tax, USD) (Secondary Index), returned 10.76% and 17.49%, respectively. (Performance for all share classes is provided in Appendix II. Performance data quoted represent past performance and do not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any.)

Macroeconomic, market and asset class conditions during the reporting period

- Global equity markets ended 2024 with positive returns with bouts of volatility in the latter half of the year with the sudden unwinding of the Yen carry trade in August followed by political uncertainty in the US and Europe.
- The Information Technology and Communication Services sectors were the best performing sectors overall with AI optimism peaking early in 2024 and stabilising later in the year.
- Fiscal policy across many countries shifted to cutting rates, with the Federal Reserve and European Central Bank signalling rate cuts into 2025.

What affected the Portfolio's performance during the reporting period

- Contributors to relative returns:
 - Overweight in Information Technology and underweight in Materials
 - Security selection in Financials, Information Technology, and Communication Services
 - Security selection in Emerging Markets and the US
- Detractors from relative returns:
 - Underweight in Financials
 - Security selection in Energy, Industrials, and Health Care
 - Security selection in Europe and the UK

Overview of investment activities during the reporting period

- The Portfolio maintained its overweight in Information Technology with the majority of that exposure concentrated in Semiconductor and Hardware industries where we found most Value candidates within the sector.
- The Portfolio continued to be positioned toward lower-duration, profitable stocks. because though rate cuts have begun globally, rates themselves have remained elevated.

We believe the Portfolio is well positioned for the market environment anticipated in 2025. Our stance is that the historic trade-off between interest rates and inflation has returned, and this will help the positioning in our Portfolio that favours attractively priced, profitable companies. In addition, against a backdrop of possible credit tightening and uncertain trade environment, we are of the view that the Portfolio's focus on good capital discipline may also accrue benefit.

High Yield Bond – Investment Manager's Report

For the 12-month reporting period ended 31 December 2024, the total return for the USD I Accumulating Class was 8.02%. Over the same period, the benchmark index, the ICE BofA US High Yield Constrained Index (Total Return, USD) (the Index), returned 8.20%. (Performance for all share classes is provided in Appendix II. Performance data quoted represent past performance and do not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any.)

Macroeconomic, market and asset class conditions during the reporting period

- The high yield bond market finished the reporting period with solid returns driven by resilient economic growth and moderating inflation. Credit spreads broadly tightened over the period, reflecting better than expected economic performance, stable fundamentals and steady demand for credit assets.
- High yield issuers' aggregate fundamentals of Earnings Before Interest, Tax, Depreciation and Amortisation (EBITDA) growth, free cash flow, interest coverage and leverage remained in somewhat favourable ranges.
- While the default rate has risen off the lows in 2022, we anticipate default rates in 2025 to remain in a range that is around the long-term average. This outlook is based on our bottom-up assessment of issuers, and driven by the higher-quality ratings mix in high yield (~50% of issuers with credit ratings of BB), less aggressive new issuance, fewer near-term maturities, as well as an energy sector that is far healthier than in the past few cycles.

What affected the Portfolio's performance during the reporting period

- Contributors to relative returns
 - From a sector perspective, positioning in Telecommunications, Utilities and Packaging contributed the most to performance over the period. From a ratings perspective, positioning in B and BB rated issuers added the most to performance over the period.
- Detractors from relative returns
 - From a sector perspective, positioning in Super Retail, Technology & Electronics and Food, Beverage & Tobacco detracted the most from performance over the period. From a ratings perspective, CCC & below rated issuers detracted the most from performance.

Overview of investment activities during the reporting period

- In our high yield strategies, we rotated selectively into higher quality B's and BB's where prices remained attractive to underlying fundamentals and default expectations were low.
- Positioning in CCC's is where we had a differentiated view of the individual credits based on our proprietary ratings and analyst views on the individual credits. We also focused on swapping within industries and risk cohorts of the market to maximise resilience with pricing power and labor cost trends, where they persisted, and reduced the leverage profile of the Portfolio where possible without locking in losses.
- Our plan was to center the Portfolio primarily around BB and higher-quality B credit risk (based on our internal credit ratings) and overweight sectors that we viewed as resilient in the current environment.

We believe high yield valuations are providing more-than-adequate compensation for the around average default outlook, should continue to provide durable income and are attractive compared to other fixed income alternatives. While the incoming macroeconomic data, future policy uncertainty of the incoming Trump administration, geopolitical concerns and overall credit cycle dynamics can move the high yield market day-to-day, our analysts continue to be focused on the specific fundamentals of individual issuers, with analysts assessing the base and downside cases. We believe our bottom-up, fundamental credit research that focuses on security selection, avoiding credit deterioration, and putting only what we view as our "best ideas" into Portfolios, will position us well to take advantage of any volatility.

InnovAsia – Investment Manager's Report

For the 12-month reporting period ended 31 December 2024, the total return for the USD I Accumulating Class was 9.93%. Over the same period, the benchmark index, the MSCI All Country Asia Index (Total Return, Net of Tax, USD) (the Index), returned 10.63%. (Performance for all share classes is provided in Appendix II. Performance data quoted represent past performance and do not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any.)

Macroeconomic, market and asset class conditions during the reporting period

- Major Asian equity markets ended the year in positive territory as the region's central banks eased monetary policy while an AI boom lifted tech stocks.
- The Taiwan equity market led gains on the back of the market's focus on tech stocks, while Japanese companies benefited from corporate reform and a weak yen. Additionally, China markets rebounded in the third quarter, and Indian markets saw continued inflows.
- South Korea ended the year negative as tariff fears and political turmoil added to uncertainty.

What affected the Portfolio's performance during the reporting period

- Contributors to relative returns:
 - Stock selection in India and South Korea
 - Allocation to Southeast Asia, a beneficiary of supply chain reconfiguration trends
 - Exposure to AI infrastructure winners, including AI servers, high-bandwidth memory, and high-speed networking
- Detractors from relative returns:
 - Underweight to China
 - Japan small-mid cap and growth software

Overview of investment activities during the reporting period

- Increased exposure to AI enablers and beneficiaries on strong demand trends and earnings growth
- Increased Software exposure in the second half of the year on improved sentiment
- Reduced Southeast Asia and South Korea exposure, shifting to Japan, Taiwan, and China

Against a backdrop of lower rates, we believe the case for Asian small-mid cap equity is becoming more attractive. We are constructive on the growth opportunity in Asia especially within advanced semiconductors, structural growth in AI, robust data centre capex, and digital content & lifestyle proliferation.

Japan Equity Engagement – Investment Manager's Report

For the 12-month reporting period ended 31 December 2024, the total return for the JPY I Accumulating Class was 14.93%. Over the same period, the MSCI Japan Small Cap Net Index (Total Return, JPY) (the Index), returned 16.35%. (Performance for all share classes is provided in Appendix II. Performance data quoted represent past performance and do not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any.)

Macroeconomic, market and asset class conditions during the reporting period

- Japanese equities saw a positive first half with benchmark indices hitting all-time highs in July as stabilising inflation and higher wages fueled expectations of the end of Japan's so-called "Lost Decades" era, while corporates led by exporters reported solid earnings on a weaker yen and continued to strengthen shareholder returns.
- Investor sentiment for Japanese stocks dampened after the resignation of the Prime Minister heightened policy uncertainties while the Bank of Japan's (BOJ) interest rate hikes resulted in the unwinding of yen carry positions. That, coupled with lower liquidity, are believed to be catalysts for the historic market crash in early August.
- Japanese small caps underperformed larger-cap peers as investors speculated the weak yen would raise import costs and benefit large-cap exporter earnings while interest rate hikes by the BOJ could dent growth of domestic-focused and higher leveraged smaller-cap firms.

What affected the Portfolio's performance during the reporting period

- Contributors to relative returns:
 - Stock selection in Consumer Discretionary and Consumer Staples as well as our underweight in Materials and overweight in Communication Services
- Detractors from relative returns:
 - Stock selection in Industrials and Financials as well as our underweight in Information Technology.

Overview of investment activities during the reporting period

- We have increased our exposure to Industrials and specifically with respect to specialised construction companies that we believed would see strong topline and profitability growth on the back of continued investments in data centres and related infrastructures.
- On the other hand, we trimmed our positions across Financials and Information Technology on valuations as well as lower earnings growth from weak semiconductor capital investments.
- We continued to engage management of our holding companies on key issues such as balance sheet efficiency and business Portfolio mix, that have yielded positive engagement wins.

We continue to see near-term uncertainties around US and Japanese monetary and fiscal policies as well as geopolitical tensions as key risk factors. That said, we believe the BOJ could gradually normalise monetary policy, which may strengthen the currency, thus potentially alleviating the pressures of imported inflation. That, combined with the possibility of higher wages, could help to support the domestic economy. Additionally, we believe regulators may also look to expand the reform agenda to small and mid-cap companies to boost capital returns. In our view, all of these factors would bode well for a broader rally for Japanese equities.

Macro Opportunities FX* – Investment Manager's Report

For the period from 1 January 2024 until the Portfolio's close on 8 February 2024, the total return for the EUR I Accumulating Class was 1.17%. Over the same period, the benchmark index, the ICE BofA 0-1 Year AAA Euro Government Index (Total Return, EUR) (the Index), returned 0.27%. (Performance data quoted represent past performance and do not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any).

Macroeconomic, market and asset class conditions during the reporting period

- The currency market exhibited low volatility during the period.
- Trading ranges were small.
- The market traded with a high beta to US monetary policy outlook.

What affected the Portfolio's performance during the reporting period

- Contributors to relative returns:
 - Short term and tactical trading opportunities led the positive performance for the period.
- Detractors from relative returns:
 - Longer term factors such as valuation detracted slightly from performance.

Overview of investment activities during the reporting period

- The Portfolio closed on 8 February 2024. We thank you for the opportunity to help you meet your financial needs.

* Portfolio liquidated on 8 February 2024.

Next Generation Connectivity – Investment Manager's Report

For the 12-month reporting period ended 31 December 2024, the total return for the USD I Accumulating Class was 34.80%. Over the same period, the benchmark index, the MSCI All Country World Index (Total Return, Net of Tax, USD) (the Index), returned 17.49%. (Performance for all share classes is provided in Appendix II. Performance data quoted represent past performance and do not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any.)

Macroeconomic, market and asset class conditions during the reporting period

- The economic environment was resilient given robust economic data. Volatility remained elevated on the back of persistent inflation, shifts in market expectations for the Federal Reserve rate cut trajectory, and US Presidential elections.
- The global equity market delivered positive returns, driven by big tech companies amid strong corporate earnings and AI related companies benefiting from rising demand.

What affected the Portfolio's performance during the reporting period

- Contributors to absolute returns:
 - Sector-wise: allocation to Semiconductors and security selection within Technology Hardware & Equipment, Industrials, and Software
 - Region-wise: security selection within Asia, of which Taiwan and Japan exposures were notable
 - Exposure to AI infrastructure winners, including high-performance computing, power/thermal management, and high-speed networking.
- Detractors from absolute returns:
 - Analog/power semiconductor companies amid weak industrial and automotive end markets

Overview of investment activities during the reporting period

- Increased exposure to AI infrastructure companies on strong demand trends and earnings growth.
- Reduced Software exposure early in the year and added in later quarters on improved sentiment.
- Realised profits on outperformers opportunistically on rallies to lock-in returns amid a volatile market environment.

Lower rates are positive for tech equity in general, but macro uncertainty could persist. Volatility remains, so we keep our focus on areas with strong earnings tailwinds and visibility while maintaining our valuation discipline. Next-generation connectivity remains the foundation of current and future technological innovations. We are positive on beneficiaries of the acceleration in AI adoption, a strategic semiconductor industry, and rising digital adoption.

Next Generation Mobility – Investment Manager's Report

For the 12-month reporting period ended 31 December 2024, the total return for the USD I Accumulating Class was -1.63%. Over the same period, the MSCI All Country World Index (Total Return, Net of Tax, USD) (the Index) returned 17.49%. (Performance for all share classes is provided in Appendix II. Performance data quoted represent past performance and do not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any.)

Macroeconomic, market and asset class conditions during the reporting period

- Equity markets demonstrated robust gains over the course of 2024, continuing the upward trajectory seen in the previous year. This positive trend was fueled by a landscape of declining inflationary pressures and reduced recession fears.
- During 2024, large-cap growth equities substantially outshined their small and mid-cap peers. Growth-focused stocks in general benefited from the favorable market environment, with large-cap growth stocks leading the charge. Conversely, value stocks underperformed, illustrating a broader market inclination towards growth equities over value equities throughout the year.

What affected the Portfolio's performance during the reporting period

- Contributors to relative returns:
 - Our overweight exposure to the Information Technology sector and stock selection in the Industrial sector were the largest positive contributors to relative performance. Unallocated sectors such as Healthcare, Consumer Staples, and Energy also had a positive impact.
 - Geographically, our stock selection in Japan contributed the most.
- Detractors from relative returns:
 - Stock selection in the Information Technology and Consumer Discretionary sectors detracted the most.
 - Geographically, both our stock selection in and marginal underweight to the United States and overweight to Korea were the biggest detractors.

Overview of investment activities during the reporting period

- The largest positions added to the Portfolio during the period were Hitachi, Kia, and Contemporary Amperex Technology.
- The largest positions removed from the Portfolio were Caterpillar, Trimble and Analog Devices

Looking ahead to 2025, we anticipate a dynamic macroeconomic landscape as central banks begin to adjust their policies toward an easing environment in response to evolving data aimed at controlling inflation. It is encouraging to observe a slowdown in inflation rates in significant areas such as the United States, suggesting that central banks may have concluded their interest rate hikes. With the recent US elections now concluded, equity markets may continue to experience fluctuations. Despite the economic shifts and political uncertainties, the core fundamentals of the Next Generation Mobility theme remain strong. We anticipate further market expansion and robust growth for autonomous and electric vehicles in the latter part of 2024, bolstered by supportive regional policies and other factors. Our approach continues to emphasise investing in high-quality, fundamentally sound companies that are crucial to and benefit from this lasting trend.

Next Generation Space Economy – Investment Manager's Report

For the 12-month reporting period ended 31 December 2024, the total return for the USD I Accumulating Class was 25.76%. Over the same period, the benchmark index, the MSCI All Country World Index (Total Return, Net of Tax, USD) (the Index) returned 17.49%. (Performance for all share classes is provided in Appendix II. Performance data quoted represent past performance and do not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any.)

Macroeconomic, market and asset class conditions during the reporting period

In 2024, global equities delivered another year of positive returns, with US markets seeing significant growth primarily driven by tech giants. Asian markets also recorded strong gains, underscoring regional economic resilience, while European markets presented a mixed performance, reflecting more subdued economic conditions. Building on trends from 2023, key investment themes centered around the expansive development of AI, focusing on new applications and the technology powering AI advancements. As inflation began to ease, the Federal Reserve (Fed) implemented rate cuts totaling 100 basis points, though they maintained a cautious stance amid ongoing economic uncertainties. Meanwhile, geopolitical tensions continued to escalate, influencing commodity prices and contributing to the strengthening of the US dollar. As the year concluded, investors turned their attention to potential policy shifts under a second Trump administration, particularly regarding global tariffs, tax reforms, and deregulation efforts.

What affected the Portfolio's performance during the reporting period

- Contributors to relative returns:
 - Our overweight to Industrials as well as strong stock selection within the sector aided relative returns with many pure-play space and aerospace and defense companies outperforming during the year.
 - Structural underweight to less thematically relevant sectors (e.g., Health Care, Consumer Staples, Energy) which underperformed the Index during the year.
- Detractors from relative returns:
 - Our stock selection within the semiconductor industry detracted from relative returns which was partially offset by our overweight to the industry.
 - Stock selection within the Communication Services sector was a headwind to relative returns as some non-thematically relevant mega-cap tech names outperformed.

Overview of investment activities during the reporting period

- The Portfolio continues to take a barbell approach between what we believe to be growth and defensive positions. We have used dislocations as opportunities to initiate and scale both fundamentally and thematically relevant positions.
- Increased both the number of securities within the Portfolio and exposure to pure-play investment opportunities addressing the expanding multi-sector opportunity set and helping diversify risk.

The Space Ecosystem has seen significant advances and announcements impacting various industries and nations. The "Space Race 2.0" continues, with the UK planning its first launch in August and the European Space Agency progressing with Ariane 6 as well as India and China making significant developments. Commercial enterprises are expanding their space-based exposure, highlighted by AST Spacemobile partnering with AT&T and Verizon for 100% geographic cellular coverage, CNH exploring satellite connectivity for their tractors and PL announcing plans to put the first NVDA chip into a satellite to leverage AI capabilities. Finally, we continue to see positive developments from SpaceX in terms of launch capabilities from both Falcon and Starship as well as a 3.3x increase in Starlink traffic. Our investment strategy remains focused on strong fundamentals tied to the Space theme, positioning the Portfolio to capitalise on anticipated growth.

Short Duration Emerging Market Debt – Investment Manager's Report

For the 12-month reporting period ended 31 December 2024, the total return for the USD I Accumulating Class was 8.95%. Over the same period, the benchmark index, the ICE BofA 3-Month US Treasury Bill Index (Total Return, USD) (the Index) returned 5.25%. (Performance for all share classes is provided in Appendix II. Performance data quoted represent past performance and do not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any.)

Macroeconomic, market and asset class conditions during the reporting period

- The year 2024 saw a resilient global economy and the start of rate cut cycles by the Federal Reserve, European Central Bank and other major Central Banks. Global bond yields saw some renewed upward pressures during the year as the market assessed risks around the inflation trajectory and fiscal policies.
- Emerging markets (EM) faced some headwinds from a strong US dollar, and from greater uncertainty around US trade policies on the back of the US election outcome. Still, EM hard currency spreads tightened over the year, supported by reform momentum and a trend of credit rating upgrades.

What affected the Portfolio's performance during the reporting period

- Contributors to relative returns:
 - The largest positive contributors to relative performance included sovereign holdings in Argentina, which benefited from important progress in fiscal consolidation and disinflation, followed by Sovereigns in Ukraine and Sri Lanka which successfully concluded external debt restructurings in 2024.
 - Sovereign holdings in El Salvador, Egypt and Ivory Coast, and corporates in Turkey and Colombia.
- Detractors from relative returns:
 - Yield curve positioning as compared to the T-bill benchmark detracted due to the average portfolio duration of around 2.5 years, amid the rise in US Treasury yields over the last year.

Overview of investment activities during the reporting period

- The Portfolio maintained a balanced allocation to EM Corporates and Sovereigns/quasi-sovereigns, and a duration around 2.5 years.
- We added exposure to Latin America, particularly in Panama sovereign bonds where short-end bond valuations look attractive even in the context of a potential rating downgrade, and in Mexico quasi-sovereign bonds which offer an attractive spread premium versus sovereigns. We also participated in different new high grade corporate issuances in the UAE.
- We reduced exposure to Asia, notably in China, amid relatively tight spreads and a somewhat cautious outlook on China amid slowing growth and risks around US trade policies. We also reduced exposure to EUR-denominated bonds in Serbia following substantial tightening in spreads.

The EM debt asset class stands to benefit from a backdrop of steady global growth, easing monetary policy, and a solid growth pickup for emerging vs. developed countries. The change in government in the US presents risks around trade protectionism, especially for some of the more open economies in Asia and Eastern Europe. It also brings more uncertainty regarding the path for US rates ahead, although short duration EM debt should be less sensitive to such risks as compared to the broader EM fixed income market. Overall, credit fundamentals across EM countries have been strengthening, with rating upgrades at decade highs across both corporates and sovereigns. While valuations have become relatively expensive in parts of the asset class, such as in different investment grade credits, we continue to see opportunities for spread compression across various issuers, particularly in the high yield space.

Short Duration Euro Bond – Investment Manager's Report

For the 12-month reporting period ended 31 December 2024, the total return for the EUR I Accumulating Class was 7.37%. Over the same period, the Bloomberg Euro Aggregate Bond 1-3 Year Index (Total Return, EUR) (the Index) returned 3.66%. (Performance for all share classes is provided in Appendix II. Performance data quoted represent past performance and do not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any.)

Macroeconomic, market and asset class conditions during the reporting period

- 2024 market moves were led primarily by stronger-than-expected economic data (notably in the US), mixed inflationary trends —with the US and UK lagging European in making progress, new governments in the UK and US, and continued geopolitical tensions across Russia/Ukraine and Gaza.
- Risk assets performed strongly in fixed income markets over 2024, with European high yield as the top performer whilst global investment grade and emerging market -debt also delivered positive returns.
- European investment grade credit, Sovereign and Securitised markets —which together constitute the majority of the investable universe for the strategy—also posted positive returns.

What affected the Portfolio's performance during the reporting period

- Contributors to relative returns:
 - Credit selection was the key driver in the strong relative returns over the year, notably from our REITs/broader financials exposure, whilst our overweights in both these areas (and credit more broadly) further enhanced the impact of these decisions as spreads tightened and fundamentals across Portfolio positions reported well over the year.
- Detractors from relative returns:
 - The only real detractor from performance was curve positioning, which cost the Portfolio ~45 basis points in relative returns over the year.

Overview of investment activities during the reporting period

- Over the year, we continued to participate in primary market deals, and capitalise on mispricings at both a credit and rates level – both of which contributed meaningfully to positive returns over the year.
- Our credit positions were consistent drivers in returns and we took profit on some of these toward the end of the year.
- Our short positioning from a duration perspective added returns, which we then took off at the end of the third quarter following the pull-back in rate markets. We remained active over the year in this regard.

In our view, 2025 is likely to begin as 2024 ended: rates may be volatile as global inflation proves to be sticky and central bank decisions will be data dependent, appetite for risk is expected to be high, and the overall demand for bonds will be supported by the above-average level of “all in yields” (risk free rates + spreads) available in the market. With spreads near all-time lows, we anticipate volatility and dispersion to increase in 2025, as the new, higher interest rate environment is likely to begin impacting issuer's balance sheets in a negative (and importantly, varying) way. Based on these views, we believe that in 2025 it will be even more important than usual to focus on fundamentally strong issuers/sectors/countries and to avoid issuers with weak financial profiles (e.g. higher leverage, less sustainable cash flows etc.), when current spreads are not wide enough to compensate us for the risk we are taking.

Short Duration High Yield Engagement – Investment Manager's Report

For the 12-month reporting period ended 31 December 2024, the total return for the USD I Accumulating Class was 6.69%. (Performance for all share classes is provided in Appendix II. Performance data quoted represent past performance and do not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any.)

Macroeconomic, market and asset class conditions during the reporting period

- The high yield bond market finished 2024 with solid returns driven by resilient economic growth and moderating inflation. Credit spreads broadly tightened over the period, reflecting better than expected economic performance, stable fundamentals and steady demand for credit assets.
- High yield issuers' aggregate fundamentals of Earnings Before Interest, Tax, Depreciation and Amortisation growth, free cash flow, interest coverage and leverage remained in somewhat favorable ranges and earnings season overall came in better-than-feared.
- While the default rate is up from the lows in 2022, we anticipate default rates in 2025 to remain in a range that is around the long-term average. This outlook is based on our bottom-up assessment of issuers, and driven by the higher-quality ratings mix in high yield (50% of issuers with credit ratings of BB), less aggressive new issuance, fewer near-term maturities, as well as an energy sector that is far healthier than in the past few cycles.

What affected the Portfolio's performance during the reporting period

- Contributors to returns:
 - From a sector perspective, positioning in Telecommunications, Utilities and Media-Cable.
 - From a ratings perspective, positioning in CCC, BB and BBB rated issuers.
- Detractors from returns:
 - From a sector perspective, positioning in Automotive & Auto Parts, Food, Beverage & Tobacco and Diversified Financial Services.
 - From a ratings perspective, the top detractors included positioning in B rated issuers.

Overview of investment activities during the reporting period

- In our high yield strategies, we rotated selectively into higher quality B's and BB's where prices remained attractive to underlying fundamentals and default expectations were low.
- Positioning in CCC's is where we have a differentiated view of the individual credits based on our proprietary ratings and analyst views on the individual credits. We also focused on swapping within industries and risk cohorts of the market to maximise resilience with pricing power and labour cost trends, where they persisted, and reduced the leverage profile of the Portfolio where possible without locking in losses in Portfolios.
- Our plan was to center the Portfolio primarily around BB and higher-quality B credit risk (based on our internal credit ratings) and overweight sectors that we view as resilient in the current environment.

We believe high yield valuations are providing more than adequate compensation for the around average default outlook, will continue to provide durable income and are attractive compared to other fixed income alternatives. While the incoming macroeconomic data, policy uncertainty of Trump 2.0, geopolitical concerns and overall credit cycle dynamics can move the high yield market day-to-day, our analysts and portfolio managers continue to be focused on the specific fundamentals of individual issuers, with analysts assessing the base and downside cases. We believe our bottom-up, fundamental credit research that focuses on security selection, avoiding credit deterioration, and putting only what we view as our "best ideas" into Portfolios, will position us well to take advantage of any volatility.

Strategic Income – Investment Manager's Report

For the 12-month reporting period ended 31 December 2024, the total return for the USD I Accumulating Class was 5.16%. Over the same period, the benchmark index, the Bloomberg US Aggregate Bond Index (Total Return, USD), returned 1.25%. (Performance for all share classes is provided in Appendix II. Performance data quoted represent past performance and do not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any.)

Macroeconomic, market and asset class conditions during the reporting period

- As inflation moderated closer to the Federal Reserve (Fed) 2% target, the hiking cycle was put on pause until September when the Fed cut rates by 50 basis points (bps). Then the Fed cut rates by 25bps each in November and December. Other major central banks also cut policy rates in 2024 as growth slowed and inflation came down.
- There were some pockets of interest rate and market volatility throughout the year and particularly in the fourth quarter. In December, with the Fed's hawkish rate cut and uncertainty around future policy shifts from Trump 2.0, the market increasingly priced a moderation in future rate cuts and US government yields moved higher across the curve in the final month of the year. For the full year, 10-year developed market sovereign yields also moved higher across the board.
- Credit spreads broadly tightened over the period, reflecting better than expected economic performance, stable fundamentals and steady demand for credit assets. US investment grade (IG), US high yield and US floating rate loan credit spreads tightened by 19bps, 47bps and 66bps, respectively. Global aggregate corporate spreads also tightened by 26bps.

What affected the Portfolio's performance during the reporting period

- Contributors to relative returns:
 - Allocations to US and European high yield, securitised credit, agency MBS, senior floating rate loans, collateralised loan obligations (CLO) and emerging markets (EM) debt.
 - Security selection in IG credit added to performance but was somewhat offset by the detractor from the underweight to that sector.
 - The Portfolio's duration underweight
- Detractors from relative returns:
 - Underweight exposure to IG credit
 - Allocation to local currency EM debt

Overview of investment activities during the reporting period

- In terms of positioning adjustments, we reduced exposure to EM debt, nominal US Treasuries and IG credit.
- We increased exposure to agency MBS, securitised credit, floating rate bank loans, high yield and CLO.
- We increased the Portfolio's duration by 0.63 years at the headline level.

With inflation trends improving and central banks' interest rate cuts either on pause or more moderate in 2025, we believe that economic growth outcomes will become increasingly important drivers of fixed income returns. We anticipate that the bifurcation in credit markets favouring quality will persist. Overall, we believe that 2025 could be a rewarding time for global bond investors that focus on fundamentals and selectivity in building Portfolios.

Sustainable Asia High Yield – Investment Manager's Report

For the 12-month reporting period ended 31 December 2024, the total return for the USD I Accumulating Class was 13.87%. Over the same period, the benchmark index, the JP Morgan ESG Asia Credit (JSEC JACI) – High Yield Index (Total Return, USD) (the Index), returned 15.49%. (Performance for all share classes is provided in Appendix II. Performance data quoted represent past performance and do not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any.)

Macroeconomic, market and asset class conditions during the reporting period

- In 2024, Asia credit bonds delivered a robust positive performance, driven by a conducive macroeconomic environment. The commencement of the Federal Reserve's easing cycle, resilient global growth and strong fundamentals within the Asian markets, coupled with supportive technical factors, led to a material tightening of credit spreads over the year. Several special situations, such as the successful restructuring of bonds issued by Sri Lanka government and a strong performance in the Metals and Mining sector in India added to the total returns for the Portfolio.

What affected the Portfolio's performance during the reporting period

- Contributors to relative returns:
 - On the back of India's resilient macroeconomic environment, our overweight in India resulted in allocation outperformance, which was further enhanced by strong performance of Vedanta bonds.
 - Sri Lanka made good progress towards restructuring efforts, which positively impacted our overweight positions in Sri Lanka bonds.
 - Our underweight in Philippines due to demanding valuation provided relative allocation contribution to the portfolio.
- Detractors from relative returns:
 - Our underweight in China Real Estate sector in the early part of the year detracted from relative returns.
 - Our exposure in defensive investment grade names detracted amidst a broader risk-on sentiment in the market.

Overview of investment activities during the reporting period

- We maintained an overweight position in Sri Lanka and Macau. In Sri Lanka, we remained constructive on the economic turnaround, while in Macau, we were attracted to the gaming sector's medium-term deleveraging prospects, which offered appealing spread levels.
- We started the year conservatively positioned, but incrementally added risk over the second and third quarters of 2024 given the constructive macro backdrop and improving fundamentals in Asia credits. In the fourth quarter, we took some profits given the policy uncertainties from the incoming US Administration.

In our view, Asian emerging markets debt remains a compelling investment opportunity underpinned by improving credit quality across the market, as well as having a tailwind of limited net issuances and higher all-in yield. Going into 2025, we maintain a tactical cautious stance given the weakness in China growth and the likely rise in geopolitical / trade uncertainties in the near term; however, we believe Asian entities are well positioned to ride out the short-term volatility and would look to take advantage of the opportunities that will arise.

Sustainable Emerging Market Debt - Hard Currency – Investment Manager's Report

For the 12-month reporting period ended 31 December 2024, the total return for the USD I Accumulating Class was 10.35%. Over the same period, the benchmark index, the JP Morgan ESG EMBI Global Diversified Index (Total Return, USD) (the Index), returned 5.75%. (Performance for all share classes is provided in Appendix II. Performance data quoted represent past performance and do not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any).

Macroeconomic, market and asset class conditions during the reporting period

- In 2024, US inflation and monetary policy were the key drivers of the bond market. The US 10-year bond yield rose from 3.9% to finish the year at 4.6%, with significant volatility in between.
- Geopolitical events also affected the market, especially in April when Middle East tensions escalated. October saw market stress due to inflation and fiscal policy concerns amid a potential Republican wave, but a market rally followed the election, driven by expectations of deregulation and growth-friendly policies. Markets stumbled in December as the Federal Reserve took a more hawkish stance despite cutting rates, while US exceptionalism pushed the US dollar to its strongest annual close since 2001.

What affected the Portfolio's performance during the reporting period

- Contributors to relative returns:
 - Country allocation, driven by overweight allocations to higher yielding markets, particularly Argentina, El Salvador, Sri Lanka, and Ukraine.
 - Security selection via euro-denominated bonds in Romania and Peru.
- Detractors from relative returns:
 - Absence from Egypt and underweight in Ecuador due to the Portfolio's responsible and transition policies.
 - Overweight allocation to Colombia, which faced political and fiscal challenges.

Overview of investment activities during the reporting period

- The Portfolio maintained a high yield bias over investment grade (IG) credits, and targeted full allocation to sustainable investments.
- Recent trading focused on reducing risk following strong asset class performance. We reduced overweights in Argentina, Mexico, and Morocco. Additionally, we reduced our positions in Romania on supply and fiscal risks ahead of elections and sold out of Uzbekistan and Jordan.
- We added to exposures in Costa Rica, El Salvador, and Ivory Coast, due to positive reform outlooks. We also added to corporates in Chile, Hong Kong, India, Mexico and Turkey, and green bonds in Indonesia and Istanbul Metropolitan Municipality in line with the Portfolio's sustainability framework.
- Allocation to EUR-denominated bonds and corporate bonds was 28.2% and 8.7%, respectively at the end of the reporting period.

The emerging markets (EM) debt asset class is set to benefit from steady global growth, easing monetary policies, and stronger growth prospects for EM. However, the US government's policy changes pose risks of trade protectionism and create uncertainty around US rates. Despite these challenges, EM credit fundamentals are improving, with rating upgrades at a decade high for corporates and sovereigns. While valuations for IG and BB-rated components appear expensive, in our view, B-rated and lower-rated segments still offer value. Opportunities exist for spread compression, particularly in specific issuers and off-benchmark bonds within the BB-rated segment.

Tactical Macro – Investment Manager's Report

For the 12-month reporting period ended 31 December 2024, the total return for the USD I Accumulating Class was 4.31%. Over the same period, the ICE BofA US Dollar 3-Month Deposit Offered Rate Constant Maturity Index (Total Return, USD) (the Index) returned 5.47%. (Performance for all share classes is provided in Appendix II. Performance data quoted represent past performance and do not indicate future results. (Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any).

Macroeconomic, market and asset class conditions during the reporting period

- Global stocks and bonds experienced another strong year in 2024, surprising many investors who anticipated challenges from economic tightening. The robust performance of risk assets was driven by continued strength in developed markets, with notable contributions from key emerging economies.
- Central banks began normalising policy throughout the year, but resilient growth and persistent inflation led to a cautious approach regarding interest rate adjustments. This environment, coupled with optimism following political developments, supported various sectors, including technology and financials.
- Investors navigated a dynamic economic and investment landscape, marked by a strong US dollar and rising yields. Despite widening regional divergence in economic growth, corporate earnings broadly remained resilient, supported by strength in the consumer and labour market, while optimism about technological advancements contributed to positive market sentiment.

What affected the Portfolio's performance during the reporting period

- Contributors to absolute returns:
 - The largest contributors to the total Portfolio return excluding cash were short 10-year US Treasuries, short the USD vs. JPY, and short the EUR vs. JPY.
- Detractors from absolute returns:
 - The largest detractors from total Portfolio return were long US defensives vs. cyclicals equity baskets, short the EUR vs. JPY, and short the 3-Month SOFR.

Overview of investment activities during the reporting period

- In Q1 2024, the Portfolio navigated macroeconomic volatility, profiting from long positions in Japanese equities and Nasdaq, but faced challenges with forex positions against the euro and yen.
- In Q2 2024, geopolitical tensions and market sentiment were key, benefiting from long two-year US Treasury positions over German bunds. Political developments led to a cautious outlook on stagflation.
- In Q3 2024, the Portfolio capitalised on market volatility from economic data and policy changes, with gains from short US cyclicals, long SPX put options, and positions in gold and short USD/JPY.
- In Q4 2024, the largest gains came from a short 10-year US Treasury position amid rate re-pricing. The Portfolio also managed geopolitical uncertainties with strategic option positions related to China, equities, and FX, while spotting short-term mispricing opportunities.

As we enter 2025, the Portfolio must stay alert to various potential outcomes. The recent tightening cycle has unique traits, and despite market resilience, challenges are emerging. The rising US dollar and 10-year yields, along with geopolitical uncertainties, hint at a turbulent path. Current fiscal and monetary dynamics may fragment the economic landscape, requiring caution. We'll focus on identifying short-term mispricing opportunities amid persistent volatility. Our strategy includes positioning for potential back-end yield increases due to fiscal imbalances and global trade dynamics. We foresee re-evaluating positions with potential policy shifts and the evolving geopolitical climate. While acknowledging a potential liquidity-driven rally, we are aware of market outcome divergences, especially between soft landing and stagflation scenarios. This outlook supports engaging in US equity shorts versus Japanese equities and considering long positions in US Treasuries if supply concerns drive yield backups. We anticipate 2025 will have heightened uncertainty and volatility, necessitating a dynamic investment approach to navigate the complex global macroeconomic environment.

Uncorrelated Strategies – Investment Manager's Report

For the 12-month reporting period ended 31 December 2024, the total return for the USD I Accumulating Class was 6.69%. Over the same period, the benchmark index, the ICE BofA US Dollar 3-Month Deposit Offered Rate Constant Maturity Index (Total Return, USD) (the Index) returned 5.47%. (Performance for all share classes is provided in Appendix II. Performance data quoted represent past performance and do not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any.)

Macroeconomic, market and asset class conditions during the reporting period

- 2024 was another risk on period, although there were episodic periods of volatility in August and around the US elections, as well as market moves driven by expectations for interest rate cuts, numerous global elections and continued conflict in the Middle East. Despite narrow leadership of equity markets in the US, stock indices performed extremely strong, as continued AI enthusiasm powered stocks higher. Bond markets were more rangebound as market participants discounted varying degrees of interest rate cuts subject to inflation data releases and policy expectations following the re-election of Donald Trump.
- The MSCI World Index finished the year up approximately 19%, while the Bloomberg Global Aggregate was down approximately 1.7%. The US dollar (as proxied by the DXY Index) rallied strongly in the second half of the year, finishing up roughly 5.9%, as higher US yields were supportive for the currency.
- The second half of the year saw implied equity volatility on average 24% higher than the first half (measured using the VIX Index) and implied currency volatility 15% higher (using EURUSD 1-month implied volatility as a proxy). This enabled two strong quarters and a meaningful recovery from what had been a more challenging period for the Portfolio.

What affected the Portfolio's performance during the reporting period

- Contributors to absolute returns:
 - Short Term Trading (+2.93%), Global Macro (+2.53%), Equity Market Neutral (+1.95%), Insurance-Linked Securities (+1.15%) and Volatility Relative Value (+0.71%)
- Detractors from absolute returns:
 - Trend Following (-1.51%) and Statistical Arbitrage (-1.11%)

Overview of investment activities during the reporting period

- The risk within the G10/Manteio allocation was scaled back up in January and diversifying strategies were added to the account in the first half of the year.
- The smaller allocation within Statistical Arbitrage relating to Cipher (around 4.6% of Portfolio risk) was closed in May due to a re-orientation of Cipher's overall business model.
- Within discretionary macro, exposure was added to DG Partners towards the end of the first quarter, complementing the existing systematic strategy run by DG Partners (BH-DG) within the Trend Following sleeve. Offsetting this, risk in the Soloda account was reduced in March.

The team believes that there is a valid case to expect some continued active movement in markets, rather than a reversion to the monotony of prior compressed periods, especially when considering the vast array of macro and geopolitical drivers evident today. Given the difficulties of forecasting market turns and the performance of any individual strategy performance into the next quarter, the team continues to maintain a diversified book of trading strategies with a very differentiated profile compared to traditional risk assets or a "60/40" Portfolio.

US Equity – Investment Manager's Report

For the 12-month reporting period ended 31 December 2024, the total return for the USD I Accumulating Class was 23.72%. Over the same period, the benchmark index, the S&P 500 Index (Total Return, Net of Tax, USD) (the Index) returned 24.50%. (Performance for all share classes is provided in Appendix II. Performance data quoted represent past performance and do not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any.)

Macroeconomic, market and asset class conditions during the reporting period

- The overall equity market rallied sharply during the year. The market was led by technology/growth stocks, partially fueled by AI-related stocks. For the year, large-cap growth stocks outperformed large-cap value stocks. Economic growth in the US remained resilient, triggering hopes for an economic soft landing. Inflation moderated but remained higher than the Federal Reserve's (Fed) 2% target. After lowering interest rates at its last three meetings of the year, in December the central bank scaled back its expectations for rate cuts in 2025.

What affected the Portfolio's performance during the reporting period

- Contributors to relative returns:
 - Overall sector allocation, in particular, an overweight allocation to Information Technology and an underweight to Health Care, were the most additive.
 - Stock selection in the Consumer Staples and Health Care sectors contributed the most.
 - Individual stocks that contributed to performance included NVIDIA Corp., Amazon.com, Inc., Meta Platforms, Inc. Class A, Broadcom, Inc. and Alphabet, Inc. Class A
- Detractors from relative returns:
 - Overall stock selection, particularly holdings in the Information Technology and Industrials sectors, detracted the most.
 - In terms of sector allocation, an underweight in Financials and a small cash position were the largest detractors.
 - Individual stocks that were negative for the Portfolio's performance included Dollar Tree, Inc., NIKE, Inc. Class B, Adobe, Inc., Advanced Micro Devices, Inc. and CDW Corp.

Overview of investment activities during the reporting period

- We made a number of adjustments on the margin throughout the reporting period. At the end of the reporting period our largest overweight allocations relative to the benchmark were Information Technology and Consumer Discretionary. In contrast, the largest sector underweights were Financials and Health Care.

The economy has been more resilient than many expected. Yet, a softer macro environment as well as political and geopolitical volatility is weighing on parts of the consumer. In addition, further signs of a softening job market offer a clear indication that the Fed's tightening cycle is having an impact on the broader economy. At the same time, policy uncertainty around tariffs and immigration proposals under the Trump administration have created some fears of renewed inflation. Against this backdrop, the Fed now anticipates only two rate cuts in 2025. Until we have more clarity on the path of the economy versus inflation and how that translates into actual rate cuts versus expectations, we anticipate continued market volatility. Furthermore, global geopolitical tensions remain ever-present and rising, while global political uncertainty may escalate with new policies under the Trump administration. So, in the current environment, we believe the divergence in underlying companies' operating performance will be ever more apparent going forward.

US Equity Premium – Investment Manager's Report

For the 12-month reporting period ended 31 December 2024, the total return for the USD I Accumulating Class was 13.15%. Over the same period, the blended benchmark comprised of 50% Cboe S&P 500 One-Week PutWrite Index and 50% Cboe S&P 500 PutWrite Index (collectively, the Index) returned 13.27%. (Performance for all share classes is provided in Appendix II. Performance data quoted represent past performance and do not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any.)

Macroeconomic, market and asset class conditions during the reporting period

- In 2024, the US presidential election impacted investor sentiment, but despite a December drop of 2.38% in the S&P 500 Index, the quarter ended with a 2.41% gain due to a strong November 'election relief' rally. Optimism about potential deregulation and tax cuts under the incoming administration led to a 2024 gain of 25.02%.
- Fixed income markets faced volatility from geopolitical events, central bank actions, and inflation pressures, as the Federal Reserve cut rates by 1%. High yield bonds outperformed investment-grade bonds, with 12-month returns of 8.19% for the Bloomberg Corporate High Yield Bond Index versus 1.25% for the Bloomberg US Aggregate Bond Index.
- Market volatility increased in 2024, particularly towards the year's end, as the Cboe Volatility Index (VIX) averaged 15.56 with a volatility premium of 3.06.

What affected the Portfolio's performance during the reporting period

- Contributors to relative returns:
 - For 2024, the S&P 500 options sleeve added an impressive 9.63%, complemented by a 4.32% contribution from the collateral Portfolio.
- Detractors from relative returns:
 - There were no detractors from relative returns during the reporting period.

Overview of investment activities during the reporting period

- The Portfolio's average option notional exposure over the period remained consistent with strategic target of 100% S&P 500 Index.

In our view, most equity managers, especially value-focused ones, generally prefer markets to trade on 'fundamentals'. We believe global economies are returning to the competitive, less predictable personalities of the past. Corporate managers may have to compete for resources, pay to borrow, navigate contentious geopolitics, and maintain shareholder and employee satisfaction in the new era of ESG and Diversity, Equity and Inclusion (DEI) investing. In our view, this future outlook seems more challenging than the past decade's relatively easy conditions. Our optimism for our strategies is not based on expectations for higher option implied volatility levels, but on the S&P 500 Index rejoining the mortal world of public investment indexes. Lower or more 'normal' US equity market returns could highlight the value of higher risk-adjusted strategies. Investors often see non-public or -private US equity as mere risk reducers. However, we believe structurally diversified strategies may pleasantly surprise investors over the next several years as long-term equity market returns, the S&P 500 in particular, revert to their long-term trends.

US Large Cap Value – Investment Manager's Report

For the 12-month reporting period ended 31 December 2024, the total return for the USD I Accumulating Class was 10.39%. Over the same period, the benchmark index, the Russell 1000 Value Index (Total Return, Net of Tax, USD) (the Index) returned 13.65%. (Performance for all share classes is provided in Appendix II. Performance data quoted represent past performance and do not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any.)

Macroeconomic, market and asset class conditions during the reporting period

- The overall equity market rallied sharply during the year. The market was led by technology/growth stocks, partially fueled by artificial intelligence related stocks. For the year, large-cap growth stocks significantly outperformed large-cap value stocks.
- Economic growth in the US remained resilient, triggering hopes for an economic soft landing.
- Inflation moderated but remained higher than the Federal Reserve's (Fed) 2% target. After lowering interest rates at its last three meetings of the year, in December the central bank scaled back its expectations for rate cuts in 2025.

What affected the Portfolio's performance during the reporting period

- Contributors to relative returns:
 - In terms of stock selection, holdings in the Consumer Staples, Information Technology and Materials sectors were the largest contributors to relative returns.
 - Individual stocks that contributed the most to relative performance included overweight positions in Walmart, Inc. and Agnico Eagle Mines Limited, as well as the exclusion of holdings in Intel Corp.
 - From a sector positioning perspective, an overweight to Utilities, coupled with underweights to Consumer Discretionary and Real Estate, were the largest contributors to relative performance.
- Detractors from relative returns:
 - Sector allocation, overall, detracted from relative performance. In particular, overweights to Materials and Health Care were the largest detractors.
 - Stock selection, overall, also detracted from relative performance. Holdings in the Health Care, Utilities and Industrials sectors were the largest headwinds for returns.
 - Individual stocks that detracted the most from relative performance included a position in Rio Tinto Plc., along with overweight positions in Freeport-McMoRan, Inc. and Johnson & Johnson.

Overview of investment activities during the reporting period

- While the Portfolio's sector positioning is driven by bottom-up stock selection, at the end of the reporting period its largest overweight allocations versus the Index were Utilities and Materials.
- In contrast, the Portfolio's largest sector underweights relative to the Index were Industrials and Information Technology.

Looking ahead, in our view, we see a balance of risks, with continued better economic data on one side and markets being expensive and heavily concentrated on the other. There is a concern that there may be higher volatility in the coming year with uncertainty around both equity and fixed income markets. We have witnessed post-election higher levels of volatility already in markets. As we enter 2025, we anticipate a more data-dependent and cautious Fed, and we expect heightened market volatility during this period. Given these conditions of economic uncertainty, value stocks could outperform in the near future. We believe while risks remain, the market is ripe with possibilities for those prepared to navigate the evolving economic landscape with a strategic, long-term perspective. We are poised to capitalise on these opportunities as they arise. We appreciate your trust and partnership in us and look forward to continuing our partnership with you.

US Long Short Equity – Investment Manager's Report

For the 12-month reporting period ended 31 December 2024, the total return for the USD I Accumulating Class was 6.47%. Over the same period, the two benchmark indices, the S&P 500 Index (Total Return, Net of Tax, USD) and the HFRX Equity Hedge Index (Total Return, USD) returned 24.50% and 7.83%, respectively. (Performance for all share classes is provided in Appendix II. Performance data quoted represent past performance and do not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any.)

Macroeconomic, market and asset class conditions during the reporting period

- The overall equity market rallied sharply during the year. The market was led by technology/growth stocks, partially fueled by AI-related stocks. For the year, large-cap growth stocks outperformed large-cap value stocks. Economic growth in the US remained resilient, triggering hopes for an economic soft landing. Inflation moderated, but remained higher than the Federal Reserve's (Fed) 2% target. After lowering interest rates at its last three meetings of the year, in December the central bank scaled back its expectations for rate cuts in 2025.

What affected the Portfolio's performance during the reporting period

- Contributors to relative returns:
 - Equity short positions, overall, were beneficial. In particular, longs in the Consumer Staples and Consumer Discretionary sectors contributed to performance.
 - Equity long positions in the Health Care and Energy sectors added the most value.
- Detractors from relative returns:
 - Equity long positions, overall, detracted from returns. In particular, longs in the Information Technology and Industrials sectors negatively impacted performance.
 - Equity short positions in the Information Technology sector were a headwind for returns.

Overview of investment activities during the reporting period

- During the period, net portfolio exposure decreased incrementally to approximately 40-45% net long, while gross notional exposure decreased to approximately 125-130%.
- Total Fundamental Short exposure decreased during the period, led by a decline in shorts in the Information Technology, Communication Services and Consumer Staples sectors.
- Market Short exposure related to hedging activity increased during the period.

The economy has been more resilient than many expected. Yet, a softer macro environment as well as political and geopolitical volatility is weighing on parts of the consumer. In addition, further signs of a softening job market offer a clear indication that the Fed's tightening cycle is having an impact on the broader economy. At the same time, policy uncertainty around tariffs and immigration proposals under the Trump administration have created some fears of renewed inflation. Against this backdrop, the Fed now anticipates only two rate cuts in 2025. Until we have more clarity on the path of the economy versus inflation and how that translates into actual rate cuts versus expectations, we anticipate continued market volatility. Furthermore, global geopolitical tensions remain ever-present and rising, while global political uncertainty may escalate with new policies under the Trump administration. So, in the current environment, we believe the divergence in underlying companies' operating performance will be ever more apparent going forward.

US Multi Cap Opportunities – Investment Manager's Report

For the 12-month reporting period ended 31 December 2024, the total return for the USD I Accumulating Class was 20.68%. Over the same period, the S&P 500 Index (Total Return, Net of Tax, USD) (the Index) returned 24.50%. (Performance for all share classes is provided in Appendix II. Performance data quoted represent past performance and do not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any.)

Macroeconomic, market and asset class conditions during the reporting period

- In 2024, US equities realised strong returns. Investor sentiment for equities was supported by continued economic and corporate earnings growth, the prospect of normalising interest rates, and the outcome of the US election.
- The US Federal Open Market Committee lowered the range of its benchmark interest rate by 100 basis points over the course of the third and fourth quarters.
- In November, the US election resulted in Donald Trump winning the United States presidency, and the Republican Party gaining control of both the Senate and House of Representatives. The incoming US administration has indicated that it will pursue a pro-business policy agenda focusing on growing the US economy. Shifts in policy, such as the potential for increased trade tariffs, may also present risk.
- While equity market returns were broadly positive, the outperformance by select large cap growth and IT oriented stocks resulted in elevated market concentration and narrow market breadth. For the period, the S&P 500 Index outperformed the S&P 500 Equal Weight Index by approximately 1,200 basis points.

What affected the Portfolio's performance during the reporting period

- Contributors to relative total returns:
 - Positive stock selection within the Consumer Staples, Energy, Financials, Health Care, and Materials sectors
 - An overweight to Consumer Discretionary and Financials, underweights to Energy and Health Care, and a zero exposure to the Real Estate sector
 - Market breadth improved from the end of June through November during which overall market performance became less concentrated. This benefitted the Portfolio's multi cap approach and fundamentally driven investment process. From 30 June through 30 November, the Portfolio returned 15.07%, outperforming its benchmark by 417 basis points.
- Detractors from relative total returns:
 - Underweights to select large-cap growth stocks and the IT sector
 - An overweight to the Materials sector and stock selection within Industrials also detracted

Overview of investment activities during the reporting period

- The Portfolio finished the period overweight Financials, Industrials, and Materials, and underweight Health Care and IT, and had no exposure to Real Estate.

We believe the outlook for US equities and our investment strategy is favourable. Both economic activity and corporate earnings are expected to grow. This is supported by a combination of pro-growth US government policy initiatives, healthy US consumer spending, a robust labour market, technological innovation, and stabilising inflation. We believe an improvement in market breadth (less market concentration) is beneficial for the Portfolio's diversified exposure to US equities across market capitalisations and investment styles. Additionally, interest rate levels and the slope of the yield curve will likely be influenced by the level of inflation, the underlying health of the economy, and the progression of the US federal deficit. We believe that our free cash flow focused strategy is poised to benefit clients in an environment characterised by evolving interest rates.

US Real Estate Securities – Investment Manager's Report

For the 12-month reporting period ended 31 December 2024, the total return for the USD I Accumulating Class was 4.06%. Over the same period, the benchmark index, the FTSE Nareit All Equity REITs Index (Total Return, Net of Tax, USD) (the Index) returned 3.66%. (Performance for all share classes is provided in Appendix II. Performance data quoted represent past performance and do not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any.)

Macroeconomic, market and asset class conditions during the reporting period

- Equity markets remained resilient despite volatility from geopolitical tensions, with mega-cap growth stocks outperforming due to AI optimism. Gains were tempered by concerns over capital requirements and supply chain issues.
- Persistent inflation could keep interest rates high, impacting future economic growth. The Federal Reserve's late-year rate cuts, with fewer expected in 2025, indicate a response to higher growth and inflation forecasts. This climate, with anticipated growth and moderate inflation, is generally favourable for REITs amid post-election investor optimism.
- All told, the S&P 500 Index returned 24.50% during the reporting period. In contrast, the Index (Net of Tax) returned 3.66%. Real estate securities were negatively impacted by interest rate volatility.

What affected the Portfolio's performance during the reporting period

- Contributors to relative returns:
 - Security selection within Health Care
 - Security Selection within Apartments
 - Underweights to Industrial and Lodging/Resorts
- Detractors from relative returns:
 - Security selection within Office
 - Security selection within Shopping Centers
 - Underweight to Data Centers and an overweight to Telecommunication REITs

Overview of investment activities during the reporting period

- While the Portfolio's sector positioning is mainly driven by bottom-up stock selection, at the end of the reporting period its largest overweight allocations versus the Index were to Manufactured Homes and Regional Malls. In contrast, the Portfolio's largest sector underweights relative to the Index were to the Diversified and Industrial sectors.

2024 proved to be a challenging year for REITs, largely due to elevated interest rate volatility. However, with more stable interest rates expected in comparison to the last two years, and an anticipated acceleration in earnings growth, REITs are well-positioned as we start 2025. Durable rent growth themes including the aging population (senior housing and manufactured housing), onshoring of manufacturing (industrial), generative AI (data centers), and strong consumer demand (retail) remain strategically poised. Additionally, supply pressures are easing across various sectors including sunbelt apartments, storage and industrials. Limited new construction activity, and possibly better external growth should benefit REITs with solid balance sheets and good liquidity. We anticipate continued volatility driven by an evolving macro environment, changing interest rate expectations, geopolitical risks, and uncertainty around the incoming administration's economic and fiscal policy. Improved credit spreads, offsetting higher base rates, have lowered the cost of capital and may open the real estate transaction market. Our focus remains on REITs with low leverage, diverse demand drivers, superior fundamentals compared to peers, and clear visibility into earnings profiles. In our view, experienced REITs with good performance and robust balance sheets should be able to cement their market leadership positions.

US Small Cap – Investment Manager's Report

For the 12-month reporting period ended 31 December 2024, the total return for the USD I Accumulating Class was 8.76%. Over the same period, the benchmark index, the Russell 2000 Index (Total Return, Net of Tax, USD) (the Index) returned 11.11%. (Performance for all share classes is provided in Appendix II. Performance data quoted represent past performance and do not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any.)

Macroeconomic, market and asset class conditions during the reporting period

- Despite periods of volatility, the overall equity market rallied sharply during the year. Resilient economic growth, moderating inflation, three Federal Reserve (Fed) rate cuts, and optimism over President-elect Donald Trump's pro-growth platform supported the market. Historically, small-cap stocks have tended to benefit from a growing economy and lower interest rates. However, small-cap equities experienced a selloff in December, as the Fed pared back its expectation for rate cuts in 2025. Smaller companies tend to have more financial leverage and fewer rate cuts could impact their cost of servicing debt.

What affected the Portfolio's performance during the reporting period

- Contributors to relative returns:
 - Stock selection in the Energy and Financials sectors. Within Energy, our Oil, Gas & Consumable Fuel names added the most value. Within Financials, many of our Bank names outperformed.
 - An overweight to Technology and underweight to the Biotechnology industry was beneficial.
 - Individual stocks that contributed included Fair Isaac Corp., CSW Industrials, Inc. and Commvault Systems, Inc.
- Detractors from relative returns:
 - Stock selection in the Information Technology and Consumer Discretionary sectors. Within Information Technology, our names in the Semiconductor & Semiconductor Equipment industry were headwinds for returns. Within Consumer Discretionary, holdings in Specialty Retail underperformed.
 - The Portfolio's underweights to Financials and Energy were drags on relative performance.
 - Individual stocks that were negative included Qualys, Inc., Fox Factory Holding Corp. and Power Integrations, Inc.

Overview of investment activities during the reporting period

- At the end of the reporting period our largest sector overweights were Industrials and Information Technology, and the largest underweights were Health Care and Financials.

Recent economic data and commentary from the Fed suggest the pace and depth of the current cutting cycle will be slower and not as deep as most market participants would have thought a few months ago. As such, markets continue to be highly sensitive to Fed commentary and economic indicators, with increased uncertainty surrounding future monetary policy actions creating volatility in markets. We remain confident that our high-quality portfolio of businesses, characterised by attractive financial characteristics, differentiated and durable business models, and sustainable earnings growth, is well-positioned to weather these uncertain times and deliver above-average, risk-adjusted returns. We believe we are in the early innings of the re-industrialisation of America. In addition, the new administration seems to be pro-US, pro-growth and pro-business. These together should drive meaningful economic activity inside the US which tends to benefit small companies, as they generate most of their revenues domestically.

US Small Cap Intrinsic Value – Investment Manager's Report

For the 12-month reporting period ended 31 December 2024, the total return for the USD I Accumulating Class was 7.72%. Over the same period, the benchmark index, the Russell 2000 Value Index (Total Return, Net of Tax, USD) (the Index) returned 7.40%. (Performance for all share classes is provided in Appendix II. Performance data quoted represent past performance and do not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any.)

Macroeconomic, market and asset class conditions during the reporting period

- 2024 was a crazy, volatile year marked by abrupt shifts in sentiment and investor preferences for stocks, sectors and themes. With varying levels of conviction during the year, investors focused on artificial intelligence (AI) winners, interest rate beneficiaries like home builders and banks, small market capitalisation, domestically focused companies, quality companies and momentum stocks. They showed little interest in and in some instances aggressively shorted businesses with products perceived as vulnerable to advances in AI, levered companies, value stocks with no momentum, tweeners (companies without compelling factor attributes) and health care companies.
- As we look back on the year, here's what surprised us and what did not.
 - Surprises in 2024
 - The benign effect the election had on our relative performance, particularly after what happened in 2016.
 - The impact DOGE and RFK Jr. had on defense, health care and consumer staples companies.
 - The muted price impacts that continued geopolitical turmoil had on commodity prices.
 - The risk of being an investor in a public company controlled by private equity sponsors.
 - Not Surprising in 2024
 - The fourth quarter reversal of interest rate beneficiaries.
 - The growing realisation that inflation would remain sticky.
 - Firm labour markets and a resilient economy.
 - Continued outperformance of large cap growth stocks.

What affected the Portfolio's performance during the reporting period

- Contributors to total returns:
 - Looking at our best performing stocks, we can see strong positive contribution from the AI/data center theme.
 - Attribution by sector relative to the Index also reflects the positive impact from the AI/data center theme.
 - Sectors positively contributing to relative returns include Utilities, driven by data center demand for power and Information Technology.
- Detractors from total returns:
 - Our worst performing stocks illustrate some of the surprises at work.
 - Attribution by sector relative to the Index reflects the negative impact of Health care combined with an underweight in interest rate beneficiaries (Financials).

Overview of investment activities during the reporting period

- We are invested in many undervalued companies where a small positive change in fundamentals can drive meaningful share price improvement. But we also remain invested, though to a lesser degree, in our 2024 winners. The combination of stocks that have worked, together with many that have yet to perform, resulted in a discount to Intrinsic Value of 32 percent. Looking back at prior periods with a similar discount to Intrinsic Value we can see the possibility for encouraging absolute and relative forward returns.
- While long-term returns remain attractive, the last three years have been a struggle. Part of the explanation lies somewhere in the camp of "mean reversion" but with hindsight maybe we should have pivoted more adroitly between sectors. We suspect the extreme patience we show with investments together with our sector biases discourages more tactical trading. We do however continue to find compelling ideas to refresh the Portfolio with the goal of enhancing the risk/reward profile of our strategy. In the last three years we've introduced 28 new ideas (nine in 2024) from a diverse group of sectors which, in our view, will lay the groundwork for better performance in the years ahead.

What's in store for 2025? Our guess is more of the same – volatility and mood swings along with plenty of surprises. How could there not be? We have a mercurial, shoot from the hip President, who's being advised by the most innovative and disruptive entrepreneur in the last century. All while a transformative technology is about to be unleashed. Our advice is to keep your seat belts fastened throughout the duration of the flight.

The more difficult question to answer is whether small caps will regain their performance halo. The best we can say is that attractive future returns from small caps are likely, but outperformance is a harder call. In a previous communication, we shared why in the absence of a recession and a decline in rates it's hard to expect small to outperform large, but we've been doing this long enough to know that the past isn't necessarily predictive of the future. As always, we remain grateful for your investment in our strategy and will endeavor to generate attractive absolute and relative returns.

** The Aggregate Financial Statements have been adjusted to account for cross investments between Portfolios. Details for any cross investments between Portfolios are included in Note 10 of the Notes to the Audited Financial Statements.

The accompanying notes form an integral part of the financial statements.

Statements of Significant Purchases and Sales (Unaudited)

In accordance with the European Communities (Undertakings for Collective Investment in Transferable Securities) Regulations, 2011 as amended, a statement of changes in the composition of the Schedule of Investments during the reporting period is provided to ensure that Shareholders can identify changes in the investments held by the Portfolio. The following statements present the aggregate purchases and sales of transferable securities exceeding one percent of the total value of purchases or sales, respectively, for the period. At a minimum, the largest twenty purchases and twenty sales are presented, if available.

Asia Responsible Transition Bond – Statement of Significant Purchases and Sales

Aggregate purchases greater than one percent of the total value of purchases:
