**路博邁投資基金 (Neuberger Berman Investment Funds plc)**

(係依 2011 年歐洲共同體 (可轉讓證券集合投資事業) 規則 (含修正)，經愛爾蘭中央銀行授權且依愛爾蘭法律設立，具可變資本之投資公司，其係傘型基金，旗下包含  
責任各自分離之子基金)

**截至 2022 年 12 月 31 日為止之年報及查核財務報表**

## **致路博邁投資基金成員之獨立查核會計師報告**

### 財務報表之查核報告

#### **意見**

本所業已查核路博邁投資基金(「本公司」)截至 2022 年 12 月 31 日止之財務報表, 包含資產負債表、損益表、可買回參與股份持有人淨資產變動表以及財務報表之附註, 包括附註 1 所陳述之重大會計政策概要。編製過程中所適用之財務報告架構係依據愛爾蘭法及由英國財務匯報局發布適用於英國及愛爾蘭共和國之 FRS102 財務報告準則。

依本所之意見, 本財務報表:

- 提供本公司截至 2021 年 12 月 31 日之資產、負債及財務狀況, 及該年度終了時之損失之真實且公平之觀點;
- 已依適用於英國及愛爾蘭共和國之 FRS102 財務報告準則妥適編製; 及
- 已依 2014 年公司法、2011 年歐洲共同體(可轉讓證券集合投資事業)規則及 2013 年中央銀行(監管與執行)法 2019 年規範(第 48(1)條)(可轉讓證券集合投資事業)之規定妥適編製。

#### **意見之基礎**

本所根據國際查核標準(愛爾蘭)(「ISAs(愛爾蘭)」)及適用法律進行查核。本所依此等標準之責任在本報告「查核會計師查核財務報表之責任」乙節有進一步描述。根據與本所在愛爾蘭查核財務報表相關之愛爾蘭道德準則, 包括愛爾蘭審計及會計監督管理局(「IAASA」)所發布之道德準則, 本所與本公司互為獨立, 且本所已依據該規定符合本所其他之道德責任。

本所相信, 本所已取得充分且適當之查核證據, 作為本所意見之基礎。

#### **與持續經營相關之結論**

在查核財務報表時, 本所得出結論認為, 董事以持續經營為會計基礎而編制財務報表之運用為妥適的。

根據本所已完成之工作, 本所並未辨識出與事件或條件相關的重大不確定性, 而可能單獨或共同在財務報表經授權發布日後之至少 12 個月內, 對本公司繼續採取持續經營之能力產生重大懷疑。

本所的責任以及董事在持續經營方面的責任, 已於本報告的相關章節中進行了說明。然而, 由於並非所有未來事件或情況都可以被預測, 因此本聲明並非關於公司持續經營能力之保證。

## 其他資訊

董事負責其他資訊。其他資訊構成年報中所載財務報表與本會計師查核報告以外之資訊。本所對於財務報表之意見並不包含其他資訊，且除非本報告另有明確陳述，本所就此並未出具任何保證之結論。

本所之責任為閱讀其他資訊，並藉此考量其他資訊是否與財務報表或本所於查核過程中所知悉者有重大不符，或所呈現者為重大不實陳述。若本所辨識出該重大不符或顯然重大不實陳述，本所應判斷是否財務報告有重大不實陳述或其他資訊之重大不實陳述。如基於本所已執行之工作，本所認為其他資訊有重大不實陳述，本所應陳報該事實。

本所就此並無陳報事項。

## 對 2014 年公司法要求之其他事項之意見

依本所意見，僅基於查核過程中已執行之工作，本所為以下報告：

- 董事報告中所提供與截至本會計年度終了之財務報告期間相同之資訊與財務報告一致；
- 董事報告業依據適用之法律規定。

本所已取得所有依本所最佳所知所信認為為進行本查核目的所必要之資訊及說明。

依本所意見，本公司之會計記錄足夠使財務報表進行即時且適當的查核，且財務報告與會計記錄一致。

## 本所應報告之例外事項

基於在查核過程中取得之對本公司及其環境之認識及了解，本所並未發現董事報告有重大不實陳述。

2014 年公司法要求本所向您報告，就本所意見，本公司是否有任何未遵循公司法第 305 條至 312 條規定有關董事報酬或交易之揭露。本所就此並無陳報事項。

## 個別責任

### 董事對財務報表之責任

如第 36 頁就董事責任聲明有更完整之說明，董事根據應適用之財務報告架構負責編製，並使此等財務報表就呈現真實且公平之觀點能被接受，以及就其認為為確保所編製之財務報表並無重大不實陳述（不論是由詐欺或錯誤引起）而必要之內部控制負責。

編製財務報表時，除非管理階層有意清算本公司或停止營運，或現實上已無其他選項而僅得如此，董事負責評估公司繼續採取持續經營、揭露與持續經營有關之事項(如有適用)，並以持續經營為會計基礎之能力。

## 查核會計師查核財務報表之責任

本所目標係就財務報表整體是否存在重大不實陳述一事取得合理確信，無論重大不實陳述係因詐欺或錯誤所致，並出具查核會計師報告，其中包含本所之意見。合理確信是高度的確信，但不能保證根據 ISAs(愛爾蘭)所進行的查核總是能發現所有重大不實陳述的存在。不實陳述可能是因詐欺或錯誤所致，若其單獨或整體可合理預期會影響財務報表使用者的經濟決策時，則可視為重大。

對本所查核財務報表之責任的進一步說明置放於 IAASA 網站：

[https://iaasa.ie/wp-content/uploads/2022/10/Description\\_of\\_auditors\\_responsibilities\\_for\\_audit.pdf](https://iaasa.ie/wp-content/uploads/2022/10/Description_of_auditors_responsibilities_for_audit.pdf)。

此說明構成本查核報告之一部分。

### 個別責任 (接續)

本所查核報告依 2014 年公司法第 391 條僅向本公司全體成員為之。本所之查核工作業已完成，故本所得向本公司成員說明本所應在查核報告向其說明之事務而無其他目的。在法律容許之最大範圍內，本所對本所之查核工作、本報告及本所形成之意見，不接受或承擔對本公司及本公司全體成員以外之其他人之責任。

## General Information

The following information is derived from and should be read in conjunction with the full texts and definitions section of the Prospectus.

Neuberger Berman Investment Funds plc (the "Company") is an investment company with variable capital incorporated in Ireland on 11 December 2000 under registration number 336425 as a public limited company pursuant to the Companies Act 2014 (as amended). The Company has been authorised by the Central Bank of Ireland (the "Central Bank") as an Undertaking for Collective Investment in Transferable Securities pursuant to the provisions of the European Communities (Undertakings for Collective Investment in Transferable Securities) Regulations, 2011 as amended (the "UCITS Regulations"). The Company is constituted as an umbrella fund insofar as its share capital is divided into different series of shares with each series of shares representing a separate investment portfolio of assets ("Portfolio"). Shares of any Portfolio may be divided into different classes to accommodate different subscription and/or redemption provisions and/or dividend and/or charges and/or fee arrangements and/or currencies including different total expense ratios. As detailed in the "Management and Administration" section of the Prospectus, the Directors have appointed Neuberger Berman Asset Management Ireland Limited ("NBAMIL") on 1 July 2021 as the Manager to provide the day to day management of the business affairs of the Company in accordance with the requirements of the Central Bank.

At 31 December 2022, the Company was comprised of fifty-four separate portfolios of investments ("Portfolios"), each of which is represented by a separate series of Redeemable Participating Shares. These are set out in the table below:

Portfolio	Launch Date*
5G Connectivity <sup>1</sup>	8 April 2020

\*First day of operations.

<sup>1</sup> Portfolio authorised by the Hong Kong Securities and Futures Commission (the "SFC") and hence may be offered to the public of Hong Kong.

<sup>2</sup> Portfolio not authorised by the SFC and not available to Hong Kong investors.

The Company has segregated liability between its sub-funds and accordingly any liability incurred on behalf of or attributable to any sub-fund shall be discharged solely out of the assets of that sub-fund.

Neuberger Berman Diversified Currency Fund (or "Diversified Currency"), Neuberger Berman Multi-Style Premia Fund (or "Multi-Style Premia"), Neuberger Berman Absolute Return Multi Strategy Fund (or "Absolute Return Multi Strategy") and Neuberger Berman Global Equity Index PutWrite Fund (or "Global Equity Index PutWrite") liquidated on 22 January 2021, 24 February 2021, 20 December 2021 and 20 December 2021, respectively, and are therefore no longer available for subscription. Neuberger Berman US Large Cap Growth Fund, Neuberger Berman Multi-Asset Growth Fund, Neuberger Berman Global Equity Fund, Neuberger Berman Absolute Alpha Fund, Neuberger Berman Global Bond Absolute Return Fund and Neuberger Berman China Equity Opportunities Fund liquidated during the prior reporting years and are therefore no longer available for subscription. Neuberger Berman Global Credit Long Short Fund, Neuberger Berman Global Dynamic Asset Allocator Fund, Neuberger Berman Asian Opportunities Fund, Neuberger Berman Multi-Asset Risk Premia Fund and Neuberger Berman China A-Share Opportunities Fund liquidated during the prior reporting years and were revoked by the Central Bank on 9 November 2021. Neuberger Berman Global Equity Income Fund, Neuberger Berman Global Long Short Equity Fund, Neuberger Berman Long Short Multi Manager Fund and Neuberger Berman World Equity Fund liquidated during the prior reporting years and were revoked by the Central Bank on 11 October 2022.

Please refer to Appendix VII for a full list of Managers, Sub-Investment Managers and Sub-Advisers for each Portfolio.

Please refer to Appendix VIII for details of Sustainable Finance Disclosure Regulation.

Investment objectives and list of active share classes of the Portfolios that were available for investment as at 31 December 2022 are as follows:

## General Information (Continued)

### 5G Connectivity

The investment objective of 5G Connectivity (the "Portfolio") is to achieve a target average return of 3-5% over the MSCI All-Country World Index before fees over a market cycle (typically 3 years).

The Portfolio seeks to achieve its investment objective by primarily investing in equity securities that are listed or traded on recognised markets globally (which may include emerging market countries) and issued by companies across all market capitalisations and economic sectors. The Portfolio may invest in companies of any market capitalisation but shall typically invest in companies that have market capitalisation greater than USD 500 million at time of purchase.

The following are the active share classes in the Portfolio at the financial year end (referred to herein as the "year end" or "year ended"):

<i>Share Class Name</i>	<i>Share Class Launch Date</i>	<i>Currency</i>
AUD A Accumulating Class <sup>1</sup>	20 May 2020	AUD
CNY A Accumulating Class	1 February 2021	CNY
EUR A Accumulating Class <sup>1</sup>	13 May 2020	EUR
EUR A Accumulating Unhedged Class	22 April 2020	EUR
EUR I Accumulating Class	30 June 2020	EUR

USD M Accumulating Class	2 June 2020	USD
USD Z Accumulating Class	19 March 2021	USD

<sup>1</sup>Authorised for public distribution in Hong Kong.

## General Information (Continued)

### Asian Debt – Hard Currency

The investment objective of Asian Debt – Hard Currency (the “Portfolio”) is to achieve an attractive level of risk adjusted total return (income plus capital appreciation) from hard currency-denominated debt issued in Asian countries.

The Portfolio seeks to achieve its objective by investing primarily in debt securities and money market instruments which are issued by governments of, government agencies or corporate issuers which have their head office or exercise an overriding part of their economic activity in Asian countries and which are denominated in hard currency. For the purposes of the Portfolio, hard currency is defined as US Dollar, Euro, Sterling, Japanese Yen and Swiss Franc. Investors should note that public issuers include corporate issuers that are, either directly or indirectly, 100% government-owned.

The following are the active share classes in the Portfolio at year end:

<i>Share Class Name</i>	<i>Share Class Launch Date</i>	<i>Currency</i>
USD A (Monthly) Distributing Class <sup>1</sup>	30 June 2015	USD
USD A Accumulating Class <sup>1</sup>	30 June 2015	USD
USD C1 Accumulating Class	15 October 2019	USD
USD I Accumulating Class	30 June 2015	USD
USD I Distributing Class	30 June 2015	USD
USD I4 (Monthly) Distributing Class	23 September 2022	USD
USD I4 Accumulating Class	23 September 2022	USD
USD M Accumulating Class	14 August 2019	USD
USD X (Monthly) Distributing Class	23 September 2022	USD
USD X Accumulating Class	8 June 2021	USD
USD Z Accumulating Class	12 December 2022	USD

<sup>1</sup>Authorised for public distribution in Hong Kong.

### China A-Share Equity

The investment objective of China A-Share Equity (the “Portfolio”) is to achieve long-term capital appreciation primarily through investment in a portfolio of China A Share equity holdings that provide exposure to economic development in the People’s Republic of China (the “PRC”).

The Portfolio seeks to achieve its investment objective by investing directly in China A Shares through the Stock Connects and through the Quota, and indirectly, mainly through investments in equity-linked securities issued by international investment banks and also through equity and debt securities which may be issued by entities which are managed by affiliates of the Sub-Investment Manager.

The following are the active share classes in the Portfolio at year end:

<i>Share Class Name</i>	<i>Share Class Launch Date</i>	<i>Currency</i>
CNY I Accumulating Class	28 July 2020	CNY
USD I Accumulating Unhedged Class	28 July 2020	USD
USD I Distributing Unhedged Class	28 July 2020	USD

## General Information (Continued)

### China Bond

The investment objective of China Bond (the "Portfolio") is to achieve an attractive level of risk adjusted total return (income plus capital appreciation) by primarily investing in fixed income instruments issued in the Chinese local currency markets.

The Portfolio seeks to achieve its objective by investing primarily in debt securities and money market instruments which are issued within the PRC by PRC government, PRC government agencies or corporate issuers which have their head office or exercise an overriding part of their economic activity in the PRC and which are denominated in or are exposed to the currency of the PRC via the RQFII (Renminbi Qualified Foreign Institutional Investor) Quota. For the purposes of the Portfolio, investors should note that public issuers include corporate issuers that are, either directly or indirectly, 100% government-owned.

The following are the active share classes in the Portfolio at year end:

<i>Share Class Name</i>	<i>Share Class Launch Date</i>	<i>Currency</i>
CNY A (Monthly) Distributing Class <sup>1</sup>	4 November 2020	CNY
CNY I Distributing Class <sup>1</sup>	8 June 2018	CNY
CNY Z Accumulating Class	8 September 2015	CNY
GBP I2 Accumulating Class	9 February 2021	GBP
SGD A (Monthly) Distributing Unhedged Class	12 March 2019	SGD
USD I Accumulating Unhedged Class	8 September 2015	USD
USD Z Accumulating Class	29 March 2019	USD
USD Z Accumulating Unhedged Class	10 April 2018	USD

<sup>1</sup>Authorised for public distribution in Hong Kong.

### China Equity

The investment objective of China Equity (the "Portfolio") is to achieve an attractive level of total return (income plus capital appreciation) from the Greater China equity market. The Portfolio seeks to achieve this objective by investing primarily in equity and equity-linked securities which are listed or traded on recognised markets and issued by companies that:

- are incorporated or organised under the laws of, or that have a principal office in, the People's Republic of China ("PRC"), Hong Kong Special Administrative Region ("SAR"), Macau SAR or Taiwan (the "Greater China Region");
- generally derive a majority of their total revenue or profits from (a) goods that are produced or sold, (b) investments made, or (c) services performed, in the Greater China Region; or
- generally hold a majority of their assets in the Greater China Region (each a "Greater China Company").

The Portfolio may also invest in hybrid securities and equity-related securities, such as convertible debentures, convertible preferred stock, debt instruments with warrants attached, including financial derivative instruments ("FDI"), which are issued by or give exposure to the performance of Greater China Companies.

For the avoidance of doubt, the Portfolio may invest in securities as described herein and which are issued by or giving exposure to Greater China Companies listed or traded on recognised markets located outside of the Greater China Region, including, without limitation, in the United States, the United Kingdom, Singapore and Japan.

The Portfolio invests primarily in mid and large capitalisation companies.

Green Court Capital Management Limited, the Non-Affiliated Sub-Adviser, employs a research intensive, fundamental-driven and bottom-up approach. Ongoing assessments of macroeconomic and market factors augment the stock-picking discipline. The investment approach is discretionary in nature and is designed to consider multiple drivers and investment strategies over different time horizons.

The Portfolio is primarily constructed by taking under and overweight positions to the market benchmark MSCI China Index. Decisions on whether the Portfolio's positions will be under or overweight relative to the benchmark are primarily driven by valuation, quality of valuation and macroeconomic factors, including such variables as opportunities for growth, competitive advantages and risk characteristics, over short-, medium- and long-term investment horizons but the requirements of the Central Bank in respect of concentration limits as set out in the "Investment Restrictions" section of the Prospectus will supersede these factors where relevant.

### CLO Income

The investment objective of CLO Income (the "Portfolio") is to achieve an attractive level of total return (a combination of capital appreciation and income) by investing primarily in USD and EUR denominated floating rate collateralised loan obligations ("CLO") mezzanine debt securities and also in US high yield debt securities which are listed or traded on recognised markets.

The Portfolio seeks to achieve its objective through a disciplined investment process, which seeks to identify CLO mezzanine debt securities which are backed by an underlying portfolio of loans with a higher portfolio score.

The following are the active share classes in the Portfolio at year end:

<i>Share Class Name</i>	<i>Share Class Launch Date</i>	<i>Currency</i>

## General Information (Continued)

### Commodities

The investment objective of Commodities (the "Portfolio") is to achieve an attractive level of total return (income plus capital appreciation) by seeking exposure to a broad range of commodities.

The Portfolio seeks to achieve its objective by seeking exposure to a broad range of commodities groups, including energy, precious metals, industrials metals, livestock, softs and agriculture.

The Portfolio will seek to obtain this exposure through a blend of investments including, primarily, investment in commodity-related financial derivative instruments ("FDI"); direct investment in the equities and equity-related securities (namely, common and preferred stock, ADRs and GDRs) of commodity-related companies. The Portfolio may also seek to achieve exposure to commodities by investing in units or shares of collective investment schemes, including exchange traded funds ("ETFs") and other sub-funds of the Company, where such investment provides commodity exposure consistent with the investment policy of the Portfolio.

The following are the active share classes in the Portfolio at year end:

USD M Accumulating Class	14 April 2022	USD
USD Z Accumulating Class	15 February 2022	USD

### Corporate Hybrid Bond

The investment objective of Corporate Hybrid Bond (the "Portfolio") is to achieve an attractive level of total return (income plus capital appreciation).

The Portfolio seeks to achieve its objective by investing primarily in investment grade and sub-investment grade corporate hybrid bonds. The Portfolio seeks to use fundamental bottom-up analysis principles in selecting securities for investment, meaning that the analysis done by Neuberger Berman Investment Advisers LLC (the "Sub-Investment Manager") will focus on the strengths of individual securities as opposed to the selection of securities by reference to broader themes, such as industries. The analysis of the strength of a security is specific to the individual security itself, as opposed to having regard to broader themes e.g. the credit rating of the security is analysed relative to its proposed yield. The Portfolio focuses on securities which are listed or traded on recognised markets globally, and not limited by industry or sector. The Portfolio may rotate its exposure to geographic regions and countries and between sectors and issuers, based on economic or regional fundamentals, such as the valuation of each security relative to other similar securities. The Portfolio may have medium levels of volatility due to its investments in subordinated debt and/or below investment grade securities.

### Emerging Market Debt – Hard Currency

The investment objective of Emerging Market Debt – Hard Currency (the “Portfolio”) is to achieve an attractive level of risk adjusted total return (income plus capital appreciation) from hard currency-denominated debt issued in emerging market countries.

The Portfolio seeks to achieve this objective by investing primarily in debt securities and money market instruments issued by public or private issuers in emerging market countries which are denominated in hard currency. For the purposes of the Portfolio, “Hard Currency” is defined as US Dollar, Euro, Sterling, Japanese Yen and Swiss Franc and investors should also note that public issuers include corporate issuers that are, either directly or indirectly, 100% government-owned.

### Emerging Market Debt – Local Currency

The investment objective of Emerging Market Debt – Local Currency (the “Portfolio”) is to achieve an attractive level of risk adjusted total return (income plus capital appreciation) from local currencies and local interest rates of emerging market countries.

The Portfolio seeks to achieve this objective by investing primarily in debt securities and money market instruments which are issued by governments of, government agencies in or corporate issuers which have their head office or exercise an overriding part of their economic activity in emerging market countries and which are denominated in or are exposed to the local currencies of such countries.

## General Information (Continued)

### Emerging Market Debt Sustainable Investment Grade Blend

The investment objective of Emerging Market Debt Sustainable Investment Grade Blend (the "Portfolio") is to achieve an attractive level of total return from a blend of investment grade rated hard and local emerging market currency denominated debt, issued by sovereigns, quasi-sovereigns, sub-sovereigns and corporate credits in emerging market countries that meet the sustainable criteria defined within the "Sustainable Investment Criteria" section of the Prospectus (the "Sustainable Criteria").

The Portfolio seeks to achieve its objective by investing primarily in investment grade debt securities and money market instruments which are issued by governments of, government agencies in or corporate issuers which have their head office or exercise an overriding part of their economic activity in emerging market countries and which are denominated in or are exposed to the currencies of such emerging market countries ("local currency") or denominated in Hard Currency. For the purposes of the Portfolio, "Hard Currency" means US Dollar, Euro, Sterling, Japanese Yen, and Swiss Franc.

The following are the active share classes in the Portfolio at year end:

<i>Share Class Name</i>	<i>Share Class Launch Date</i>	<i>Currency</i>
AUD I2 Accumulating Class	16 February 2021	AUD
NOK I Accumulating Class	9 May 2018	NOK
USD I Accumulating Class	10 July 2017	USD
USD I2 Accumulating Class	16 March 2021	USD
USD Z Accumulating Class	2 November 2017	USD

### Emerging Markets Equity

The investment objective of Emerging Markets Equity (the "Portfolio") is to achieve long-term capital growth. The Portfolio seeks to achieve this objective by investing primarily in equity and equity-linked securities which are listed or traded on recognised markets globally and issued by companies that:

- trade principally on a recognised stock exchange in emerging market countries;
- are organised under the laws of and have a principal office in emerging market countries; or
- derive 50% or more of their total revenues from, and/or have 50% or more of their total assets in, goods produced, sales made, profits generated or services performed in emerging market countries. The Portfolio may also invest in other collective investment schemes, which provide exposure to such securities, subject to a maximum of 10% of the Portfolio's Net Asset Value.

Neuberger Berman Investment Advisers LLC (the "Sub-Investment Manager") uses a fundamental bottom-up, research-driven securities selection approach focusing on high return businesses while factoring in economic, legislative and business developments to identify countries and economic sectors (such as Energy, Financials, Health Care, Telecommunication Services and Utilities) that it believes may be particularly attractive.

The Sub-Investment Manager seeks to invest in companies that it believes have sustainable free cash flow growth and are trading at attractive valuations. The Portfolio seeks to reduce risk by diversifying among many industries within the countries and economic sectors it identifies, and it generally intends to remain diversified across countries and geographical regions.

### Emerging Markets Select Equity

The investment objective of Emerging Markets Select Equity (the "Portfolio") is to achieve long-term capital growth by investing primarily in emerging market companies.

The Portfolio seeks to achieve its objective by investing primarily in equity and equity-linked securities which are listed or traded on recognised markets globally and issued by companies that: (1) trade principally on a recognised stock exchange in emerging market countries; (2) are organised under the laws of and have a principal office in emerging market countries; or (3) derive 50% or more of their total revenues from, and/or have 50% or more of their total assets in, goods produced, sales made, profits generated or services performed in emerging market countries. The Portfolio may also invest in other collective investment schemes which provide exposure to such securities, subject to a maximum of 10% of the Portfolio's Net Asset Value. The Portfolio may seek exposure to a country or region within emerging markets through investment in securities traded on stock exchanges or markets located in other jurisdictions through participatory notes.

## General Information (Continued)

### Euro Bond Absolute Return

The investment objective of Euro Bond Absolute Return (the "Portfolio") is to generate positive absolute returns over a market cycle (typically 3-5 years), irrespective of market conditions with a moderate level of volatility. It aims to achieve this by implementing an unconstrained strategy combining long and synthetic short positions in a diversified portfolio of predominantly Euro-denominated debt securities.

The Portfolio seeks to achieve its investment objective through a disciplined investment process utilising a combination of top-down and bottom-up strategies to identify multiple sources of value. Top down strategies focus on macroeconomic considerations, country and sector analysis. Bottom up strategies evaluate the characteristics of individual instruments or issuers.

The following are the active share classes in the Portfolio at year end:

<i>Share Class Name</i>	<i>Share Class Launch Date</i>	<i>Currency</i>
EUR I Accumulating Class	29 November 2018	EUR
EUR I Distributing Class	29 November 2018	EUR
EUR I5 Accumulating Class	28 March 2019	EUR
USD Z Accumulating Class	22 November 2019	USD

### Euro Opportunistic Bond

The investment objective of Euro Opportunistic Bond (the "Portfolio") is to achieve an attractive level of total return (income plus capital appreciation) by investing in a diversified mix of Euro-denominated fixed and floating rate debt securities.

The Portfolio seeks to achieve its investment objective through a disciplined investment process investing in Euro-denominated bonds across a variety of sectors and maturities, utilising a combination of top-down and bottom-up strategies to identify multiple sources of value. Top down strategies focus on macroeconomic considerations, country and sector analysis. Bottom up strategies evaluate the characteristics of individual instruments or issuers.

The following are the active share classes in the Portfolio at year end:

<i>Share Class Name</i>	<i>Share Class Launch Date</i>	<i>Currency</i>
EUR I Accumulating Class	14 November 2018	EUR
EUR I Distributing Class	14 November 2018	EUR

### European High Yield Bond

The investment objective of European High Yield Bond (the "Portfolio") is to achieve an attractive level of total return (income plus capital appreciation) from the European high yield fixed income market.

The Portfolio seeks to achieve its objective by investing primarily in corporate high yield fixed income securities, which are (i) denominated in a European currency or (ii) issued or guaranteed by companies of any industrial sector that are domiciled in, or exercise the main part of their economic activity in a European country that are listed, dealt or traded on recognised markets.

The following are the active share classes in the Portfolio at year end:

<i>Share Class Name</i>	<i>Share Class Launch Date</i>	<i>Currency</i>
EUR I Accumulating Class	27 June 2014	EUR
EUR M Accumulating Class	29 January 2016	EUR
EUR X Accumulating Class	20 February 2018	EUR
USD A (Monthly) Distributing Class <sup>1</sup>	31 October 2014	USD
USD I Accumulating Class	27 June 2014	USD
USD X Accumulating Class	12 January 2018	USD
USD Z Accumulating Class	26 April 2019	USD

<sup>1</sup>Authorised for public distribution in Hong Kong.

## General Information (Continued)

### European Sustainable Equity

The investment objective of European Sustainable Equity (the "Portfolio") is to achieve a minimum excess annualised return of 2% over the Benchmark (the MSCI Europe Index (Total Return, Net of Tax, EUR)) before fees over a 3-5 year investment horizon from investing primarily in a portfolio of European equity holdings that comply with the Sustainable Criteria (as set out in the Prospectus).

Investors should note that the target return is not guaranteed over the investment horizon, a 12-month or any period and the Portfolio's capital is at risk. Investors should also note that, over the course of the investment horizon, there may be significant periods of time during which the performance of the Portfolio will deviate from the targeted return and the Portfolio may experience periods of negative return. There can be no guarantee that the Portfolio will ultimately achieve its investment objective.

The following are the active share classes in the Portfolio at year end:

<i>Share Class Name</i>	<i>Share Class Launch Date</i>	<i>Currency</i>
EUR A Distributing Class <sup>1</sup>	12 January 2022	EUR
EUR I Accumulating Class	24 February 2021	EUR

USD A Accumulating Unhedged Class	15 March 2021	USD
USD I Accumulating Unhedged Class	15 March 2021	USD
USD M Accumulating Unhedged Class	15 March 2021	USD

<sup>1</sup>Authorised for public distribution in Hong Kong.

### Event Driven

The investment objective of Event Driven (the "Portfolio") is to generate positive market neutral, absolute risk adjusted returns with low correlation to broader equity markets through utilising event driven strategies.

The Portfolio seeks to achieve its investment objective by taking both long and synthetic short positions in global equity securities utilising event driven strategies. Event driven strategies are based on announced or anticipated events or a series of events and on investing in the securities of companies that could be affected by the occurrence of such events. The Portfolio will take exposure to equity securities that are listed or traded on recognised markets in developed markets, and that are subject to or expected to be subject to corporate events including and not limited to mergers, takeover bids, exchange offers, tender offers, spin-offs, proxy fights, liquidations, recapitalisations, corporate restructurings, litigation, legislation or regulatory events, or post-bankruptcy situations. The Portfolio will take long positions in respect of equity securities that it expects to increase in value as a result of such events and take synthetic short positions in respect of equity securities that it expects to decrease in value as a result of such events.

The following are the active share classes in the Portfolio at year end:

## General Information (Continued)

### Global Bond

The investment objective of Global Bond (the "Portfolio") is to achieve an attractive level of total return (income plus capital appreciation) from global fixed income markets.

The Portfolio seeks to achieve this objective by investing primarily in:

- Investment grade debt securities issued by governments and agencies from Organisation for Economic Co-operation and Development ("OECD") countries; and
- Investment grade debt securities issued by corporations, which have their head office or exercise an overriding part of their economic activity in OECD countries.

All securities will be listed, dealt or traded on recognised markets without any particular focus on any one industrial sector.

There are four main differentiating factors that set the Portfolio's approach:

- Diversification through the use of multiple uncorrelated alpha sources
- Active FX management
- Integrated Global Macro Overlay
- Proprietary risk management systems

In addition, the Manager and the Sub-Investment Manager conduct analysis of data and seeks to exploit opportunities across multiple time horizons. Central to the investment philosophy is the Manager's and the Sub-Investment Manager's qualitative judgment, which is exercised at all stages of the investment process. This discretion enables it to take into account information and events that cannot be readily quantified, for example political events, shifts in regulatory regimes or the effects of market positioning and hedging.

The following are the active share classes in the Portfolio at year end:

<i>Share Class Name</i>	<i>Share Class Launch Date</i>	<i>Currency</i>

### Global Diversified Income FMP – 2024

The investment objective of Global Diversified Income FMP – 2024 (the "Portfolio") is to maximise current income over the term of the Portfolio, by investing in a diversified mix of global fixed income securities, including high income securities.

The Portfolio seeks to achieve its investment objective by investing in debt securities and money market instruments, including through the use of FDI, issued by governments and their agencies and corporations worldwide including within Emerging Markets. Securities will typically be dealt or traded on recognised markets globally without any particular focus on any one industrial sector. Securities may be rated investment grade or below by a recognised rating agency.

### Global Equity Megatrends

The investment objective of Global Equity Megatrends (the "Portfolio") is to achieve long-term capital appreciation through investment in a portfolio of equity holdings that are exposed to global long-term themes.

The Portfolio seeks to achieve its objective by investing primarily in equity securities that are listed or traded on recognised markets globally (which may include emerging market countries) and issued by companies across all market capitalisations and industrial sectors.

The following are the active share classes in the Portfolio at year end:

<i>Share Class Name</i>	<i>Share Class Launch Date</i>	<i>Currency</i>

### Global Flexible Credit Income

The investment objective of Global Flexible Credit Income (the "Portfolio") is to maximise total return from current income and long-term capital appreciation by investing in a diversified mix of global fixed rate and floating rate debt securities, including high income securities.

The Portfolio seeks to achieve its investment objective primarily by investing in debt securities and money market instruments, including through the use of FDI, issued by governments and their agencies and corporations worldwide including within Emerging Markets. Securities will typically be dealt or traded on recognised markets globally without any particular focus on any one industrial sector. Securities may be rated investment grade or below by a recognised rating agency.

### Global High Yield SDG Engagement

The investment objective of Global High Yield SDG Engagement (the "Portfolio") is to achieve an attractive level of total return (income plus capital appreciation) from the global high yield fixed income market.

The Portfolio seeks to achieve its objective by investing primarily in:

- US dollar and non-US dollar denominated high yield fixed income securities that are issued or guaranteed by corporate issuers of any industrial sector; and
- short duration, high yield fixed income securities issued by governments and agencies globally that are primarily denominated in US dollars located throughout the world that are listed, dealt or traded on recognised markets.

The Portfolio will invest primarily in securities denominated in the currencies included in the BofA Merrill Lynch Global High Yield Constrained Index (USD Hedged Total Return).

In addition, the Portfolio may also invest in securities of companies located in and governments of emerging market countries, which may involve additional risk, relative to investment in more developed economies.

The following are the active share classes in the Portfolio at year end:

<i>Share Class Name</i>	<i>Share Class Launch Date</i>	<i>Currency</i>
AUD I Distributing Class	3 May 2022	AUD

## General Information (Continued)

### Global High Yield Sustainable Action

The investment objective of Global High Yield Sustainable Action (the "Portfolio") is to achieve a total return (income plus capital appreciation) with an emphasis on current income, from investments in an actively managed portfolio of global high yield fixed income securities that comply with the Sustainable Criteria.

The Portfolio seeks to achieve its investment objective by investing in bonds and other transferable fixed income debt securities which meet the Sustainable Criteria and which are rated below investment grade. Issuers of these securities may be located in any country, including emerging markets and may be across a variety of industry sectors and maturities.

The following are the active share classes in the Portfolio at year end:

<i>Share Class Name</i>	<i>Share Class Launch Date</i>	<i>Currency</i>
USD I Accumulating Class	21 January 2020	USD
USD I Distributing Class	21 January 2020	USD
USD X Accumulating Class	10 November 2020	USD
USD Y Accumulating Class	25 February 2021	USD

### Global Investment Grade Credit

The investment objective of Global Investment Grade Credit (the "Portfolio") is to achieve a target average return of 1% over the Benchmark (Bloomberg Barclays Global Aggregate Corporate Index (Total Return, Hedged USD)) before fees over a market cycle (typically 3 years) from investing primarily in investment grade corporate fixed income securities globally.

Investors should note that the target return is not guaranteed over a market cycle, a 12-month or any period and the Portfolio's capital is at risk. Investors should also note that, over the course of a market cycle, there may be significant periods of time during which the performance of the Portfolio will deviate from the targeted return and the Portfolio may experience periods of negative return. There can be no guarantee that the Portfolio will ultimately achieve its investment objective.

The Portfolio will invest primarily in investment grade fixed income securities issued by corporations, which have their head office or exercise an overriding part of their economic activity in OECD countries. The Portfolio will seek to use fundamental, bottom-up analysis principles in selecting securities for investment, meaning that the Manager's and the Sub-Investment Manager's analysis will focus on the strengths of individual securities as opposed to the selection of securities by reference to broader themes, such as industries. For example the credit rating of the security will be analysed relative to its proposed yield and the characteristics of the security will be analysed to determine cash flow predictability, using such factors including the issuer's cash flow profile, debt and leverage. The Portfolio will focus on securities which are listed or traded on Recognised Markets globally, and is not limited by industry or sector. The Portfolio may rotate its exposure to geographic regions and countries and between sectors and issuers, based on economic or regional fundamentals, such as the valuation of each security relative to other similar securities.

The following are the active share classes in the Portfolio at year end:

<i>Share Class Name</i>	<i>Share Class Launch Date</i>	<i>Currency</i>
USD I Accumulating Class	1 September 2021	USD
USD X Accumulating Class	1 September 2021	USD
USD Z Accumulating Class	1 September 2021	USD

## General Information (Continued)

### Global Opportunistic Bond

The investment objective of Global Opportunistic Bond (the "Portfolio") is to achieve an attractive level of total return (income plus capital appreciation) by opportunistically investing in a diversified mix of fixed rate and floating rate debt securities globally under varying market environments.

The Portfolio seeks to achieve its objective by investing primarily in debt securities and money market instruments issued by governments and their agencies and corporations worldwide. Securities will be listed, dealt or traded on recognised markets globally without any particular focus on any one industrial sector. Securities may be rated investment grade or below by a recognised rating agency. On an ancillary basis, the Portfolio may hold preferred stocks issued by public or corporate issuers.

The following are the active share classes in the Portfolio at year end:

<i>Share Class Name</i>	<i>Share Class Launch Date</i>	<i>Currency</i>
EUR I Accumulating Class	27 November 2020	EUR
GBP P Accumulating Class	16 January 2020	GBP
USD A Accumulating Class	22 September 2017	USD
USD I Accumulating Class	20 December 2016	USD
USD I Distributing Class	20 December 2016	USD
USD I2 Accumulating Class	23 April 2018	USD
USD Z Accumulating Class	16 May 2019	USD

### Global Real Estate Securities

The investment objective of Global Real Estate Securities (the "Portfolio") is to seek total return through investment in securities of real estate companies located globally, emphasising both capital appreciation and current income.

The Portfolio seeks to achieve its investment objective by investing at least 80% of its net assets in US and non-US equity securities issued by real estate investment trusts ("REITs") and common stocks and other securities issued by other real estate companies. A REIT is a company dedicated to owning, and usually operating, income-producing real estate, or to financing real estate. The Portfolio defines a real estate company as one that derives at least 50% of its revenue from, or has at least 50% of its assets in, real estate. The Portfolio will allocate its assets among various regions and countries, including the US, but will at all times invest in a minimum of three different countries. The Portfolio may also invest up to 20% of its Net Asset Value in real estate equity securities issued by companies domiciled in emerging market countries.

The following are the active share classes in the Portfolio at year end:

<i>Share Class Name</i>	<i>Share Class Launch Date</i>	<i>Currency</i>
EUR I5 Distributing Class	8 July 2021	EUR

USD M Accumulating Class	2 October 2019	USD
USD Z Accumulating Class	13 February 2015	USD

<sup>1</sup>Authorised for public distribution in Hong Kong.

## General Information (Continued)

### Global Sustainable Equity

The investment objective of Global Sustainable Equity (the “Portfolio”) is to achieve a minimum excess annualised return of 2% over the Benchmark (The MSCI World Index (Total Return, Net of Tax, USD)) before fees over a 3-5 year investment horizon from investing primarily in a portfolio of global equity holdings that comply with Sustainable Criteria (as set out in the Prospectus).

Investors should note that the target return is not guaranteed over the investment horizon, a 12-month or any period and the Portfolio’s capital is at risk. Investors should also note that, over the course of the investment horizon, there may be significant periods of time during which the performance of the Portfolio will deviate from the targeted return and the Portfolio may experience periods of negative return. There can be no guarantee that the Portfolio will ultimately achieve its investment objective.

The Portfolio will seek to achieve its objective by investing primarily in equity securities that are listed or traded on recognised markets globally (which may include emerging market countries) and issued by companies across all market capitalisations and industrial sectors. The Portfolio will invest primarily in equity securities issued by companies whose behaviours, processes and operations contribute to system-level progress towards environmental and social objectives, such as: access to healthcare, sustainable consumption (which is the use of products, energy and services so as to minimise the environmental impact of such use) and conscious consumers, access to information and the digital revolution, energy transition and industrial innovation, resource efficiency, human capital development, fintech and financial inclusion (which is the availability and equality of opportunities to access financial services). In seeking to achieve the Portfolio’s investment objective, the Sub-Investment Manager invests in high quality companies, which (i) provide attractive sustainable products or services, (ii) demonstrate a commitment to sustainability in their operations, and (iii) are economically competitive, as described in greater detail below. The Sub-Investment manager will pursue an investment process which will embed analysis of “best in class” companies within an investment universe of listed equity securities issued by companies primarily from developed market countries globally, from both a financial and an Environmental, Social, and Governance (“ESG”) perspective. The financial and ESG analysis will enable the Sub-Investment Manager to evaluate and identify companies that are deemed “best in class” in terms of their performance on financial and ESG factors.

The following are the active share classes in the Portfolio at year end:

<i>Share Class Name</i>	<i>Share Class Launch Date</i>	<i>Currency</i>

<sup>1</sup>Authorised for public distribution in Hong Kong.

## General Information (Continued)

### High Yield Bond

The investment objective of High Yield Bond (the "Portfolio") is to achieve an attractive level of total return (income plus capital appreciation) from the high yield fixed income market. The Portfolio seeks to achieve this objective by investing primarily in:

- high yield fixed income securities issued by US and foreign corporations, which, respectively, have their head office or exercise an overriding part of their economic activity in the US; and
- high yield fixed income securities issued by governments and agencies in the US that are primarily denominated in US Dollars,

that are listed, dealt or traded on recognised markets. In addition, although the Portfolio concentrates its investments in the US, the Portfolio may also invest in securities of companies located in and governments of emerging market countries, which may involve additional risk, relative to investment in more developed economies.

## General Information (Continued)

### InnovAsia 5G

The investment objective of InnovAsia 5G (the "Portfolio") is to invest primarily in a portfolio of equity holdings, focusing on companies that are involved in or derive benefit from Innovative Technologies (as defined below).

The Portfolio will seek to achieve its objective by investing primarily in equity securities which are listed or traded on recognised markets globally (which may include emerging market countries) and issued by companies across all market capitalisations and economic sectors with innovative technologies or business models that:

- are incorporated or organized under the laws of a country in Asia, or that have a principal office in Asia;
- generally derive a majority of their incremental growth from (a) goods that are produced or sold, (b) investments made, or (c) services performed, in Asia; or
- generally hold a majority of their assets in Asia.

The Portfolio may invest in companies of any market capitalisation but shall typically invest in companies that have market capitalisation greater than USD 500 million at time of purchase.

In seeking to achieve the Portfolio's investment objective, the Sub-Investment Managers pursue the following investment process (which is described in further detail below) to identify a universe of companies that offer exposure to disruptive technologies, innovative business models with a relatively low penetration rate in Asia or which are in a relatively early growth phase as well as long-term, structural trends and themes such as 5G/internet of things, (including but not limited to data infrastructure, connected devices or advanced semiconductors), digital lifestyle (including but not limited to healthcare, education or internet and consumer) and industrial innovations (including but not limited to robotics, clean tech or smart logistics) ("Innovative Technologies"):

- Qualitative business analysis: to identify companies which are key enablers of Innovative Technologies, as well as companies that are well-positioned to benefit from new business models related to Innovative Technologies;
- Quantitative screening: to identify stocks that the Sub-Investment Managers believe may be too illiquid or have too small a market capitalisation;
- Strategic valuation and analysis: in-depth research and analysis of companies, including of company/business models, quality of management, competitive strength and record of success which is determined by reference to existing financial data (eg, market share data); and
- Security selection and portfolio construction: to select companies with the ability to provide solutions to drive Innovative Technologies that the Sub-Investment Managers believe have significant capital appreciation potential over three to five years and determine entry and exit price targets based on current market prices for the securities and the preceding analysis, that guide buy and sell decisions.

The following are the active share classes in the Portfolio at year end:

## General Information (Continued)

### Japan Equity Engagement

The investment objective of Japan Equity Engagement (the "Portfolio") is to achieve a target average return of 3% over the MSCI Japan Small Cap Net Index before fees over a market cycle (typically 3 years).

The Portfolio seeks to achieve its investment objective by investing in equity securities issued by small and mid capitalisation companies which have either their head office or exercise an overriding part of their economic activity in Japan and that are listed or traded on recognised markets globally.

The following are the active share classes in the Portfolio at year end:

<i>Share Class Name</i>	<i>Share Class Launch Date</i>	<i>Currency</i>
EUR I5 Distributing Class	10 February 2022	EUR
GBP I5 Accumulating Class	22 September 2021	GBP
GBP P Accumulating Unhedged Class	11 November 2021	GBP
JPY I Accumulating Class	12 May 2020	JPY
JPY I Distributing Class	12 May 2020	JPY
JPY I5 Accumulating Class	16 February 2021	JPY
JPY Z Accumulating Class	28 April 2021	JPY

### Macro Opportunities FX

The investment objective of Macro Opportunities FX (the "Portfolio") is to achieve a target average return of 5-6% over cash before fees over a market cycle (typically 3 years).

The Portfolio seeks to achieve its investment objective:

- firstly, by obtaining long and short exposures to a range of global liquid currencies, predominantly but not limited to the G10 currencies and opportunistically, in the most liquid emerging market country currencies (these are typically the most heavily traded e.g. Brazilian Real, Singapore Dollar and South Korean Won using a range of financial derivative instruments; and
- secondly, through investing in global fixed income debt securities and short-dated Euro-denominated bonds to opportunistically seek to enhance cash returns and to provide liquidity and collateral cover for exposures created through the use of financial derivative instruments as outlined above.

The following are the active share classes in the Portfolio at year end:

<i>Share Class Name</i>	<i>Share Class Launch Date</i>	<i>Currency</i>
EUR I Accumulating Class	4 December 2019	EUR
GBP Z Accumulating Class	4 December 2019	GBP

USD I Accumulating Class	4 December 2019	USD
USD Z Accumulating Class	4 December 2019	USD

### Multi-Asset Income

The investment objective of Multi-Asset Income (the "Portfolio") is to seek to generate income and capital appreciation.

The Portfolio seeks to achieve its objective primarily by allocating the Portfolio's assets amongst multiple asset classes. It will invest in strategies which are intended to generate income for the Portfolio using global equity and debt securities, currencies and UCITS-eligible exposures to commodities. The Portfolio may obtain exposure to these asset classes through direct investment in such securities (other than in the case of commodities), investment in exchange traded notes and certificates or other eligible collective investment schemes ("Underlying Funds"), including exchange traded funds ("ETFs"), which are themselves exposed to such assets, or through the use of FDI. Exposure to commodities will be achieved through exposure to commodity indices that have been cleared in advance by the Central Bank for use by UCITS.

### Next Generation Mobility

The investment objective of Next Generation Mobility (the "Portfolio") is to achieve long-term capital appreciation through investing primarily in a portfolio of global equity holdings, focusing on companies that are involved or derive benefit from Next Generation Mobility.

The Portfolio seeks to achieve its investment objective by investing primarily in equity securities that are listed or traded on recognised markets globally (which may include emerging market countries) and issued by companies across all market capitalisations and economic sectors. The Portfolio may invest in companies of any market capitalisation but shall typically invest in companies that have market capitalisation greater than USD 500 million at time of purchase.

### Next Generation Space Economy

The investment objective of Next Generation Space Economy (the "Portfolio") is to achieve long-term capital appreciation through investing primarily in a portfolio of global equity holdings that are involved in or derive benefit from the Next Generation Space Economy.

The Portfolio seeks to achieve its investment objective by investing primarily in equity securities that are listed or traded on recognised markets globally (which may include emerging market countries) and issued by companies across all market capitalisations and economic sectors. The Portfolio may invest in companies of any market capitalisation but shall typically invest in companies that have market capitalisation greater than USD 500 million at time of purchase.

## General Information (Continued)

### Next Generation Space Economy (continued)

The following are the active share classes in the Portfolio at year end:

<i>Share Class Name</i>	<i>Share Class Launch Date</i>	<i>Currency</i>
EUR I3 Accumulating Unhedged Class	10 May 2022	EUR
EUR M Accumulating Unhedged Class	10 May 2022	EUR
USD I Accumulating Class	10 May 2022	USD

### Short Duration Emerging Market Debt

The investment objective of Short Duration Emerging Market Debt (the "Portfolio") is to achieve a stable income and return by investing in a diversified selection of Hard Currency-denominated short duration sovereign and corporate debt issued in emerging market countries. For the purposes of the Portfolio, "Hard Currency" is defined as US Dollar, Euro, Sterling, Japanese Yen and Swiss Franc.

The Portfolio seeks to achieve this objective by investing primarily in short duration debt securities and money market instruments issued by public or corporate issuers which have their head office, or exercise an overriding part of their economic activity, in emerging market countries and which are denominated in Hard Currency. Investors should also note that corporate issuers that are, either directly or indirectly, 100% government-owned are considered to be public issuers. With the exception of permitted investments in transferable securities and money market instruments which are unlisted, all securities invested in by the Portfolio will be listed, dealt or traded on recognised markets globally, without any particular focus on any one industrial sector or region.

Investments in securities issued by companies located in, and governments and government agencies of, emerging markets countries may involve additional risk, relative to investments in more developed economies.

### Short Duration High Yield SDG Engagement

The investment objective of Short Duration High Yield SDG Engagement (the "Portfolio") is to generate high current income by investing in short-duration high yield fixed income securities.

The Portfolio seeks to achieve this objective by investing primarily in short duration high yield bonds issued by:

- US and non-US corporations, which, respectively, have their head office or exercise an overriding part of their economic activity in the US; and
- governments and agencies in the US that are primarily denominated in US dollars that are listed, dealt or traded on recognised markets without any particular focus on any one industrial sector.

## General Information (Continued)

### Short Duration High Yield SDG Engagement (continued)

In addition, although the Portfolio will concentrate its investments in the US or other Organisation for Economic Co-operation and Development (“OECD”) countries, the Portfolio may also invest in securities of companies located in and governments of emerging market countries, which may involve additional risk, relative to investment in more developed economies.

The following are the active share classes in the Portfolio at year end:

### Strategic Income

The investment objective of Strategic Income (the "Portfolio") is to maximise total return from high current income and long-term capital appreciation by opportunistically investing in a diversified mix of fixed rate and floating rate debt securities under varying market environments.

The Portfolio seeks to achieve this objective by investing primarily in debt securities issued by US corporations or by the US government and its agencies. Such securities will be listed, dealt or traded on recognised markets and may be rated investment grade or below investment grade or non-rated by recognised rating agencies.

The following are the active share classes in the Portfolio at year end:

<sup>1</sup>Authorised for public distribution in Hong Kong.

## General Information (Continued)

### Sustainable Asia High Yield

The investment objective of Sustainable Asia High Yield (the "Portfolio") is to outperform the JP Morgan JESG JACI High Yield Index (Total Return, USD) before fees over a market cycle (typically 3 years) by primarily investing in below investment grade rated Hard Currency-denominated debt instruments issued in Asian countries that comply with the Sustainable Criteria.

Investors should note that the target return is not guaranteed over a market cycle, a 12-month or any period and the Portfolio's capital is at risk. Investors should also note that, over the course of a market cycle, there may be significant periods of time during which the performance of the Portfolio will deviate from the targeted return and the Portfolio may experience periods of negative return. There can be no guarantee that the Portfolio will ultimately achieve its investment objective.

The Portfolio will invest primarily in below investment grade rated Hard Currency-denominated debt securities and money market instruments which are issued by governments or government agencies of, or corporate issuers which have their head office or exercise an overriding part of their economic activity in, Asian countries and which are consistent with the Portfolio's objective of promoting environmental and social characteristics. For the purposes of the Portfolio, Hard Currency is defined as US Dollar, Euro, Sterling, Japanese Yen and Swiss Franc. Investors should note that public issuers include corporate issuers that are, either directly or indirectly, 100% government-owned.

With the exception of permitted investments in transferable securities and money market instruments which are unlisted, all securities invested in by the Portfolio will be listed, dealt or traded on Recognised Markets globally, without any particular focus on any one industrial sector.

In determining the investments which the Portfolio will make, the Manager and the Sub-Investment Manager will prioritise issuers which:

- have a lower carbon emission intensity. The Portfolio aims to achieve a carbon emission intensity reduction of at least 30% compared to that of the broader Asia high yield debt investment universe, represented by the JPMorgan Asian Credit High Yield Index (the "Index"); and
- demonstrate better environmental, social and governance ("ESG") practices. The Portfolio aims to achieve a higher ESG score as compared to the broader Asia high yield debt investment universe, represented by the Index, based on third party ESG scores from an established external provider.

The objective of lower carbon emission intensity is with a view to achieving the long-term global warming objectives of the Paris Agreement.

In addition, the Portfolio will make meaningful allocations to environmental, social and sustainability-labelled fixed income securities and, as a result, will have a higher exposure to such securities as compared to the Index, dependent on market opportunities.

The following are the active share classes in the Portfolio at year end:

<i>Share Class Name</i>	<i>Share Class Launch Date</i>	<i>Currency</i>
EUR X Accumulating Class	28 January 2022	EUR
GBP X Accumulating Class	8 April 2022	GBP

USD Z Distributing Class	22 March 2022	USD

<sup>1</sup>Authorised for public distribution in Hong Kong.

## General Information (Continued)

### Sustainable Emerging Market Corporate Debt

The investment objective of Sustainable Emerging Market Corporate Debt (the "Portfolio") is to achieve an attractive level of risk adjusted total return (income plus capital appreciation) from debt issued in emerging market countries.

The Portfolio seeks to achieve this objective by investing primarily in debt securities and money market instruments issued by corporate issuers which have their head office or exercise an overriding part of their economic activity in emerging market countries, which may be denominated in Hard Currency or the currencies of such emerging market countries. For the purposes of the Portfolio, "Hard Currency" is defined as US Dollar, Euro, Sterling, Japanese Yen and Swiss Franc.

The following are the active share classes in the Portfolio at year end:

### Sustainable Emerging Market Debt - Hard Currency

The investment objective of Sustainable Emerging Market Debt - Hard Currency (the "Portfolio") is to outperform the Benchmark (JPMorgan ESG EMBI Global Diversified Index (Total Return, USD)) before fees over a market cycle (typically 3 years) by investing primarily in Hard Currency-denominated debt securities issued in emerging market countries that comply with the Sustainable Investment Criteria.

The Portfolio seeks to achieve this objective by investing primarily in debt securities and money market instruments issued by public or private issuers in emerging market countries which are denominated in hard currency and which are consistent with the Portfolio's sustainability objective. For the purposes of the Portfolio, hard currency is defined as US Dollar, Euro, Sterling, Japanese Yen and Swiss Franc and investors should also note that public issuers include corporate issuers that are, either directly or indirectly, 100% government-owned.

## General Information (Continued)

### Sustainable Emerging Market Debt - Hard Currency (continued)

The following are the active share classes in the Portfolio at year end:

<i>Share Class Name</i>	<i>Share Class Launch Date</i>	<i>Currency</i>
EUR I3 Accumulating Class	26 September 2022	EUR
EUR I5 Accumulating Class	8 March 2022	EUR

USD I5 Accumulating Class	27 January 2022	USD

### Systematic Global Sustainable Value

The investment objective of Systematic Global Sustainable Value (the "Portfolio") is to achieve long term capital growth.

The Portfolio seeks to achieve its objective by investing primarily in equity securities issued by companies that are listed or traded on recognised markets globally (which may include emerging market countries).

Research identifies investment themes (i.e. characteristics of stocks that are believed to be systematically linked to the generation of better than average returns). Investment themes are used to assess the characteristics of security issuers and drive stock selection. Themes include, but are not limited to, the valuation, earnings quality, price dynamics and sentiment of each issue.

The following are the active share classes in the Portfolio at year end:

<i>Share Class Name</i>	<i>Share Class Launch Date</i>	<i>Currency</i>
EUR M Accumulating Class	29 January 2016	EUR
GBP I5 Accumulating Unhedged Class	27 September 2022	GBP
USD A Accumulating Class	14 August 2017	USD
USD I Accumulating Class	18 December 2014	USD
USD I3 Accumulating Class	31 May 2022	USD
USD Z Accumulating Class	24 May 2016	USD

### Ultra Short Term Euro Bond

The investment objective of Ultra Short Term Euro Bond (the "Portfolio") is to achieve an attractive level of outperformance over the Euro cash return over a period of 1 year irrespective of the market environment by taking exposure to a diversified mix of short-term Euro-denominated fixed and floating rate debt securities.

The Portfolio seeks to achieve its investment objective through a disciplined investment process investing in Euro-denominated bonds across a variety of sectors and maturities, utilising a combination of top-down and bottom-up strategies to identify multiple sources of value. Top down strategies focus on macroeconomic considerations, country and sector analysis. Bottom up strategies evaluate the characteristics of individual instruments or issuers.

## General Information (Continued)

USD Z Accumulating Class	24 January 2019	USD

### Uncorrelated Strategies

The investment objective of Uncorrelated Strategies (the "Portfolio") is to seek capital appreciation with an emphasis on absolute returns from a diversified portfolio of uncorrelated investment strategies.

The Portfolio seeks to achieve its objective by allocating its assets to fully discretionary investment advisers, which employ a variety of investment strategies and will invest globally without a focus on any particular industrial sector.

The following are the active share classes in the Portfolio at year end:

<i>Share Class Name</i>	<i>Share Class Launch Date</i>	<i>Currency</i>
CHF I Accumulating Class	13 March 2018	CHF
CHF I5 Accumulating Class	8 September 2017	CHF

USD Z Accumulating Class	8 September 2017	USD

### Uncorrelated Trading

The investment objective of Uncorrelated Trading (the "Portfolio") is to achieve returns in excess of the Benchmark (as defined below) over a typical investment horizon (of 3 years) from a diversified portfolio of uncorrelated investment strategies.

The Portfolio seeks to achieve its objective by allocating its assets to fully discretionary investment advisers, which employ a variety of investment strategies and will invest globally without a focus on any particular industrial sector.

The following are the active share classes in the Portfolio at year end:

<i>Share Class Name</i>	<i>Share Class Launch Date</i>	<i>Currency</i>
EUR X Accumulating Class	14 June 2022	EUR
USD X Accumulating Class	22 June 2022	USD

### US Equity

The investment objective of US Equity (the "Portfolio") is to achieve long term capital appreciation.

The Portfolio seeks to achieve its objective principally by taking long positions in equity and equity-linked securities, listed or traded on recognised markets in the US. The Portfolio may also but to a lesser extent take long positions in equity and equity-linked securities which are listed or traded on recognised markets located in the countries which comprise the MSCI All Country World Index (which may include emerging market countries).

The following are the active share classes in the Portfolio at year end:

<i>Share Class Name</i>	<i>Share Class Launch Date</i>	<i>Currency</i>
JPY I3 Accumulating Class	1 March 2022	JPY
USD A Accumulating Class	27 March 2020	USD

USD I Distributing Class	18 December 2015	USD
USD M Accumulating Class	9 February 2022	USD

## General Information (Continued)

### US Equity Index PutWrite

The Investment objective of US Equity Index PutWrite (the "Portfolio") is to seek long term growth of capital and income generation.

The Portfolio seeks to achieve its goal primarily through a strategy of writing collateralised put options on global equity indices and exchanged traded funds ("ETFs") providing exposure to US equity indices, such as the S&P 500 and Russell 2000. The put options will be traded on recognised markets.

The following are the active share classes in the Portfolio at year end:

<i>Share Class Name</i>	<i>Share Class Launch Date</i>	<i>Currency</i>
EUR I Accumulating Class	13 February 2017	EUR
EUR I3 Distributing Class	3 December 2021	EUR

USD M Accumulating Class	13 February 2017	USD
USD Z Accumulating Class	10 February 2017	USD

### US Large Cap Value

The investment objective of US Large Cap Value (the "Portfolio") is to achieve long term capital growth.

The Portfolio will primarily invest in equity securities issued by large-capitalisation companies which have their head office or exercise an overriding part of their economic activity in the US and that are listed or traded on Recognised Markets in the US. The Portfolio's investment in large capitalisation companies will not be restricted by sector or industry.

## General Information (Continued)

USD Z Accumulating Class	23 May 2022	USD

### US Long Short Equity

The investment objective of US Long Short Equity (the "Portfolio") is to seek long term capital appreciation with a secondary objective of principal preservation.

The Portfolio seeks to achieve its objective by taking long and synthetic short positions in equity and equity-linked securities, including Exchange Traded Funds ("ETFs") listed or traded in US equity markets. The Portfolio may also, but to a lesser extent take long and synthetic short positions in equity, equity-linked securities and ETFs which are listed or traded on recognised markets located in the countries comprising the MSCI All Country World Index (which may include emerging market countries). Investments generally include those companies across all industrial sectors with a market capitalisation of at least USD 250 million measured at the time of initial investment.

### US Multi Cap Opportunities

The investment objective of US Multi Cap Opportunities (the "Portfolio") is to achieve capital growth through the selection of investments using systematic, sequential research. The Portfolio seeks to achieve this objective by Neuberger Berman Investment Advisers LLC (the "Sub-Investment Manager") using systematic, sequential research in identifying potential investments. Investment selection is the result of both quantitative and qualitative analysis in an effort to identify companies that are believed to have the potential to increase in value. This potential may be realised in many ways, some of which include: free cash flow generation, product or process enhancements, margin increases and improved capital structure management.

### US Real Estate Securities

The investment objective of US Real Estate Securities (the "Portfolio") is to achieve total return through investments in real estate securities, emphasising both capital appreciation and current income. The Portfolio seeks to achieve this objective by investing on a diversified basis mainly in securities (including convertible bonds) issued by US REITs. It should be noted that the Portfolio does not acquire any real estate directly.

### US Small Cap

The investment objective of US Small Cap (the "Portfolio") is to achieve capital growth through the selection of investments applying analysis of company key metrics and macro economic factors. The Portfolio seeks to achieve this objective by investing primarily in equity securities issued by small-capitalisation companies which have their head office or exercise an overriding part of their economic activity in the US and that are listed or traded on recognised markets.

The Portfolio seeks to identify undervalued companies whose current market share and balance sheet are strong and whose financial strength is largely based on existing business lines rather than on projected growth.

Factors in identifying such companies include:

- above-average returns;
- an established market niche;
- circumstances that may make it difficult for new competitors to enter the market;
- an ability to finance their own growth; and
- sound future business prospects.

### US Small Cap Intrinsic Value

The investment objective of US Small Cap Intrinsic Value (the "Portfolio") is to achieve long term capital growth.

The Portfolio seeks to achieve its objective by investing primarily in equity securities issued by small-capitalisation companies which have their head office or exercise an overriding part of their economic activity in the US and that are listed or traded on recognised markets in the US. The Portfolio's investment in small capitalisation companies will not be restricted by sector or industry.

## Directors' Report

The Directors present herewith their annual report and audited financial statements for Neuberger Berman Investment Funds plc (the "Company") for the year ended 31 December 2022 and comparatives for the year ended 31 December 2021.

### Statement of Directors' Responsibilities

The Directors are responsible for preparing the annual report and the financial statements in accordance with applicable Irish Law and Generally Accepted Accounting Practice in Ireland including the Financial Reporting Standards ("FRS") 102: 'The financial reporting standard applicable in the UK and Republic of Ireland' issued by the Financial Reporting Council and published by the Chartered Accountants Ireland.

Under Irish law, the Directors shall not approve the financial statements unless they are satisfied that they give a true and fair view of the Company's assets, liabilities and financial position as at the end of the financial year and the profit or loss of the Company for the financial year.

In preparing these financial statements, the Directors are required to:

- select suitable accounting policies and then apply them consistently;
- make judgements and estimates that are reasonable and prudent;
- state whether the financial statements have been prepared in accordance with applicable accounting standards and identify the standards in question, subject to any material departures from those standards being disclosed and explained in the notes to the financial statements; and
- prepare the financial statements on the going concern basis unless it is inappropriate to presume that the Company will continue in business.

The Directors are responsible for keeping adequate accounting records that are sufficient to:

- correctly record and explain the transactions of the Company;
- enable, at any time, the assets, liabilities, financial position and profit or loss of the Company to be determined with reasonable accuracy; and
- enable the Directors to ensure that the financial statements comply with Financial Reporting Standard ("FRS") 102: The financial reporting standard applicable in the UK and Republic of Ireland, the European Communities (Undertakings for Collective Investment in Transferable Securities) Regulations, 2011 as amended (the "UCITS Regulations"), Irish statute comprising the Companies Act 2014 (as amended) and the Central Bank (Supervision and Enforcement) Act 2013 (Section 48 (1)) (Undertakings for Collective Investment in Transferable Securities) Regulations 2019 (the "Central Bank UCITS Regulations") and enable those financial statements to be audited.

The Directors are also responsible for safeguarding the assets of the Company and hence for taking reasonable steps for the prevention and detection of fraud and other irregularities.

Under the UCITS Regulations, the Directors are required to entrust the assets of the Company to a depositary for safe-keeping. In carrying out this duty, the Company has declared custody of the Company's assets to Brown Brothers Harriman Trustee Services (Ireland) Limited (the "Depositary").

### Relevant Audit Information Statement

The Directors in office at the date of this report have each confirmed that:

- as far as he/she is aware, there is no relevant audit information of which the Company's auditor is unaware; and
- he/she has taken all the steps that he/she ought to have taken as a Director in order to make himself/herself aware of any relevant audit information and to establish that the Company's auditor is aware of that information.

### Directors' Compliance Statement

It is the policy of the Company to comply with its relevant obligations (as defined in the Companies Act 2014 (as amended)). As required by Section 225(2) of the Companies Act 2014 (as amended), the Directors acknowledge that they are responsible for securing the Company's compliance with the relevant obligations. The Directors have drawn up a compliance policy statement as defined in Section 225(3)(a) of the Companies Act 2014 (as amended) and a compliance policy which refers to the arrangements and structures that are in place and which are, in the Directors' opinion, designed to secure material compliance with the Company's relevant obligations. In discharging their responsibilities under Section 225, the Directors relied upon, among other things, the services provided, advice and/or representations from third parties whom the Directors believe have the requisite knowledge and experience in order to secure material compliance with the Company's relevant obligations.

## Directors' Report (Continued)

### Accounting records

The Directors are responsible for ensuring that adequate accounting records as outlined in Section 281 of the Companies Act 2014 (as amended) are maintained by the Company. To achieve this, the Directors have appointed a service organisation Brown Brothers Harriman Fund Administration Services (Ireland) Limited (the "Administrator"). The Company's accounting records are retained at the Administrator's office at 30 Herbert Street, Dublin 2.

### Principal Activities and Review of Business

The Company is an investment company with variable capital incorporated in Ireland on 11 December 2000 as a public limited company. The Company was authorised by the Central Bank as an Undertaking for Collective Investment in Transferable Securities pursuant to the UCITS Regulations. The objective of the Company is the collective investment in transferable securities and other liquid financial assets of capital raised from the public, operating on the principle of risk spreading in accordance with the UCITS Regulations.

The Company is structured as an umbrella fund with segregated liability between sub-funds in that the Directors may from time to time with the prior approval of the Central Bank, issue different series of shares representing separate Portfolios. The assets of each Portfolio are invested in accordance with the investment objectives applicable to such Portfolio as outlined in the general information section of these Financial Statements. Each Portfolio bears its own liabilities and none of the Company, any of the service providers appointed to the Company, the Directors, any receiver, examiner or liquidator, nor any other person will have access to the assets of a Portfolio in satisfaction of a liability of any other Portfolio.

As at 31 December 2022 fifty-four constituent sub-funds were in existence, which are listed in the General Information section of this Annual Report.

### Results for the Year and Assets, Liabilities and Financial Position at 31 December 2022

A detailed review of the year and factors which contributed to the performance for the year is included in the Investment Manager's reports. Details of the assets, liabilities and financial position of the Company and results for the year ended 31 December 2022 are set out in the Balance Sheet and Profit and Loss Account for each Portfolio.

### Directors

The names and nationalities of the persons who served as Directors at any time during the year ended 31 December 2022 are set out below:

Tom Finlay**	Irish
Gráinne Alexander***	Irish
Michelle Green*	British
Naomi Daly***	Irish
Alex Duncan*	British

\*Non-Executive Director

\*\*Independent, Non-Executive Director and Permanent Chairman

\*\*\*Independent, Non-Executive Director

### Directors' and Secretary's Interests

As at 31 December 2022, Ms. Michelle Green and Mr. Alex Duncan are Directors of the Company and also Directors and employees of Neuberger Berman Europe Limited ("NBEL"), the Manager (until 30 June 2021), Promoter (until 30 June 2021), Sub-Investment Manager (since 1 July 2021) and Distributor of the Company. Until 15 February 2023 Ms. Michelle Green was also a Director of NBAMIL, the Manager (since 1 July 2021) of the Company.

None of the Directors, the Company Secretary, or their families holds or held any beneficial interests in the Company at 31 December 2022 or during the year (2021: Nil).

### Transactions Involving Directors

There are no contracts or arrangements of any significance in relation to the business of the Company in which the Directors or the Company Secretary had any interest as defined in the Companies Act 2014 (as amended) at any time during the year ended 31 December 2022 other than those disclosed in note 10 of these Financial Statements.

## Directors' Report (Continued)

### Transactions Involving Directors (continued)

#### *Connected Persons*

In accordance with the Central Bank's UCITS Regulation 43(1), any transaction carried out with the Company by the Manager, the Depositary, the Investment Adviser and/or associated or group companies of these entities ("connected persons") must be carried out as if negotiated at arm's length. Such transactions must be in the best interest of the shareholders of the Company.

The Board of Directors of the Company (the "Board") is satisfied that (i) there are arrangements (evidenced by written procedures) in place to ensure that the obligations set out above are applied to all transactions with connected parties; and (ii) transactions with connected parties entered into during the period complied with these obligations.

### Political Donations

There were no political donations made during the year ended 31 December 2022 (2021: Nil).

### Risk Management Objectives and Policies

Each Portfolio is invested in accordance with the investment objectives and policies applicable to the Portfolio as set out in detail in the Prospectus. Investment in each Portfolio carries with it a degree of risk including, but not limited to, the risks referred to in note 12 of these Financial Statements.

### Dividends and Retention

The dividend distributions declared and paid during the year are disclosed in the Profit and Loss Account under Finance Costs.

### Future Developments

The Company will continue to pursue its investment objective as set out in the Directors' Report.

### Other Matters

Russia's invasion of Ukraine, and corresponding events in late February 2022, have had, and could continue to have adverse effects on commodities and European economic activity. Whilst the direct Company's exposure to Russia-Ukraine is limited, Management will continue to monitor any potential impact on the activities of the Company, including but not limited to the imposed Russian sanctions and the increase in associated macroeconomic and geopolitical risks.

### Audit Committee

The Company established an audit committee. Mr. Tom Finlay, Ms. Gráinne Alexander, Ms. Naomi Daly and Mr. Alex Duncan are members of the Board of Directors of the Company and are part of the audit committee.

### Significant Events During the Year

Significant events during the year are set out in note 21 of these Financial Statements.

### Significant Events Since the Year End

Significant events since the year end are set out in note 22 of these Financial Statements.

### Independent Auditors

The Directors appointed the Independent Auditors, Ernst & Young, Chartered Accountants, in 2000 to audit the financial statements for the year ended 31 December 2001 and subsequent financial periods.

In order to compare the quality and effectiveness of the services provided by the incumbent auditors with those of other audit firms, the Company in 2021 commenced a tender process for the appointment of its external auditor. The audit tender process concluded in 2022 and it resulted in the re-appointment of Ernst & Young as the Company's external auditor.

The Independent Auditors have indicated their willingness to continue in office in accordance with Section 383(2) of the Companies Act 2014 (as amended).

## Directors' Report (Continued)

### Corporate Governance

The Company is subject to and complies with Irish statute comprising the Companies Act 2014 (as amended) and with the UCITS Regulations. The Company does not apply additional requirements in addition to those required by the above. Each of the service providers engaged by the Company is subject to their own corporate governance requirements.

#### *Financial Reporting Process - Description of Main Features*

The Directors are responsible for establishing and maintaining adequate internal control and risk management systems of the Company in relation to the financial reporting process. Such systems are designed to manage rather than eliminate the risk of failure to achieve the Company's financial reporting objectives and can only provide reasonable and not absolute assurance against material misstatement or loss.

The Directors have established processes regarding internal control and risk management systems to ensure its effective oversight of the financial reporting process. These include appointing the Administrator to maintain the accounting records of the Company independently of the Manager and the Depositary. The Administrator is required under the terms of the administration agreement to maintain adequate accounting records on behalf of the Company. To that end the Administrator performs regular reconciliations of its records to those of the Depositary. The Administrator is also contractually obliged to prepare for review and approval by the Directors the annual report including financial statements intended to give a true and fair view and the interim report and unaudited abridged financial statements.

The Directors evaluate and discuss significant accounting and reporting issues as the need arises. From time to time the Directors also examine and evaluate the Administrator's financial accounting and reporting routines and monitor and evaluate the external auditors' performance, qualifications and independence. The Administrator has operating responsibility in respect of its internal controls in relation to the financial reporting process and the Administrator's report to the Directors.

#### *Risk Assessment*

The Directors are responsible for assessing the risk of irregularities whether caused by fraud or error in financial reporting and ensuring the processes are in place for the timely identification of internal and external matters with a potential effect on financial reporting. The Directors have also put in place processes to identify changes in accounting rules and recommendations and to ensure that these changes are accurately reflected in the Company's financial statements.

The Manager completes in depth reviews of the Financial Statements to ensure that all of the content included is accurate. Should a discrepancy be identified the Manager would report this to the Board of Directors at the next board meeting, or immediately where the discrepancy is deemed material. Changes in accounting rules and standards are monitored by the Manager and the Company's Administrator; all changes are reported to the Board periodically.

The Manager liaises with the Company's Administrator to ensure that all changes in accounting rules and standards are reflected in the financial statements in a timely manner. The Manager also has regular dialogue with the Company's Auditors.

#### *Control Activities*

The Administrator maintains control structures to manage the risks over financial reporting. These control structures include appropriate division of responsibilities and specific control activities aimed at detecting or preventing the risk of significant deficiencies in financial reporting for every significant account in the financial statements and the related notes in the Company's annual report. Examples of control activities exercised by the Administrator include analytical review procedures, reconciliations and automatic controls in IT systems. Prices not available from independent sources are typically valued by the Manager using methods the Directors have approved in the good-faith belief that the resulting valuation will reflect the fair value of the security.

#### *Diversity*

With respect to diversity, the Company has no employees and the only individuals engaged directly by it are the Directors. When there is a vacancy on the Board, the objective is to ensure that the Board is diversified with an appropriate mix as regards age, gender, race and educational/professional backgrounds, while achieving compliance by all individuals with regulatory requirements and an overall composition with the requisite experience and skills. This was most recently reflected in 2019, in the context of the appointment of Naomi Daly and Alex Duncan as directors.

#### *Information and Communication*

The Company's policies and the Directors' instructions with relevance for financial reporting are updated and communicated via appropriate channels, such as e-mail, correspondence, telephone and meetings to ensure that all financial reporting information requirements are met in a complete and accurate manner.

## Directors' Report (Continued)

### Corporate Governance (continued)

#### *Monitoring*

The Directors receive regular presentations and review reports from the Depositary, Manager and Administrator. The Directors also have an annual process to ensure that appropriate measures are taken to consider and address the shortcomings identified and measures recommended by the independent auditors.

#### *Capital Structure*

No person has a significant direct or indirect holding of securities in the Company. No person has any special rights of control over the Company's share capital. There are no restrictions on voting rights. With regard to the appointment and replacement of Directors, the Company is governed by its Articles of Association, Irish statute comprising the Companies Act 2014 (as amended) and with the UCITS Regulations as applicable to investment funds. The Articles of Association themselves may be amended by special resolution of the Shareholders.

#### *Powers of the Directors*

The Directors are responsible for managing the business affairs of the Company in accordance with the Articles of Association. The Directors may delegate certain functions to the Administrator and other parties, subject to the supervision and direction by the Directors. The Directors have appointed the Manager to provide the day to day management of the Company's business affairs and have for this purpose delegated certain of their duties and powers to the Manager. The Directors will receive periodic reports from the Manager detailing, inter alia, its review of the performance of the Company and the Portfolios and providing an analysis of their respective investment portfolios. The Manager will also provide such other information as may from time to time be reasonably required by the Directors for the purposes of such meetings. The Directors have appointed the Depositary in respect of the safekeeping of the Company's assets. Consequently, none of the Directors is an executive Director. The Articles of Association provide that the Directors may exercise all the powers of the Company to borrow money, to mortgage or charge its undertaking, property or any part thereof and may delegate these powers to the Manager.

The Directors may at any time, with prior notification to the Depositary, temporarily suspend the calculation of the Net Asset Value of a particular Portfolio and the issue, valuation, sale, purchase, redemption or conversion of shares and/or the payment of redemption proceeds at any time in any of the following instances:

- a) any period when any recognised market on which a substantial portion of the investments for the time being comprised in the relevant Portfolio are quoted, listed or dealt in is closed otherwise than for ordinary holidays, or during which dealings on any such recognised market are restricted or suspended;
- b) any period when, as a result of political, military, economic or monetary events or other circumstances beyond the control, responsibility and power of the Directors, the disposal or valuation of investments for the time being comprised in the relevant Portfolio cannot, in the opinion of the Directors, be effected or completed normally or without prejudicing the interests of Shareholders;
- c) any breakdown in the means of communication normally employed in determining the value of any investments for the time being comprised in the relevant Portfolio or during any period when for any other reason the value of investments for the time being comprised in the relevant Portfolio cannot, in the opinion of the Directors, be promptly or accurately ascertained;
- d) any period when the Company is unable to repatriate funds for the purposes of making redemption payments or during which the realisation of investments for the time being comprised in the relevant Portfolio, or the transfer or payment of funds involved in connection therewith cannot, in the opinion of the Directors, be effected at normal prices or normal rates of exchange;
- e) any period when, as a result of adverse market conditions, the payment of redemption proceeds may, in the opinion of the Directors, have an adverse impact on the relevant Portfolio or the remaining Shareholders in such Portfolio;
- f) any period after a notice convening a meeting of Shareholders for the purpose of dissolving the Company or terminating a Portfolio has been issued, up to and including the date of such meeting of Shareholders;
- g) any period during which dealings in a collective investment scheme in which the Portfolio has invested a significant portion of its assets are suspended;
- h) any period in which the repurchase of the shares would, in the opinion of the Directors, result in a violation of applicable laws; or
- i) any period when the Directors determine that it is in the best interests of the Shareholders to do so.

## Directors' Report (Continued)

### Corporate Governance (continued)

#### *Powers of the Directors (continued)*

Notice of any such suspension shall be published by the Company at its registered office and in such newspapers and through such other media as the Directors may from time to time determine, if in the opinion of the Directors, it is likely to exceed thirty days, and shall be transmitted immediately to the Central Bank and the Shareholders. Shareholders who have requested the issue or redemption of shares of any series or class will have their subscription or redemption request dealt with on the first dealing day after the suspension has been lifted unless applications or redemption requests have been withdrawn prior to the lifting of the suspension. Where possible, all reasonable steps will be taken to bring any period of suspension to an end as soon as possible.

Registered shares may be transferred to another beneficial owner free of cash in a form that has been approved by the Directors. The instrument of transfer of a share must be signed by or on behalf of the transferor. The transferor shall be deemed to remain the holder of the share until the name of the transferee is entered on to the Register in respect of such share.

The Directors may decline to register a transfer if they are aware or reasonably believe the transfer would result in the beneficial ownership of shares by a person in contravention of any restrictions on ownership imposed by the Directors or might result in legal, regulatory, pecuniary, taxation or material administrative disadvantage to the relevant Portfolio or Shareholders generally.

#### *Shareholder Meetings*

The Annual General Meeting of the Company will be held in Ireland, normally during the month of June or such other date as the Directors may determine. Notice convening the Annual General Meeting in each year at which the audited financial statements of the Company will be presented (together with the Directors' and Auditors' Reports of the Company) will be sent to Shareholders at their registered addresses not less than twenty one clear days before the date fixed for the meeting. Other general meetings may be convened from time to time by the Directors in such manner as provided by Irish law.

Each of the shares entitles the holder to attend and vote at meetings of the Company and of the Portfolio represented by those shares. All votes shall be cast by a poll of Shareholders present in person or by proxy at the relevant Shareholder meeting or by unanimous written resolution of the Shareholders. No class of shares confers on the holder thereof any preferential or pre-emptive rights or any rights to participate in the profits of any other share class or any voting rights in relation to matters relating solely to any other share class.

Any resolution to alter the class rights of the shares requires the approval of three-fourths of the holders of the shares represented or present and voting at a general meeting of the class. The quorum for any general meeting of the class convened to consider any alteration to the class rights of the shares shall be present in person or by proxy two or more persons holding shares issued in that class. In the event that a quorum is not present at a meeting and the meeting is adjourned, the quorum for the adjourned meeting shall be one Shareholder present in proxy or person.

Each of the shares other than subscriber shares entitle the Shareholder to participate equally (subject to any differences between fees, charges and expenses applicable to different classes of shares) on a pro-rata basis in the profits and net assets of the Portfolio in respect of which the shares have been issued, save in the case of profits declared prior to becoming a Shareholder.

Subscriber shares entitle the Shareholders holding them to attend and vote at all general meetings of the Company but do not entitle the holders to participate in the profits or net assets of the Company except for a return of capital on a winding up.

#### *Composition and Operation of Board and Committees*

There are five Directors currently, all of whom are non-executive Directors. Ms. Michelle Green is Director of the Company and until 15 February 2023 was also Director of Neuberger Berman Asset Management Ireland Limited, the Manager of the Company. The Articles of Association do not provide for retirement of Directors by rotation. However, the Directors may be removed by the shareholders by ordinary resolution in accordance with the procedures established under the Irish Companies Act 2014 (as amended). The Board meets at least quarterly. Other than the Audit Committee, there are no permanently authorised sub-committees of the Board.

The Board has satisfied itself that the Directors have sufficient time to fully discharge their duties and disclose in writing to the Board their other commitments, including other CIS directorships and non Fund directorships.

#### *Irish Funds Corporate Governance Code*

The Irish Funds ("IF") has published a corporate governance code ("IF Code") that may be adopted on a voluntary basis by Irish authorised collective investment schemes. It should be noted that the IF Code reflects existing corporate governance practices imposed on Irish authorised collective investment schemes, as noted above. If the IF Code is adopted on a voluntary basis, it can be referred to in the disclosures made in the Directors' Report in compliance with the provisions of the European Communities (Directive 2006/46/EC) Regulations (i.e. S.I. 450 of 2009 and S.I. 83 of 2010).

With effect from 1 January 2013, the Board voluntarily adopted the Corporate Governance Code for Irish Domiciled Collective Investment Schemes as published by the IF, as the Company's corporate governance code.

## Report of the Depositary to the Shareholders

We have enquired into the conduct of Neuberger Berman Investment Funds plc (the "Company") for the year ended 31 December 2022, in our capacity as Depositary to the Company.

This report including the opinion has been prepared for and solely for the Shareholders in the Company as a body, in accordance with Part 5 of the European Communities (Undertakings for Collective Investment in Transferable Securities) Regulations 2011, as amended, (the 'UCITS Regulations'), and for no other purpose. We do not, in giving this opinion, accept or assume responsibility for any other purpose or to any other person to whom this report is shown.

### Responsibilities of the Depositary

Our duties and responsibilities are outlined in Part 5 of the UCITS Regulations. One of those duties is to enquire into the conduct of the Company in each annual accounting period and report thereon to the shareholders.

Our report shall state whether, in our opinion, the Company has been managed in that period in accordance with the provisions of the Company's Memorandum and Articles of Association and the UCITS Regulations. It is the overall responsibility of the Company to comply with these provisions. If the Company has not so complied, we as Depositary must state why this is the case and outline the steps which we have taken to rectify the situation.

### Basis of Depositary Opinion

The Depositary conducts such reviews as it, in its reasonable opinion, considers necessary in order to comply with its duties as outlined in Part 5 of the UCITS Regulations and to ensure that, in all material respects, the Company has been managed (i) in accordance with the limitations imposed on its investment and borrowing powers by the provisions of the constitutional documentation and the appropriate regulations and (ii) otherwise in accordance with the Company's constitutional documentation and the appropriate regulations.

### Opinion

In our opinion, the Company has been managed during the year, in all material respects:

- (i) in accordance with the limitations imposed on the investment and borrowing powers of the Company by the Memorandum & Articles of Association, the UCITS Regulations and the Central Bank (Supervision and Enforcement) Act 2013 (Section 48(1)) (Undertakings for Collective Investment in Transferable Securities) Regulations 2019 ('the Central Bank UCITS Regulations'); and
- (ii) otherwise in accordance with the provisions of the Memorandum & Articles of Association, the UCITS Regulations and the Central Bank UCITS Regulations.

# Independent Auditor's Report to the Members of Neuberger Berman Investment Funds Plc

## Report on the audit of the financial statements

### Opinion

We have audited the financial statements of Neuberger Berman Investment Funds plc ('the Company') for the year ended 31 December 2022, which comprise the Balance Sheet, the Profit and Loss Account, the Statement of Changes in Net Assets Attributable to Holders of Redeemable Participating Shares and notes to the financial statements, including the summary of significant accounting policies set out in note 1. The financial reporting framework that has been applied in their preparation is Irish Law and FRS 102 The Financial Reporting Standard applicable in the UK and Republic of Ireland issued in the United Kingdom by the Financial Reporting Council.

In our opinion the financial statements:

- give a true and fair view of the assets, liabilities and financial position of the company as at 31 December 2022 and of its loss for the year then ended;
- have been properly prepared in accordance with FRS 102 The Financial Reporting Standard applicable in the UK and Republic of Ireland; and
- have been properly prepared in accordance with the requirements of the Companies Act 2014, the European Communities (Undertakings for Collective Investment in Transferable Securities) Regulations, 2011, and the Central Bank (Supervision and Enforcement) Act 2013 (Section 48(1)) (Undertakings for Collective Investment in Transferable Securities) Regulations 2019.

### Basis for opinion

We conducted our audit in accordance with International Standards on Auditing (Ireland) (ISAs (Ireland)) and applicable law. Our responsibilities under those standards are further described in the Auditor's Responsibilities for the Audit of the Financial Statements section of our report. We are independent of the Company in accordance with ethical requirements that are relevant to our audit of financial statements in Ireland, including the Ethical Standard issued by the Irish Auditing and Accounting Supervisory Authority (IAASA), and we have fulfilled our other ethical responsibilities in accordance with these requirements.

We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our opinion.

### Conclusions relating to going concern

In auditing the financial statements, we have concluded that the directors' use of the going concern basis of accounting in the preparation of the financial statements is appropriate.

Based on the work we have performed, we have not identified any material uncertainties relating to events or conditions that, individually or collectively, may cast significant doubt on the Company's ability to continue as a going concern for a period of at least twelve months from the date when the financial statements are authorised for issue.

Our responsibilities and the responsibilities of the directors with respect to going concern are described in the relevant sections of this report. However, because not all future events or conditions can be predicted, this statement is not a guarantee as to the company's ability to continue as a going concern.

### Other information

The directors are responsible for the other information. The other information comprises the information included in the annual report other than the financial statements and our auditor's report thereon. Our opinion on the financial statements does not cover the other information and, except to the extent otherwise explicitly stated in our report, we do not express any form of assurance conclusion thereon.

Our responsibility is to read the other information and, in doing so, consider whether the other information is materially inconsistent with the financial statements or our knowledge obtained in the audit or otherwise appears to be materially misstated. If we identify such material inconsistencies or apparent material misstatements, we are required to determine whether there is a material misstatement in the financial statements or a material misstatement of the other information. If, based on the work we have performed, we conclude that there is a material misstatement of this other information, we are required to report that fact.

We have nothing to report in this regard.

## Independent Auditor's Report to the Members of Neuberger Berman Investment Funds Plc (Continued)

### Opinions on other matters prescribed by the Companies Act 2014

In our opinion, based solely on the work undertaken in the course of the audit, we report that:

- the information given in the directors' report for the financial year ended for which the financial statements are prepared is consistent with the financial statements; and
- the directors' report has been prepared in accordance with applicable legal requirements.

We have obtained all the information and explanations which, to the best of our knowledge and belief, are necessary for the purposes of our audit.

In our opinion the accounting records of the Company were sufficient to permit the financial statements to be readily and properly audited and the financial statements are in agreement with the accounting records.

### Matters on which we are required to report by exception

Based on the knowledge and understanding of the company and its environment obtained in the course of the audit, we have not identified material misstatements in the directors' report.

The Companies Act 2014 requires us to report to you if, in our opinion, the disclosures required by sections 305 to 312 of the Act, which relate to disclosures of directors' remuneration and transactions are not complied with by the Company. We have nothing to report in this regard.

### Respective responsibilities

#### Responsibilities of directors for the financial statements

As explained more fully in the Statement of Directors' Responsibilities set out on page 36, the directors are responsible for the preparation of the financial statements in accordance with the applicable financial reporting framework that give a true and fair view, and for such internal control as they determine is necessary to enable the preparation of financial statements that are free from material misstatement, whether due to fraud or error.

In preparing the financial statements, the directors are responsible for assessing the Company's ability to continue as a going concern, disclosing, as applicable, matters related to going concern and using the going concern basis of accounting unless management either intends to liquidate the Company or to cease operations, or has no realistic alternative but to do so.

#### Auditor's responsibilities for the audit of the financial statements

Our objectives are to obtain reasonable assurance about whether the financial statements as a whole are free from material misstatement, whether due to fraud or error, and to issue an auditor's report that includes our opinion. Reasonable assurance is a high level of assurance, but is not a guarantee that an audit conducted in accordance with ISAs (Ireland) will always detect a material misstatement when it exists. Misstatements can arise from fraud or error and are considered material if, individually or in the aggregate, they could reasonably be expected to influence the economic decisions of users taken on the basis of these financial statements.

A further description of our responsibilities for the audit of the financial statements is located on the IAASA's website at:

[http://www.iaasa.ie/getmedia/b2389013-1cf6-458b-9b8f-a98202dc9c3a/Description\\_of\\_auditors\\_responsibilities\\_for\\_audit.pdf](http://www.iaasa.ie/getmedia/b2389013-1cf6-458b-9b8f-a98202dc9c3a/Description_of_auditors_responsibilities_for_audit.pdf).

This description forms part of our auditor's report.

## Independent Auditor's Report to the Members of Neuberger Berman Investment Funds Plc (Continued)

### Respective responsibilities (continued)

#### The purpose of our audit work and to whom we owe our responsibilities

Our report is made solely to the Company's members, as a body, in accordance with section 391 of the Companies Act 2014. Our audit work has been undertaken so that we might state to the Company's members those matters we are required to state to them in an auditor's report and for no other purpose. To the fullest extent permitted by law, we do not accept or assume responsibility to anyone other than the Company and the Company's members, as a body, for our audit work, for this report, or for the opinions we have formed.

# Independent Auditor's Report to the Directors of Neuberger Berman Investment Funds Plc

The Directors  
Neuberger Berman Investment Funds plc

## Opinion

We have audited the accompanying financial statements of Neuberger Berman Investment Funds plc (the "Company"), which comprise the Balance Sheet, including the Schedule of Investments, as of 31 December 2022, the Profit and Loss Account, the Statement of Changes in Net Assets Attributable to Holders of Redeemable Participating Shares, for the year then ended, and the related notes (collectively referred to as the "financial statements").

In our opinion, the accompanying financial statements present fairly, in all material respects, the balance sheet of the Company at 31 December 2022, and the results of its operations, changes in net assets for the year then ended, in conformity with Accounting Standards including FRS 102 The Financial Reporting Standard applicable in the UK and Republic of Ireland (Irish Generally Accepted Accounting Practice).

## Basis for Opinion

We conducted our audit in accordance with auditing standards generally accepted in the United States of America (GAAS). Our responsibilities under those standards are further described in the Auditor's Responsibilities for the Audit of the Financial Statements section of our report. We are required to be independent of the Company and to meet our other ethical responsibilities in accordance with the relevant ethical requirements relating to our audit. We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our audit opinion.

## Responsibilities of Management for the Financial Statements

Management is responsible for the preparation and fair presentation of the financial statements in accordance with Accounting Standards including FRS 102 The Financial Reporting Standard applicable in the UK and Republic of Ireland (Irish Generally Accepted Accounting Practice), and for the design, implementation, and maintenance of internal control relevant to the preparation and fair presentation of financial statements that are free of material misstatement, whether due to fraud or error.

In preparing the financial statements, management is required to evaluate whether there are conditions or events, considered in the aggregate, that raise substantial doubt about the Company's ability to continue as a going concern for one year after the date that the financial statements are available to be issued.

## Auditor's Responsibilities for the Audit of the Financial Statements

Our objectives are to obtain reasonable assurance about whether the financial statements as a whole are free of material misstatement, whether due to fraud or error, and to issue an auditor's report that includes our opinion. Reasonable assurance is a high level of assurance but is not absolute assurance and therefore is not a guarantee that an audit conducted in accordance with GAAS will always detect a material misstatement when it exists. The risk of not detecting a material misstatement resulting from fraud is higher than for one resulting from error, as fraud may involve collusion, forgery, intentional omissions, misrepresentations, or the override of internal control. Misstatements are considered material if there is a substantial likelihood that, individually or in the aggregate, they would influence the judgment made by a reasonable user based on the financial statements.

In performing an audit in accordance with GAAS, we:

- Exercise professional judgment and maintain professional skepticism throughout the audit.
- Identify and assess the risks of material misstatement of the financial statements, whether due to fraud or error, and design and perform audit procedures responsive to those risks. Such procedures include examining, on a test basis, evidence regarding the amounts and disclosures in the financial statements.
- Obtain an understanding of internal control relevant to the audit in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the Company's internal control. Accordingly, no such opinion is expressed.
- Evaluate the appropriateness of accounting policies used and the reasonableness of significant accounting estimates made by management, as well as evaluate the overall presentation of the financial statements.
- Conclude whether, in our judgment, there are conditions or events, considered in the aggregate, that raise substantial doubt about each Company's ability to continue as a going concern for a reasonable period of time.

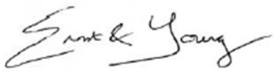

We are required to communicate with those charged with governance regarding, among other matters, the planned scope and timing of the audit, significant audit findings, and certain internal control-related matters that we identified during the audit.

## Independent Auditor's Report to the Directors of Neuberger Berman Investment Funds Plc (Continued)

### Other Information

Management is responsible for the other information. The other information comprises the information included in the annual report but does not include the financial statements and our auditor's report thereon. Our opinion on the financial statements does not cover the other information, and we do not express an opinion or any form of assurance thereon.

In connection with our audit of the financial statements, our responsibility is to read the other information and consider whether a material inconsistency exists between the other information and the financial statements, or the other information otherwise appears to be materially misstated. If, based on the work performed, we conclude that an uncorrected material misstatement of the other information exists, we are required to describe it in our report.

## 5G Connectivity – Investment Manager's Report

For the 12 months ended 31 December 2022, the total return for the USD I Accumulating Class was -43.15%. Over the same period, the MSCI All Country World Index (ACWI) (Total Return, Net of Tax, USD) (the "Index") returned -18.36%. (Performance for all share classes is provided in Appendix II. Performance data quoted represent past performance and do not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any).

2022 was an unusual year marked by the highest inflation and the fastest pace of rate hikes by central banks in 40 years. While global equity markets began the year with rich valuations, long duration and mega-cap tech stocks subsequently derated significantly. For example, the MSCI ACWI IT Index returned -31.07% over the year. Market volatility was high during the period, and sentiment weak due to recession concerns and geopolitical tensions. This led to widespread de-risking and market rotations away from growth equity.

Against a challenging macro backdrop, the Portfolio underperformed the Index over the reporting period. By sector, an overweight to Information Technology was the biggest detractor. In particular, portfolio exposure in high growth areas such as Software and cyclical sectors such as Semiconductors underperformed, as they were challenged by growth normalisation and macro weakness. Region-wise, a higher allocation to China versus the benchmark detracted given continued COVID-related lockdowns and political changes. On the other hand, exposure to Industrials and more defensive growth areas such as Telecommunications held up better.

Through 2022, we were avoiding growth traps and placing emphasis on Growth at a Reasonable Price. We reduced exposure to high growth internet and software, as well as exposure to consumer electronics. Instead, we focused on areas with positive secular tailwinds (5G infrastructure, industrials), defensive growth (telecoms), and solid earnings power (leading-edge semiconductors).

Looking into 2023, while the pace of rate hikes is expected to slow, rates are likely to be kept higher for longer and macro uncertainty could persist. We thus continue to emphasise on quality but are ready to capture tactical opportunities and position for cyclical growth. We are positive on beneficiaries of the acceleration in 5G rollout, a strategic semiconductor industry, proliferation of industrial automation & electrification, and key beneficiaries and enablers of digital transformation. Given continued market volatility, we stress the importance of being nimble and plan to take advantage of market dislocations to trade up for higher quality exposures where we see incremental positive outlook, better earnings power, and validation of our 5G investment theses.

## Asian Debt - Hard Currency – Investment Manager's Report

For the 12 months ended 31 December 2022 (the "reporting period"), the total return for the USD I Accumulating Class was -13.50%. Over the same period, the JP Morgan Asia Credit Index (Total Return, USD) (the "Index") returned -11.02%. (Performance for all share classes is provided in Appendix II. Performance data quoted represent past performance and do not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any).

The Asian bond market saw significant drawdowns over the reporting period, driven primarily by the performance of the Chinese real estate sector. Under the "common prosperity" mantra, Chinese authorities continued their policy of forced deleveraging of the property sector, which resulted in a high degree of credit stress and large number of defaults in the market. Outside of the Chinese real estate sector, the Asian hard currency debt markets performed relatively better, yet posted negative returns for the calendar year amidst a challenging year for the asset class given the rising core yields and tightening financial conditions.

Towards the end of the year, markets showed signs of recovery due to two key developments in China: first, the government's pro-growth stance including re-opening and the shift away from zero-COVID policy, and second, the pivot towards more supportive policy for the property sector. Chinese authorities scrapped strict curbs on travel and activity in a move towards re-opening which aided positive sentiment in the China credit complex. Regarding the property sector, Chinese regulators have turned more positive on property developer financing and the People's Bank of China ("PBoC") and the China Banking and Insurance Commission ("CBIRC") reiterated the need to mitigate risks for "good-quality and systematically-important" developers.

Over the year, credit selection was key amidst the unprecedented volatility in Asian credit markets. Overall, security selection contributed positively to relative return versus the Index while country allocation was the largest detractor. Security selection in Indonesia, India, Hong Kong, Singapore and Thailand were key contributors to positive excess returns. More specifically within India, the Portfolio's overweight positions in the renewable energy sector were a key positive contributor. On the other hand, security selection in China was a detractor given our underweight positions in lower beta issuers combined with exposure in the property sector which suffered significantly with the Index down 28% in 2022. Within the Portfolio's country allocation, the largest negative contribution came from exposure to Sri Lanka, which saw a sovereign credit default.

Following the worst year in decades for Asia credit and emerging markets ("EM") more broadly, we believe that prospects for the asset class look much brighter in 2023. With substantial monetary tightening behind us and inflation having likely peaked in both the US and in major Asian economies, we believe pressures from rising rates may abate and potentially become a more two-sided risk going forward. In China, while the sudden easing of COVID restrictions was a surprise, the reopening and renewed policy focus on supporting growth could drive a strong economic rebound later in the year, with positive spillovers across the region. We anticipate default rates for Asian high yield bonds to decline in 2023 due to positive developments in China. For China specifically, we believe that a more positive stance is now warranted given policy accommodation for developers as well as the government's broader pro-growth stance. Furthermore, we believe the broader China-related complex including Macau may benefit going forward from re-opening. We continue to hold Sri Lanka exposure and anticipate recovery values to be higher than current market prices. Elsewhere, we remain constructive on credit opportunities in particular across South and Southeast Asia including India given attractive fundamentals and valuations.

We believe the key risks to our constructive view are either the possible unfolding of a global recession which could push EM spreads materially higher, or an unexpected acceleration of inflation dynamics globally which could require substantially more rate hikes. Considering current yield levels for Asian hard currency bonds, we believe that those risks are well compensated for and we see valuations for Asian credit as attractive.

## China A-Share Equity – Investment Manager's Report

For the 12 months ended 31 December 2022 (the "reporting period"), the total return for the CNY I Accumulating Class was -22.68%. Over the same period, the MSCI China A Onshore Net Index (Total Return, CNY) (the "Index") returned -20.63%. (Performance for all share classes is provided in Appendix II. Performance data quoted represent past performance and do not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any).

After aggressive regulatory tightening in 2021, many anticipated 2022 to be a year of recovery for China, but 2022 proved even more difficult. China's adherence to its zero-COVID policy and its real estate downturn, along with weak global growth rates, the US Federal Reserve Board's rate hikes, and the Russia-Ukraine war, undermined the China equity markets in terms of both fundamentals and liquidity.

In November, however, the market rebounded strongly as China's government abandoned its zero-COVID policy and relaxed quarantine and contact-tracing requirements. (Unsurprisingly, December Purchasing Managers' Index ("PMI") data weakened as COVID cases surged as a result.) On the property front, the government initiated a number of measures aimed at supporting developers with financing difficulties. The late-year rally, while welcome, was not sufficient to overcome earlier losses.

During the reporting period, Energy names surged, particularly Coal and Oil, but all other sectors lost value. Defensive Utilities and interest-rate sensitive Financials outperformed, while IT, Materials, and Health Care declined most.

The Portfolio outperformed the Index during the fourth quarter's rally, but lagged for the full year. Underperformance resulted from a zero weighting to Energy names and stock selection within Consumer Discretionary and Communications Services. These headwinds outweighed benefits from our Financials and Real Estate holdings, and an overweight to Consumer Staples.

We continue to adhere to our investment philosophy, and remain focused on domestic growth via high quality companies across market-cap spectrum. The types of companies we seek are what we call Quality Compounders and Secular Growth Beneficiaries.

Quality Compounders are high quality companies with high return on equity ("ROE"), consistent cash flow potential, and strong corporate governance with consistent long-term performance records. These are concentrated in Consumer industries, Health Care, and retail Financials.

Secular Growth Beneficiaries are companies positioned for domestic secular growth over the long term, supported by government policies and broader industry trends. These are primarily concentrated in the alternative energy industry, including high quality companies involved in electric vehicle ("EV") batteries, photovoltaic modules and equipment, and consumer electronics.

Looking ahead, while current rapid surge of COVID cases is likely to weaken growth momentum in the short term, we believe that China is on a definitive reopening path, and that a return to normalcy can be anticipated in the coming months.

As the country reopens, we believe the sectors most severely impacted by COVID are likely to benefit the most. We believe investment opportunities will emerge in the following areas: Consumption, first in essentials, and then non-essentials; Health Care, where medical services affected by the pandemic are likely to recover; New Energy, an area of long-term secular growth potential despite short-term headwinds; Real Estate, where policy reversals could lead to recovery of short-term fundamentals; Financials, a sector likely to benefit from economic recovery and a possible higher rate environment later in the year; and Internet, where the combination of a normalising regulatory environment, improving fundamentals, and the potential for capital to flow back to emerging markets support the sector.

We are using opportunities from the areas we have targeted to build on our diversified portfolio of high quality core holdings, and seeking to deliver attractive risk-adjusted returns over the long-term.

## China Bond – Investment Manager's Report

For the twelve months ended 31 December 2022 (the "reporting period"), the total return for the CNY I Distributing Class was -6.13%. Over the same period, the reference index, the FTSE Chinese Government and Policy Bank Bond 0-1 Year Select Index (CNY, Total Return) (the "Index"), returned 2.08%. (Performance for all share classes is provided in Appendix II. Performance data quoted represent past performance and do not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any).

As measured by the China Bond New Composite Total Return Index, onshore Chinese fixed income assets returned 3.30% in CNY terms over the reporting period, a relatively strong performance compared to other global fixed income asset classes. While central banks around the world were guarding against rampant inflation by raising rates at an unprecedented pace since the Volcker era, the Chinese economy was battling a different set of issues, including weak growth from a property market rout, deteriorating external demand and preserving the zero-COVID policy. Compared to developed market rates this year, the moves in China rates were considerably less volatile.

10-year China Government Bond ("CGB") traded in a relatively tight 15-20 bps range in the first half of the year. Growth headwinds have urged the regulators to unveil more supportive measures, including a 25 bps required reserves ratio ("RRR") cut in April, and a 5-year Loan Prime Rate ("LPR") cut in May. As we moved to the later part of the year, the upcoming 20th Party Congress in mid-October loomed large and the government took no chances and implemented stringent controls with citywide lockdowns. This was in stark contrast to neighboring countries that eased travel restrictions. Consequently, rates rallied to a low of 2.62% and traded in the range of 2.65%-2.75% in the third quarter of 2022. Subsequently, once the new leaders were appointed at the 20th Party Congress in October, we saw broad-based stimulative measures for the ailing real estate sector. Green shoots on reopening emerged, particularly on official communications and local government loosening zero-COVID policies. It caught investors by surprise. This led to a surge in CGB yields to end the year in the range of 2.85%-2.95%.

On credits, we continued to see an increasing number of defaults in the real estate sector over the first 10 months of the reporting period. Privately Owned Enterprise ("POE") property names were largely the casualties as State-Owned Equity ("SOE") developers are still able to seek government or SOE support for financial assistance. In the fourth quarter of 2022, the rapid selloff in onshore rates and credits caught investors by surprise and caused Net Asset Value ("NAV") of Wealth Management Products ("WMPs") to decline sharply. This resulted in widespread redemption pressures on WMPs onshore by retail investors. This negative feedback loop manifested throughout November and December. Credit bonds were not spared either. Over the last two months of 2022, we saw broad-based widening in credit bond yields and credit spread widened drastically above historical average.

On the FX side, CNY saw two bouts of material depreciation moves over the course of 2022, the first wave being in April following the expected policy rate cuts in China vis a vis the rapid pace of tightening in developed markets, while the second wave of rapid depreciation started in the third quarter after the People's Bank of China ("PBoC") unexpectedly cut policy rates again in August amid worsening economic data. We saw USDCNY hit a peak range at around 7.35, before retracing below the 7.0 handle in the last two months of the reporting period as a result of reopening expectations.

The negative return of the Portfolio at the end of the reporting period was mainly driven by holdings in USD real estate bonds, which saw unprecedented price pressures amid a wave of credit events in the sector. In onshore bonds we kept a short duration and positioned defensively, given the unattractive levels of credit spreads as well as rates. This has helped us mitigate the selloff resulting from WMP redemption pressures in the last two months of the year. We have some allocation in USD real estate bonds, which saw unexpected defaults and credit events. This caused bulk of the detractor in performance this year. In the second half of the year, the rapid rise in short-end US rates increased the relative attractiveness of USD Investment Grade ("IG") credits, and we have tactically allocated around 25% of the Portfolio's net assets in USD strong IG credits.

Recent global economic data has undoubtedly taken a turn for the worse. A global economic slowdown might exacerbate the weak China growth profile. The tail risk of a ripple effect across the economy is still lingering. The outcome of the twice-a-decade summit, China's 20th Communist Party Congress ("CPC") will likely have large macro implications and structural capital allocation redistribution. Once the political dust settles, we will focus on the "two-sessions" in March 2023 to get a better sense on how the CPC is going to tackle economic challenges.

Currently, we believe that sentiments in the bond market remain very fragile and bond outflows (likely reallocating into equity) into first quarter of 2023 remain likely. The unwinding rout from WMPs will likely take time to dissipate and further selling pressure could cause volatility in the rates and credit markets. From our previous experiences of market rout, liquidity is of paramount importance, and we will attempt to incrementally increase our risk positions during such market dislocations.

## China Bond – Investment Manager's Report (continued)

On the property side, we believe the recent supportive policies to boost market sentiment and stabilise confidence of different stakeholders (investors, suppliers, homebuyers) is a positive signal that the financial regulators are taking a firmer and stronger stance on trying to tackle problems of slow home delivery projects and shutting down of developers' bond refinancing plans. However, we will need to continue monitoring the effectiveness of these measures, and how it will result in an improvement in contracted sales. Property bonds had a significant run-up in prices, and at this juncture, we are cautious and wait to see evidence of refinancing channel for POE names, as it still depends on project assessment and due diligence from banks granting the credit lines. For higher quality SOE/mixed-ownership names, a risk-off pullback could provide a good opportunity to incrementally add risk there.

We also think the areas of vulnerability would likely shift from POE property names to fundamentally weak Local Government Funding Vehicles ("LGFVs") and upstream / downstream corporate exposures linked to the broader property ecosystem. Recent headlines on some financially stretched regions, such as Yunnan, Guizhou and Gansu, suggest local governments remain wary about contagion risks and the liquidity pressures are rising among weaker LGFVs. We anticipate greater differentiation in the sector. Hence, we will likely only be involved with quality names.

## China Equity – Investment Manager's Report

For the twelve months ended 31 December 2022 (the "reporting period"), the total return for the USD I Accumulating Class was -21.33%. Over the same period, the benchmark index, the MSCI China All Shares Net Total Return Index (the "Index"), returned -23.61%. (Performance for all share classes is provided in Appendix II. Performance data quoted represent past performance and do not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any).

China equity markets underwent severe turbulence in 2022 amidst slowing economic growth. At the start of the reporting period, both offshore and onshore China equity markets sold off assets, along with global risk, on concerns of a faster pace of US policy tightening. The correction accelerated following the Russian-Ukraine conflict and large-scale lockdowns in a number of major cities including Shenzhen and Shanghai due to a surge in local COVID-19 cases. While markets stabilised in May and June after the government's announcement of fiscal, credit and industry policies to boost economic growth, China equity markets corrected over the summer given renewed concerns about property developers' credit woes as well as potential delisting of US-listed ADRs. At the time, we believed that the downside risk associated with the zero-COVID policy had already been priced into the market and we took advantage of the market volatility to add to many high-quality companies that were sold off due to negative investor sentiment. As such, the Portfolio was well-positioned for the market rebound at the end of the reporting period as China accelerated its reopening process and rolled out supportive measures for property developers.

Looking ahead, we anticipate economic growth to see a sharp rebound amid a faster pace of reopening and supportive policy backdrop. The Politburo meeting as well as the Central Economic Working Conference in December struck a pro-business stance which could allow economic growth to return more quickly towards trend as policymakers take a concerted approach to promote growth. Policy easing is anticipated to continue on both fiscal and monetary fronts especially as the reopening process will likely lead to some near-term transition pain initially. Infrastructure investment growth will also likely remain elevated, with domestic consumption recovering as the employment rate improves with China's full reopening. On the real estate front, we believe further demand-side easing and policy support could alleviate developers' liquidity pressure, reining in any potential spillovers to the broader economy.

Overall, we hold a constructive view on the outlook for Greater China equities in 2023. Despite the market rally since November, valuations remain reasonably attractive with the Index trading at P/E of 11.2x and CSI 300 at 11.3x on a forward-looking basis, versus MSCI World Index at 15.2x and S&P 500 at 17.5x. We may see a re-rating in valuations supported by improving fundamentals and strong earnings growth resulting from the anticipated economic recovery. That being said, we are mindful of possible downside scenarios such as weaker external demand given global recessionary risk, slower-than-anticipated consumption recovery and potential escalation of geopolitical risks. As such, the Portfolio continues to identify high quality companies with good earnings visibility and strong long-term growth prospects potentially capable of weathering the uncertain macro environment on the horizon.

## CLO Income – Investment Manager's Report

For the 12 months ended 31 December 2022, the total return for the USD I Accumulating Class was -6.91%. Over the same period, the ICE BofA US Dollar 3-Month Deposit Offered Rate Constant Maturity Index (Total Return, USD) (the "Index") returned 1.21%. (Performance for all share classes is provided in Appendix II. Performance data quoted represent past performance and do not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any).

Following a significant Collateralised Loan Obligation ("CLO") acceleration of CLO issuance into year-end 2021 given the shift to SOFR for primary market issuance, the beginning of 2022 had a quiet initial start, with CLO BB spreads relatively stable to start the year in the L+600 area. As geopolitical concerns regarding a possible Russian invasion of Ukraine began to emerge in early-to-mid February, CLO debt spreads slowly moved wider, and as the invasion came to fruition in late February, CLO debt spreads moved even wider, with CLO BB spreads widening into the L+700 area. This trend of widening continued into late March, as markets reacted to the geopolitical conflict and the global economic ramifications of wide-reaching sanction activity placed on Russian in the wake of the invasion of Ukraine.

Through July, CLO debt spreads continued to move wider, as the combination of (a) ongoing geopolitical concerns and the associated economic impact of the Russian sanctions and (b) aggressive tightening of financial conditions by global central banks in an effort to mitigate record levels of inflation, with CLO BB debt spreads widening into the L+1,000 area. In August, spreads tightened meaningfully as economic data seemed to suggest that global economies were approaching an inflection point in the pace of interest rate increases by global central banks, with CLO BB spreads tightening to the L+850 area.

In September and October, CLO debt spreads again widened as mixed economic data led to ongoing concerns of elevated interest rate increases, which was further exacerbated by the UK "mini budget," which led to forced selling of CLO debt held by UK pensions, which pushed CLO BB spreads to the L+1,050 area. In mid-November, following the release of better-than-expected US CPI data, CLO debt spreads tightened as investors interpreted the report as a positive datapoint towards a potential slowdown in the pace of rate hikes. This tightening trend continued into year end, with CLO BB spreads as of 31 December 2022 at approximately L+950.

As of 31 December 2022, the trailing 12-month par weighted default rate for loans was 0.72%, down 345 basis points from the recent peak of 4.17% in September 2020. Despite the market volatility, new issue volume in 2022 was \$117 billion, the second highest annual issuance in history, which compares to \$165 billion in 2021.

For the 12 months ended 31 December 2022, the fund had net inflows of \$12 million. As of 31 December 2022, primary CLO spreads for higher quality BBs was L+825. The Portfolio underperformed the Index due to weaker credit conditions and the general widening of non-investment grade credit spreads over the course of the year.

From a fundamental perspective, we continue to be confident in the significant structural protection provided against credit losses in the underlying loans in our portfolio. CLO structures in general, and in particular CLOs rated BB, have shown themselves once again to be very robust in the face of a significant recession. We believe our focus on investing in the highest quality underlying loan portfolios will lead to outperformance versus the Index over a multi-year time horizon.

## Commodities – Investment Manager's Report

From its inception on 9 February 2022 to 31 December 2022, the total return for the USD I Accumulating Class was 12.00%. Over the same period, the Bloomberg Commodity Index ("the Index") returned 4.89%. (Performance for all share classes is provided in Appendix II. Performance data quoted represent past performance and do not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any).

2022 was one of the most challenging years for markets in recent history. A painful concoction of spillover effects from Russia's war in Ukraine, unrelenting inflation, and the US Federal Reserve Board (the "Fed") resulting hawkish monetary policy challenged assets across the board. Specifically, the S&P 500 Index and Bloomberg US Aggregate Bond Index both suffered severe downturns during the year resulting -18.11% and -13.01%, respectively. However, one bright spot in the markets during the year was commodities as the index soared an impressive 16.09% in 2022. True to form, commodities were able to diversify traditional assets like stocks and bonds and provide a much-needed inflation hedge.

Energy commodities lead the way during the year with the Bloomberg Energy Subindex surging 15.62% over the period as sanctions on Russian oil exports created supply disruptions. US natural gas, which at its peak in the summer rose an astronomical +137%, quickly fell back as it declined -55.26% in the remainder of the year. We believe this brings its price closer to fundamentals—natural gas exports remain at capacity and there is plentiful supply in the US belying scarcity pricing. Over the year, the Portfolio's positioning in energy was positive from both an absolute and a relative perspective. Relative to the benchmark, the Portfolio's nearly double-digit underweight in natural gas was its largest contributor to outperformance and helped the Portfolio avoid natural gas' swift decline at year's end.

Industrial metals were lower during the year as China, the world's largest consumer of commodities, remained in lockdown as a result of the government's zero-COVID policy. During the reporting period industrial metals positioning was a slight detractor. Relative to the benchmark, positive performance from the Portfolio's overweight in nickel was eroded by negative performance from an overweight in zinc.

Precious metals were essentially flat year-to-date, gold and silver in particular, as the dollar continued to move lower off a multi-decade high with investors assessing the pace of the Fed's rate hikes. Precious metals positioning detracted from overall portfolio performance during the year due to the Portfolio's overweight in gold and out-of-benchmark position in palladium.

Agricultural commodities were the second best sector over the period thanks to poor crop conditions and reduced supplies. The Portfolio's positioning in agriculture was additive—relative to the benchmark, and benefited from overweights across the board in corn, Kansas wheat, soybean meal, and wheat.

Softs were negative during the year with coffee realising the steepest decline of -31.58%. From a portfolio perspective, this sector detracted from performance. The Portfolio performed in line relative to the benchmark as gains from an underweight in coffee were offset by losses from an overweight in cotton.

Finally, livestock was mixed in 2022 but was additive to the portfolio. Relatively speaking, the Portfolio outperformed the benchmark due to an overweight in lean hogs.

Based on a number of policy pivots we've seen commence in the broader macro environment, we believe that markets are facing a prolonged period of shortages, and that is what establishes a prolonged supercycle. A supercycle is a sequence of price spikes, it is not a nice and steady upward trend in prices. Generally we observe spike after spike as was the case in the 1970s and 2000s. Because commodity markets have to balance supply against demand, when inventory buffers and spare capacity are depleted, prices have to spike to kill demand. In these wildly volatile environments, carry (i.e. scarcity premium) buffers spot losses via higher backwardation as we saw in previous cycles. Today, we are starting 2023 with sizeable backwardation across almost all commodity sectors. In 2023, we believe that prices are very likely to follow their structural under-investment and policy-pivot-driven demand trends. However, as of now, markets are very much priced for a steep recession, positioned firmly in a risk-off stance, and not at all prepared for China's reopening, lower gas burden on European industry, and a more resilient than expected US economy.

## Corporate Hybrid Bond – Investment Manager's Report

For the 12 months ended 31 December 2022, the total return for the EUR I Accumulating Class was -14.13%. Over the same period, the benchmark index, the ICE BofA Global Hybrid Non-Financial 5% Constrained Custom Index (Total Return, Hedged, Euro) (the "Index"), returned -13.80%. (Performance for all share classes is provided in Index II. Performance data quoted represent past performance and do not indicate future results. Total returns shown reflect the reinvestment of income dividends and other distributions, if any).

The Fund, gross of fees, outperformed the benchmark by 25 bps over 2022. Positive security selection across Utilities, Basic Industry and Healthcare were the key drivers of performance for the Portfolio. Across Utilities, short-dated positions such as Enel and Centrica added value, as well as specific situations such as EnBW and Veolia. Within Basic Industry, Solvay and Evonik were the key issuers that outperformed. For Solvay, we still have a positive outlook on the split of Solvay's specialty chemical business and believe the hybrids will be well positioned for further upside upon completion. On Evonik, the group continues to show ability to pass on inflationary pressures and cope with slowing demand. They are also in the process of spinning-off the more cyclical part of their chemicals business which we view as positive. We also saw positive sector allocation performance from our underweight to Real Estate, but this was offset by negative security selection returns within the sector. Transportation and Energy were also both detractors to performance from a sector selection perspective. Transportation is a structural underweight given it contains emerging market issuers that fall outside of our investable universe. For Energy, our underweight was a detractor over 2022 as elevated commodity prices helped issuers here perform relatively well.

Our duration positioning over the course of 2022 was another main contributor. On average we were roughly 0.3 years short duration versus the Index throughout the year. This was mostly a function of finding attractive, undervalued short-dated hybrids to own. As always, whilst we do keep an eye on our overall duration positioning, we always construct the portfolio on a bottom-up, security by security basis. This means we are also currency agnostic and are willing to take the interest rate risk associated with a specific currency if we believe the bond looks most undervalued in that currency.

We remain committed to having zero exposure to emerging market issuers, as well as having only limited exposure to bonds issued by peripheral Eurozone issuers. The portfolio continues to have zero exposure to airlines, hotels, travel or leisure companies. We believe most corporate hybrid issuers we hold are extremely robust, with limited fundamental sensitivity to either the economic outlook or oil prices.

Given wider spreads for corporate hybrids over the course of the year, the spread differential between interpolated senior spreads and their corporate hybrid equivalents remained elevated at +325 basis points on average. We still believe that the relative level of senior spreads of high quality, non-financial, European investment grade ("IG") companies and the persistent low level of government bond yields, particularly in euros, should continue to support corporate hybrid bond spreads and make them look attractive relative to other options in European credit and broader fixed income markets.

As of the reporting period end, the portfolio remained significantly more diversified than the Index, particularly at the single name level. However, following a long-term value approach, we continued to allocate a considerable portion of the portfolio to the utilities sector, alongside telecoms and high-quality energy issuers. Our decisions, on a bond-by-bond basis, were driven by valuations considered in the context of an overall low business risk, low peak-to-trough Earnings Before Interest Tax Depreciation and Amortisation (EBITDA) level and, for utilities, a favourable regulatory backdrop.

The conservative positioning means the portfolio (as at 31 December 2022):

- only invested in IG issuers
- had approximately 14% in below investment grade securities issued by IG issuers (all rated BB or BB+)
- was running with approximately 5% cash
- had zero exposure to hotels, leisure, airlines or travel companies
- was cautious on real estate companies, which we view as more cyclical than most of the sector

The portfolio only invests in non-financial corporate hybrid bonds. It does not invest in bank and other financial sector bonds. Being very much a high quality, developed market, European-dominated asset class, where euros are the main currency, corporate hybrids offer global credit investors good diversification away from financial sector bonds, US issuers and US dollar credit risk.

In terms of construction, the portfolio has purchased a range of issuers that the portfolio managers are comfortable with from a fundamental perspective. We have zero exposure to names from Greece, and the portfolio holds no bonds where the issuer is domiciled in an emerging market country. The portfolio reflects strong fundamentals across both industries and issuers. The investment philosophy remains that of long-term, value-based investing; the focus is on bottom-up fundamental research and rigorous valuation work. We are patient in waiting for opportunities but are aggressive when we find them, in an attempt to generate good long-term performance.

## Corporate Hybrid Bond – Investment Manager's Report (continued)

We continue to believe that the corporate hybrid market trades significantly wide of fair value. In our view, there are various attractive security selection ideas available from a relative value perspective and the growth of the new issue market provides further diversification and relative value opportunities.

We believe that the combination of an elevated initial yield, spread tightening, security selection opportunities and new issuance at attractive prices should lead, over time, to a positive outcome for investors.

## Emerging Market Debt - Hard Currency – Investment Manager's Report

For the 12 months ended 31 December 2022, the total return for the USD I Accumulating Class was -18.98%. Over the same period, the benchmark index, the JPM EMBI Global Diversified Index (Total Return, USD) ("the index"), returned -17.78%. (Performance for all share classes is provided in Appendix II. Performance data quoted represent past performance and do not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any).

This was an extremely turbulent period for emerging markets ("EM") which experienced continued risks from COVID-19, particularly in China where the authorities stuck to rigid policies for most of the year, Russia's invasion of Ukraine, persistently high inflation, leading to the most aggressive monetary tightening campaign in decades, and a stronger dollar. As such we saw a sharp rise in core rates and the second worst year in returns for the benchmark since its inception in 1994. This pressure on markets saw a reprieve late in the year as the easing of price pressures in the US and Eurozone supported the peak inflation theme. Signs that China was inching away from its zero Covid strategy, were also supportive. The index default rate reached 7.3% as Belarus, Russia, Sri Lanka, and Ukraine defaulted on external liabilities whereas Ghana also declared its intent to do so. IMF support remained an important theme for several EMs, such as Argentina, Egypt, and Pakistan, and anchor for the restructuring processes underway in Ghana, Sri Lanka, and Zambia.

Index spreads widened from 369 basis points to 453 basis points, hitting a high of 593 in mid-July, while US Treasury yields ended the year at 3.87% from 1.51% at the start of the year. The index yield to maturity ended at 8.56% at the end of 2022, from 5.29% at the end of 2021.

The best performers were Iraq, supported by strong oil prices and Costa Rica, where fiscal and external risks were mitigated by continued adherence to the IMF program. Ukraine performed the worst given the horrific economic devastation caused by the Russian aggression, followed by Pakistan, whose financing challenges were made worse with significant floods.

The Portfolio underperformed the index, driven mainly by top-down positioning and country allocation while security selection contributed. In country allocation, our overweight allocations to Ukraine, Sri Lanka, and Ghana, and underweight allocation to Turkey, where authorities were able to rely on local and bilateral sources to meet financing needs, were the main detractors. The main contributors were our underweight to Russia and absence from Pakistan and Belarus. Our quasi-sovereign positioning in Kazakhstan was the main detractor in security selection.

We believe that prospects for the asset class look much brighter in 2023. With substantial monetary tightening behind us and inflation having likely peaked in both the US and in many emerging countries, pressures from rising rates should abate and become a more two-sided risk going forward. In China, while the sudden easing of covid restrictions is disrupting activity in the very near term, the reopening and renewed policy focus on supporting growth should drive a strong economic rebound later in the year, with positive spillovers across global EM. We believe default rates for sovereigns to decline to the low single digits in 2023, while increasing IMF engagement by different EM countries should support funding needs and reform agendas.

The key risks to our constructive view are either the unfolding of a deep global recession which would push EM spreads materially higher, or an unexpected acceleration of inflation dynamics globally which would require substantially more rate hikes.

We see technicals to be supportive with flows returning to the asset class following significant outflows last year and net issuance remaining negative, particularly for higher yielding markets. We believe that the spread widening in EM hard currency bonds this year has been disproportionate, particularly in the high yield space, and we currently see valuations as attractive on an absolute basis.

## Emerging Market Debt - Local Currency – Investment Manager's Report

For the 12 months ended 31 December 2022, the total return for the USD I Accumulating Class was -12.92%. Over the same period, the JPMorgan GBI Emerging Markets Global Diversified Index (Total Return, Unhedged, USD) ("the Index") returned -11.69%. (Performance for all share classes is provided in Appendix II. Performance data quoted represent past performance and do not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any).

This was an extremely turbulent period for emerging markets ("EM") which experienced continued risks from COVID-19, particularly in China where the authorities stuck to rigid policies for most of the year, combined with Russia's invasion of Ukraine, persistently high inflation, leading to the most aggressive monetary tightening campaign in decades, and a stronger dollar. Against this challenging backdrop, the average EM local currency Index yield rose substantially from 5.72% at the start of the year to 6.86% at the end of December, while EM currencies depreciated by -6.14% on average versus the US dollar over the same period.

Turkey was the best performing country in the local currency index in 2022, thanks to a plunge in local yields on the back of an easing cycle and policies directed towards increased bond purchases by domestic institutions. Brazil and Uruguay followed, each posting double digit positive returns last year. Besides Russian bonds which plunged after the invasion of Ukraine and were removed from the Index at the end of March, Egypt was the worst performing index country which was driven by the two sharp devaluations of the Egyptian pound in March and in October, followed by Hungary and Colombia.

The Portfolio underperformed the Index over the period, driven mainly by rates positioning. The main detractors in rates included overweight duration in Brazil, Mexico and Hungary, as well as the underweight in Chile later in the year. In FX, the main detractors included off-benchmark exposures in Kazakhstani tenge, Ghanaian cedi and positioning in the Chilean peso. The main positive contributors over this period included, underweights in Egyptian pound, Chinese renminbi and overweight in South African rand, as well as an underweight duration exposures in Poland and Thailand. Positioning in Russia also added to relative performance as we gradually exited from all Russian holdings following the invasion at generally better prices compared to time of index exclusion.

Following the major downturn for EM fixed income last year, we believe that prospects for the asset class look more positive in 2023. With substantial monetary tightening behind us and inflation having likely peaked in both the US and in many emerging countries, pressures from rising rates should moderate and become a more two-sided risk going forward. In China, while the sudden easing of Covid restrictions is disrupting activity in the very near term, the reopening and renewed policy focus on supporting growth should drive a strong economic rebound later in the year, with positive spillovers across global EM.

Technical factors have also improved, with EM capital flows showing signs of bottoming out, while valuations remain reasonably attractive across various EM rates and FX markets as well. Against this backdrop we moved to an overweight stance on EM FX currencies, and added to duration where we favor the Latin American region and a number of CEEMEA countries, while focusing on relative value across Asia.

The key risks to our constructive view are either the unfolding of a deep global recession which would push EM risk premia materially higher, or an unexpected acceleration of inflation dynamics globally which would require substantially more rate hikes.

## Emerging Market Debt Blend – Investment Manager's Report

For the 12 months ended 31 December 2022, the total return for the USD I Accumulating Class was -14.12%. Over the same period, the benchmark index, a blend comprising of 50% weighting to JPMorgan GBI Emerging Markets Global Diversified Index (Total Return, Unhedged, USD), 25% weighting to JPMorgan EMBI Global Diversified Index (Total Return, USD), and 25% weighting to JPMorgan CEMBI Diversified Index (Total Return, USD) (the "Index"), returned -13.51%. (Performance for all share classes is provided in Appendix II. Performance data quoted represent past performance and do not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any).

This was an extremely turbulent period for emerging markets ("EM") which experienced continued risks from COVID-19, particularly in China where the authorities stuck to rigid policies for most of the year, combined with Russia's invasion of Ukraine, persistently high inflation, leading to the most aggressive monetary tightening campaign in decades, and a stronger dollar. As such we saw a sharp rise in core rates and the worst year of performance for the EMBI Global Diversified index since the Global Financial Crisis. EM local markets also ended the year in negative territory due to rising rates across different EM countries and currency weakness versus the dollar. This pressure on markets saw a reprieve late in the year as the easing of price pressures in the US and Eurozone supported the peak inflation theme. Signs that China was inching away from its zero Covid strategy, as well as providing some concrete steps to support the property sector which collapsed, were also supportive. The hard currency sovereign default rate reached 7.3% as Belarus, Russia, Sri Lanka, and Ukraine defaulted on external liabilities whereas Ghana also declared its intent to do so. IMF support remained an important theme for several EMs, such as Argentina, Egypt, and Pakistan, and anchor for the restructuring processes underway in Ghana, Sri Lanka, and Zambia. The corporate high yield default rate reached 14.0% as companies in Russia, Ukraine and the China property sector faced material headwinds during the year.

Performance ended the 12-month period negative and the Portfolio underperformed the Index. The contribution from tactical allocation was negative over the period. The underlying hard currency corporates and local currency bottom-up positioning contributed to relative performance. In the overlay, the short US interest rate duration position was positive. However, a CDX.EM position that we held as partial protection against the higher risk profile of the strategy was negative given the sharp rally at year end. The impact from asset allocation was negative due to the overweight to hard currency sovereigns versus local currency.

Hard currency sovereign performance was driven mainly by country allocation while security selection contributed. In country allocation, the main contributors were our underweight to Russia and absence from Pakistan and Belarus. However, our overweight allocations to Ukraine, Sri Lanka, and Zambia, and underweight allocation to Turkey, where authorities were able to rely on local and bilateral sources to meet financing needs, were the main detractors. Our security selection in Argentina was positive while positioning in Ivory Coast and quasi-sovereign positioning in Kazakhstan were the main detractors.

Within corporates, positioning in Russia was the primary driver of outperformance especially not holding any VTB Bank or Sberbank, where prices dropped significantly alongside all Russian corps irrespective of sector after the invasion of Ukraine and the significant sanctions imposed on the country. However, security selection in China detracted due to exposure to the property sector which faced significant stress resulting in ongoing defaults. A position in a Chilean telecom also detracted as it faced operational and liquidity pressure during a merger at the end of the year. Within country allocation, the overweight exposure to Brazil was positive as the country moved through its election cycle with little turmoil. The overweight to Ukraine and underweight exposure to Turkey and investment grade Asian countries were negative.

Within local currency, rates positioning contributed to performance. This was primarily driven by the exposure in Russia, where we gradually exited from all holdings through the year instead of selling at the time of index exclusion, resulting in better prices. The underweight positioning in Poland and Turkey were also positive. However, the overweight positioning in Brazil, where a longer than anticipated hiking cycle and higher fiscal risks pushed yields higher which weighed on performance. Finally our underweight in Chile was negative as markets priced in more aggressive rate cuts than anticipated. FX positioning was positive over the year as the portfolio benefitted from the underweight position in the Chinese renminbi, active positioning around the Egyptian pound and an overweight to the Mexican peso. Overweight positioning in the Chilean peso as well as off-benchmark exposure to the Kazakhstani tenge and Ghanaian cedi detracted during the year.

We believe that prospects for the asset class look much brighter in 2023. With substantial monetary tightening behind us and inflation having likely peaked in both the US and in many emerging countries, pressures from rising rates should abate and become a more two-sided risk going forward. In China, while the sudden easing of Covid restrictions is disrupting activity in the very near term, the reopening and renewed policy focus on supporting growth should drive a strong economic rebound later in the year, with positive spillovers across global EM. We anticipate default rates for sovereigns to decline to the low single digits in 2023, while increasing IMF engagement by different EM countries should support funding needs and reform agendas. In EM high yield corporates we anticipate default rates to decline to 5.2% in 2023, with the majority of defaults relating to China property developers and Ukrainian issuers. Excluding those specific areas we anticipate the EM high yield corporate default rate to be broadly in line with the historical average at 3.3%, as EM corporates have maintained robust balance sheets on average.

The key risks to our constructive view are either the unfolding of a deep global recession which would push EM spreads materially higher, or an unexpected acceleration of inflation dynamics globally which would require substantially more rate hikes.

## Emerging Market Debt Sustainable Investment Grade Blend – Investment Manager's Report

For the 12 months ended 31 December 2022, the total return for the USD I Accumulating Class was -14.33%. Over the same period, the blended benchmark comprising of one third weighting JPMorgan GBI Emerging Markets Global Diversified Investment Grade 15% Cap Index (Total Return, Unhedged, USD), and two thirds weighting to JPMorgan EMBI Global Diversified Investment Grade Index (Total Return, USD) (the "Index"), returned -17.86%. (Performance for all share classes is provided in Appendix II. Performance data quoted represent past performance and do not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any).

This was an extremely turbulent period for emerging markets ("EM") which experienced continued risks from COVID-19, particularly in China where the authorities stuck to rigid policies for most of the year, combined with Russia's invasion of Ukraine, persistently high inflation, leading to the most aggressive monetary tightening campaign in decades, and a stronger dollar. As such we saw a sharp rise in core rates and the worst year of performance for the EMBI Global Diversified index since the Global Financial Crisis. EM local markets also ended the year in negative territory due to rising rates across different EM countries and currency weakness versus the dollar. This pressure on markets saw a reprieve late in the year as the easing of price pressures in the US and eurozone supported the peak inflation theme. Signs that China was inching away from its zero Covid strategy, as well as providing some concrete steps to support the property sector which collapsed, were also supportive. The hard currency sovereign default rate reached 7.3% as Belarus, Russia, Sri Lanka, and Ukraine defaulted on external liabilities whereas Ghana also declared its intent to do so. IMF support remained an important theme for several EMs, such as Argentina, Egypt, and Pakistan, and anchor for the restructuring processes underway in Ghana, Sri Lanka, and Zambia. The corporate high yield default rate reached 14.0% as companies in Russia, Ukraine and the China property sector faced material headwinds during the year.

Performance ended the twelve-month period in negative territory, but the Portfolio outperformed the Index. The impact from asset allocation was positive: the negative impact from the overweight to hard currency sovereigns was offset by the underweight to local currency in favor of cash. In addition the short interest rate duration position was positive.

From a bottom-up perspective the portfolio's primary driver during the period was from having no exposure to Russia across hard and local currency leading up to and during the invasion; we were not invested in it due to ESG concerns. Outside of Russia in the hard currency space the portfolio benefited from its overweight to Chile, Indonesia, and Mexico. The underweight to Saudi Arabia, due to ESG concerns, detracted from the portfolio as did the underweight to the UAE and Malaysia. Within the local currency space, duration positioning was the primary driver of relative outperformance. The main positive contributors over this period, aside from Russia, included underweight duration exposures in Poland and Thailand. In FX the underweight in the Chinese renminbi and overweight to the Mexican peso were positive. The main detractors included overweight duration in Hungary and underweight in Chile; exposure to off-benchmark currencies in Kazakhstan and Israel were also negative.

We believe that prospects for the asset class look much brighter in 2023. With substantial monetary tightening behind us and inflation having likely peaked in both the US and in many emerging countries, pressures from rising rates should abate and become a more two-sided risk going forward. In China, while the sudden easing of covid restrictions is disrupting activity in the very near term, the reopening and renewed policy focus on supporting growth should drive a strong economic rebound later in the year, with positive spill overs across global EM. We expect default rates for sovereigns to decline to the low single digits in 2023, while increasing IMF engagement by different EM countries should support funding needs and reform agendas.

The key risks to our constructive view are either the unfolding of a deep global recession which would push EM spreads materially higher, or an unexpected acceleration of inflation dynamics globally which would require substantially more rate hikes.

## Emerging Markets Equity – Investment Manager's Report

For the 12 months ended 31 December 2022, the total return for the USD I Accumulating Class was -23.86%. Over the same period, the MSCI Emerging Markets Index (Total Return, Net of Tax, USD) (the "Index") returned -20.09%. (Performance for all share classes is provided in Appendix II. Performance data quoted represent past performance and do not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any).

Emerging markets ("EM") equities ended 2022 on a positive note, posting a solid gain in fourth quarter. However, they declined for the full year, slightly trailing developed markets slightly, with a loss of 20%.

Distress about global inflation and rising US interest rates, along with the write-down of the Russian market as it was removed from the Index, were the key factors at play this year. The fourth quarter's relief rally was a response to optimism about a variety of concerns, headlined by China pivoting away from its zero-Covid policies, and hopes that the US Federal Reserve Board was close to achieving its peak interest rate. These hopes were tempered somewhat nearing year-end, as investors worried about a broader economic slowdown, which led to a continued weakening in energy commodities.

All sectors lost value this year, with defensive Utilities and Consumer Staples, and interest-rate sensitive Financials outperforming; and Information Technology ("IT"), Communications Services, and Energy declining most. By country, Turkey, Chile and Brazil outperformed, with positive results for the year. Beyond the write-down of Russia, Hungary, Taiwan and Korea lagged.

The portfolio trailed its benchmark for the year. By country, exposure to the Russian market, along with poor stock picking in Brazil were the key headwinds. This outpaced our overweight and strong security selection in both India and Chile.

By sector, an overweight to the lagging IT sector along with weak positioning dragged relative returns, as did with Russian names in the Energy sector. Solid stock picking in Consumer Staples and Health Care could not overcome deficits elsewhere.

Looking to the future, fourth quarter's news flow focused mainly on US interest rates and prospects for the Chinese economy, both of which seem to have a more certain medium-term trajectory, with US interest rates potentially approaching a peak and the Chinese economy reopening. The team believes the path may not be as clear as investors seem to believe; as seen in the December news flow that tempered expectations on both fronts.

The team used price volatility to incrementally add to domestically linked exposure in China, ending with China-related exposure close to benchmark weight when including our off-benchmark exposure to Hong Kong. At the same time, the team trimmed its India overweight. The portfolio's overweights are funded by less exposure in a variety of smaller markets.

By sector, the portfolio continues to favor Consumer Staples, and trimmed the IT overweight. Trims both by country and sector reflect individual stocks reaching near-term target prices or diminished conviction in select positions.

During both November's rally and December's retreat, EM outperformed developed markets. We believe this could be the pattern in 2023, should the US economy slow down due to higher interest rates, while reopening boosts China and markets linked to it, and domestically driven EM markets like India benefit from slowing inflation and sustained local growth.

We will continue to use any near-term volatility to fine-tune the portfolio, but believe it is well positioned for the environment we foresee.

## Emerging Markets Select Equity – Investment Manager's Report

For the 12 months ended 31 December 2022, the total return for the USD I Accumulating Class was -25.02%. Over the same period, the MSCI Emerging Markets Index (Total Return, Net of Tax, USD) (the "Index") returned -20.09%. (Performance for all share classes is provided in Appendix II. Performance data quoted represent past performance and do not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any).

Emerging markets ("EM") equities ended 2022 on a positive note, posting a solid gain in fourth quarter. However, they declined for the full year, slightly trailing developed markets with a loss of 20%.

Distress about global inflation and rising US interest rates, along with the write-down of the Russian market as it was removed from the Index, were the key factors at play this year. The fourth quarter's relief rally was a response to optimism about a variety of concerns, headlined by China pivoting away from its zero-Covid policies, and hopes that the US Federal Reserve Board was close to achieving its peak interest rate. These hopes were tempered somewhat nearing year-end, as investors worried about a broader economic slowdown, which led to a continued weakening in energy commodities.

All sectors lost value this year, with defensive Utilities and Consumer Staples, and interest-rate sensitive Financials outperforming; and Information Technology ("IT"), Communications Services, and Energy declining most. By country, Turkey, Chile and Brazil outperformed, with positive results for the year. Beyond the write-down of Russia, Hungary, Taiwan and Korea also lagged.

The portfolio trailed its benchmark for the year. By country, exposure to the Russian market, along with poor stock picking in Brazil were the key headwinds. This outpaced our overweight and strong security selection in both India and Chile.

By sector, an overweight to the lagging IT sector along with weak positioning dragged relative returns, as did with names in the Industrials and Energy sectors. Solid stock picking in Consumer Discretionary, Consumer Staples and Financials could not overcome deficits elsewhere.

Looking to the future, fourth quarter's news flow focused mainly on US interest rates and prospects for the Chinese economy, both of which seem to have a more certain medium-term trajectory, with US interest rates potentially approaching a peak and the Chinese economy reopening. But the team believes the path may not be as clear as investors seem to believe; as seen in the December news flow that tempered expectations on both fronts.

The team used price volatility to incrementally add to domestically linked exposure in China, ending with China-related exposure close to benchmark weight when including our off-benchmark exposure to Hong Kong. At the same time the team trimmed its India overweight. The portfolio's overweights are funded by less exposure in a variety of smaller markets.

By sector, the portfolio continues to favor Consumer Staples, and trimmed the IT overweight. Trims both by country and sector reflect individual stocks reaching near-term target prices or diminished conviction in select positions.

During both November's rally and December's retreat, EM outperformed developed markets. We believe this could be the pattern in 2023, should the US economy slow down due to higher interest rates, while reopening boosts China and markets linked to it, and domestically driven EM markets, like India, benefit from slowing inflation and sustained local growth.

We will continue to use any near-term volatility to fine-tune the portfolio, but believe it is well positioned for the environment we foresee.

## Euro Bond Absolute Return – Investment Manager's Report

For the 12 months ended 31 December 2022 (the "reporting period"), the total return for the EUR I Accumulating Class was -4.71%. Over the same period, the benchmark ICE BofA 0-1 Year AAA Euro Government Index (Total Return, EUR) (the "Index") returned -0.94%. (Performance for all share classes is provided in Appendix II. Performance data quoted represent past performance and do not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any).

The first half of the reporting period saw a sharp decline of the euro bond market in the wake of rising inflation rates. The German 10-year government bond yield rose significantly from -0.18% to +1.33%, its highest level since 2014. This marks the fastest price acceleration data point since the 1970's, mainly driven by higher commodity prices due to the Russian invasion of Ukraine, and by food prices as a second round of consequences of higher energy prices and a fall in Eastern country exports as both Russia and Ukraine are major exporters of agricultural products and fertilisers. Moreover, there were still supply chain dislocations due to Chinese lockdown restrictions. As a consequence, the long-term inflation outlook of the market reached 2.5%, raising the European Central Bank ("ECB") question if inflation is still anchored on the long run. Indeed, euro inflation data has been rising throughout the year: the German CPI inflation started to reveal a sharp monthly rise of 2.5% in March, the highest on record since the reunification in 1992, pushing the year on year increase over 7%, mainly because of higher energy prices.

Moreover, when the ECB published the eurozone wage increase in the first quarter of 2022, this indicator of negotiated wages rose from 1.8% in the fourth quarter of 2021 to 2.8% in the first quarter of 2022. But this was partly caused by collectively-agreed one-off payments like those in the chemical sector in Germany, some of which were a result of delayed wage negotiation rounds beyond to the war in Ukraine. The ECB repeated its optimism for a bright economic outlook and then expected a protracted rise in wages for the coming years.

Such an economic evolution led the ECB to rise sharply its medium-term inflation outlook, which implied a strong reaction from the ECB. Thus, the ECB justified a rate hike cycle by announcing its monetary policy normalisation and a first hike of 25 bps, which was validated at the ECB Forum in Sintra, Portugal, in July.

The Russian invasion of Ukraine was a shock for the eurozone population as the war there is at its periphery. The euro market fears an economic slowdown due to the inflation rate weighting on consumption reinforced by sanctions on Russia, such a stagnation scenario is bearish for the euro credit market due to the recession risk and the exposure to the Russian economy and exports. The European economy is much more exposed than the US, particularly if there is disruption to natural gas supply. Thus, corporate bonds underperformed on the back of a strong primary market re-opening. There was no liquidation trades despite the jump in spreads, even for high yield bonds: the iTraxx Crossover Credit Index jumped significantly by 338 bps to a spread of 580 bps. The periphery markets also underperformed but less, considering their fundamental state credit quality improvement, thanks to the support of the "grants" distributed by the Next Generation Fund of the European Union.

After a strong and quick market recovery in July, in the wake of sluggish economic data, the sharp bear market came back during the second half of 2022. The German 10-year government bond yield rose again significantly from 1.33% to 2.56%, its highest level since 2011. This was followed by a new high inflation rate of 10.7% in October in the Eurozone and the hawkish ECB policy, this latter started in July and was a significant key rate adjustment of 2.5% in to fight against inflation pressures. The largest jump in yield was for short-term maturities as shown by the 2-year Schatz yield increase of 2.12% during the second half of 2022. A bond sell-off led to a new underperformance of the credit market, and the iTraxx Crossover protection spread increased by 90 bps during the third quarter.

This bearish outlook was reinforced by the Jackson Hole forum where central bankers delivered a terse and unequivocal message to the markets that they intend to bring their policy into restrictive territory and keep it there until inflation is sustainably lower. The ECB was especially worried by energy prices continuing to rise in the wake of the Russia decision to stop delivering gas flows from its Nord Stream 1 pipeline. Beginning in the summer, Germany reacted by accelerating its gas storage, which made progress in replenishing its gas stocks faster than expected, which then led to the start of energy price normalisation. In addition, the EU reached a deal for electricity and gas caps while governments decided to implement energy plans like the German fund of € 200 billion. Thus, the credit market recovered significantly in the last quarter of the year with the iTraxx Crossover spread falling from its September high of 670 bps to 474 bps at the end of December.

In parallel, peripheral government debts followed the credit market, but performed less due to the new election in Italy in September. Its result provided a centre-right coalition elected, which could imply higher public deficit.

During the first quarter of the reporting period, we increased the Portfolio's duration with core and semi-core countries by two years. We reduced our non-core exposure by maintaining a long position in Italy, in consideration of the new context of rising yields and ahead of the heavy primary market in the first quarter of 2022. Subsequently we stabilised the duration around 2.5 years. Due to inflation concerns, we favored flattening strategies being light on the short end of the curve. We remained light in non-core countries and favored a long position in Croatia, as Croatia is expected to become the 20th member of the eurozone the 1st January of 2023.

## Euro Bond Absolute Return – Investment Manager's Report (continued)

Early in the third quarter of the reporting period, we kept the duration exposure high to take advantage of the strong bond market recovery and finally took fully our profit at the end of July. In August, we decided to move our yield curve positioning receiving 10-year swaps and selling long end of the yield curve. In September, we also favored swap spreads tightening strategies and proxy swaps. During October, we increased duration exposure as the 10-year Bund yield jumped above 2.25%, receiving swaps versus government bonds judging that swaps spreads levels should normalise with Targeted longer-term refinancing operations ("TLTRO") reimbursements. We were active on eastern European countries on primary market. Because of the strong recovery of the Italian government debt, we took profit on the BTPs keeping an exposure to BTP Italia linkers indexed on domestic inflation. End of year, we decreased the Portfolio's duration exposure as the 10-year Bund yield fell below 190%, far lower than the minimum terminal rate of the ECB with 2.5% as the target level to take profit. Our view was reinforced by a hawkish ECB meeting mid-December.

During the first quarter of the reporting period, we tactically partially hedged our credit market exposure with an iTraxx Crossover protection for a nominal up to 8%. We were long BBB issuers and long high yield bonds by 15% on average. The European economy being more exposed than the US to the Russian invasion of Ukraine, due to the disruption risk to natural gas supplies, we switched out from euro issuers into US issuers for securities issued in the Euro currency. During the third quarter, we maintained our short sell of iTraxx Crossover protection for a nominal of 5% as we anticipated a credit market recovery from its depressed spread level. In August, we increased our exposure to Corporate hybrids from 6% to 10% of the Portfolio. The European economy is significantly exposed to the Russian sanctions and tensions in return, which led us to reduce our exposure to the industrial sector in favor of the financial sector.

With rising energy prices in the first quarter we increased our exposure to short end euro linkers and inflation swaps. We also increased our exposure to US TIPS 2-year but sold the position in February considering that the Fed was ready to tighten its monetary policy. In April, we reduced our exposure in breakeven. We have implemented several strategies via inflation swaps, flattening of breakeven curve and long 2y2y and long 5y5y. We participated in primary market to the inaugural green French linker and also sold a large part of our BTP Italia exposure before the supply of the new 8-year.

During the summer, natural gas prices jumped to EUR350/MWh as a result of Germany and other European countries rushing to fill their gas storage capacities. We increased our linkers exposure on 4-year maturity to benefit from the large index duration extension end of month and from low supply summer period. In September, we reduced our holdings in linkers and closed some strategies in inflation swaps with gain (5y5y).

During the fourth quarter, we implemented several strategies via inflation swaps, long 5y5y EUR vs 5y5y USD and long 3y EZ CPI outright. Outside of Eurozone, we added an exposure to UK breakeven on 10-year where there were attractive valuations and sold it after 50 bps of breakeven widening. In November, we increased our linkers exposure during the month buying the new BTP Italia (6-year maturity) lagging in breakeven with the large rally in nominal Italian rates. We felt mid-December was the time to reduce our linkers exposure, keeping only some short term BTP Italia for a positive carry in January.

Over the upcoming months in 2023, we believe investors may focus on the tug of war between wage increase and the economic recession. This latter could happen due to consumer and corporate confidence protracted pessimism: the risk of low growth era for the Eurozone has increased in a context of still high energy prices, credit spread widening, yield surge and supply chain disruption. Indeed, we feel the ECB may repeatedly continue to hike its key rate up to the confirmation of the fall of the euro core inflation. As a conclusion, anticipating euro inflation to have peaked, we believe the euro rates and credit spreads may stabilise after the heavy primary market at the start of the year. The bond rates and spreads are attractive and compared to the potential long term-growth, and already discount a sharp jump in the ECB key rates.

## Euro Opportunistic Bond – Investment Manager's Report

For the 12 months ended 31 December 2022, the total return for the EUR I Accumulating Class was -15.59%. Over the same period, the Bloomberg Euro Aggregate Bond Index (Total Return, Hedged, EUR) (the "Index") returned -17.17%. (Performance for all share classes is provided in Appendix II. Performance data quoted represent past performance and do not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any).

The first half of the reporting period saw a sharp decline of the euro bond market in the wake of rising inflation rates. The German 10-year government bond yield rose significantly from -0.18% to 1.33%, its highest level since 2014. This marks the fastest price acceleration data point since the 1970's, mainly driven by higher commodity prices due to the Russian invasion of Ukraine, and by food prices as a second round of consequences of higher energy prices and a fall in eastern country exports as both Russia and Ukraine are major exporters of agricultural products and fertilisers. Moreover, there were still supply chain dislocations due to Chinese lockdown restrictions. As a consequence, the long-term inflation outlook of the market reached 2.5%, raising the European Central Bank ("ECB") to question if inflation is still anchored on the long run. Indeed, euro inflation data have been rising throughout the year: the German CPI inflation started to reveal a sharp monthly rise of 2.5% in March, the highest on record since the reunification in 1992, pushing the year on year increase over 7%, mainly because of higher energy prices.

Moreover, when the ECB published the eurozone wage increase, in the first quarter of 2022, this indicator of negotiated wages rose from 1.8% in the fourth quarter of 2021 to 2.8% in the first quarter of 2022. But this was partly caused by collectively agreed one-off payments like those in the chemical sector in Germany, some of which were a result of delayed wage negotiation rounds beyond to the war in Ukraine. The ECB repeated its optimism for a bright economic outlook and then expected a protracted rise in wages for the coming years.

Such an economic evolution led the ECB to rise sharply its medium-term inflation outlook, which implied a strong reaction from the ECB. Thus, the ECB justified a rate hike cycle by announcing its monetary policy normalisation and a first hike of 25 basis points ("bps"), which was validated at the ECB Forum in Sintra, Portugal, in July.

The Russian invasion of Ukraine was a shock for the eurozone population as the war there is at its periphery. The euro market fears an economic slowdown due to the inflation rate weighting on consumption reinforced by sanctions on Russia; such a stagnation scenario is bearish for the euro credit market due to the recession risk and the exposure to the Russian economy and exports. The European economy is much more exposed than the US, particularly if there is a disruption to the natural gas supply. Thus, corporate bonds underperformed on the back of a strong primary market re-opening. There were no liquidation trades despite the jump in spreads, even for High Yield bonds: the iTraxx Crossover Credit Index jumped significantly by 338 bps to a spread of 580 bps. The periphery markets also underperformed but less, considering their fundamental state credit quality improvement, thanks to the support of the "grants" distributed by the Next Generation Fund of the European Union.

After a strong and quick market recovery in July, in the wake of sluggish economic data, the sharp bear market came back during the second half of 2022. The German 10-year government bond yield rose again significantly from 1.33% to 2.56%, its highest level since 2011. This was followed by a new high inflation rate at 10.7% in October in the eurozone and the hawkish ECB policy; this latter started in July and was a significant key rate adjustment of 2.5% to fight against inflation pressures. The largest jump in yield was for short-term maturities as shown by the German 2-year Schatz yield increase of 2.12% during the second half of 2022. A bond sell-off led to a new underperformance of the credit market and the iTraxx Crossover protection spread increased by 90 bps during the third quarter.

This bearish outlook was reinforced by the Jackson Hole forum where central bankers delivered a terse and unequivocal message to the markets that they intend to bring their policy into restrictive territory and keep it there until inflation is sustainably lower. The ECB was especially worried by energy prices continuing to rise in the wake of the Russia decision to stop delivering gas flows from its Nord Stream 1 pipeline. Beginning in the summer, Germany reacted by accelerating its gas storage, so it made faster progress replenishing its gas stocks than expected, which led to the start of energy price normalisation. In addition, the EU reached a deal for electricity and gas caps while governments decided to implement energy plans like the German fund of € 200 billion. Thus, the credit market recovered significantly in the last quarter of the year with the iTraxx Crossover spread falling from its September high of 670 bps to 474 bps at the end of December.

In parallel, peripheral government debts followed the credit market, but performed less due to the new election in Italy in September. Its result provided a centre-right coalition elected, which could imply higher public deficit.

Since the start of the year-long bond market sell-off, the portfolio has actively managed an underweight duration exposure. This was implemented mainly by an underexposure of bonds from Germany and France. In addition, we took advantage of the market volatility by actively managing long put and call option positions. We took profit on almost all our large over-weighted inflation exposure, which was approximately 10% of the fund's net assets in the second half of the year.

## Euro Opportunistic Bond – Investment Manager's Report (continued)

In parallel, we took profit step by step on our overweighted exposure to the peripheral countries to invest in supranational and euro agencies like the "European Union" on long maturities. The ECB's hawkish policy reinforces the risk of the Italian debt burden, especially following the presidential election in Italy

We have been overweight credit bonds throughout the year by around 0.75 to 1 year in duration versus the Index. We have been long BBB rated bonds while underweight AA & A rated bonds. We overweighted mainly the bank sector which we believe should take advantage of higher rates. As for the question of higher returns, we diversified our investments into High Yield rated bonds representing on average 15% of the fund assets. Our investment focus was again to be active and to take advantage of opportunities offered by the primary market as many corporate bond auctions offered extra spread premium.

In December, we cautiously reduced our corporate exposure due to the rising risk of recession as a consequence of the hawkish ECB policies and ahead of the heavy primary market in the first quarter of 2023. We also bought iTraxx Crossover protection for a nominal 4%.

Over the upcoming months in 2023, we believe investors will focus on the tug of war between wage increase and the economic recession. This latter could happen due to consumer and corporate confidence protracted pessimism: the risk of low growth era for the eurozone has increased in a context of still high energy prices, credit spread widening, yield surge and supply chain disruption.

Indeed, the ECB repeatedly hiking up its key rate to the confirmation of the fall of the Euro core inflation. Such a hawkish policy rises recession risk which should weigh on the periphery as well as the credit market for the coming months.

As a conclusion, anticipating Euro inflation to have peaked, we forecast euro rates and credit spreads should stabilise after the heavy primary market at the start of the year. The bond rates and spreads are attractive and compared to the potential long-term growth, and already discount a sharp jump in the ECB key rates.

## European High Yield Bond – Investment Manager's Report

For the 12 months ended 31 December 2022, the total return for the EUR I Accumulating Class was -9.53%. Over the same period, the ICE BofA European Currency Non-Financial High Yield 3% Constrained Index (Total Return, EUR) (the "Index") returned -11.70%. (Performance for all share classes is provided in Appendix II. Performance data quoted represent past performance and do not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any).

The European high yield bond market finished 2022 with negative returns in what was a tumultuous year across the majority of fixed income and equity asset classes. The overall risk-off sentiment was driven by the ongoing Russia-Ukraine conflict, elevated inflation and energy prices, tightening of financial conditions and slowing economic activity. Repercussions from the war in Ukraine and other factors combined to push inflation to multi-decade highs in Europe. Against this backdrop, the ECB and Bank of England began aggressive rate hike campaigns in early 2022, which are expected to continue until inflation is under control. Bellwether European longer-dated government bonds moved higher in 2022 as nominal GDP growth remained robust and inflation persisted. Importantly, the major concern of the "lights going out" in Europe due to energy shortages this winter had abated, with warmer weather and higher than expected gas reserves helping cool energy prices, which in turn reads positively for inflation and for the corporates ability to preserve margins. Furthermore, political turmoil in the UK and elsewhere has calmed down and we foresee the current stalemate in Ukraine as being the "least worst" result for markets. As sentiment turned "less bad" later in the year, there was a solid rally in the European high yield market in the fourth quarter. Despite the volatility throughout the year, the improvement or stability in credit fundamentals for most issuers was not derailed as many were able to pass on price increases and adjust to the new operating environment. Credit differentiation was also a prevalent factor in 2022. Moreover, default rates declined to all-time lows in the first half of 2022, rising only incrementally in the second half of the year.

During the year, from a sector perspective, security selection within and an underweight to the Index within Real Estate & Homebuilders, security selection within and an overweight to Support-Services and an overweight to Super Retail were the most beneficial to performance. In contrast, security selection within and an underweight to both Automotive & Auto Parts and Airlines and an underweight to Building Materials were the largest detractors. Within the Portfolio's credit ratings positioning, security selection within and an overweight to securities rated B and security selection within CCC and below and BB rated issuers were the most beneficial to performance, while an underweight to securities rated BB and an overweight to CCC and below rated issuers were the largest detractors. On average over the year, the Portfolio was overweight securities rated B and CCC and below, slightly overweight securities rated BBB and above and underweight BB rated issuers.

European high yield spreads widened in 2022, but we believe valuations are more than compensating investors for the below average default outlook. The tightening of financial conditions has caused real GDP growth to slow and slowing demand has helped inflation come off the boil, but it is still higher than central bank targets. Normalising supply chains and changes in consumer behavior, among other factors, are likely to continue to mitigate upward inflationary pressures, which could eventually lead to a less aggressive path for central bank policy. That said, our analysts remain focused on the specific credit fundamentals of individual issuers in their coverage, assessing the base and downside cases in the event of a recession. While real economic growth has grinded slower, solid nominal GDP growth and falling energy prices should remain supportive for issuer fundamentals. While inventories are building as a result of slowing demand, we remain focused on sector-specific dynamics and idiosyncratic risks to individual issuers. Despite short-term volatility resulting from heightened uncertainty on economic growth and central bank tightening, we believe our bottom-up, fundamental credit research that focuses on security selection, avoiding credit deterioration, and putting only our "best ideas" into portfolios, will position us well to take advantage of the increased volatility.

## European Sustainable Equity – Investment Manager's Report

For the 12 months ended 31 December 2022, the total return for the EUR I Accumulating Class was -24.96%. Over the same period, the MSCI Europe Index (Total Return, Net of Tax, EUR) (the "Index") returned -9.49%. (Performance for all share classes is provided in Appendix II. Performance data quoted represent past performance and do not indicate future results. The total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions if any).

2022 was a tumultuous year for markets amidst soaring inflation, hawkish central banks and geopolitical shocks. The majority of asset performance for the year was profoundly negative, as global stocks and bonds jointly sold off. Coming into the year, inflation was already rising due to supply-side issues from the economic restart following the COVID-19 pandemic. Russian forces' devastating invasion of Ukraine in February sent shockwaves through markets, and as nations rushed to impose sanctions, food & energy prices soared further. 2022 saw headline inflation reach historic highs, with the US Consumer Price Index increasing 9.1% year over year in June and central banks embark on a landmark path of interest rate hikes, unexpected in speed and magnitude. Collectively, G10 central banks implemented over 2700 basis points of interest rate increases over 2022.

Recession risks grew further in Europe and the UK as the energy crisis deepened and the dollar demonstrated extreme strength against major global currencies in 2022. However, we saw a meaningful reversal in the final quarter. China's economic activity was muted due to housing market weakness and maintaining its zero-COVID policy through most of the year, implementing strict and enduring lockdowns in many major cities. In December, however, Beijing moved to loosen controls, signaling the start of China's much-anticipated re-opening. Finally, the Bank of Japan surprised markets toward year-end by modifying its long-held yield control policy, putting upward pressure on global bond yields.

Over the reporting period, the Portfolio underperformed the Index, posting a -24.96% return versus -9.49% of the Index. Despite a strong performance in the fourth quarter of 2022, the Portfolio ended the year in negative territory, with stock selection and asset allocation detracting from performance. Stock selection in the Financials and Consumer Discretionary sectors were the largest detractors from performance, while stock selection in the Industrials and Information Technology sectors helped to mitigate the underperformance. At the sector level, a zero weighting in Energy was a drag on performance as the sector was the best performing in 2022, rising by 28%. An overweight position versus the Index in Information Technology also detracted from performance as the sector fell in aggregate by 33% during the year. However, a zero weighting in the worst-performing sector, Real Estate, helped to mitigate the portfolio's underperformance. At the individual stock level, our holdings in S4 Capital, HelloFresh and Dechra Pharma were the weakest performers in 2022, with Novo Nordisk and HomeServe contributing positively to performance.

During the year, the team had several engagements with companies held in the portfolio on a broad range of sustainable topics. In our call with the private asset management firm Partners Group Holding, we discussed commercial momentum, which is still strong. On the environmental, social, and governance ("ESG") front, Partners Group presented a clear ambition to reduce carbon emissions to zero by 2050. However, data collection is an issue as they invest in 1,000 companies directly and 14,000 indirectly and applying too strict commitments might also constrain investment opportunities. Oversight of the practical implementation of ESG-related plans at Partner's Group is delegated to the boards of controlled companies along a materiality matrix setup by Partners Group. External consultants usually help with implementation, as small businesses often lack in-house skills. Partners Group sets three ESG targets per controlled holding, which are material and measurable. Partners Group has ESG integration on all its investments, classified as article 8 under SFDR.

Despite fluctuations in the broader market, macro-economic developments or outright shocks such as the COVID-19 pandemic, we believe our portfolio remains resilient and attractive, thanks to high-quality companies where sustainability reinforces their competitive advantage. We focus on companies that (1) have a durable competitive position, meaning we believe they possess hard-to-replicate competitive advantages; (2) do no harm, meaning we believe they carefully manage ESG practices; and (3) adapt to change, meaning we believe they focus on innovation and continuous improvement.

We anticipate a continued regulatory push for more sustainable development of the global economy. Given the challenging market backdrop, we believe the success of most quality companies now increasingly depends on the development of intangible capital - innovative technology, research and development, human capital, and brand or platform reputation to create a durable competitive position. This durable competitive position can be reinforced via good corporate citizenship through careful ESG management. We believe the forward-looking analysis of this combination of quality attributes, ESG factors, and idiosyncratic characteristics is critical to identifying the "Transition Winners" of the new economy. We believe in the short-term, markets appear to be at an inflection point, repricing the balance of growth vs. inflation, as data begins to show signs that central bank tightening is creeping into economic activity and recession risk is rising. In our opinion, the path forward will depend highly on central bank policy and inflationary pressures easing toward the Fed's inflation target.

## Event Driven – Investment Manager's Report

Since its inception on 26 October 2022 until 31 December 2022 (the "reporting period"), the total return for the USD I Accumulating Class was 1.20%. Over the same period, the benchmark index, the S&P 500 (Total Return, Net of Tax, USD) (the "Index"), returned 0.49%. (Performance for all share classes is provided in Appendix II. Performance data quoted represent past performance and do not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any).

The Portfolio launched on 26 October with \$38.1m. In its short period of trading, the Portfolio generated a 1.2% total return, two of its sub-strategies, Risk-Arbitrage and Market Neutral Catalyst, contributed positively to returns.

In the broader event space over this short period, the only notable event was the termination of DuPont's acquisition of Rogers Corporation on 1 November 2022. The Portfolio did not have a position in this deal and was able to avoid losses that impacted many participants in the Risk-Arbitrage investment community.

In looking to 2023, we are excited about the opportunity ahead of us. In volatile and even range-bound markets, management teams look to unlock value in their portfolio companies by pulling different levers at their disposal and cannot rely on the multiple expansion of a bull market to meet shareholder expectations. Given the current environment, we anticipate high levels of corporate activity to drive opportunities for event-driven strategies; this is an ideal backdrop for our investment approach. Furthermore, the outcomes of corporate events are often less market-dependent and have a low correlation to broader market beta, providing opportunities to diversify investment portfolios and take advantage of a differentiated source of alpha. Specifically, with respect to merger activity, boards remain cautious on deal-making for the time being, but we believe external pressures to consolidate, gain scale, and cut costs remain and will drive significant deal activity when market volatility abates. The number of deals and the aggregate transactional market cap has declined recently, but we believe that the risk-adjusted profit pool remains fairly robust. This opportunity set requires careful management of risk capital in individual deals and across correlated transactions while we wait for a larger universe of mispriced situations.

## Global Bond – Investment Manager's Report

For the 12 months ended 31 December 2022 (the "reporting period"), the total return for the USD I Accumulating Class was -15.67%. Over the same period, the benchmark index, the Bloomberg Global Aggregate Index (Total Return, Unhedged, USD) (the "Index"), returned -16.25%. (Performance for all share classes is provided in Appendix II. Performance data quoted represent past performance and do not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any).

Fixed income markets were challenged over the reporting period, as persistently elevated inflation, aggressive central bank tightening and increasing likelihood of a meaningful growth slowdown drove interest rates higher and credit spreads wider. Credit spreads retraced some of this move during the fourth quarter of the reporting period as investor demand picked up on the back of more attractive all-in yields. All told, for the reporting period the 10-year US Treasury yield climbed +236 bps; intermediate government yields were similarly higher for Germany (+275 bps), the UK (+270 bps) and Japan (+35 bps). Global investment grade credit<sup>1</sup> and non-investment grade credit<sup>2</sup> spreads widened +50 bps and +164 bps, respectively.

The largest driver of relative outperformance came from the portfolio's interest rate positioning, which was positive for the reporting period. The portfolio benefitted from underweight exposure to UK, core Europe, Sweden and Japan rates. Conversely, overweight exposure in New Zealand rates modestly detracted. The portfolio's exposure to emerging markets debt and overweight exposure to global investment grade credit were the primary detractors from performance, however, positive security selection within global investment grade credit added value, helping to limit the impact. Active positioning in securitised sectors, including an overweight in agency mortgage-backed securities and commercial mortgage-backed securities, and an underweight in covered bonds, also added value.

After a year of significant global monetary tightening, we anticipate inflation to retreat further from peak levels, although we believe it is likely to remain well above norms and central bank targets throughout the upcoming year and possibly into 2024. As expressed in their meetings and policymaker comments, central banks understand the need to maintain tight conditions in order to tame pricing pressures. So, although we could see just a couple more hikes, we believe US short rates are likely to remain high for some time. In other words, we feel the world of zero interest rates that was so prevalent after the Global Financial Crisis is likely over.

We believe much of the US Federal Reserve Board's heavy lifting is in the rear-view mirror, and we anticipate that 2023 will see quieter fixed income markets. In our view, this could create significant opportunity to capture higher yields with limited risk, especially given the added yield cushion that last year's repricing created. The focal point of our enthusiasm is the investment grade market.

Looking ahead, we anticipate interest rates to trade within a much tighter range than in 2022, as inflation moderates and central banks hike at a more gradual pace. We believe duration exposure should be less risky than it was in 2022. However, fundamental concerns about credit are likely to increase, not just due to macro developments, but as a function of individual issuer dynamics and financial positions, making security selection more important than ever.

Despite potential for economic deterioration this year, the picture for default risk is relatively benign, in our view. Corporate leverage remains generally lower and cash levels higher than prior to the pandemic. New issuance patterns have been less aggressive, both in their use of proceeds and ratings cohorts. Moreover, given ultralow yields in recent years, many companies were able to extend their maturities at low interest rates and relatively few names will be maturing in 2023 and 2024. That said, we feel there is the potential for an increase in high yield defaults in the next year or two, particularly if the recession turns out to be worse than anticipated.

What does that mean for portfolio positioning in credit markets? Credit differentiation may rise as the impact of higher rates and a slower economy filter into actual corporate earnings and outcomes. We anticipate credit markets to morph from being driven by "macro" outcomes in 2022 to becoming more tied to fundamental outcomes. A key wild card is whether the mixed picture in economic dynamics could lead to more inflation than anticipated—and thus potentially more difficulty in financial markets. This is not our base case, but it needs to be considered as we press into still uncertain territory.

## Global Diversified Income FMP – 2024 – Investment Manager's Report

For the 12 months ended 31 December 2022, the total return of the USD I Accumulating Class was -3.99%. (Performance for all share classes is provided in Appendix II. Performance data quoted represent past performance and do not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any).

Fixed income markets were challenged over the period, as persistently elevated inflation, aggressive central bank tightening and increasing likelihood of a meaningful growth slowdown drove interest rates higher and credit spreads wider; credit spreads retraced some of this move during the fourth quarter as investor demand picked up on the back of more attractive all-in yields. All told, for the reporting period the 2-year US Treasury yield climbed +370 bps in response to aggressive tightening by the US Federal Reserve Board; 2-year government yields were similarly higher for Germany (+338 bps), the UK (+289 bps) and Japan (+13 bps). Developed markets investment grade ("IG") credit<sup>1</sup> and non-investment grade credit<sup>2</sup> spreads widened +50 bps and +164 bps, respectively, while emerging markets ("EM") corporates spreads widened +53 bps.

The portfolio's EM corporates and global IG credit exposures were the primary drivers of negative performance during the period. Performance from the portfolio's developed markets high yield exposure was roughly flat, as coupon payments essentially offset price declines.

Following the COVID-19 shock in 2020, IG companies went into defensive mode, building cash balances by issuing debt, cutting costs, pausing share repurchases and scrapping any plans for mergers and acquisitions. This resulted in a strong fundamental credit backdrop, including record EBITDA margins and cash flows, while leverage declined to below pre-pandemic levels. While we anticipate credit fundamentals to weaken from here, it's important to consider they are entering this slower growth environment from a position of relative strength. Overall, we believe wider spreads appear to compensate for increased risks from higher interest rates and economic softening. While slower growth will pressure ratings, we believe fallen angel risk should be contained. We anticipate security selection will become more important as we believe the margin for error for companies will be reduced over the coming quarters.

We believe current valuations in high yield offer investors an attractive opportunity, especially given our below average default outlook. That said, our analysts remained focused on the specific credit fundamentals of individual issuers in their coverage, assessing the base and downside cases in the event of a soft-landing or recession. While inventories are building as a result of slowing demand, we remain focused on sector-specific dynamics and idiosyncratic risks to individual issuers. Despite short-term volatility resulting from heightened uncertainty on economic growth and central bank tightening, we believe our bottom-up, fundamental credit research that focuses on security selection and avoiding credit deterioration will position us to take advantage of the increased volatility.

Following the major downturn for EM fixed income last year, we believe that prospects for the asset class look more positive in 2023. In China, while the sudden easing of Covid restrictions is disrupting activity in the near-term, reopening and renewed policy focus on supporting growth should drive a strong economic rebound later in the year, with positive spillovers across global EM. We anticipate default rates for sovereigns to decline to the low-single-digits in 2023, while increasing IMF engagement by different EM countries should support funding needs and reform agendas. Key risks to our constructive view are either the unfolding of a deep global recession which would push EM spreads materially higher, or an unexpected acceleration of inflation globally, which would require substantially more rate hikes. Considering current yield levels for EM hard currency bonds, we believe that those risks are well compensated for and we see valuations for short duration EM bonds as attractive.

## Global Equity Megatrends – Investment Manager's Report

For the 12 months ended 31 December 2022, the total return for the USD I Accumulating Class was -13.78%. Over the same period, the benchmark index, the MSCI World Index (Total Return, Net of Tax, USD) ("the Index"), returned -18.14%. (Performance for all share classes is provided in Appendix II. Performance data quoted represent past performance and do not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any).

The past year once again reinforced to us the value of our investment process. A process that, by design, acknowledges that economic cycles and market cycles are highly unpredictable and therefore emphasises the importance of "investing through the cycle". It is the unique elements and dogmatic application of our process that has allowed us to remain focused through the volatility of 2022 and that underpins our current optimism despite the macro crosscurrents in the days ahead.

2022 was particularly challenging for investors. As the COVID era came to an end, many of the monetary accelerants injected into the economy over the past decade began to move in reverse. Much as they were on the upside in 2020 and 2021, the market and economic impact of these forces were exceptionally violent and rapid due to the unprecedented liquidity injected over the previous twelve years now being rapidly withdrawn from the system. In 2009, central banks around the world concluded the policy prescription for the credit crisis at the core of the Global Financial Crisis was to inject liquidity. While global economies largely recovered by 2018, the onset of the COVID pandemic led central banks to increase money supply further and take interest rates to historically low levels for longer. The end result, as we highlighted in our year end letters of 2020 and 2021, was distorted fixed income markets and equity valuations, unsustainable risk-taking behaviors, and higher inflation. These challenges were amplified this past year by ongoing COVID related supply chain distortions, the war in Ukraine and a botched zero-COVID policy in China. Aversion to risk naturally followed and access to capital dried up quickly. To illustrate the degree of risk aversion with one statistic: in 2022, proceeds from IPOs in the US fell 95% from 2021 levels.

In this context, equity investors faced annual losses not experienced since the Great Financial Crisis of 2008. Adding fuel to this fire, fixed income markets experienced record negative returns, calling into question asset allocation models relied upon by most financial institutions. While this seems dire, investors should not forget these losses follow several years of positive returns: the Portfolio has a 3-year total return of 5.09%, and the MSCI World Index (Total Return, Net of Tax, USD) has a 4.94% total return for the same 3-year period.

As we know, in any given year investor returns do not necessarily reflect underlying business performance and certainly not in 2022. While many businesses are indeed challenged, those who follow business closely know that many corporations are navigating this environment reasonably well. In particular, businesses in the way of powerful global shifts benefit from sustainable secular demand and truly unique businesses invariably command pricing power. Furthermore, over the past three years, best-in-class businesses successfully adapted their operations to react to an ever-changing economic environment by increasing efficiency and driving resiliency even through the downcycle. Such characteristics have allowed many of our portfolio companies to meaningfully improve their cash flow, giving them the financial fortitude to use these economic speedbumps to their advantage as competitors are caught offside and acquisitions become more reasonably priced. Additionally, this financial strength allowed many of our portfolio companies to take advantage of recent market volatility by opportunistically buying back shares at valuations not seen in many years.

Thematically, our Energy Efficiency and Energy Infrastructure themes provided the greatest contribution to returns, while Smart Systems and Evolving Global Consumer themes provided the greatest headwinds. At the holdings level, top contributors to portfolio performance during 2022 included ATI Inc. (Energy Efficiency), an aerospace specialty metals manufacturer, and Paya Holdings (Evolving Global Consumer), an integrated payments software provider. Meanwhile, online travel agency Expedia (Evolving Global Consumer) and memory manufacturer Western Digital (Smart Systems) were among the top detractors to portfolio returns.

As is the case every January, the financial media is once again obsessing with 'what lies ahead for 2023 and beyond'. Not surprisingly, opinions are plentiful, but conviction is scarce. Irrespective of the near term macro-economic outlook and associated market gyrations, we feel particularly confident that our portfolio companies are well positioned to navigate the range of likely outcomes. As enablers of secular change, irrespective of whether the total pie is growing, flat, or shrinking, our businesses benefit from exposure to a growing piece of the pie. Additionally, many of our portfolio companies are agents of efficiency, enabling their customers to 'do more with less'. While this is a valuable proposition in any business environment, it becomes particularly relevant in recessionary periods when demand shrinks, resources are scarce, and economic efficiency becomes critical.

## Global Equity Megatrends – Investment Manager's Report (continued)

We believe that these traits significantly enhance portfolio company visibility and predictability, and are widespread across many different industries and businesses. A few examples are below:

- The shift from traditional analog to digital advertising has many years to run, enabling businesses of all sizes to reach customers more effectively and efficiently. In our portfolio, digital ad tech software developers Alphabet, Criteo and Zeta Global (Smart Systems) are at the center of this transformation from traditional (i.e. less effective) to digital advertising.
- The migration to digital travel booking and management platforms that more effectively serve travelers throughout their journey is still in its early days of development and adoption. In our portfolio, online travel agencies Expedia and Despegar.com (Evolving Global Consumer) are key enablers of this transition.
- Consolidation in the US airline industry over the past decade has resulted in a shrinking number of providers to serve an increasing number of travelers and destinations. Additionally, the cost of air travel has fallen by more than half since the 1980's as a result of next generation jetliners that burn nearly half as much fuel as their predecessors, and airlines that leverage more effective revenue management and more efficient business operations. We anticipate Delta Airlines (Evolving Global Consumer) will be a leading share gainer, while also doubling free cash flow over the next two years.
- Following the Ukraine invasion, funding to ensure energy independence, and transition to cleaner energy sources, has never been more 'secure' and we suspect that only a severe downturn would slow existing investment plans. In our portfolio, enablers of this energy transition include infrastructure E&C specialist Quanta Services and Vistra Energy (Energy Infrastructure) on the supply side, and sensors manufacturer TE Connectivity and ATI Inc. (Energy Efficiency) on the demand side.
- The adoption of robotics and process automation is still in its early days, but already delivering meaningful efficiencies to all sorts of processes, across both manufacturing and service industries. Businesses that enable this megatrend should continue to be well positioned in the years ahead. In our portfolio, these include sensors and connectors manufacturer TE Connectivity (Energy Efficiency), Paya Holdings (Evolving Global Consumer) and contact center software developer NICE (Smart Systems).
- Finally, digitisation, data analytics and the supporting ecosystems, are at the core of each of these megatrends. Therefore, cloud providers, AI developers and cyber safety software developers such as Alphabet (Smart Systems), Alibaba (Evolving Global Consumer) and GEN Digital Inc. (Smart Systems) should also benefit from powerful tailwinds in the years to come.

Economic downturns invariably affect all businesses, but we strongly believe that the enablers of powerful, global, secular shifts that assist their customers in driving efficiency by delivering truly unique products and services offer a higher degree of business visibility and predictability. These businesses should be among the best positioned to grow equity value throughout the entirety of the cycle. Importantly, we only commit capital to those businesses that we believe offer a truly attractive yield on their multi-year free cash flow generating potential.

As always, we appreciate your ongoing trust and commitment, and work to continue to earn it. If we can be helpful in any way do not hesitate to contact us.

## Global Flexible Credit Income – Investment Manager's Report

For the 12 months ended 31 December 2022, the total return of the USD I Accumulating Class was -9.91%. (Performance for all share classes is provided in Appendix II. Performance data quoted represent past performance and do not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any).

Fixed income markets were challenged over the period, as persistently elevated inflation, aggressive central bank tightening and increasing likelihood of a meaningful growth slowdown drove interest rates higher and credit spreads wider; credit spreads retraced some of this move during the fourth quarter as investor demand picked up on the back of more attractive all-in yields. All told, for the period the 10-year US Treasury yield climbed +236 bps; intermediate government yields were similarly higher for Germany (+275 bps), the UK (+270 bps) and Japan (+35 bps). Global investment grade credit<sup>1</sup> and non-investment grade credit<sup>2</sup> spreads widened +50 bps and +164 bps, respectively.

Against this backdrop, the portfolio generated a negative return for the period. The portfolio's exposure to US high yield, European high yield, investment grade ("IG") credit and emerging markets debt were the primary detractors from performance. Tactical interest rate positioning and exposure to CLOs were the primary contributors.

After a year of massive global monetary tightening, we expect inflation to retreat further from peak levels, although it is likely to remain well above norms and central bank targets throughout the year and into 2024. As expressed in their meetings and policymaker comments, central banks understand the need to maintain tight conditions in order to tame pricing pressures. Although we anticipate just a couple more hikes, we believe US short rates are likely to remain high for some time. In other words, the world of zero interest rates that was so prevalent after the Global Financial Crisis is likely over.

We believe much of the US Federal Reserve Board heavy lifting is in the rear-view mirror, and we anticipate that 2023 will see quieter fixed income markets. In our view, this could create significant opportunity to capture higher yields with limited risk, especially given the added yield cushion that last year's repricing created. The focal point of our enthusiasm is the IG market.

We anticipate interest rates to trade within a much tighter range than in 2022, as inflation moderates and central banks hike at a more gradual pace. We believe duration exposure should be less risky than it was in 2022. However, fundamental concerns about credit are likely to increase, not just due to macro developments, but as a function of individual issuer dynamics and financial positions, making security selection more important than ever.

Despite potential for economic deterioration this year, the picture for default risk is relatively benign, in our view. Corporate leverage remains generally lower and cash levels higher than prior to the pandemic. New issuance patterns have been less aggressive, both in their use of proceeds and ratings cohorts. Moreover, given ultralow yields in recent years, many companies were able to extend their maturities at low interest rates and relatively few names will be maturing in 2023 and 2024. That said, general consensus is for an increase in high yield defaults in 2023 – 2024, particularly if the recession turns out to be worse than anticipated.

What does that mean for portfolio positioning in credit markets? Credit differentiation will rise as the impact of higher rates and a slower economy filter into actual corporate earnings and outcomes. We believe credit markets to morph from something that was more driven by "macro" outcomes in 2022 to something more tied to fundamental outcomes. A key wild card is whether the mixed picture in economic dynamics could lead to more inflation than anticipated—and thus more difficulty in financial markets. This is not our base case, but it needs to be considered as we press into still uncertain territory.

## Global High Yield SDG Engagement – Investment Manager's Report

For the 12 months ended 31 December 2022, the total return for the USD I Accumulating Class was -11.16%. Over the same period, the ICE BofA Global High Yield Constrained Index (Total Return, Hedged, USD) (the "Index") returned -11.38%. (Performance for all share classes is provided in Appendix II. Performance data quoted represent past performance and do not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any).

The global high yield bond market finished the reporting period with negative returns in what was a tumultuous year across the majority of fixed income and equity asset classes. The overall risk-off sentiment was driven by the ongoing Russian-Ukraine conflict, elevated inflation and commodity prices, tightening of financial conditions and slowing economic activity. Robust consumer spending and a tight labor market, repercussions from the war in Ukraine, and other factors combined to push US inflation to a 40-year high. Against this backdrop, the US Federal Reserve Board began an aggressive rate hike campaign in March 2022, which is expected to continue until inflation is under control. Global high yield credit spreads widened due to periods of risk aversion and the central banks' monetary tightening campaigns. US 10-Year Treasury yields, and other bellwether longer-dated government bonds, moved higher in 2022 as nominal GDP growth remained robust and inflation reached multi-year highs in many countries. This type of environment did not derail the improvement or stability in credit fundamentals for most global high yield issuers as many were able to pass on price increases and adjust to the new operating environment. Credit differentiation was also a prevalent factor in 2022. Moreover, default rates declined to all-time lows in the first half of 2022, rising only incrementally in the second half of 2022. Additionally, higher yields and better valuations attracted investors into the high yield asset class.

In global high yield, lower quality securities, such as those rated CCC and below in the ICE BofA Global High Yield Index (Total Return, Hedged, USD) underperformed with returns of -14.33%, whereas BB and B securities returned -10.89% and -11.56%, respectively, for the full year. This compares to the Index overall return of -11.38%.

Default rates in the US, Europe and other Developed Markets are expected to remain well below average but have moved up from the all-time lows reached earlier in 2022. While Emerging Markets ("EM") defaults are on the rise, we are focused on select opportunities away from the higher risk regions and sectors. In December, the par weighted last 12-month US high yield default rate was 0.84%, unchanged from the prior month. This was the fifth month in a row with no US high yield bond defaults which is unprecedented. While the default rate has risen off the all-time low, we expect defaults to remain below average based on our bottom-up assessment of issuers and driven by the higher-quality ratings mix in high yield (50% of issuers with credit ratings of BB), less aggressive new issuance, fewer near-term maturities, as well as an energy sector that is far healthier than in the past few cycles. For context, the long-term average US high yield default rate is 3.2% (based on annual default rates back to 1980 according to JP Morgan). As for EM high yield corporates, the overall default rate is expected to end well into double digits this year due to non-payment by Russian and Ukrainian issuers, and due to the elevated defaults in the China property sector. Excluding those specific areas, the EM high yield corporate default rate was just 1.8% in 2022, as EM corporates entered this slowdown in growth with reasonable liquidity on average. The outlook for 2023 EM defaults excluding Russia, Ukraine and the China property sector is upward but still in a relatively benign range.

During the reporting period, security selection within Diversified Financial Services, security selection within and an overweight to Gas Distribution and security selection within and an overweight to Support-Services were the most beneficial to performance. Within the Portfolio's ratings positioning, security selection within BB and CCC and below and an underweight to BBB and above rated issuers were the most beneficial to performance. In contrast, security selection within and an underweight to B, an overweight to BB, an underweight to and security selection within Not Rated and an overweight to CCC and below rated issuers were the primary detractors from performance.

Global high yield spreads widened in 2022, but we believe valuations are more than compensating investors for the below-average default outlook. The tightening of financial conditions has caused real GDP growth to slow and slowing demand has helped inflation come off the boil, but it is still higher than central banks' target ranges. Normalising supply chains and changes in consumer behavior, among other factors, are likely to continue to mitigate upward inflationary pressures, which could eventually lead to a less aggressive path for central bank policy. That said, our analysts remained focused on the specific credit fundamentals of individual issuers in their coverage, assessing the base and downside cases in the event of a soft-landing or recession. Relatively healthy consumer and business balance sheets and growing nominal GDP should remain supportive for issuer fundamentals. While inventories are building as a result of slowing demand, we remain focused on sector-specific dynamics and idiosyncratic risks to individual issuers. Despite short-term volatility resulting from heightened uncertainty on economic growth and central bank tightening, we believe our bottom-up, fundamental credit research that focuses on security selection, avoiding credit deterioration, and putting only our "best ideas" into portfolios, will position us well to take advantage of the increased volatility.

## Global High Yield Sustainable Action – Investment Manager's Report

For the 12 months ended 31 December 2022, the total return of the USD I Accumulating Class was -11.49%. (Performance for all share classes is provided in Appendix II. Performance data quoted represent past performance and do not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any).

We believe a strategy of consistent engagement with issuers in the Portfolio will result in the most effective dialogue and ultimately a greater probability of successful outcomes. Another advantage of consistent engagement is the long-term relationships that are built between our research team and management over time. We believe these trusted relationships are especially valuable in the dynamic environment we live in today. We have found that developing deep relationships with senior management provides us with superior ability to influence change over time. During the reporting period, issuer engagements remained a key focus in the management of the Portfolio and engagement efforts are progressing as analysts focus on communicating with key members of senior management teams on aligning products and services with Sustainable Development Goals ("SDG") relevant to each industry. We also acknowledge that the SDG's and the overall impact of the Portfolio are important considerations along with the investment performance. The data suggest that companies that "do the right thing" also tend to perform well over the long run, demonstrating that company resiliency is also supported by how well leadership integrates ESG and SDG factors into operating their companies.

The global high yield bond market finished the reporting period with negative returns in what was a tumultuous year across the majority of fixed income and equity asset classes. The overall risk-off sentiment was driven by the ongoing Russian-Ukraine conflict, elevated inflation and commodity prices, tightening of financial conditions and slowing economic activity. Robust consumer spending and a tight labor market, repercussions from the war in Ukraine, and other factors combined to push US inflation to a 40-year high. Against this backdrop, the US Federal Reserve Board began an aggressive rate hike campaign in March 2022, which is expected to continue until inflation is under control. Global high yield credit spreads widened due to periods of risk aversion and the central banks' monetary tightening campaigns. US 10-Year Treasury yields, and other bellwether longer-dated government bonds, moved higher in 2022 as nominal GDP growth remained robust and inflation reached multi-year highs in many countries. This type of environment did not derail the improvement or stability in credit fundamentals for most global high yield issuers as many were able to pass on price increases and adjust to the new operating environment. Credit differentiation was also a prevalent factor in 2022. Moreover, default rates declined to all-time lows in the first half of 2022, rising only incrementally in the second half of 2022. Additionally, higher yields and better valuations attracted investors into the high yield asset class.

While the Portfolio does not have a benchmark, the broader global high yield market (as measured by the ICE BofA Global High Yield Index) saw lower quality securities, such as those rated CCC and below, underperform with returns of -14.33%, whereas BB and B securities returned -10.89% and -11.56%, respectively, for the full year. This compares to the Index overall return of -11.38%.

During the period, the Portfolio's positioning within Aerospace/Defense and Printing & Publishing was additive to performance and positioning whilst Consumer-Products was neutral. In contrast, positioning within Telecommunications, Real Estate & Homebuilders and Healthcare were the largest detractors from performance.

Default rates in the US, Europe and other Developed Markets are expected to remain well below average but have moved up from the all-time lows reached earlier in 2022. While Emerging Markets ("EM") defaults are on the rise, we are focused on select opportunities away from the higher risk regions and sectors. In December, the par weighted last 12-month US high yield default rate was 0.84%, unchanged from the prior month. This was the fifth month in a row with no US high yield bond defaults which is unprecedented. While the default rate has risen off the all-time low, we anticipate defaults to remain below average based on our bottom-up assessment of issuers and driven by the higher-quality ratings mix in high yield (50% of issuers with credit ratings of BB), less aggressive new issuance, fewer near-term maturities, as well as an energy sector that is far healthier than in the past few cycles. For context, the long-term average US high yield default rate is 3.2% (based on annual default rates back to 1980 according to JP Morgan). As for EM high yield corporates, the overall default rate is believed to end well into double digits this year due to non-payment by Russian and Ukrainian issuers, and due to the elevated defaults in the China property sector. Excluding those specific areas, the EM high yield corporate default rate was just 1.8% in 2022, as EM corporates entered this slowdown in growth with reasonable liquidity on average. The outlook for 2023 EM defaults excluding Russia, Ukraine and the China property sector is upward but still in a relatively benign range.

Global high yield spreads widened in 2022, but we believe valuations are more than compensating investors for the below-average default outlook. The tightening of financial conditions has caused real GDP growth to slow and slowing demand has helped inflation come off the boil, but it is still higher than central banks' target ranges. Normalising supply chains and changes in consumer behavior, among other factors, are likely to continue to mitigate upward inflationary pressures, which could eventually lead to a less aggressive path for central bank policy. That said, our analysts remained focused on the specific credit fundamentals of individual issuers in their coverage, assessing the base and downside cases in the event of a soft-landing or recession. Relatively healthy consumer and business balance sheets and growing nominal GDP should remain supportive for issuer fundamentals. While inventories are building as a result of slowing demand, we remain focused on sector-specific dynamics and idiosyncratic risks to individual issuers. Despite short-term volatility resulting from heightened uncertainty on economic growth and central bank tightening, we believe our bottom-up, fundamental credit research that focuses on security selection, avoiding credit deterioration, and putting only our "best ideas" into portfolios, will position us well to take advantage of the increased volatility.

## Global Investment Grade Credit – Investment Manager's Report

For the 12 months ended 31 December 2022, the total return for the USD I Accumulating class was -14.57%. Over the same period, the benchmark the Bloomberg Global Aggregate Corporate Index (Total Return, Hedged, USD) (the "Index") returned -14.11% (Performance for all share classes is provided in Appendix II. Performance data quoted represent past performance and do not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any).

The first nine months of 2022 challenged investment grade credit markets with the Russia invasion of Ukraine on 24 February, resulting in higher commodity prices, and inflation rates continued to rise during the year with central banks rapidly adjusting monetary policy. During the year, the U.S. Federal Reserve (the "Fed") raised the Federal Funds target range by 425 basis points to 4.25% to 4.50% which significantly impacted market volatility and credit spreads. Following the Russia invasion of Ukraine gas prices in Europe rose materially, and gas flows to Europe via the Nord Stream pipeline stopped in the third quarter. While issuer credit fundamentals remained strong as companies maintained pricing power and passed on cost inflation, geopolitical developments, monetary policy tightening, and concerns over energy supply in Europe, resulted in a material widening of credit spreads. Spreads started to recover from mid-November after US and EU consumer price inflation data for October came in below expectations. Sentiment towards Europe also improved in the fourth quarter as gas prices in Europe moderated substantially from the August peak due to warm weather, high gas storage levels, and conservation measures to reduce consumption across member states.

Security selection across Banking and Tech/Communications added positive performance to the Portfolio. Asset allocation in terms of our underweight versus the Index to the Finance sector also contributed positively to performance. Our asset allocation in Consumer Non-Cyclical (underweight) and Basics (underweight) detracted from performance.

Spreads have narrowed with inflation and other economic data pointing to the possibility of a soft landing and a lower probability of recession. We anticipate the Fed to continue to hike rates but at a more modest pace over the course of the first quarter of 2023. With monetary policy in restrictive territory, we anticipate the macroeconomic backdrop to show meaningful softening over the beginning of 2023 given tighter financial conditions. We believe we will see a weakening labor market and a more challenging earnings backdrop for most companies throughout the year. While this could soften investor risk appetite, attractive market yields combined with historically strong credit metrics should help support demand and credit risk premiums. We anticipate inflation to decline meaningfully over the remainder of the year with the Fed likely to pause further tightening and maintain its policy rate in restrictive territory for the remainder of the year. We believe the economy will most likely experience below trend growth potentially leaving credit spreads susceptible to wider levels as credit fundamentals exhibit modest deterioration. As the year progresses and we continue to see inflation moderate as well as credit fundamentals stabilise, we would see improved investor support for corporate credit and subsequently a narrowing of spreads during the second half of the year. We believe the primary market supply should be similar to 2022 levels which should be well absorbed by the market.

Heading into 2023, we remain overweight some of the more defensive sectors such as Communication Services, Utilities and Banking as well as some of the higher beta and cyclical sectors like Finance, REITs and Consumer Cyclical. We continue to be overweight sectors that have strong fundamentals and are currently in deleveraging mode like Communication Services as well as Banking which we believe will continue to benefit from a rising rate environment. We have an underweight in sectors such as consumer non-cyclicals that we view as being at a higher risk of using debt to finance shareholder returns via stock buybacks and merger and acquisition and trade at relatively tight valuations.

## Global Opportunistic Bond – Investment Manager's Report

For the 12 months ended 31 December 2022, the total return for the USD I Accumulating Class was -11.44%. Over the same period, the benchmark index, the Bloomberg Global Aggregate Index (Total Return, Hedged, USD) (the "Index"), returned -11.22%. (Performance for all share classes is provided in Appendix II. Performance data quoted represent past performance and do not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any).

Fixed income markets were challenged over the period, as persistently elevated inflation, aggressive central bank tightening and increasing likelihood of a meaningful growth slowdown drove interest rates higher and credit spreads wider; credit spreads retraced some of this move during the fourth quarter as investor demand picked up on the back of more attractive all-in yields. All told, for the period the 10-year US Treasury yield climbed +236 basis points ("bps"); intermediate government yields were similarly higher for Germany (+275 bps), the UK (+270 bps) and Japan (+35 bps). Global investment grade credit<sup>1</sup> and non-investment grade credit<sup>2</sup> spreads widened +50 bps and +164 bps, respectively.

In terms of relative performance, the portfolio's interest rate positioning was roughly neutral over the reporting period. Underweight exposure in US, core European and Canadian rates were notable contributors; these positives were offset, however, by overweight exposure in Australia and New Zealand rates. In credit, the portfolio's exposure to emerging markets ("EM") debt was the primary detractor from performance; security selection in global investment grade credit was a lesser detractor. The portfolio's exposure to global high yield, underweight exposure to global investment grade credit, and exposure to credit risk transfers were the largest contributors to performance. Our active FX strategy was negative for the period; positioning in Swiss franc and sterling contributed for the period, whereas positioning in Japanese yen and Norwegian krone detracted.

After a year of massive global monetary tightening, we anticipate inflation to retreat further from peak levels, although it is likely to remain well above norms and central bank targets throughout the year and into 2024. As expressed in their meetings and policymaker comments, central banks understand the need to maintain tight conditions in order to tame pricing pressures. So, although we could see just a couple more hikes, we believe US short rates are likely to remain high for some time. In other words, the world of zero interest rates that was so prevalent after the Global Financial Crisis is likely over.

We believe much of the US Federal Reserve's heavy lifting is in the rearview mirror, and we anticipate that 2023 will see quieter fixed income markets. In our view, this could create significant opportunity to capture higher yields with limited risk, especially given the added yield cushion that last year's repricing created. The focal point of our enthusiasm is the investment grade market.

We anticipate interest rates to trade within a much tighter range than in 2022, as inflation moderates and central banks hike at a more gradual pace. We believe duration exposure should be less risky than it was in 2022. However, we believe fundamental concerns about credit are likely to increase, not just due to macro developments, but as a function of individual issuer dynamics and financial positions, making security selection more important than ever. Despite the potential for economic deterioration this year, the picture for default risk is relatively benign, in our view. Corporate leverage remains generally lower and cash levels higher than prior to the pandemic. New issuance patterns have been less aggressive, both in their use of proceeds and ratings cohorts. Moreover, given ultra-low yields in recent years, many companies were able to extend their maturities at low interest rates and so relatively few names will be maturing in 2023 and 2024. That said, the general consensus is there will be an increase in high yield defaults in 2023 and 2024, particularly if the recession turns out to be worse than anticipated.

What does that mean for portfolio positioning in credit markets? Credit differentiation will rise as the impact of higher rates and a slower economy filter into actual corporate earnings and outcomes. We anticipate credit markets to morph from something that was more driven by "macro" outcomes in 2022 to something more tied to fundamental outcomes. A key wild card is whether the mixed picture in economic dynamics could lead to more inflation than anticipated—and thus more difficulty in financial markets. This is not our base case, but it needs to be considered as we press into still uncertain territory.

<sup>2</sup> Non-Investment Grade: Bloomberg Global High Yield Corporate Index

## Global Real Estate Securities – Investment Manager's Report

For the 12 months ended 31 December 2022, the total return of the USD I Accumulating Class was -25.56%. Over the same period, the benchmark index, the FTSE EPRA/Nareit Developed Real Estate Index (Total Return, Net of Tax, USD) (the "Index"), returned -25.05%. (Performance for all share classes is provided in Appendix II. Performance data quoted represent past performance and do not indicate future results. Total returns shown are net of all fees and expenses and include reinvestment of income dividends and other distributions, if any.)

The global stock market, as measured by the MSCI All Country World Index (Total Return, Net of Tax, USD), fell sharply during the reporting period. This was driven by a number of factors, including elevated inflation, which reached a 40-year high in the US. This triggered a sharp reversal in central bank monetary policy. Investor sentiment was also negatively impacted by the repercussions from war in Ukraine, supply chain issues, and the potential for tightening monetary policies to push the global economy into a recession. All told, the MSCI All Country World Index, (Total Return, Net of Tax, USD), returned -18.36% for the 12 months ended 31 December 2022. In contrast, the FTSE EPRA/Nareit Developed Real Estate Index (Total Return, Net of Tax, USD) returned -25.05%.

The Portfolio underperformed the Index during the reporting period. Both stock selection and country positioning, overall, contributed to relative results. The Portfolio's holdings in the Real Estate Holding & Development, Infrastructure and Office sectors added the most value. Conversely, holdings in the Storage, Retail and Health Care sectors were the largest detractors from performance. Looking at country positioning, underweights to Germany and Sweden were the most beneficial for relative results. In contrast, an overweight to the UK and an underweight in Switzerland were the largest headwinds from performance.

We are cautious as we enter 2023 with the macro backdrop being weighed down by inflation, a hawkish US Federal Reserve that is determined to get inflation under control, slower economic growth, and a lack of liquidity in both transaction markets and private investment vehicles. The global economy appears to be weakening, highlighted by slowing housing and low business confidence. However, the reopening of China's economy, lower energy and commodity prices, and a slowing labor market could provide some support for the view that inflation levels are peaking. Elevated cost of capital for REITs, paired with likely slowing fundamentals from a robust 2021/2022 leasing period, will likely stall business decisions and weigh on overall demand and earnings growth for REITs. In our opinion, property sector and stock selection will be important alpha generators, more so than in the past. We believe a majority of REITs are prepared for a meaningful disruption to business demand, with strong balance sheets, relatively low new construction activity and diverse demand drivers that lean more defensive. The rapid reversal of fundraising by Non-Traded REITs (NTRs) and waves of redemption requests may provide a window of opportunity for REITs to selectively acquire assets at relatively attractive valuations.

Overseas, European real estate markets experienced a sharp recovery during the fourth quarter. Both continental European markets and the UK rallied as debt capital markets began to recover as the new Sunak administration helped to stabilise market sentiment. Additionally, leasing and asset sales of prime, modern London office properties suggested that tenant and investor demand for the best assets remain healthy. On the continent, real estate share prices recovered from deeply discounted levels, as distressed asset sales failed to materialise and debt markets somewhat stabilised. However, there remains a risk about weaker companies seeking highly dilutive equity raising to bolster their balance sheets in 2023. Overall, we remain concerned that an economic slowdown could impact the more cyclical real estate sectors in Europe and we maintain a preference for companies in sectors enjoying secular tailwinds, such as logistics, self-storage and student housing. Performance of the Asia markets were influenced by government policies in the fourth quarter of 2022. China's decisive move to abandon its zero-COVID policy, stimulate the economy and support the real estate sector all at the same time led to a sharp rebound in Hong Kong and China stocks. In contrast, real estate stocks in Japan saw a sizeable pullback after the Bank of Japan unexpectedly widened the trading band of 10-year bond yields. In response to China's policy turn, we raised the portfolio's Hong Kong weighting and added new stocks to the portfolio to better capture the recovery opportunities.

## Global Sustainable Equity – Investment Manager's Report

For the 12 months ended 31 December 2022, the total return for the USD I Accumulating Class was -28.39%. Over the same period, the MSCI World Index (Total Return, Net of Tax, USD) (the "Index") returned -18.14%. (Performance for all share classes is provided in Appendix II. Performance data quoted represent past performance and do not indicate future results. The total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions if any).

2022 was a tumultuous year for markets amidst soaring inflation, hawkish central banks and geopolitical shocks. The majority of asset performance for the year was profoundly negative, as global stocks and bonds jointly sold off. Coming into the year, inflation was already rising due to supply-side issues from the economic restart following the COVID-19 pandemic. Russian forces' devastating invasion of Ukraine in February sent shockwaves through markets, and as nations rushed to impose sanctions, food & energy prices soared further. 2022 saw headline inflation reach historic highs, with the US Consumer Price Index increasing 9.1% year over year in June and central banks embark on a landmark path of interest rate hikes, unexpected in speed and magnitude. Collectively, G10 central banks implemented over 2700 basis points of interest rate increases over 2022.

Recession risks grew further in Europe and the UK as the energy crisis deepened and the dollar demonstrated extreme strength against major global currencies in 2022. However, we saw a meaningful reversal in the final quarter. China's economic activity was muted due to housing market weakness and maintaining its zero-COVID policy through most of the year, implementing strict and enduring lockdowns in many major cities. In December, however, Beijing moved to loosen controls, signaling the start of China's much-anticipated re-opening. Finally, the Bank of Japan surprised markets toward year-end by modifying its long-held yield control policy, putting upward pressure on global bond yields.

During the reporting period, the Portfolio underperformed the Index, posting a -28.39% total return versus -18.14% of the Index. Despite a strong performance in the fourth quarter of 2022, the Portfolio ended the year in negative territory, with stock selection and asset allocation detracting from performance. Stock selection and an overweight position in Communication Services detracted from performance as the sector fell by -36.9%, turning into the worst sector performance for 2022. Meanwhile, a zero weighting in Energy, which rose by 46% in the year, also detracted from performance. An overweight position in Health Care helped, however, to mitigate the underperformance from a sector allocation perspective. In addition to stock selection in Communication Services detracting from performance, as noted above, holdings in Consumer Staples also struggled in 2022. However, stock selection within the Industrials sector helped mitigate the underperformance. At the individual stock level, our holdings in Amazon, Alphabet and HelloFresh were the weakest performers in 2022, with Health Care stocks such as United Health, Novo Nordisk and Elevance Health contributing positively to performance.

It was a challenging year for Amazon, and as we approached year-end, the company was guided to a softer fourth quarter outlook, reflective of a worsening macroeconomic environment. While North American e-commerce trends held up well, management pointed to slowing international results, driven by softening consumer confidence and inflationary pressures in markets like the UK and Germany. Despite these short-term, exogenous pressures to the business, we believe nothing has structurally changed about Amazon's retail and AWS's long-term propositioning and opportunity. Amazon continues to take market share through its leading retail service (inventory availability, price, and fast delivery). Furthermore, while in the short-term revenue growth at AWS is slowing from a high base, the appeal of AWS's public cloud should structurally become more vital for enterprises looking for efficiencies in a downturn (something highlighted by the strength of the AWS billings growth).

The team had several engagements with companies held in the portfolio on a wide selection of Sustainable subjects, including board diversity. In our call with the private asset management firm Partners Group Holding, we discussed commercial momentum which is still strong. On the environmental, social, and governance ("ESG") front, Partners Group presented a clear ambition to reduce carbon emissions to zero by 2050. However, data collection is an issue as they invest in 1,000 companies directly and in 14,000 indirectly and applying too strict commitments might also constrain investment opportunities. Oversight of the practical implementation of ESG-related plans at Partner's Group is delegated to the boards of controlled companies along a materiality matrix setup by Partners Group. External consultants usually help with implementation as small businesses often lack the required skills in-house. Partners Group sets three ESG targets per controlled holding which are material and measurable. Partners Group has ESG integration on all its investments, classified as article 8 under SFDR.

Despite fluctuations in the broader market, macro-economic developments or outright shocks such as the COVID-19 pandemic, we believe our portfolio remains resilient and attractive, thanks to high-quality companies where sustainability reinforces their competitive advantage. We focus on companies that (1) have a durable competitive position meaning we believe they possess hard-to-replicate competitive advantages, (2) do no harm meaning we believe they carefully manage ESG practices, and (3) adapt to change, meaning we believe they focus on innovation and continuous improvement.

We anticipate a continued regulatory push for more sustainable development of the global economy. Given the challenging market backdrop, we believe the success of most quality companies now increasingly depends on the development of intangible capital - innovative technology, research and development, human capital, and brand or platform reputation to create a durable competitive position. This durable competitive position can be reinforced via good corporate citizenship through careful ESG management. We believe the forward-looking analysis of this combination of quality attributes, ESG factors, and idiosyncratic characteristics is critical to identifying the "Transition Winners" of the new economy. We believe in the short-term, markets appear to be at an inflection point, repricing the balance of growth vs. inflation, as data begins to show signs that central bank tightening is creeping into economic activity and recession risk is rising. We believe the path forward will depend highly on central bank policy and inflationary pressures easing toward the Fed's inflation target.

## High Yield Bond – Investment Manager's Report

For the 12 months ended 31 December 2022 (the "reporting period"), the total return for the USD I Accumulating Class was -11.84%. Over the same period, the ICE BofA US High Yield Constrained Index (Total Return, USD) (the "Index") returned -11.21%. (Performance for all share classes is provided in Appendix II. Performance data quoted represent past performance and do not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any).

The high yield bond market finished 2022 with negative returns in what was a tumultuous year across the majority of fixed income and equity asset classes. The overall risk-off sentiment was driven by the ongoing Russian-Ukraine conflict, elevated inflation and commodity prices, tightening of financial conditions and slowing economic activity. Robust consumer spending and a tight labor market, repercussions from the war in Ukraine, and other factors combined to push US inflation to a 40-year high. Against this backdrop, the US Federal Reserve Board began an aggressive rate hike campaign in March 2022, which is anticipated to continue until inflation is under control. High yield credit spreads widened due to periods of risk aversion and rapidly rising interest rates. US 10-Year Treasury yields, and other bellwether longer-dated government bonds, moved higher in 2022 as nominal GDP growth remained robust and inflation reached multi-year highs in many countries. This type of environment did not derail the improvement or stability in credit fundamentals for most high yield issuers as many were able to pass on price increases and adjust to the new operating environment. Credit differentiation was also a prevalent factor in 2022. Moreover, default rates declined to all-time lows in the first half of 2022, rising only incrementally in the second half of 2022. Additionally, higher yields and better valuations attracted investors into the high yield asset class.

During the reporting period, lower quality securities, such as those rated CCC and below in the ICE BofA US High Yield Index underperformed the Index with returns of -16.32%, whereas BB and B securities returned -10.57% and -10.58%, respectively for the reporting period. During the same period, the ICE BofA US High Yield Non-Distressed Index returned -10.61%, outperforming the Index, while the ICE BofA US High Yield Distressed Index returned -27.36%, significantly underperforming the Index which returned -11.21%.

In December, the par weighted last 12-month US high yield default rate was 0.84%, unchanged from the prior month. This was the fifth month in a row with no high yield bond defaults which is unprecedented. While the default rate has risen off the all-time low of 0.43% reached earlier in 2022, we anticipate defaults to remain below average based on our bottom-up assessment of issuers, and driven by the higher-quality ratings mix in high yield (50% of issuers with credit ratings of BB), less aggressive new issuance, fewer near-term maturities, as well as an energy sector that is far healthier than in the past few cycles. For context, according to JP Morgan research, based on annual default rates back to 1980, the long-term average default rate is 3.2%.

During the reporting period, security selection within and an overweight to Gas Distribution, security selection within Diversified Financial Services and security selection within and an overweight to Support-Services were the most beneficial to performance. In contrast, security selection within and an overweight to Media-Cable, security selection within and an overweight to Technology & Electronics and security selection within and an underweight to Energy were the largest detractors. Within the Portfolio's ratings positioning, security selection within BB and an overweight in Not Rated, BBB and above and B rated issuers were the most beneficial to performance. In contrast, an overweight to and security selection within CCC and below, security selection within B, and an underweight to BB rated issuers were the largest detractors.

High yield spreads widened in 2022, but we believe valuations offered investors an attractive opportunity especially given our below average default outlook. The tightening of financial conditions has caused real GDP growth to slow and slowing demand has helped inflation come off the boil, although it is still higher than central banks' target ranges. Normalising supply chains and changes in consumer behavior, among other factors, are likely to continue to mitigate upward inflationary pressures, which could eventually lead to a less aggressive path for central bank policy. That said, our analysts remained focused on the specific credit fundamentals of individual issuers in their coverage, assessing the base and downside cases in the event of a soft-landing or recession. Relatively healthy consumer and business balance sheets and growing nominal GDP could remain supportive for issuer fundamentals. While inventories are building as a result of slowing demand, we remain focused on sector-specific dynamics and idiosyncratic risks to individual issuers. Despite short-term volatility resulting from heightened uncertainty on economic growth and central bank tightening, we believe our bottom-up, fundamental credit research that focuses on security selection, avoiding credit deterioration, and putting only our "best ideas" into portfolios, will position us well to take advantage of the increased volatility.

## InnovAsia 5G – Investment Manager's Report

For the 12 months ended 31 December 2022 (the "reporting period"), the total return for the USD I Accumulating Class was -39.36%. Over the same period, the MSCI AC World Index (ACWI) (Total Return, Net of Tax, USD) (the "Index") returned -18.36% (Performance for all share classes is provided in Appendix II. Performance data quoted represent past performance and do not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any).

2022 was an unusual year marked by the highest inflation and the fastest pace of rate hikes by central banks in 40 years. The market narrative was centered around higher interest rates driven by aggressive tightening by central banks around the world. Asian equity markets were challenged given geopolitical tensions, COVID-related lockdowns in China, and recession concerns. This drove high market volatility and weak market sentiment during the reporting period, which led to widespread de-risking and market rotations away from growth equity. For example, the MSCI AC Asia Pacific IT Index returned -32.74% over the reporting period.

Against a challenging macro backdrop, the Portfolio underperformed the Index over the reporting period. By sector, an overweight to Information Technology and Communication Services were the largest detractors. In particular, portfolio exposure to high growth areas such as Internet and Mobile Gaming, as well as cyclical sectors such as Semiconductors underperformed, as they were challenged by growth normalisation and macro weakness. On the other hand, at the security level, exposure to leading-edge semiconductors, high-speed networking, and digital transformation leaders contributed positively to performance.

Through 2022, we avoided growth traps and placed emphasis on Growth at a Reasonable Price. We reduced exposure to high growth internet and software business models, companies impacted by weaker consumer demand, and those with weaker outlook due to macro slowdown or geopolitical risks. Instead, we added to areas with positive secular tailwinds (electrification, renewables, digitalisation), and areas of strategic importance (advanced semiconductors). In our view, focusing on the most innovative Asian small giants with competitive advantages and strategic partnerships may drive return over the long term.

Looking into 2023, while the pace of rate hikes is anticipated to slow, rates are likely to be kept higher for longer and macro uncertainty could persist. We thus continue to emphasise quality but are ready to capture tactical opportunities and position for cyclical growth. As the China economy re-opens, we believe the case for Asia's innovative small giants has become even more attractive. We are constructive on the growth opportunity especially within advanced semiconductors, robust 5G and data center capex, and digital content and lifestyle proliferation in Asia. We remain focused on the leaders and are ready to take advantage of market dislocations to build high-quality exposure where we see incremental positive outlook and validation of our investment theses.

## Japan Equity Engagement – Investment Manager's Report

For the 12 months ended 31 December 2022 (the "reporting period"), the total return for the JPY I Accumulating Class was -14.18%. Over the same period, the MSCI Japan Small Cap Net Index's (Total Return, JPY) (the "Index") returned 0.77%. (Performance for all share classes is provided in Appendix II. Performance data quoted represent past performance and do not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any).

During the reporting period, Japanese small caps outperformed the bigger and broader TOPIX Index. We believe Japanese smaller companies saw more resilience in their share price performances as a result of their focus on the domestic economy. On the other hand, larger and more export-dependent companies faced global economic uncertainties coupled with higher commodity prices in the wake of the military conflict in Ukraine as well as the sharp depreciation of the Japanese Yen ("JPY") contributing to steeper import costs. The lingering effects of the COVID-19 pandemic also continued to disrupt supply chains across many industries especially those related to autos and industrial manufacturing. Lastly, global investors regarded the Bank of Japan's ("BOJ") decision to adjust its monetary policy with respect to its Yield Curve Control ("YCC") as a de facto step towards monetary tightening, resulting in an appreciation of the JPY and higher interest rates that weighed on the stock prices of larger export-dependent companies.

During the reporting period, the Portfolio underperformed the Index primarily due to negative stock selection with core holdings in Industrials, Consumer Discretionary and Materials sectors seeing weak share price performance. In terms of sector allocation, overweight positions in Information Technology and Communication Services as well as traditional non-exposure to Consumer Staples detracted from performance.

In the year ahead, we believe economic growth in Japan will likely be supported by a combination of resilient consumer spending and inbound demand, which may see tailwinds as China reopens its economy. As for inflation, our anticipation is for the economy to see a gradual pick-up in consumer prices and wages. Whether this will evolve in the form of a sustainable upward trend remains to be seen. Hence, we believe the BOJ will pursue a phased approach to monetary policy normalisation, which we anticipate will help reduce the volatile moves of the JPY seen in 2022. A continuing trend from 2022 that we view will pick up momentum in 2023 is Japanese companies' efforts to realise corporate value through corporate governance reforms. According to SMBC Nikko data, through the first quarter of 2023, Japanese companies are expected to increase shareholder returns including stock buybacks to an all-time high<sup>1</sup> as corporate management look to address their firms' low capital efficiency vis-à-vis global peers. Furthermore, the Tokyo Stock Exchange ("TSE") and its working group on market reforms began a new round of deliberations in December to tackle the long-standing issue of Japanese listed companies' discounted valuations among developed market equities and has made proposals including whether to enforce new rules to companies trading below 1x price-to-book to disclose mid-term plans to raise corporate value<sup>2</sup>. It's also worth noting that the Financial Services Agency ("FSA") is paving the way for new disclosure requirements starting April 2024 mandating all listed companies to disclose measures on how to tackle material environment and social issues such as climate change and human capital management. We believe it would be prudent to actively select the winners from the losers in this type of market environment that are run by progressive management that are willing to work with shareholders to unlock value over the mid to long-term.

<sup>1</sup> SMBC Nikko data as of October 2022.

<sup>2</sup> Tokyo Stock Exchange, 5th meeting of the Market Reform Follow-Up Working Group, 28 December 2022.

## Macro Opportunities FX – Investment Manager's Report

For the 12 months ended 31 December 2022 (the "reporting period"), the total return for the EUR I Accumulating Class was -2.53%. Over the same period, the benchmark index, the ICE BofA 0-1 Year AAA Euro Government Index (Total Return, EUR) (the "Index"), returned -0.94%. (Performance for all share classes is provided in Appendix II. Performance data quoted represent past performance and do not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any).

During the reporting period, the best performing major currencies were the US dollar and the Swiss franc. The worst performing major currencies were the Japanese yen and the Swedish krona. As compared to the Index, an underweight the Swiss franc and Canadian dollar were the best performing positions whilst an overweight in the Japanese yen and Norwegian krone were detractors from performance.

Much of 2022 was dominated by elevated inflationary pressures across all major economies and aggressive policy tightening by central banks. Sharp increases in energy and food prices caused by the war in Ukraine led to fears of energy rationing resulting in a recession in Europe and the United Kingdom. A mild winter alleviated this risk. However, the rise in import prices did impact Europe's current account and saw the euro fall briefly below parity with the US dollar.

Looking ahead into 2023, we believe much will depend on whether or not inflation pressures continue to fall, and if central banks adopt a more neutral or even dovish policy outlook. Should this materialise, we may anticipate divergencies between countries to increase. We feel this, alongside the current account imbalances caused by rising energy prices, has the potential to see higher currency volatility.

## Multi-Asset Income – Investment Manager's Report

For the 12 months ended 31 December 2022, the total return for the USD I Accumulating Class was -11.86%. (Performance for all share classes is provided in Appendix II. Performance data quoted represent past performance and do not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any).

2022 was a tumultuous year for markets amidst soaring inflation, hawkish central banks and geopolitical shocks. Asset performance for the year, with the exception of Commodities, was negative, as global stocks and bonds jointly sold-off. Coming into the year, inflation was already rising due to supply-side issues from the economic restart following the COVID-19 pandemic. The devastating invasion of Ukraine by Russian forces in February sent shockwaves through markets, and as nations rushed to impose sanctions, food & energy prices soared further. 2022 saw headline inflation reached historic levels, with the US Consumer Price Index increasing 9.1% (YoY) in June, and central banks embark on a path of interest rate hikes, unexpected in both speed and magnitude. Collectively, G10 central banks implemented over 2700bps of interest rate increases over 2022. Recession risks grew further across Europe and the UK as the energy crisis deepened, and in September a crash in the UK gilt market unfolded after the then Government proposed massive, unfunded, fiscal easing. The pound plunged, hitting its lowest level against the dollar since 1985. In-fact, the dollar demonstrated extreme strength against major global currencies in 2022, though the trend reversed meaningful in the final quarter. China's economic activity was muted due to housing market weakness and the zero-COVID policy in place through most of the year, implementing strict and enduring lockdowns in many major cities. In December, however, Beijing moved to loosen controls, signaling the start of China's much anticipated re-opening. Finally, toward year-end, the Bank of Japan surprised markets by modifying its long-held yield control policy, putting upward pressure on global bond yields.

The portfolio's allocations to equities and fixed income detracted from performance over the year, though Uncorrelated Strategies contributed positively, reducing the size of the drawdown and dampening volatility. Within equities, performance was mixed as energy infrastructure stocks and the US Systematic Equity Strategy were able to provide some positive contribution as the energy sector outperformed and stock markets experienced a style rotation from growth into value. Emerging Market and non-US equities detracted, though REITs was by far the largest detractor due to rising interest rates and recession fears. Fixed income performance was negative across all components, as yields globally shifted higher and credit spreads widened. Preferred securities were the largest detractor, as the universe has a bias towards growth, which underperformed. The options strategy detracted over the year as elevated volatility moved prices outside the positive pay-off range, though income continued to be received. Within Uncorrelated strategies, the multi-asset teams fundamental tactical allocation process was additive, as was the strategic portfolio adjustment in place over the year which reduced the portfolios duration. The currency strategy was broadly flat. The broader mandate of the Portfolio, and more expansive approach helped diversify exposures and avoided large underperformance from particular markets.

Over the next 12 months, we anticipate markets to remain challenging amidst slowing growth and still-high (albeit, likely declining) inflation. The rising risk of global recession and central banks' determination to tighten financial conditions, makes a sustained rise in equity market valuations, narrowing of credit spreads or decline in bond yields very unlikely, in our view. We do think investor optimism can fuel short-term rallies; however, concerns about continued volatility lead us to favor defensive income and alternative diversifiers to mitigate portfolio volatility. Positionally, we favor yield over equity risk, advocate leaning toward defensiveness, quality and income in equities and emphasise the importance of alternative diversifiers to mitigate portfolio volatility.

Finally, we continue to believe that a multi-dimensional approach to income is prudent. During 2022 overall, portfolio performance was bolstered by expanded income sources such as energy infrastructure and the use of Uncorrelated and Absolute Return Strategies. We continue to seek specialist income sources that offer an attractive risk/return payoff. Our diversified multi-asset approach avoids concentration of portfolio risk in equity, duration or spread risk and attempts to diversify across asset classes to achieve a high-and sustainable-income level in a risk managed framework.

## Next Generation Mobility – Investment Manager's Report

For the 12 months ended 31 December 2022, the total return of the USD I Accumulating Class was -26.22%. Over the same period, the benchmark index, the MSCI All Country World Index (ACWI) (Total Return, Net of Tax, USD), (the "Index"), returned -18.36%. (Performance for all share classes is provided in Appendix II. Performance data quoted represent past performance and do not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any).

While the Index captures the global nature of the portfolio, its scope is significantly broader than the investable universe of the portfolio and therefore has limitations for comparative performance purposes. The Portfolio underperformed the Index by 786 basis points over the reporting period. Security selection in the Communication Services sector was the largest positive contributor to the Portfolio's relative performance during the period while sector allocation to the Information Technology sector detracted the most from relative performance. Unallocated sectors such as Consumer Staples, Energy, Health Care, and Utilities negatively impacted performance during the period.

Global equity markets weakened materially during 2022. Elevated rates of inflation across many geographies and subsequent monetary policy tightening weighed on global equity returns. Yields increased substantially and the US dollar strengthened meaningfully over the course of the year. This backdrop more negatively impacted growth-oriented stocks such as those in the Communication Services, Consumer Discretionary, and Information Technology sectors. Conversely, defensive sectors including Consumer Staples, Health Care, and Utilities as well as pro-inflation sectors such as Energy, Industrials and Materials outperformed on a relative basis.

Going forward, we see both risks and opportunities. We anticipate the macroeconomic backdrop to remain fluid. Tighter monetary policy will likely result in slower economic growth globally. However, following a relaxation of COVID policy, the reopening of the China economy will be an important contributor to global growth in 2023. China's policy shift may also lead to positive developments for specific sectors such as Internet and Semiconductors, which could also have positive implications for other economies. Thematically, we strongly believe that there will be further gains for both Autonomous Vehicles (AV) and Electric Vehicles (EV) in 2023 despite a fluid macroeconomic backdrop. Consequently, we continue to see attractive long-term opportunities across the investable universe heading into 2023.

From a thematic perspective the transportation industry continues to evolve. Global electric vehicle battery demand is on pace to increase more than 60% to approximately 8 million units in 2023, reaching approximately 10% of the global vehicle market. This robust EV growth occurred despite uncertain macroeconomic conditions and lingering supply chain constraints. We anticipate further advances in EV adoption in 2023 for several reasons. We believe that policies will generally remain supportive and will become a more meaningful contributor to EV growth in the US due to the passage of the Inflation Reduction Act. Additionally, automotive manufacturers continue to spend significant capital to broaden their EV offerings, which will provide consumers with greater product selection. Meanwhile, supporting charging infrastructure investments are being made, which should reduce consumer range anxiety. Overall, it is still early in terms of global battery-electric vehicle adoption, and we believe that a multi-year runway still lies ahead. Autonomous vehicle adoption continues to advance as well. During 2022 automakers continued to accelerate the rollout of advanced driver assistance systems (ADAS), such as Honda's recent decision to offer hands-free technology on all vehicle models in the US by 2030. In addition to greater ADAS uptake, we also observed meaningful progress on the sophistication of these systems, such as hands-free functionality on highways and in some cases urban areas. We envision greater uptake of these increasingly capable autonomous systems to play out through 2023 and beyond. On the robotaxi front, industry leaders are transitioning from the R&D phase to the commercialisation phase. For example, another commercial robotaxi service was launched in 2022, GM Cruise in San Francisco. We anticipate greater commercial progress in 2023 as GM and Google's Waymo have recently expanded their operations to new domains.

## Next Generation Space Economy – Investment Manager's Report

Since its inception on 10 May 2022 until 31 December 2022 (the "reporting period"), the total return for the USD I Accumulating Class was -3.90%. Over the same period, the MSCI All Country World Index (ACWI) (Total Return, Net of Tax, USD) (the "Index") returned -1.91%. (Performance for all share classes is provided in Appendix II. Performance data quoted represent past performance and do not indicate future results. Total returns shown are net of all fees and expenses and include reinvestment of income dividends and other distributions, if any).

During the reporting period, as well as more broadly throughout 2022, we saw heightened economic volatility due to rapidly rising global inflation, higher interest rates, elevated energy prices, lingering impacts from COVID, as well as continued geopolitical tensions headlined by Russia/Ukraine. Despite these pressures, as the year ended, there were more positive commentary around supply chain improvements and an effort to re-open China's economy.

The Portfolio underperformed the Index over the reporting period primarily attributable to its lack of exposure in typically defensive sectors such as Health Care, Financials, and Energy which was partially offset by our positive stock selection in Information Technology and our positioning in Communication Services. Over the period, the largest contributor was Safran which was a beneficiary of the broader aerospace recovery; meanwhile Rocket Lab detracted the most during the period as rising rates impacted valuations on many high-growth names.

While we anticipate continued volatility in the market throughout 2023 as investors try to navigate inflationary pressures and recessionary fears, we believe we are at the inflection point as it relates to the Space Economy. With launch costs decreasing more than ten-fold, advancements in satellite technologies, and increased commercial investment, space is becoming more accessible and further integrated within our everyday lives. We believe that as capabilities in space continue to improve, this will drive more commercial demand, which will allow for additional revenue streams that will further drive continued innovation and even the emergence of entirely new businesses and business models.

During the second half of the year, we saw exciting announcements related to the space theme. The most high-profile news came in the form of direct satellite-to-cell connectivity. Major companies such as Apple, Qualcomm, and T-Mobile announced plans that will allow off-the-shelf cell phones to connect to satellites. With news reports that the technology already saving the lives of more than one customer highlighted not only the importance of this technology but expected consumer demand. Outside of this, we witnessed the first successful mission of the Artemis program, and the US continues to march forward in returning humans to the surface of the moon and establishing a longer-term presence. Finally, we saw continued M&A from both strategic and financial buyers with the two main deals being the combination of OneWeb and Eutelsat and private equity firm Advent International buying Maxar Technologies. Heading into 2023, we remain excited at the prospect of growth within the space economy. While space-based businesses should continue to see strong growth, we anticipate hearing more about terrestrial businesses to start leveraging space-based technology to enhance their product with opportunities with the agricultural, financial and communications markets.

## Short Duration Emerging Market Debt – Investment Manager's Report

For the 12 months ended 31 December 2022, the total return for the USD I Accumulating Class shares was -7.09%. Over the same period, the ICE BofA 3-Month US Treasury Bill Index (Total Return, USD) (the "Index") returned 1.46%. (Performance for all share classes is provided in Appendix II. Performance data quoted represent past performance and do not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any).

This was an extremely turbulent period for emerging markets ("EM") which experienced continued risks from COVID-19, particularly in China where the authorities stuck to rigid policies for most of the year, combined with Russia's invasion of Ukraine, persistently high inflation, leading to the most aggressive monetary tightening campaign in decades, and a stronger dollar. As such we saw a sharp rise in core rates, wider EM spreads, and a high default rate across both the sovereign and corporate universe driving negative returns for the asset class. This pressure on markets saw some reprieve towards the end of the year as the easing of price pressures in the US and eurozone supported the peak inflation theme. Signs that China was inching away from its zero Covid strategy, as well as providing some concrete steps to support the property sector which collapsed, were also supportive.

The Fund posted a negative total return over the reporting period and underperformed the Index, driven by both a surge in short-end US Treasury yields, as well as by the sharp rise in EM spreads. Exposures in Russia and Ukraine were among the main detractors from spread returns as bond prices fell sharply following Russia's attack on Ukraine. Elsewhere, corporate holdings in the China property sector detracted, as well as sovereign holdings in Sri Lanka and Ghana. Meanwhile, the main positive contributors included holdings in Turkey, Brazil and Colombia.

Following the major downturn for EM fixed income last year, we believe that prospects for the asset class look more positive in 2023. With substantial monetary tightening behind us and inflation having likely peaked in both the US and in many emerging countries, pressures from rising rates should moderate and become a more two-sided risk going forward. In China, while the sudden easing of Covid restrictions is disrupting activity in the very near term, the reopening and renewed policy focus on supporting growth should drive a strong economic rebound later in the year, with positive spillovers across global EM. We expect default rates for sovereigns to decline to the low single digits in 2023, while increasing IMF engagement by different EM countries should support funding needs and reform agendas. Also in EM high yield corporates we expect default rates to decline, from 14.0% last year to 5.2% in 2023, with the majority of defaults relating to China property developers and Ukrainian issuers. Excluding those specific areas we expect the EM high yield corporate default rate to be broadly in line with the historical average at 3.3%, as EM corporates have maintained robust balance sheets on average.

The key risks to our constructive view are either the unfolding of a deep global recession which would push EM spreads materially higher, or an unexpected acceleration of inflation dynamics globally which would require substantially more rate hikes. Considering current yield levels for EM hard currency bonds, we believe that those risks are well compensated for and we see valuations for short duration EM bonds as attractive.

## Short Duration High Yield SDG Engagement – Investment Manager's Report

For the 12 months ended 31 December 2022, the total return for the USD I Accumulating Class was -4.18%. (Performance for all share classes is provided in Appendix II. Performance data quoted represent past performance and do not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any).

The high yield bond market finished the reporting period with negative returns in what was a tumultuous year across the majority of fixed income and equity asset classes. The overall risk-off sentiment was driven by the ongoing Russian-Ukraine conflict, elevated inflation and commodity prices, tightening of financial conditions and slowing economic activity. Robust consumer spending and a tight labor market, repercussions from the war in Ukraine, and other factors combined to push US inflation to a 40-year high. Against this backdrop, the Federal Reserve Board began an aggressive rate hike campaign in March 2022, which is expected to continue until inflation is under control. High yield credit spreads widened due to periods of risk aversion and rapidly rising interest rates. US 10-Year Treasury yields, and other bellwether longer-dated government bonds, moved higher in 2022 as nominal GDP growth remained robust and inflation reached multi-year highs in many countries. This type of environment did not derail the improvement or stability in credit fundamentals for most high yield issuers as many were able to pass on price increases and adjust to the new operating environment. Credit differentiation was also a prevalent factor in 2022. Moreover, default rates declined to all-time lows in the first half of 2022, rising only incrementally in the second half of 2022. Additionally, higher yields, better valuations and concerns over rising interest rates attracted investors into short duration high yield.

During the reporting period, lower quality securities, such as those rated CCC and below in the ICE BofA US High Yield Index underperformed the index with returns of -16.32%, whereas BB and B securities returned -10.57% and -10.58%, respectively for the full year. During the same period, the ICE BofA US High Yield Non-Distressed Index returned -10.61%, outperforming the overall index, while the ICE BofA US High Yield Distressed Index returned -27.36%, significantly underperforming the ICE BofA US High Yield Constrained Index which returned -11.21%. The ICE BofA 0-5 Year BB-B US High Yield Constrained Index—a measure of shorter duration and higher quality high yield securities—experienced lesser drawdowns of -4.97% in 2022.

In December, the par weighted last 12-month US high yield default rate was 0.84%, unchanged from the prior month. This was the fifth month in a row with no high yield bond defaults which is unprecedented. While the default rate has risen off the all-time low of 0.43% reached earlier in 2022, we expect defaults to remain below average based on our bottom-up assessment of issuers, and driven by the higher-quality ratings mix in high yield (50% of issuers with credit ratings of BB), less aggressive new issuance, fewer near-term maturities, as well as an energy sector that is far healthier than in the past few cycles. For context, the long-term average default rate is 3.2% (based on annual default rates back to 1980 according to JP Morgan).

During the year, from a sector perspective, positioning within Steel, Food & Beverage and Aerospace/Defense added the most to performance, while positioning within Media-Cable, Healthcare and Diversified Financial Services detracted the most from performance. From a credit ratings perspective, the Portfolio's positioning in Not Rated was neutral to performance and BBB and above positioning detracted slightly from performance, while positioning in B, BB and CCC and below rated issuers detracted the most from performance.

High yield spreads widened in 2022, but we believe valuations are more than compensating investors for the below-average default outlook. The tightening of financial conditions has caused real GDP growth to slow and slowing demand has helped inflation come off the boil, but it is still higher than central banks' target ranges. Normalising supply chains and changes in consumer behavior, among other factors, are likely to continue to mitigate upward inflationary pressures, which could eventually lead to a less aggressive path for central bank policy. That said, our analysts remained focused on the specific credit fundamentals of individual issuers in their coverage, assessing the base and downside cases in the event of a soft-landing or recession. Relatively healthy consumer and business balance sheets and growing nominal GDP should remain supportive for issuer fundamentals. While inventories are building as a result of slowing demand, we remain focused on sector-specific dynamics and idiosyncratic risks to individual issuers. Despite short-term volatility resulting from heightened uncertainty on economic growth and central bank tightening, we believe our bottom-up, fundamental credit research that focuses on security selection, avoiding credit deterioration, and putting only our "best ideas" into portfolios, will position us well to take advantage of the increased volatility.

## Strategic Income – Investment Manager's Report

For the 12 months ended 31 December 2022, the total return for the USD I Accumulating Class was -10.24%. Over the same period, the benchmark index, the Bloomberg US Aggregate Bond Index (Total Return, USD) (the "Index"), returned -13.01%. (Performance for all share classes is provided in Appendix II. Performance data quoted represent past performance and do not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any).

Fixed income markets were challenged over the period, as persistently elevated inflation, aggressive central bank tightening and increasing likelihood of a meaningful growth slowdown drove interest rates higher and credit spreads wider; credit spreads retraced some of this move during the fourth quarter as investor demand picked up on the back of more attractive all-in yields. All told, for the period the 10-year US Treasury yield climbed +236 bps while US investment grade ("IG") credit<sup>1</sup> and non-investment grade credit<sup>2</sup> spreads widened +34 bps and +172 bps, respectively; against this backdrop, the fund generated a negative total return and outperformed the index by +243 bps.

In terms of relative performance, the Portfolio's duration underweight was the largest contributor for the reporting period, and underweight exposure to IG credit and agency MBS also added value. These positives were partly offset by the fund's allocation to below IG credit, mortgage credit, financial hybrids and US TIPS.

After a year of massive global monetary tightening, we anticipate inflation to retreat further from peak levels, although it is likely to remain well above norms and central bank targets throughout the year and into 2024. As expressed in their meetings and policymaker comments, central banks understand the need to maintain tight conditions in order to tame pricing pressures. So, although we could see just a couple more hikes, we believe US short rates are likely to remain high for some time. In other words, the world of zero interest rates that was so prevalent after the Global Financial Crisis is likely over.

We believe much of the US Federal Reserve Board heavy lifting is in the rear-view mirror, and we anticipate that 2023 will see quieter fixed income markets. In our view, this could create significant opportunity to capture higher yields with limited risk, especially given the added yield cushion that last year's repricing created. The focal point of our enthusiasm is the IG market.

We anticipate interest rates to trade within a much tighter range than in 2022, as inflation moderates and central banks hike at a more gradual pace. We believe duration exposure should be less risky than it was in 2022. However, fundamental concerns about credit are likely to increase, not just due to macro developments, but as a function of individual issuer dynamics and financial positions, making security selection more important than ever.

Despite potential for economic deterioration this year, the picture for default risk is relatively benign, in our view. Corporate leverage remains generally lower and cash levels higher than prior to the pandemic. New issuance patterns have been less aggressive, both in their use of proceeds and ratings cohorts. Moreover, given ultralow yields in recent years, many companies were able to extend their maturities at low interest rates and relatively few names will be maturing in 2023 and 2024. That said, general consensus is for an increase in high yield defaults in 2023 – 2024, particularly if the recession turns out to be worse than anticipated.

What does that mean for portfolio positioning in credit markets? Credit differentiation will rise as the impact of higher rates and a slower economy filter into actual corporate earnings and outcomes. We anticipate credit markets to morph from something that was more driven by "macro" outcomes in 2022 to something more tied to fundamental outcomes. A key wild card is whether the mixed picture in economic dynamics could lead to more inflation than anticipated—and thus more difficulty in financial markets. This is not our base case, but it needs to be considered as we press into still uncertain territory.

<sup>1</sup> Investment Grade: Bloomberg US Credit Index

<sup>2</sup> Non-Investment Grade: ICE BofA US High Yield Constrained Index

## Sustainable Asia High Yield – Investment Manager's Report

For the 12 months ended 31 December 2022 (the "reporting period"), the total return for the USD I Accumulating Class was -15.76%. Over the same period, the JP Morgan ESG Asia Credit (JESG JACI) – High Yield Index (Total Return, USD) (the "Index") returned -14.65%. (Performance for all share classes is provided in Appendix II. Performance data quoted represent past performance and do not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any).

Asian high yield bonds saw severe drawdowns over the reporting period, driven primarily by the performance of the Chinese real estate sector. Under the "common prosperity" mantra, Chinese authorities continued their policy of forced deleveraging of the property sector, which resulted in a high degree of credit stress and large number of defaults in the market. Outside of the Chinese real estate sector, the Asia high yield market performed relatively better, yet posted largely negative returns for the calendar year amidst a challenging year for the asset class given the rising core yields and tightening financial conditions.

Towards the end of the reporting period, markets showed signs of recovery due to two key developments in China: first the government's pro-growth stance including re-opening and the shift away from zero-COVID policy, and second, the pivot towards more supportive policy for the property sector. Chinese authorities have scrapped strict curbs on travel and activity in a move towards re-opening which aided positive sentiment in the China credit complex. Regarding the property sector, Chinese regulators have turned more positive on property developer financing and the People's Bank of China ("PBoC") and the China Banking and Insurance Commission ("CBIRC") reiterated the need to mitigate risks for "good-quality and systematically-important" developers. Credit selection and risk management were key amidst the unprecedented volatility in Asian Credit markets over the year. Overall, security selection contributed positively to relative return versus the Index. A key driver of this came from avoidance of many distressed and defaulted credits in China. Elsewhere, the Portfolio's overweight position in India contributed positively, including exposure to issuers in the renewable energy sector, as did the security selection in Indonesia. On the other hand, the Portfolio's underweight positions in the Philippines and Singapore which are more low beta, combined with the underweight in Macau detracted from relative return.

Following the worst year in decades for Asia Credit and emerging markets ("EM") more broadly, we believe that prospects for the asset class look much brighter in 2023. With substantial monetary tightening behind us and inflation having likely peaked in both the US and in major Asian economies, we believe pressures from rising rates may abate and potentially become a more two-sided risk going forward. In China, while the sudden easing of COVID restrictions is disrupting activity in the very near term, the reopening and renewed policy focus on supporting growth could drive a strong economic rebound later in the year, with positive spillovers across the region. We anticipate default rates for Asian high yield bonds to decline in 2023 due to positive developments in China. For China specifically, we believe that a more positive stance is now warranted given policy accommodation for developers as well as the government's broader pro-growth stance. Furthermore, we believe the broader China-related complex including Macau may benefit going forward from re-opening. Outside of China, we remain constructive on credit opportunities in particular across Southeast Asia given attractive fundamentals and valuations. We continue to be optimistic on Indian high yield credits as macroeconomic fundamentals continue to be supportive, and issuers from the country have a strong focus on Environmental, Social and Governance ("ESG") practices.

We believe the key risks to our constructive view are either the possible unfolding of a global recession which could push EM spreads materially higher, or an unexpected acceleration of inflation dynamics globally which could require more rate hikes. Considering current yield levels for Asian hard currency bonds, we believe that those risks are well compensated for and we see valuations for Asian credit as attractive.

## Sustainable Emerging Market Corporate Debt – Investment Manager's Report

For the 12 months ended 31 December 2022, the total return for the USD I Accumulating Class was -12.06%. Over the same period, the JPMorgan ESG (JESG) CEMBI Broad Diversified Index (the "Index"), returned -10.63. (Performance for all share classes is provided in Appendix II. Performance data quoted represent past performance and do not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any).

The Portfolio transitioned to a sustainable strategy on 3 October 2022. As part of the transition, the fund now targets a >30% reduction in carbon intensity and higher ESG score<sup>1</sup> vs. the EM Corporate Debt universe.<sup>2</sup> On 3 October 2022, due to the change in strategy, the performance benchmark is now the JPMorgan ESG (JESG) CEMBI Broad Diversified Index. For the period from 3 October 2022 to 31 December 2022, the USD I Accumulating Class returned 5.60% outperforming the Index, which returned 5.17%. For the entire reporting period the USD I Accumulating class returned -12.06%, outperforming the previous index, the JPMorgan CEMBI Diversified Index, which returned -12.92% for the reporting period.

This was an extremely turbulent period for emerging markets ("EM") which experienced continued risks from COVID-19, particularly in China where the authorities stuck to rigid policies for most of the year, as well as the continued collapse of the property sector (defaults reached 50% in 2022), combined with Russia's invasion of Ukraine, persistently high inflation, leading to the most aggressive monetary tightening campaign in decades, and a stronger dollar. As such we saw a sharp rise in core rates and the worst year of performance for the index since the Global Financial Crisis. This pressure on markets saw a reprieve late in the year as the easing of price pressures in the US and eurozone supported the peak inflation theme. Signs that China was inching away from its zero Covid strategy were also supportive as well as providing some concrete steps to support the property sector. The corporate high yield default rate reached 14.0% as companies in Russia, Ukraine and the China property sector faced material headwinds in the year.

The JPMorgan CEMBI Diversified Index posted negative returns for the year. Spreads started the year at 255bps, hit highs of 425bps in October, and ended the year at 308bps. Yields moved from 4.49% at the beginning of the year to 7.27% by year end, peaking at 8.57% in October. The high yield segment of the market outperformed investment grade during the year. All regions posted negative performance, with Latin America seeing the smallest negative performance for the year. The best performing countries in the index were Argentina and Turkey which posted positive returns, while the rest of the countries saw negative performance. By sector, commodities fared the worst, down over 20% during the year. Defensive sectors such as financials, diversified, infrastructure and utilities only lost single digits in 2022.

The fund outperformed the benchmark over the year. Positioning in Russia was the primary driver of outperformance especially not holding any VTB Bank or Sberbank, where prices dropped significantly alongside all Russian corporates irrespective of sector after the invasion of Ukraine and the significant sanctions imposed on the country. However, security selection in China detracted due to exposure to the property sector which faced significant stress resulting in ongoing defaults. A position in a Chilean telecom also detracted due to weaker operational performance and tight liquidity conditions. Within country allocation, the overweight exposure to Brazil was positive as the country moved through its election cycle with little turmoil. The overweight to Ukraine and underweight exposure to Turkey and investment grade Asian countries were negative.

We believe that prospects for the asset class look more positive in 2023. With substantial monetary tightening behind us and inflation having likely peaked in both the US and in many emerging countries, pressures from rising rates should abate and become a more two-sided risk going forward. In China, while the sudden easing of Covid-19 restrictions is disrupting activity in the very near term, the reopening and renewed policy focus on supporting growth should drive a strong economic rebound later in the year, with positive spillovers across global EM. In EM high yield ("HY") corporates we expect default rates to decline, from 14.0% last year to 5.2% in 2023, with the majority of defaults relating to China property developers and Ukrainian issuers. In light of the recent steps taken by the Chinese government, we believe that defaults expectations going forward are likely to be further reduced. Excluding those specific areas we expect the EM HY corporate default rate to be broadly in line with the historical average at 3.3%, as EM corporates have maintained robust balance sheets on average.

The key risks to our constructive view are either the unfolding of a deep global recession which would push EM spreads materially higher, or an unexpected acceleration of inflation dynamics globally which would require substantially more rate hikes. Considering current yield levels for EM hard currency bonds, we believe that those risks are well compensated for and we see valuations for EMD corporates as attractive.

<sup>1</sup> The strategy targets a higher MSCI ESG Score versus the broader market as represented by the JPMorgan CEMBI Diversified Index, whilst excluding issuers with very weak ESG practices

<sup>2</sup> The JPMorgan CEMBI Diversified Index

## Sustainable Emerging Market Debt - Hard Currency – Investment Manager's Report

Since its inception on 19 January 2022 through 31 December 2022 (the "reporting period"), the total return for the USD I Accumulating Class was -14.60%. Over the same period, the benchmark index, the JPM ESG EMBI Global Diversified Index (Total Return, USD) (the "Index"), returned -16.06%. (Performance for all share classes is provided in Appendix II. Performance data quoted represent past performance and do not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any).

This was an extremely turbulent period for emerging markets ("EM") due to continued risks from COVID-19, particularly in China where the authorities stuck to rigid policies for most of the year, Russia's invasion of Ukraine and persistently high inflation which led to the most aggressive monetary tightening campaign in decades and a stronger dollar. As such, we saw a sharp rise in core rates and the second worst year in returns for the Index since its inception in 1994. This pressure on markets saw a reprieve late in the year as the easing of price pressures in the US and eurozone supported the peak inflation theme. Signs that China was inching away from its zero-COVID policy, were also supportive. The broad market index default rate reached 7.3% as Belarus, Russia, Sri Lanka, and Ukraine defaulted on external liabilities whereas Ghana also declared its intent to do so. IMF support remained an important theme for several EMs, such as Argentina, Egypt, and Pakistan, and an anchor for the restructuring processes underway in Ghana, Sri Lanka, and Zambia. Index spreads widened from 317 basis points to 377 basis points, hitting a high of 509 in mid-July, while US Treasury yields ended the year at 3.87% up from 1.51% at the start of the year. The Index yield to maturity ended at 7.8% at the end of 2022, up from 4.81% at the end of 2021.

The best performers in the broad market index were Iraq (excluded from the Index), supported by strong oil prices and Costa Rica, where fiscal and external risks were mitigated by continued adherence to the IMF program. Ukraine performed the worst given the horrific economic devastation caused by the Russian aggression, followed by Pakistan, also excluded from the Index, whose financing challenges were made worse with significant floods.

The Portfolio outperformed the Index, driven mainly by country allocation while security selection contributed, and top down positioning detracted. In country allocation, our absence from Russia and Belarus due to ESG criteria, and overweight allocations in Costa Rica and Oman, where fiscal and governance reforms made the country resilient to the market downturn, contributed. Our absence from Saudi Arabia and Qatar due to ESG criteria, and overweight allocation to Ukraine detracted the most. Our corporate positioning in China, where sovereign and quasi-sovereign bonds are excluded due to ESG criteria, was the main detractor in security selection, which contributed as a whole.

We believe that prospects for the asset class look much brighter in 2023. With substantial monetary tightening behind us and inflation having likely peaked in both the US and in many EM countries, we believe pressures from rising rates should abate and become a more two-sided risk going forward. In China, while the sudden easing of COVID restrictions is disrupting activity in the very near term, the reopening and renewed policy focus on supporting growth should drive a strong economic rebound later in the year, with positive spillovers across global emerging markets. We anticipate default rates for sovereigns to decline to the low single digits in 2023, while increasing IMF engagement by different EM countries should support funding needs and reform agendas.

The key risks to our constructive view are either the unfolding of a deep global recession which would push EM spreads materially higher, or an unexpected acceleration of inflation dynamics globally which would require substantially more rate hikes.

We anticipate technicals to be supportive with flows returning to the asset class following significant outflows last year and net issuance to remain negative, particularly for higher yielding markets. We believe that the spread widening in EM hard currency bonds this year has been disproportionate, particularly in the high yield space, and we currently see valuations as attractive on an absolute basis.

## Systematic Global Sustainable Value – Investment Manager's Report

For the 12 months ended 31 December 2022 (the "reporting period"), the total return for the USD I Accumulating Class was -12.92%. Over the same period, the MSCI ACWI (All Country World Index) Value (Total Return, Net of Tax, USD) (the "Primary Index") and the MSCI All-Country World Index (ACWI) (Total Return, Net of Tax, USD) (the "Secondary Index") returned -7.55% and -18.36%, respectively. (Performance for all share classes is provided in Appendix II. Performance data quoted represents past performance and does not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any).

Global equity markets saw extended volatility throughout 2022, with brief rallies that could not offset the overall negative total returns during the reporting period. Inflation was top of mind for investors as the Consumer Price Index ("CPI") surged to multi-decade highs before peaking and eventually seeing a slight decline into year end. The US Federal Reserve Board (the "Fed") maintained aggressive rate hikes throughout 2022, anticipating to continue to keep rates 'higher for longer' even in the face of economic slowdown. Purchasing managers index ("PMI") started the year strong but began to see a modest slowdown in the US and Europe as the lagged aftermath of rate hikes began to take effect. The US Treasury yield curve inverted in the second half of 2022, on the back of a consensus bearish outlook which historically has signalled a recession ahead. The Chinese government began to ease the restrictive zero-COVID policy that had been in place from almost three years, as the government planned to open borders and ease quarantine regimes for travellers in the new year.

During the reporting period, the portfolio's Value tilt had mixed relative returns throughout this year's sustained market volatility, underperforming the Primary Index and outperforming the Secondary Index. Our underperformance versus the Primary Index was mainly driven by security selection in the US and Europe except UK, while Japan contributed positively. Consumer Discretionary and Industrials sectors drove the portfolio's underperformance, while security selection in Health Care and Energy contributed positively relative to the Primary Index. From a factor perspective, Value, Liquidity, and Momentum equity factors drove underperformance relative to the Primary Index while Volatility rallied.

The portfolio's outperformance versus the Secondary Index was mainly driven by security selection in the US and Japan, while the UK detracted. Health Care and Communication Services sectors drove the portfolio's outperformance, while security selection in Utilities lagged relative to the Secondary Index. From a factor perspective, Value, Volatility, and Quality equity factors drove outperformance relative to the Secondary Index while the Liquidity factor dragged.

Looking ahead to 2023, our outlook is informed by recent growth and inflation trends as well as the recent Fed comments. We believe global economic growth will continue to slow down and inflation could potentially maintain its decline into mid-2023. In addition, we believe the US is likely to enter a recession with a higher likelihood of a moderate recession while possibly avoiding a more severe outcome.

## Ultra Short Term Euro Bond – Investment Manager's Report

For the 12 months ended 31 December 2022 (the "reporting period"), the total return for the EUR I Accumulating Class was -5.59%. Over the same period, the ICE BofA 0-1 Year AAA Euro Government Index (Total Return, EUR) returned -0.94%. (Performance for all share classes is provided in Appendix II. Performance data quoted represent past performance and do not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any).

During the reporting period, the market was characterised by abrupt sell-off of rates. The German 10-year government bond yield rose significantly from -0.20% to +2.56%, a level last seen in 2011. Rates sell-off was prompted by the fastest price acceleration data point since the 1970's, mainly driven by higher commodity prices due to the Russian invasion of Ukraine. Moreover, supply chain bottle-necks due to Chinese lockdown restrictions put additional pressure on roaring inflation. Not only did rates widen during the reporting period, the European rates curve inverted, with the 2-year German rates widening more than the 10-year, as the former ended the year 336 bps wider, whereas the latter just 276 bps wider. As the Portfolio was mainly invested on the short part of the curve, it was severely hit by this curve inversion notwithstanding a structural short position on German Schatz.

The European Central Bank ("ECB") answered to high and accelerating inflation by tightening monetary policy through rate increases and quantitative tightening, which led to a deceleration of economic growth. Market participants experienced outflows from fixed income funds and were better sellers of risk, prompting further widening of rates and spreads. European investment grade ("IG") credit spreads widened from 96 bps to 168 bps during the reporting period, negatively impacting the Portfolio. In the meantime, European high yield ("HY") credit spreads widened from 316 bps to 512 bps. The active hedge through a short position on iTraxx Crossover limited the losses.

Sectors that were detractors were the most cyclical like Auto, Retailers, and Airlines. Also, Financials underperformed Industrials. We took advantage of credit market sell-off to increase those sectors that were mostly impacted, such as Financials. Another theme of 2022 was decompression between IG and HY spreads, a reason we took the Tactical sleeve of the Portfolio to its upper limit of 20%, allowing the Portfolio to increase its exposure to high yield bonds, subordinated financials, and callable corporate hybrids. We were comfortable adding credit risk as fundamentals are still very sound and all-in yields are very attractive.

Floating rate securities, Asset Backed Securities ("ABS"), and Inflation-linked bonds were the outperformers in 2022 as they benefitted respectively from the absence of duration and from a coupon indexed to increasing inflation. Towards year end we decreased both ABS and Inflation-linked notes to add duration risk to the Portfolio as we started to believe that we were getting closer to the terminal rates in Europe and to a peak inflation. To add convexity, we added fixed coupon IG credit bonds to the portfolio.

Going into the new year, we anticipate the euro rates and credit spreads will stabilise following the material widening of 2022. As we believe that inflation has peaked or it is about to do so, the future for European bonds should be rosier than last year. The current level of yields on European bonds has not been seen for years, as prices reflect material hikes from central banks and cannot be ignored.

## Uncorrelated Strategies – Investment Manager's Report

For the 12 months ended 31 December 2022 (the "reporting period"), the total return for the USD I Accumulating Class was 8.33%. The Portfolio's benchmark, ICE BofA US Dollar 3-Month Deposit Offered Rate Constant Maturity Index, (the "Index") returned 1.21% over the same period. The Index is a cash index and Portfolio performance is not designed to track or to replicate that of the Index. (Performance for all share classes is provided in Appendix II. Performance data quoted represent past performance and do not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any).

The Portfolio delivered strong performance over the first three quarters of the reporting period, before a more challenging return in the final quarter of the reporting period. A strong first quarter return for the Portfolio of 2.99% was followed by continued strong performance in the second quarter, with a return for the Portfolio of 5.45%, following a return of 3.25% during the third quarter, and finishing with negative performance in the fourth quarter of -3.39%.

The Portfolio allocated to seven investment strategies over the period. Four of the strategies contributed positively to return (in order of magnitude): Short Term Trading, Trend Following, Global Macro, and Volatility Relative Value. The negatively contributing strategies over the year were Equity Market Neutral, Statistical Arbitrage, and Insurance-Linked Securities.

The Portfolio traded currencies, equities, sovereign fixed income/interest rates, and credit securities throughout the year. By asset class, there were positive contributions to Portfolio performance from sovereign fixed income/interest rates and currencies. Trading in equities and credit were detractors from performance over the year.

The Portfolio made no sub-adviser additions or redemptions over the year. At the end of the reporting period, the Portfolio was allocated to ten external sub-advisers across six strategy allocations, with an additional internal sub-adviser allocation to Insurance-Linked Securities.

Portfolio risk remains highly diversified across several important considerations, including by strategy type, the balance between discretionary and systematic approaches, the types of data inputs used, the time horizon of positioning, and the underlying asset classes and contracts traded. Importantly, the Portfolio continues to specifically target a return profile that is uncorrelated to traditional equity and bond markets, and to provide protection in adverse periods for broad markets.

Looking forward, we cannot predict a medium-term fundamental macro outlook with confidence, but can make a few observations with regards to the environment and the portfolio strategies. Certainly, the fourth quarter of 2022 was tough for equity stock picking as significant de-leveraging took place across the hedge fund community; the P&L has now calmed somewhat and levels of hedge fund gross exposure are lower, with factor exposures more balanced. This means, as we head into the first quarter of 2023, we may find ourselves at a point where there is arguably less technical adversity, more cash on hand and the potential to take advantage of some of the dislocations which occurred in the fourth quarter of 2022. Equity Market Neutral was a disappointing strategy in 2022, but it has at times been the case that an under-performer in one calendar year is amongst the best in the subsequent year. The volatility environment remains high in rates and currencies as well as in single stocks, though equity index volatility has continued to be muted. As investors continue to chop and change in response to any key economic data release, this should support volatility generally and favour approaches with a convex nature, such as those we aim to include in the portfolio. We believe such strategies may also provide valuable protection in the event that unexpected tails emerge, a particularly relevant comment for an environment of such significant structural shift and related uncertainty as we find ourselves in today. Some of the same can also be said of dynamic strategies such as Short Term Trading. We are certainly seeing a continued wide range of movement in currencies, rates and bonds in particular and as we remain focused on our strategies, we believe continued breakouts and short-term momentum swings have the potential to drive returns.

## Uncorrelated Trading – Investment Manager's Report

From its inception on 22 June 2022 to the reporting period ended 31 December 2022, the total return for the USD X Accumulating Class was 0.00%. The Portfolio's benchmark, the ICE BofA 1-Month Deposit Offered Rate Constant Maturity Index (the "Index")\* returned 1.43% over the same period. (Performance for all share classes is provided in Appendix II. Performance data quoted represent past performance and do not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any).

The Portfolio allocated to four investment strategies over the period. Two of the strategies contributed positively to return, with the primary driver of returns the Short-Term Trading allocation, with a smaller additional contribution from the Volatility Relative Value allocation. The main driver of negative performance by strategy was the allocation to Equity Market Neutral, with the Statistical Arbitrage allocation a small additional detractor.

The Portfolio traded currencies, equities, sovereign fixed income/interest rates, and credit securities throughout the reporting period. By asset class, there were positive contributions to Portfolio performance from sovereign fixed income/interest rates and credit. Trading in equities and currencies were detractors from performance over the reporting period.

The Portfolio made no sub-adviser additions or redemptions over the reporting period, following the inception of the Portfolio in June. As of year-end, the Portfolio was allocated to six external sub-advisers across four strategy allocations.

Portfolio risk remained highly diversified across several important considerations, including by strategy type, the balance between discretionary and systematic approaches, the types of data inputs used, the time horizon of positioning, and the underlying asset classes and contracts traded. Importantly, the Portfolio continued to specifically target a return profile that was uncorrelated to traditional equity and bond markets, and to provide protection in adverse periods for broad markets.

Looking forward, we cannot predict a medium-term fundamental macro outlook with confidence, but we can make a few observations as regards the environment and the portfolio strategies. Certainly, the fourth quarter of 2022 was tough for equity stock picking as significant de-leveraging took place across the hedge fund community; the P&L has somewhat calmed, and levels of hedge fund gross exposure are lower, with factor exposures more balanced. This means that we find ourselves at a point where there is arguably less technical adversity, more cash on hand and the potential to take advantage of some of the dislocations which occurred in the fourth quarter of 2022 as we head into the first quarter 2023 earnings season. Equity Market Neutral was our worst performing strategy in 2022 and we are clearly disappointed by this, but it has often been the case that the worst performer in one calendar year is amongst the best in the subsequent year. The volatility environment remains high in rates and currencies as well as in single stocks, though equity index volatility has continued to be muted. As investors continue to chop and change in response to any key economic data release, we believe this should generally support volatility and favour approaches with a convex nature, such as those we aim to include in the portfolio. Such strategies can also provide valuable protection in the event that unexpected tails emerge – a particularly relevant comment for an environment of such significant structural shift and related uncertainty as we find ourselves in today. Some of the same can also be said of dynamic strategies such as Short-Term Trading. We are certainly seeing a continued wide range of movement in currencies, rates and bonds in particular and while our strategies won't always get these right, if we can be more right than wrong as we were in 2022, then continued breakouts and short term momentum swings have the potential to drive returns.

\* The benchmark is a cash index and Portfolio performance is not designed to track or to replicate that of the benchmark.

## US Equity – Investment Manager's Report

For the 12 months ended 31 December 2022, the total return of the USD I Accumulating Class was -26.01%. Over the same period, the benchmark index, the S&P 500 Index (Total Return, Net of Tax, USD) (the "Index"), returned -18.51%. (Performance for all share classes is provided in Appendix II. Performance data quoted represent past performance and do not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any.)

The overall equity market, as witnessed by the Index, generated weak results during the reporting period. Whereas the US Federal Reserve (the "Fed") initially characterised rising inflation as being "transitory," this was not the case. Robust consumer spending, supply chain bottlenecks, repercussions from the war in Ukraine, and other factors combined to push US inflation to a 40-year high. Against this backdrop, the Fed began an aggressive rate hike campaign in March 2022, which is expected to continue until inflation is under control, even if it leads to a recession. This, coupled with concerns over moderating corporate profits, led to periods of elevated risk aversion.

We categorise the Portfolio's investments on the long side into three buckets: Capital Growth, Total Return and Opportunistic. Capital Growth investments demonstrate attractive industry fundamentals, strong competitive positions, growing revenues, and attractive re-investment opportunities. Total Return investments demonstrate sustainable and/or growing streams of income that are underpinned by asset value and which can result in growing cash returns to shareholders (e.g., increased dividends, share repurchases, return of capital). Opportunistic investments are those with identifiable catalysts. This bucket may include companies with management changes, company reorganisations, merger and acquisition activity, "hidden assets," or other market dislocations that have the potential to unlock intrinsic value.

The Portfolio underperformed the Index during the reporting period. Both stock selection and sector allocation detracted from relative results. From a stock selection perspective, holdings in the Consumer Discretionary sector were the largest contributor to relative performance. Conversely, stock selection in the Financials and Industrial sectors detracted the most from returns. In terms of sector allocation, underweights versus the Index to the Energy sector and overweight to Information Technology detracted. In contrast, the Portfolio's overweight to cash was the largest contributor to performance.

As we enter 2023, we recognise the economy is slowing. Yet, the primary debate is how much the economy will slow and how quickly inflation will reach more manageable levels. There are two competing views of where we go from here. At one end, we have inflation peaking sooner rather than later, allowing the Fed to pivot, thus leading to a soft landing. On the other hand, we have a relentless Fed taming inflation very aggressively, leading to a more prolonged economic downturn, a weakening consumer, and earnings revisions across many companies. For now, the market seems to be convinced the Fed will make a mistake and tighten too aggressively. Yet, at the same time, indicators that inflation is past peak are starting to appear and S&P 500 earnings estimates for 2023 have been marching lower. With slowing inflation and a weakening consumer, companies face potential top-line pressure, but at the same time margins stand to benefit as costs and inventory balances continue to normalise. Thus, the critical question is the severity of any earnings downturn. In a typical downturn, S&P 500 earnings contract about 25% from peak to trough. Forecasting, budgeting, and allocating scarce resources have never been more nuanced, especially given the backdrop of the unprecedented and unexpected surge in demand during 2020 and 2021. In our view, the modeling challenge going forward is as significant for the Fed as it is for the local restaurant.

Nevertheless, we are very mindful of the complex world in which we live and invest. Given the massive amounts of stimulus around the globe, there is a risk that the underlying assumption around very low inflation may be misguided since at some point, unchecked fiscal spending has consequences. We highlight these risks because the current environment, as always, necessitates a flexible approach in the complex, global world in which we operate. Moreover, we strongly believe the greatest risks to the global economy are still those that are unknown today, be they financial or geopolitical in nature. As always, we must be ready and able to adapt when the facts change.

## US Equity Index PutWrite – Investment Manager's Report

For the twelve months ended 31 December 2022 (the "reporting period"), the total return for the USD I Accumulating Class was -10.63%. Over the same period, a blended benchmark, comprising of 50% Cboe S&P 500 One-Week PutWrite Index and 50% Cboe S&P 500 PutWrite Index (collectively, the "Index"), returned -10.94%. (Performance for all share classes is provided in Appendix II. Performance data quoted represent past performance and do not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any).

On 19 August 2022, the Portfolio began comparing its performance to the Index rather than the 42.5% Cboe S&P 500 One-Week PutWrite Index, 42.5% Cboe S&P 500 PutWrite Index, 7.5% Cboe Russell 2000 One-Week PutWrite Index, 7.5% Cboe Russell 2000 PutWrite Index because the Index has characteristics that are more representative of the Portfolio's investment strategy than its previous index. From the close of 19 August 2022 (the effective date of the change) through the reporting period, the USD I Accumulating Class returned -4.26%, outperforming the Index, which returned -6.16%. For the entire reporting period, the USD I Accumulating Class returned -10.63%, outperforming its previous index, which returned -11.25% for the reporting period.

Despite another 125 bps of tightening from the US Federal Reserve Board over the fourth quarter, financial markets tried to salvage 2022 with broad gains. However, despite the holiday rebounds the S&P 500 Index ended 2022 squarely in negative double-digits with a return of -18.11%. To paint the year with a single statistic, 2022 had the most +/-8% monthly returns than any year since 1939. Equity index putwrite indexes performed as designed and finished the year well ahead of their underlying equity index exposures. Specifically, the Cboe S&P 500 PutWrite Index ("PUT") declined a more modest -7.66% having benefited from a few 'lucky' monthly option rolls. Fixed income markets suffered a similar fate as equity markets for the year with the Bloomberg US Aggregate Index and the Bloomberg US Corporate High Yield Index realising losses of -13.01% and -11.19%, respectively. Short-term US Treasury index returns weathered the inflation storm with the ICE BofA U.S. 3-Month T-Bill Index ("ICE 3M USB") posting an attractive 1.46% for the year with 84 bps accruing in the fourth quarter. The slightly longer duration ICE BofA 1-3 Year US Treasury Index ("ICE 1-3Y UST") rose 73 bps in the fourth quarter but remained in negative territory for the year at -3.65%. This 2022 performance differential was the most notable headwind for the Portfolio's relative performance as passive option strategy indexes generally hold 1- to 3-month US T-Bills as collateral.

In general, we feel the Portfolio performed in line with anticipations for the reporting period. Yet, unprecedented interest rate increases in 2022 proved to create a modest relative performance challenge versus option strategy indexes. We reduced the duration of the Portfolio's collateral portfolio to approximately 1 year by the end of 2021, but any duration exposure was a detractor in 2022. For the reporting period, the ICE 1-3Y UST returned -3.65% marking only the second negative calendar year since 1978, with 2021 being the first with a modest -0.55% loss. In sharp contrast, the ICE 3M USB positive 1.46% return resulted in a material relative underperformance for ICE 1-3Y UST, a -511 bps differential. Importantly, the 2022 performance dispersion between short-dated US Treasury securities accounts for most of the Portfolio's underperformance versus the PUT Index which holds US T-Bills as collateral. The good news is that collateral portfolio losses suffered in 2022 are largely mark-to-market in nature and discounted position prices should accrue back towards par at maturity. On the year, the Portfolio's S&P 500 putwrite strategy and the collateral portfolio detracted from overall portfolio performance. Year-to-date, the Fund fell -10.63% compared to the Index return of -10.94% as it avoided much of the S&P 500's loss of -18.11%. Meanwhile, weekly putwrite, as measured by the Cboe S&P 500 One-Week PutWrite ("WPUT") fell a material -14.25% and the Cboe S&P 500 BuyWrite Index ("BXM") tumbled -11.37%. Over the same period the collateral portfolio modestly declined and finished behind the ICE BofA US 0-3-Month US Treasury Index return of 1.53%. Year-to-date there were no positive contributors to portfolio performance.

With the annual cycle of financial and economic prognostication upon us, we believe the next decade looks far more challenging than the last as investors face a combination of risks not seen in our careers, if ever. Specifically, investors face a 'dirty dozen': higher interest rates, aging demographics, polarised politics, uncertain inflation, pandemic policies, ESG regulation (social taxation), energy/commodity insecurity, decentralised finance ("DeFi"), climate disasters, social media (conspiracies), decreasing financial liquidity, and armed conflicts (war has many modern names). Each of these factors will potentially impact global economic outcomes in the coming decade but it's impossible to handicap what combinations will emerge as the key economic drivers/influences. Regardless, we believe their confluence may lead to an unprecedented equity market volatility landscape characterised by less cyclical implied volatility levels that could remain 'higher for longer'. We believe the Cboe S&P 500 Volatility Index ("VIX") may continue to price higher equity market risk levels and resist returning to below long-term average levels. With increased levels of implied volatility over the course of the year, implied volatility premiums were positive in three out of four quarters and averaged 1.42 for the full reporting period. Lastly, we feel VIX futures markets, in 2023, may experience persistent elevated levels of equity implied volatility.

## US Large Cap Value – Investment Manager's Report

For the 12 months ended 31 December 2022, the total return of the USD I Accumulating Class was -1.06%. Over the same period, the Russell 1000 Value Index (Total Return, Net of Tax, USD) (the "Index"), returned -7.54%. (Performance for all share classes is provided in Appendix II. Performance data quoted represent past performance, and do not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any).

The US stock market fell sharply during the reporting period, posting its worst return since 2008. This was driven by a number of factors, including elevated inflation, which reached a 40-year high in May. This triggered a sharp reversal in the US Federal Reserve Board (the "Fed") monetary policy, which included seven rate hikes in 2022 for a total of 4.25%, the most since 1980. Investor sentiment was also negatively impacted by the repercussions from the war in Ukraine, supply chain issues, and the potential for the Fed's action to push the economy into a recession. All told, the S&P 500 Index returned -18.11% during the reporting period. While large-cap value stocks could not escape the market's sharp decline, they held up relatively better, returning -7.54% during the reporting period.

The Portfolio outperformed the Index during the reporting period. Both sector allocation decisions and stock selection contributed to the Portfolio's relative performance. From a sector allocation perspective, underweights to Information Technology and Communication Services, along with overweight to Energy, were the most beneficial for performance. In contrast there was a small negative impact from an underweight to Consumer Discretionary and an overweight to Utilities. In terms of stock selection, holdings in the Materials, Industrials and Health Care sectors were the most beneficial for the Portfolio's relative performance. In contrast, stock selection in the Financials, Consumer Staples and Consumer Discretionary sectors were the largest headwinds for returns.

Looking ahead, we anticipate the market to remain volatile given the many uncertainties heading into 2023. One of those uncertainties is what the lag effect of the monetary tightening that took place over the course of 2022 will be in 2023. The Fed's seven rate hikes in 2022 was the fastest pace of tightening many investors have ever experienced and the rate path is still unknown and will play out over the course of this year. Another uncertainty will be China's reopening from Covid lockdowns and what their economy will look like as activity picks up and they have their own stimulus being pumped into the economy. All this is to say that market leadership transitions are not likely to occur in a straight line. We have been actively evaluating the implications of a weaker economy and how it may impact the earnings potential for some of the more cyclically exposed companies in the Portfolio. We also continue to closely monitor valuations and opportunities in the marketplace. In our view, we could continue to experience elevated volatility in the coming months. Against this backdrop, we believe maintaining appropriate asset allocations will be of utmost importance.

## US Long Short Equity – Investment Manager's Report

For the 12 months ended 31 December 2022, the total return of the USD I Accumulating Class was -7.67%. Over the same period, the two benchmark indices, the S&P 500 Index (Total Return, Net of Tax, USD) and the HFRX Equity Hedge Index (Total Return, USD), returned -18.51% and -3.18%, respectively. (Performance for all share classes is provided in Appendix II. Performance data quoted represent past performance and do not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any.)

The overall equity market, as witnessed by the S&P 500 Index total return, generated weak results during the reporting period. Whereas the US Federal Reserve (the "Fed") initially characterised rising inflation as being "transitory," this was not the case. Robust consumer spending, supply chain bottlenecks, repercussions from the war in Ukraine, and other factors combined to push US inflation to a 40-year high. Against this backdrop, the Fed began an aggressive rate hike campaign in March 2022, which is expected to continue until inflation is under control, even if it leads to a recession. This, coupled with concerns over moderating corporate profits, led to periods of elevated risk aversion.

We categorise the Portfolio's investments on the long side into three buckets: Capital Growth, Total Return and Opportunistic. Capital Growth investments demonstrate attractive industry fundamentals, strong competitive positions, growing revenues, and attractive re-investment opportunities. Total Return investments demonstrate sustainable and/or growing streams of income that are underpinned by asset value and which can result in growing cash returns to shareholders (e.g., increased dividends, share repurchases, return of capital). The Total Return bucket also includes fixed income holdings, which currently consists mainly of high yield securities. Opportunistic investments are those with identifiable catalysts. This bucket may include companies with management changes, company reorganisations, merger and acquisition activity, "hidden assets," or other market dislocations that have the potential to unlock intrinsic value. Short positions may be used to increase returns and/or reduce risks with this mix being partly determined by the environment in which the Portfolio is operating: fundamental shorts (company-specific securities) which may be characterised by catalyst-driven ideas, potential earnings misses, changes in the competitive landscape, and/or thematic shorts, as a few examples. "Market" shorts are used in an effort to manage exposure and reduce risks of the broader market.

For the reporting period, equity longs lagged versus the Index, primarily driven by security selection in the Industrials, Financials, and Energy sectors. On the long side, the Capital Growth, Total Return (including fixed income) and Opportunistic buckets were negative. In contrast, individual security shorts and market shorts to hedge the portfolio were additive to performance, partially the overall decline in the market during the reporting period.

As we enter 2023, we recognise the economy is slowing. Yet, the primary debate is how much the economy will slow and how quickly inflation will reach more manageable levels. There are two competing views of where we go from here. At one end, we have inflation peaking sooner rather than later, allowing the Fed to pivot, thus leading to a soft landing. On the other hand, we have a relentless Fed taming inflation very aggressively, leading to a more prolonged economic downturn, a weakening consumer, and earnings revisions across many companies. For now, the market seems to be convinced the Fed will make a mistake and tighten too aggressively. Yet, at the same time, indicators that inflation is past peak are starting to appear and S&P 500 earnings estimates for 2023 have been marching lower. With slowing inflation and a weakening consumer, companies face potential top-line pressure, but at the same time margins stand to benefit as costs and inventory balances continue to normalise. Thus, the critical question is the severity of any earnings downturn. In a typical downturn, S&P 500 earnings contract about 25% from peak to trough. Forecasting, budgeting, and allocating scarce resources have never been more nuanced, especially given the backdrop of the unprecedented and unexpected surge in demand during 2020 and 2021. In our view, the modeling challenge going forward is as significant for the Fed as it is for the local restaurant. As always, we continue our efforts to best understand company and portfolio specific factors as we believe this environment is flush with a confluence of fiscal policy considerations, monetary policy stimulus, public health concerns, geopolitical uncertainty, commodity price volatility, inflation dynamics, and economic sequencing question marks. As market dynamics change, this can cause company market values to dislocate from their long-term potential values, creating potential opportunities both long and short.

Nevertheless, we are very mindful of the complex world in which we live and invest. We highlight these risks because the current environment, as always, necessitates a flexible approach in the complex, global world in which we operate. Moreover, we strongly believe the greatest risks to the global economy are still those that are unknown today, be they financial or geopolitical in nature. As always, we must be ready and able to adapt when the facts change.

## US Multi Cap Opportunities – Investment Manager's Report

For the 12 months ended 31 December 2022 (the "reporting period"), the total return for the USD1 I Accumulating Class was -17.11%. Over the same period, the benchmark index, the S&P 500 (Total Return, Net of Tax, USD) (the "Index"), returned -18.51%. (Performance for all share classes is provided in Appendix II. Performance data quoted represent past performance and do not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any).

For the reporting period, the Portfolio outperformed the Index. The Portfolio outperformed the Index in both the 3rd and 4th quarters of 2022. In the second half of the year, the Portfolio returned 7.28%, outperforming the Index by 524 basis points. Stock selection drove outperformance for the year. Strong stock selection within the Communication Services, Consumer Discretionary, and Information Technology sectors benefitted relative performance. Selection within Materials detracted from relative performance. The Portfolio's zero exposure to the Energy sector was the primary detractor from relative performance during the reporting period. An overweight to Consumer Discretionary and an underweight position to Health Care also detracted. The Portfolio benefitted from an underweight position to Information Technology, overweight positions to Consumer Staples, Financials, Industrials, and Materials, and by having zero exposure to Real Estate. The Portfolio finished the year with an overweight in Consumer Discretionary, Financials, and Materials, an underweight in Health Care and Information Technology, and had no exposure to Energy or Real Estate.

Portfolio construction is an important component of our investment process, and we continue to find compelling opportunities across our three investment categories: Special Situation, Opportunistic, and Classic investments. This balanced approach is designed to mitigate risk, while generating alpha through stock selection in various market environments. We continue to find compelling opportunities in each category.

The core of our investment process is an unwavering focus on a company's generation of free cash flow and its use by management. We believe free cash flow is a cleaner measure of value creation than income statement earnings. Our analysis considers the stability and sources of free cash flow generation, as well as the potential uses of this capital. This investment focus enables us to look across sectors, market capitalisations, and risk profiles to find opportunities, particularly during periods of increased market volatility.

We continue to apply disciplined fundamental research to identify high quality business models with attractive free cash flow characteristics trading at compelling valuations. Our focus on free cash flow may provide an advantage in an environment characterised by higher interest rates. We believe higher interest rates and related market adjustments are resulting in differentiated stock price performance, which is favorable for our active approach. Free cash flow oriented companies have a potential advantage as they may be less reliant on the capital markets and may have the ability to self-fund growth initiatives. Our disciplined free cash flow focused approach, understanding of capital structures, valuation discipline, and select holdings within the Financials sector, provide a potential benefit in the current environment.

We believe our investment strategy has the ability to create long-term value for clients. There is the potential for the reduction of macro uncertainty in 2023, which may benefit our Strategy. This includes supply chain improvement, decelerating rate of inflation, stabilising commodity prices, the possible resolution of geopolitical tensions, clarity on spending trends as companies report earnings, and continued visibility from central banks globally on the pace of interest rate increases. Equity valuations have become more favorable for select companies over the past year. In an evolving market environment, we believe our bottom-up approach and ability to understand the idiosyncratic opportunities being presented by individual companies is an advantage. Select businesses are able to differentiate themselves from peers with company-specific solutions in response to macroeconomic and industry-related events. We believe the Portfolio is well-positioned to benefit as investors increase their focus on company fundamentals.

As we evaluate both potential new positions and current portfolio holdings, we will continue to do so with a long-term investment perspective in mind. As always, our focus is to grow our clients' assets through the disciplined application of our investment philosophy and process.

## US Real Estate Securities – Investment Manager's Report

For the 12 months ended 31 December 2022, the total return of the USD I Accumulating Class was -28.01%. Over the same period, the Portfolio's benchmark index, the FTSE Nareit All Equity REITs Index (Total Return, Net of Tax, USD) (the "Index"), returned -25.71%. (Performance for all share classes is provided in Appendix II. Performance data quoted represent past performance, and do not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any.)

The US stock market, as measured by the S&P 500 Index, fell sharply during the reporting period, posting its worst return since 2008. This was driven by a number of factors, including elevated inflation, which reached a 40-year high in May. This triggered a sharp reversal in US Federal Reserve (Fed) monetary policy, which included seven rate hikes in 2022 for a total increase of 4.25% - 4.50%, the most since 1980. Investor sentiment was also negatively impacted by the repercussions from war in Ukraine, supply chain issues, and the potential for the Fed's actions to push the economy into a recession. All told, the S&P 500 Index returned -18.11% for the 12 months ended 31 December 2022. In contrast, the FTSE Nareit All Equity REITs Index (Total Return, Gross of Fees, Net of Tax, USD), returned -24.95%.

The Portfolio underperformed the Index during the reporting period. Both stock selection and sector allocation detracted from the Portfolio's relative returns. From a stock selection perspective, the Portfolio's holdings in the Health Care, Diversified and Apartment sectors detracted the most from results. In contrast, holdings in the Specialty, Office and Self Storage sectors contributed the most to performance. In terms of sector positioning, underweights to Specialty and Free Standing were the largest detractors from returns. Conversely, an underweight to Office and a small cash position contributed the most to performance.

We are cautious as we enter 2023 with the macro backdrop being weighed down by inflation, a hawkish Fed that is determined to get inflation under control, slower economic growth, and a lack of liquidity in both transaction markets and private investment vehicles. The global economy appears to be weakening, highlighted by slowing housing and low business confidence. However, we believe the reopening of China's economy, lower energy and commodity prices, and a slowing labor market could provide some support for the view that inflation levels are peaking. Elevated cost of capital for REITs, paired with the potential for slowing fundamentals from a robust 2021/2022 leasing period, will likely stall business decisions and weigh on overall demand and earnings growth for REITs. In our opinion, property sector and stock selection will be important alpha generators, more so than in the past. We believe a majority of REITs are prepared for a meaningful disruption to business demand, with strong balance sheets, relatively low new construction activity and diverse demand drivers that lean more defensive. The rapid reversal of fundraising by Non-Traded REITs and waves of redemption requests may provide a window of opportunity for REITs to selectively acquire assets at relatively attractive valuations.

## US Small Cap – Investment Manager's Report

For the 12 months ended 31 December 2022, the total return of the USD I Accumulating Class was -19.25%. Over the same period, the Russell 2000 Index (Total Return, Net of Tax, USD) (the "Index"), returned -20.76%. (Performance for all share classes is provided in Appendix II. Performance data quoted represent past performance and do not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any).

The US stock market fell sharply during the reporting period, posting its worst return since 2008. This was driven by a number of factors, including elevated inflation, which reached a 40-year high in May. This triggered a sharp reversal in the US Federal Reserve Board (the "Fed") monetary policy, which included seven rate hikes in 2022 for a total of 4.25%, the most since 1980. Investor sentiment was also negatively impacted by the repercussions from the war in Ukraine, supply chain issues, and the potential for the Fed's action to push the economy into a recession. All told, the Index returned -20.76%, while the S&P 500 Index returned -18.11% for the reporting period.

The Portfolio posted a negative absolute return, but outperformed the benchmark during the reporting period. This was driven by strong stock selection, which was partially offset by negative sector allocation. In terms of stock selection, the Fund's strongest relative results were in the Information Technology ("IT") and Financials sectors. Within IT, our Software names were the most additive for returns. Across the Technology sector, our holdings are characterised by having high barriers to entry, strong free cash flow generation and attractive growth opportunities led by company-specific innovation and the mission-critical nature of their products. Conversely, many of the businesses that populate the benchmark are more speculative in nature and reliant on capital markets for growth. We have seen these sorts of stocks under meaningful pressure this year as capital markets have become more discerning of businesses that have not demonstrated an ability to become profitable. Within Financials, our Insurance and Bank positions were the most beneficial. Conversely, stock selection in the Consumer Discretionary and Consumer Staples sectors were the largest drags on relative results. Within Consumer Discretionary, weakness in a few large "big ticket" positions were pressured by fears of slowing end market demand. Within Consumer Staples, our Food and Household Product companies were not rewarded. Looking at sector allocation, our underweight to Energy and overweight to IT sector were meaningful detractors from relative results. This was partially offset by the benefit of being underweight Biotechnology companies and Real Estate Investment Trusts (REITs).

The Fed remains squarely focused on restoring price stability by increasing the Fed Funds rate, with the expectation that this will depress demand and bring inflation under control. Their goal of restoring price stability at the expense of economic growth and higher unemployment continues to lead to downward earnings revisions, lower P/E multiples and ultimately lower stock prices. In addition, the stronger US dollar, weaker retail spending, declining consumer/business confidence and the ongoing conflict in Ukraine all continue to drive heightened levels of uncertainty creating additional volatility. In total, these ingredients have led to increasing concern around the potential for recession in the US and globally. With potential macro outcomes highly uncertain, we are striving to maintain balance in the portfolio across sectors. We are confident that investing in a diversified portfolio of financially strong companies, with sustainable and highly differentiated business models, is a prudent approach for long-term investment success.

## US Small Cap Intrinsic Value – Investment Manager's Report

For the 12 months ended 31 December 2022, the total return for the USD I Accumulating Class shares was -20.64%. Over the same period the Russell 2000 Value Index (Total Return, Net of Tax, USD) returned -15.00%. (Performance for all share classes is provided in Appendix II. Performance data quoted represent past performance and does not indicate future results. Total returns shown are net of all fees and expenses and include the reinvestment of income dividends and other distributions, if any).

As we reflect on the economic and market outlook for 2023 it's clear that the challenges encountered in 2022 and those that remain are mostly all attributable to the global response to the pandemic. From disrupted supply chains to labor shortages and excessive financial stimulus, the long-term symptom of the various pandemic policy responses here and abroad has been inflation. Reducing inflation and its pernicious impact on all of us is job one for the US Federal Reserve Board (the "Fed") and how this progresses is critically important if we aspire to a pre-pandemic economy.

In our view progress has been made. However central bankers continue to talk down the improving inflationary data and remain steadfast that more needs to be done. Across the economic landscape we see encouraging trends. Commodity prices have softened, and housing markets are cooling rapidly. Demand for a host of consumer goods has fallen and labor shortages are easing. Companies will now think long and hard before putting forward additional price increases. The one area where arguably we haven't yet seen enough improvement is in the services sector. It will take some time here and the fact that our economy is almost 70% services is no doubt one reason why the Fed remains hawkish in its public commentary.

As much as we need the Fed to be successful in its quest to tame inflation it's critical that they accomplish the goal without engendering a severe economic contraction. We are a highly indebted society, and a deep recession could clearly risk a financial shock of some kind. For the moment the correction in financial asset valuations hasn't left a deep mark on the real economy.

The dramatic upwards move in interest rates in 2022 resulted in markets repricing stocks to lower P/E multiples with additional haircuts in valuation to companies whose earnings would decline in a recession or from increased interest expense. Throughout 2022 companies highlighted the difficulties they encountered running their operations. Parts shortages, increased logistics and labor costs, and spikes in commodity costs were often cited as reasons for earnings disappointments. As the year progressed and interest rates and the dollar rose, foreign exchange translations and increased borrowing costs were added to the litany of issues to navigate.

In spite of these obstacles, nearly half the portfolio's earnings performance was either better than or in line with analyst's expectations prior to the start of the year, approximately 44% of the portfolio exceeded the consensus earnings estimate and another of 5% were in-line. Not surprisingly though the other half of the portfolio, where earnings were revised down, generated all the negative return for 2022.

Looking at what worked, the conclusion was pretty clear – anything we did in Energy worked and to a much lesser degree Healthcare. Despite the selloff in the Information Technology sector, we profited from investments in software companies purchased at attractive valuations and one hardware investment – Rambus – with positive earnings and revenue revisions. But clearly the more technology you owned the greater the headwind you encountered in 2022.

Given the outsized impact negative earnings revisions had on performance in 2022 it would be worthwhile understanding the source of 2022's disappointing results and the opportunity for recovery, as well as the expectations for 2023.

The supply chain disruption was a huge challenge and accounted for more than half of the negative revisions. We witnessed this with several of our technology investments and the well-publicised chip shortage. Solving this issue can go a long way towards reducing earnings risks in 2023 and set the stage for a performance recovery. A good example would be our investment in Ciena. The company's inability to secure \$5 million of low-cost parts prevented them from shipping \$500 million of product in 2022. Earnings for 2022 were revised down by about \$1 from \$3.76 to \$2.77 and Ciena's stock price declined from \$70 to \$40. In the most recent quarter, the company announced that the component shortage is largely resolved and Ciena is able to produce and ship at a much higher rate. Analysts have raised their earnings estimates for the next fiscal year by almost \$1 per share and the shares, now trading at \$50, have recovered a third of their lost valuation.

Commodity costs and foreign exchange played a role in 40% of the underperformers. Both of these items are now trending lower and if interest rates peak, are less likely to repeat as reasons to revise earnings downward in the year ahead. Less than a 20% of the negative contributors cited weakness in sales. Business conditions as measured by revenues held up for most of the portfolio. Which begets the question of the demand outlook in 2023 – hard or soft economic landing? The consensus among economists is that the economy will likely experience a recession in 2023 or 2024, the severity of which depends on how quickly the Fed shifts gears and starts to loosen rather than staying tight. It's hard and frankly a bit pointless for us to opine on whether the Fed will find the right balance between inflation fighting and maintaining a reasonable level of economic growth and employment. Candidly, we are a bit down on the Fed but only time will tell if they play their hand correctly.

Leaving aside speculation about the Fed, given the compression in P/E multiples we believe individual stock performance should be driven mostly by how well companies execute to earnings expectations in a slowing economy. If there is such a thing as "de-risked" expectations, we would note that over 50% of our portfolio has had earnings expectations for 2023 reduced from a year ago.

## US Small Cap Intrinsic Value – Investment Manager's Report (continued)

Our activity during the year was focused more on adding to underperformers and trimming winners rather than introducing new ideas. Additionally, only two companies were acquired – Ping Identity and Mandiant (the former FireEye). Historically, between five and eight companies are acquired annually, freeing up 5% to 10% of the portfolio for re-investment. The outlook for M&A in 2023 is also uncertain. There is a lot of firepower on the sidelines but leveraged lending markets are virtually shut and caution prevails among private equity firms and strategic buyers. Smaller transactions by buyers looking for technology are likely but public acquirors need to be very mindful of excessively leveraging their balance sheets. We saw a handful of ill received transactions in 2022 where public buyers lost between 20% and 50% of their equity value after announcing transformative (i.e., large) acquisitions.

The six new investments in 2022 were in our traditional wheelhouse of technology and industrial sectors where a combination of complexity and interrupted growth led to underperformance. We invested in three software companies, WIX, Varonis and Cerence, and three industrial companies Markforged (3-D printing), Arcosa and nLight. We note that private equity firms seem to have an appetite for quality software companies. Both WIX and Varonis are debt-free companies with very strong product offerings and solid long term demand prospects. After some internal debate and additional meetings with the management of Cerence we decided, in December 2022 to exit our investment. Simply put, we suspect that the company's new business model will not show any momentum for at least another year and the explanation for the precipitous revenue decline in 2022 at their November analyst meeting was unconvincing.

We remain committed to constructive corporate engagements. During the year we signed three non-disclosure agreements which enabled us to collaborate with management of portfolio companies and propose strategies to enhance valuation. We led capital raises at Ribbon Communications and Quantum, filed a 13-D on Cogyte Software, and recently engaged the management of Unisys. If we see a path towards faster resolution of the issues facing a portfolio company, we will move aggressively.

After a string of three years of 20% plus returns it shouldn't really surprise us that we paid the piper in 2022 but still we remain rather disappointed with the outcome. More challenging and relevant for us is a clear path forward. Today's inflation is a direct outgrowth of the solutions we applied to the crises of the last 15 years. Near zero interest rates together with Central Bank and Federal Government intervention artificially depressed the cost of capital and inflated economic growth. Looking ahead, with higher interest rates and less room for stimulative government programs, future growth will have to come from innovation (productivity) and demographics. Nothing unusual but not as predictable as some investors would like.

Putting it all together we remain confident in the compelling long-term opportunities in the small cap equity market and our portfolio but uncertain that the challenges of 2022 will not prevail into 2023. We thank you for your commitment of your capital to our strategy and will endeavor to intelligently compound your investment at an attractive rate of return.
