## Appendix III

### INFORMATION ON GLOBAL EXPOSURE (UNAUDITED)

Measurement of Market Risk and Leverage using the Commitment Approach and VaR

The Portfolios will seek to limit the market risk and leverage created through the use of derivatives by using either the commitment approach or by using a sophisticated risk measurement technique known as value-at-risk ("VaR"). The 5G Connectivity, China A-Share Equity, China Equity, CLO Income, Corporate Hybrid Bond, Emerging Markets Equity, Emerging Markets Select Equity, European High Yield Bond, European Sustainable Equity, Global Diversified Income FMP – 2024, Global Equity Megatrends, Global Flexible Credit Income, Global High Yield SDG Engagement, Global High Yield Sustainable Action, Global Investment Grade Credit, Global Real Estate Securities, Global Sustainable Equity, High Yield Bond, InnovAsia 5G, Japan Equity Engagement, Next Generation Mobility, Next Generation Space Economy, Short Duration Emerging Market Debt, Short Duration High Yield SDG Engagement, Systematic Global Sustainable Value, US Equity, US Large Cap Value, US Multi Cap Opportunities, US Real Estate Securities, US Small Cap and US Small Cap Intrinsic Value use the commitment approach. The commitment approach calculates leverage by measuring the market value of the underlying exposures of derivatives relative to the relevant Portfolio's NAV but such leverage will not exceed the Portfolio's NAV at any time.

A Portfolio may use an "absolute" VaR model where the measurement of VaR is relative to the NAV of the Portfolio or the Portfolio may use a relative VaR model where the measurement of VaR is relative to a derivatives free comparable benchmark or equivalent portfolio. The model used by certain Portfolios is noted in the column "Market Risk" in the table included below. The VaR methodology used is subject to several limitations. First, VaR is based on a model of stock price returns which uses risk factors. To the extent that there are missing risk factors, mis-specified risk factors, or risk factors which are not predictive, the VaR may not be indicative of future risk. Also, the returns to various risk factors are not directly observable in the market and must be estimated using statistical techniques. To the extent that these estimates may be imprecise, the VaR may not be indicative of future risk. In addition, the covariance between the risk factors is estimated over a particular historical time period. To the extent that the future time period may be different from the historical time period, the VaR may not be indicative of future risk. For these reasons, VaR may be more useful as a relative measure of risk among Portfolios, rather than as an absolute measure of risk.

A number of calculation standards are employed for the Portfolios using the VaR model. However, these calculation standards are dealt with in more detail in the risk management process of the Portfolio and may change from time to time at the discretion of the Manager and in accordance with the requirements of the Central Bank.

The table below detail the maximum, minimum and average usage of regulatory limit calculated during the year ended 31 December 2022 for each Portfolio using VaR:

Portfolio	Market Risk	Observed VaR at 31 December 2022	Maximum usage of Regulatory Limit*	Minimum usage of Regulatory Limit*	Average usage of Regulatory Limit*
Asian Debt - Hard Currency	Relative VaR	113.8%	70.5%	50.2%	61.3%
China Bond	Absolute VaR	1.58%	17.5%	6.2%	12.5%
Commodities	Relative VaR	95.0%	59.4%	45.7%	49.5%
Emerging Market Debt - Hard Currency	Relative VaR	131.5%	76.0%	64.4%	67.3%
Emerging Market Debt - Local Currency	Relative VaR	113.1%	56.5%	49.5%	53.0%
Emerging Market Debt Blend	Relative VaR	119.2%	61.3%	52.4%	57.2%
Emerging Market Debt Sustainable Investment Grade Blend	Relative VaR	104.1%	53.6%	45.9%	50.6%
Euro Bond Absolute Return	Absolute VaR	1.84%	20.1%	4.4%	13.6%
Euro Opportunistic Bond	Relative VaR	90.2%	68.7%	41.0%	56.5%
Event Driven	Absolute VaR	5.25%	44.9%	18.9%	25.2%
Global Bond	Relative VaR	100.2%	52.1%	47.5%	50.2%
Global Flexible Credit Income	Absolute VaR	5.36%	32.1%	14.5%	25.4%
Global Opportunistic Bond	Absolute VaR	4.23%	26.5%	10.4%	19.8%
Macro Opportunities FX	Absolute VaR	1.54%	10.6%	3.6%	5.8%
Multi-Asset Income	Absolute VaR	7.0%	44.7%	12.5%	27.1%
Strategic Income	Absolute VaR	4.85%	24.3%	9.9%	17.9%

## Appendix III (Continued)

### INFORMATION ON GLOBAL EXPOSURE (UNAUDITED) (CONTINUED)

Portfolio (continued)	Market Risk	Observed VaR at 31 December 2022	Maximum usage of Regulatory Limit*	Minimum usage of Regulatory Limit*	Average usage of Regulatory Limit*
Sustainable Asia High Yield	Relative VaR	103.8%	66.0%	37.4%	48.5%
Sustainable Emerging Market Corporate Debt	Relative VaR	107.2%	64.1%	49.6%	57.6%
Sustainable Emerging Market Debt - Hard Currency	Relative VaR	119.4%	70.5%	57.5%	63.0%
Ultra Short Term Euro Bond	Absolute VaR	1.8%	24.5%	2.9%	11.2%
Uncorrelated Strategies	Absolute VaR	1.71%	34.3%	4.6%	8.4%
Uncorrelated Trading	Absolute VaR	2.87%	61.3%	4.1%	19.4%
US Equity Index PutWrite	Absolute VaR	9.76%	96.0%	18.1%	41.5%
US Long Short Equity	Absolute VaR	6.26%	48.8%	13.0%	26.5%

\*Regulatory Limit for Absolute VaR is 20% for the 1M 99% VAR. For Relative VaR it is 2\* the benchmark VaR.

Depending on market conditions, the Portfolios may employ leverage from time to time. In this context, "leverage" is calculated, in accordance with the requirements of the Central Bank, as the sum of the notionals of the derivatives used. The disclosed level of leverage is not intended to be an additional risk exposure limit for the Portfolios. Furthermore, it is not intended that the leverage level by itself be indicative of the risk profile of the Portfolios. The table below details the level of leverage employed during the year ended 31 December 2022 and is calculated as the sum of the absolute value of the notionals of the derivatives used and expressed as a percentage of the Net Asset Value:

Portfolio	31 December 2022
Asian Debt - Hard Currency	152%
China Bond	166%
Commodities	213%
Emerging Market Debt - Hard Currency	175%
Emerging Market Debt - Local Currency	323%
Emerging Market Debt Blend	254%
Emerging Market Debt Sustainable Investment Grade Blend	248%
Euro Bond Absolute Return	248%
Euro Opportunistic Bond	190%
Event Driven	127%
Global Bond	282%
Global Flexible Credit Income	216%
Global Opportunistic Bond	522%
Macro Opportunities FX	1138%
Multi-Asset Income	395%
Strategic Income	192%
Sustainable Asia High Yield	103%
Sustainable Emerging Market Corporate Debt	114%
Sustainable Emerging Market Debt - Hard Currency	206%
Ultra Short Term Euro Bond	191%
Uncorrelated Strategies	496%
Uncorrelated Trading	386%
US Equity Index PutWrite	154%
US Long Short Equity	154%

## Appendix IV

### SECURITIES FINANCING TRANSACTION REGULATION (UNAUDITED)

Securities Financing Transaction Regulation (“SFTR”) introduces reporting requirements for securities financing transactions (“SFTs”) and total return swaps.

A Securities Financing Transaction (SFT) is defined as per Article 3(11) of the SFTR as:

- a repurchase/reverse repurchase agreement
- securities or commodities lending and securities or commodities borrowing
- a buy-sell back transaction or sell-buy back transaction, or
- a margin lending transaction

As at 31 December 2022 the following Portfolios held total return swaps and reverse repurchase agreements as types of instruments under the scope of the SFTR:

CLO Income  
 Commodities  
 Corporate Hybrid Bond  
 Event Driven  
 Global Flexible Credit Income  
 Global High Yield SDG Engagement  
 High Yield Bond  
 Short Duration Emerging Market Debt  
 Strategic Income  
 Uncorrelated Strategies  
 Uncorrelated Trading  
 US Long Short Equity

#### CLO Income

#### Global Data:

The amount of assets across total return swaps as at 31 December 2022 was as follows:

Type of Assets	Amount US\$	Proportion of NAV (%)
Total Return Swaps – Liabilities	334,323	0.24

#### Data on Reuse of Collateral:

Cash collateral is received into the custody account for the Portfolio and therefore is not tracked specifically to determine if it is re-used. Therefore any cash collateral re-used cannot be reasonably verified.

## Appendix IV (Continued)

### SECURITIES FINANCING TRANSACTION REGULATION (UNAUDITED) (CONTINUED)

#### CLO Income (continued)

#### Concentration Data:

The Portfolio did not receive any securities as collateral for the total return swaps as at 31 December 2022.

The counterparties across all total return swaps as at 31 December 2022 were as follows:

Counterparty	Amount US\$
Goldman Sachs International	334,323

#### Safekeeping of Collateral Received:

As at 31 December 2022 there was no collateral received or held with the Depository.

#### Aggregate Transaction Data:

The aggregate transaction data for collateral positions (including cash) pledged/(received) across all total return swaps as at 31 December 2022 was as follows:

	Type of collateral	Amount US\$*	Quality**	Maturity tenor (collateral)***	Currency of collateral	Country of counterparty establishment****	Settlement and clearing
<b>Total Return Swap</b>							
Goldman Sachs International	Cash Collateral	320,000	N/A	N/A	USD	United Kingdom	OTC

\* Cash collaterals may cover a combination of swaps instruments, as such a portion of the collaterals relates to swap agreements not in scope of the SFTR.

\*\* There is no credit rating for cash assets or liabilities. Cash denominated in USD is deemed to be at highest quality due to its high liquid nature.

\*\*\* Split to be provided by 7 maturity buckets (< 1 day, 1 day to 1 week, 1 week to 1 month, 1 month to 3 months, 3 months to 1 year, > 1 year, open maturity). Cash collateral has no maturity tenor.

\*\*\*\* Country corresponds with the address of our actual counterparty.

The maturity tenor of total return swaps positions as at 31 December 2022 was 1 month to 3 months.

## Appendix IV (Continued)

### SECURITIES FINANCING TRANSACTION REGULATION (UNAUDITED) (CONTINUED)

#### CLO Income (continued)

#### Safekeeping of Collateral Granted:

The proportion of collateral held in segregated, pooled or other accounts as at 31 December 2022 was as follows:

	%
Segregated Accounts	0%
Pooled Accounts	0%
Other	100%
	<b>100%</b>

#### Return/Costs:

For total return swaps transactions costs, if applicable, are not separately identifiable. For these investments, transaction costs are included in the purchase and sales price and are part of the gross investment performance of each Portfolio. Returns are identified as the realised gains/losses and change in unrealised gains/losses on the swap contracts during the reporting period.

#### Commodities

#### Global Data:

The amount of assets across total return swaps as at 31 December 2022 was as follows:

Type of Asset	Amount US\$	Proportion of NAV (%)
Total Return Swaps – Assets	0	0.00

#### Data on Reuse of Collateral:

Cash collateral is received into the custody account for the Portfolio and therefore is not tracked specifically to determine if it is re-used. Therefore any cash collateral re-used cannot be reasonably verified.

## Appendix IV (Continued)

### SECURITIES FINANCING TRANSACTION REGULATION (UNAUDITED) (CONTINUED)

#### Commodities (continued)

##### Concentration Data:

The Portfolio did not receive any securities as collateral for the total return swaps as at 31 December 2022.

The counterparties across all total return swaps as at 31 December 2022 were as follows:

Counterparty	Amount US\$
Goldman Sachs International	0

##### Safekeeping of Collateral Received:

As at 31 December 2022 all collateral received is held at the Depository, Brown Brothers Harriman Trustee Services (Ireland) Limited.

##### Aggregate Transaction Data:

The aggregate transaction data for collateral positions (including cash) pledged/(received) across all total return swaps as at 31 December 2022 was as follows:

	Type of collateral	Amount US\$*	Quality**	Maturity tenor (collateral)***	Currency of collateral	Country of counterparty establishment****	Settlement and clearing
<b>Total Return Swap</b>							
Goldman Sachs International	Cash Collateral	(5,450,000)	N/A	N/A	USD	United Kingdom	OTC

\* Cash collaterals may cover a combination of swaps instruments, as such a portion of the collaterals relates to swap agreements not in scope of the SFTR.

\*\* There is no credit rating for cash assets or liabilities. Cash denominated in USD is deemed to be at highest quality due to its high liquid nature.

\*\*\* Split to be provided by 7 maturity buckets (< 1 day, 1 day to 1 week, 1 week to 1 month, 1 month to 3 months, 3 months to 1 year, > 1 year, open maturity). Cash collateral has no maturity tenor.

\*\*\*\* Country corresponds with the address of our actual counterparty.

The maturity tenor of total return swaps positions as at 31 December 2022 was 1 month to 3 months.

##### Safekeeping of Collateral Granted:

There was no collateral held in segregated, pooled or other accounts as at 31 December 2022.

## Appendix IV (Continued)

### SECURITIES FINANCING TRANSACTION REGULATION (UNAUDITED) (CONTINUED)

#### Commodities (continued)

##### Return/Costs:

For total return swaps transactions costs, if applicable, are not separately identifiable. For these investments, transaction costs are included in the purchase and sales price and are part of the gross investment performance of each Portfolio. Returns are identified as the realised gains/losses and change in unrealised gains/losses on the swap contracts during the reporting period.

#### Corporate Hybrid Bond

##### Global Data:

The amount of assets across reverse repurchase agreements as at 31 December 2022 was as follows:

Type of Asset	Amount EUR	Proportion of NAV (%)
Reverse Repurchase Agreements – Liabilities	37,445,575	2.10

##### Data on Reuse of Collateral:

Cash collateral is received into the custody account for the Portfolio and therefore is not tracked specifically to determine if it is re-used. Therefore any cash collateral re-used cannot be reasonably verified.

##### Concentration Data:

The Portfolio did not receive any securities as collateral for the reverse repurchase agreements as at 31 December 2022.

The counterparties across all reverse repurchase agreements as at 31 December 2022 were as follows:

Counterparty	Amount EUR
Citigroup	37,445,575

##### Safekeeping of Collateral Received:

As at 31 December 2022 all collateral received is held at the Depository, Brown Brothers Harriman Trustee Services (Ireland) Limited.

## Appendix IV (Continued)

### SECURITIES FINANCING TRANSACTION REGULATION (UNAUDITED) (CONTINUED)

#### Corporate Hybrid Bond (continued)

#### Aggregate Transaction Data:

The aggregate transaction data for collateral positions (including cash) pledged across all reverse repurchase agreements as at 31 December 2022 was as follows:

	Type of collateral	Amount EUR*	Quality**	Maturity tenor (collateral)***	Currency of collateral	Country of counterparty establishment****	Settlement and clearing
<b>Reverse Repurchase Agreement</b>							
Citigroup	Corporate Bonds	18,017,986	A-	Open	EUR	United States	OTC
Citigroup	Corporate Bonds	13,484,182	BBB-	Open	EUR	United States	OTC
Citigroup	Corporate Bonds	14,085,000	BBB-	> 1 year	EUR	United States	OTC

\* Cash collaterals may cover a combination of swaps instruments, as such a portion of the collaterals relates to swap agreements not in scope of the SFTR.

\*\* There is no credit rating for cash assets or liabilities. Cash denominated in USD is deemed to be at highest quality due to its high liquid nature.

\*\*\* Split to be provided by 7 maturity buckets (< 1 day, 1 day to 1 week, 1 week to 1 month, 1 month to 3 months, 3 months to 1 year, > 1 year, open maturity). Cash collateral has no maturity tenor.

\*\*\*\* Country corresponds with the address of our actual counterparty.

The maturity tenor of reverse repurchase agreements positions as at 31 December 2022 was open.

#### Safekeeping of Collateral Granted:

There was no collateral held in segregated, pooled or other accounts as at 31 December 2022.

#### Return/Costs:

For reverse repurchase agreements transactions costs, if applicable, are not separately identifiable. For these investments, transaction costs are included in the purchase and sales price and are part of the gross investment performance of each Portfolio. Returns are identified as the realised gains/losses and change in unrealised gains/losses on the reverse repurchase agreements during the reporting period.

##### Return/Costs:

For total return swaps transactions costs, if applicable, are not separately identifiable. For these investments, transaction costs are included in the purchase and sales price and are part of the gross investment performance of each Portfolio. Returns are identified as the realised gains/losses and change in unrealised gains/losses on the swap contracts during the reporting period.

As at 31 December 2022 none of the Portfolios was engaged into securities lending transactions.

During the year ended 31 December 2022, Corporate Hybrid Bond, Emerging Market Corporate Debt, Emerging Market Debt - Hard Currency, Emerging Market Debt Blend, Emerging Markets Equity, Emerging Markets Sustainable Equity, Euro Bond Absolute Return, European High Yield Bond, Global Bond, Global High Yield SDG Engagement, Global Opportunistic Bond, High Yield Bond, Short Duration Emerging Market Debt, Short Duration High Yield Bond, Strategic Income, Systematic Global Sustainable Value, Ultra Short Term Euro Bond, US Equity and US Long Short Equity entered into securities lending transactions but had no securities on loan as at 31 December 2022.

## Appendix V

### REMUNERATION DISCLOSURE (UNAUDITED)

The European Union Directive 2014/91/EU (known as the “UCITS V Directive”) came into effect on 18 March 2016. The Company has adopted a remuneration policy in order to meet the requirements of the UCITS V Directive and ESMA’s Guidelines on Sound Remuneration Policies under the UCITS V Directive in a way and to the extent that is appropriate to the Company’s size, internal organisation and the nature, scope and complexity of its activities.

The Company’s remuneration policy applies to staff whose professional activities have a material impact on the risk profile of the Company.

As at 31 December 2022, the Company did not have any employees and the Company’s remuneration policy applied only to the Company’s board of directors who manage and control the Company. Please refer to Note 7 for details of Directors’ remuneration.

## Appendix VI

### GLOSSARY OF INDICES (UNAUDITED)

#### **Bloomberg Commodity Index**

The index is a rolling index composed of exchange-traded futures contracts on physical commodities. The index relies primarily on liquidity data of futures contracts, along with US dollar-adjusted production data, in determining the relative quantities of included commodities. The index is designed to be a highly liquid and diversified benchmark for commodities investments. The version of the index that is calculated on a total return basis reflects the returns on a fully collateralised investment in the underlying commodity futures contracts, combined with the returns on cash collateral invested in US Treasury Bills.

#### **Bloomberg Euro Aggregate Bond Index (Total Return, Hedged, EUR)**

The index includes fixed-rate, investment-grade euro denominated bonds. Inclusion is based on the currency of the issue, and not the domicile of the issuer. The principal sectors in the index are the Treasury, corporate, government-related and securitised.

#### **Bloomberg Global Aggregate Corporate Index (Total Return, Hedged, USD)**

The index is a flagship measure of global investment grade, fixed-rate corporate debt. This multi-currency benchmark includes bonds from developed and emerging markets issuers within the industrial, utility and financial sectors. The index is a component of the Global Aggregate and Multiverse Indices.

#### **Bloomberg Global Aggregate Index (Total Return, Hedged, USD)**

The index measures global investment grade debt from twenty-four different local currency markets and includes fixed-rate treasury, government-related, corporate and securitised bonds from both developed and emerging markets issuers. The index is largely comprised of three major regional aggregate components: the Bloomberg US Aggregate Bond Index, the Bloomberg Pan-European Aggregate Bond Index, and the Bloomberg Asian-Pacific Aggregate Index. In addition to securities from these three indices, the index also includes investment grade Eurodollar, Euro-Yen, Canadian, and 144A index-eligible securities not already in these three indices. The index is fully hedged back to USD.

#### **Bloomberg Global Aggregate Index (Total Return, Unhedged, USD)**

The index measures global investment grade debt from twenty-four different local currency markets and includes fixed-rate treasury, government-related, corporate and securitised bonds from both developed and emerging markets issuers. The index is largely comprised of three major regional aggregate components: the Bloomberg US Aggregate Bond Index, the Bloomberg Pan-European Aggregate Bond Index, and the Bloomberg Asian-Pacific Aggregate Index. In addition to securities from these three indices, the index also includes investment grade Eurodollar, Euro-Yen, Canadian, and 144A index-eligible securities not already in these three indices.

#### **Bloomberg US Aggregate Bond Index (Total Return, USD)**

The index measures the investment grade, US dollar-denominated, fixed-rate, taxable bond market and includes Treasuries, government-related and corporate securities, mortgage-backed securities (agency fixed-rate and hybrid adjustable rate mortgage pass-throughs), asset-backed securities, and commercial mortgage-backed securities (agency and nonagency). The index is a broad-based benchmark that measures the investment grade, US dollar denominated, fixed-rate taxable bond market. This includes Treasuries, government-related and corporate securities, mortgage-backed securities, asset-backed securities and collateralised mortgage-backed securities.

#### **Cboe S&P 500 PutWrite Index**

The index tracks the value of a passive investment strategy which consists of overlaying S&P 500 ("SPX") short put options over a money market account invested in one- and three-months Treasury bills. The SPX puts are struck at-the-money and are sold on a monthly basis.

#### **Cboe S&P 500 One-Week PutWrite Index**

The index tracks the performance of a hypothetical strategy that sells an at-the-money (ATM) S&P 500 Index (SPX) put option on a weekly basis. The maturity of the written SPX put option is one week to expiry. The written SPX put option is collateralised by a money market account invested in one-month Treasury bills. The index rolls on a weekly basis, typically every Friday.

## Appendix VI (Continued)

### GLOSSARY OF INDICES (UNAUDITED) (CONTINUED)

**FTSE Chinese Government and Policy Bank Bond 0-1 Year Select Index (Total Return, CNY)**

The index measures the performance of CNY denominated, fixed-rate book entry government bonds as well as policy bank bonds issued in Mainland China. The following instruments are excluded: savings bonds, special government bonds, central bank bills, private placements and callable and puttable bonds.

**FTSE EPRA Nareit Developed Index (Total Return, Net of Tax, USD)**

The index is a free float-adjusted, market capitalisation-weighted index that is designed to measure the performance of listed real estate companies and real estate investment trusts (REITs) in developed markets. Net total return indices reinvest dividends after the deduction of withholding taxes, using (for international indexes) a tax rate applicable to non-resident institutional investors who do not benefit from double taxation treaties.

**FTSE Nareit All Equity REITs Index (Total Return, Net of Tax, USD)**

The index is a free-float adjusted, market capitalisation-weighted index that tracks the performance of all tax-qualified equity real estate investment trusts (REITs) that are listed on the New York Stock Exchange or NASDAQ. Equity REITs include all tax-qualified REITs with more than 50 percent of total assets in qualifying real estate assets other than mortgages secured by real property.

**ICE BofA European Currency Non-Financial High Yield 3% Constrained Index (Total Return, EUR)**

The index measures the performance of non-financial below-investment grade corporate debt denominated in Euro and GBP, publicly issued in the eurobond, sterling domestic or euro domestic markets and caps exposure to any issuer at 3%. The index contains all non-financial securities in the ICE BofA European Currency High Yield Index but caps issuer exposure at 3%.

**ICE BofA Global High Yield Constrained Index (Total Return, Hedged, USD)**

The index tracks the performance of USD, CAD, GBP and EUR-denominated below investment grade corporate debt publicly issued in the major domestic or Eurobond markets and limits exposure to each issuer included in the index to a maximum of 2% of the index. The index contains all securities in the ICE BofA Global High Yield Index but caps issuer exposure at 2%.

**ICE BofA Global Hybrid Non-Financial 5% Constrained Custom Index (Total Return, Hedged, Euro)**

The index tracks the performance of investment grade non-financial hybrid corporate debt publicly issued in major domestic and Eurobond markets and each issuer is capped at 5% maximum weight.

**ICE BofA US Dollar 1-Month Deposit Offered Rate Constant Maturity Index (Total Return, USD)**

The index is a widely used benchmark for short-term interest rates, providing an indication of the average rates at which banks could obtain wholesale, unsecured funding for set periods in particular currencies.

**ICE BofA US Dollar 3-Month Deposit Offered Rate Constant Maturity Index (Total Return, USD)**

The index tracks the performance of a synthetic asset paying SOFR to a stated maturity. The index is based on the assumed purchase at par of a synthetic instrument having exactly its stated maturity and with a coupon equal to that day's fixing rate. That issue is assumed to be sold the following business day (priced at a yield equal to the current day fixing rate) and rolled into a new instrument.

**ICE BofA US High Yield Constrained Index (Total Return, USD)**

The index tracks the performance of US dollar-denominated below investment grade corporate debt publicly issued in the US domestic market. In addition to meeting other criteria, qualifying securities must have a below investment grade rating (based on an average of Moody's, S&P and Fitch ratings), and have risk exposure to countries that are members of the G10 FX, Western Europe or territories of the US and Western Europe. Securities in legal default are excluded from the index. Index constituents are capitalisation-weighted, provided the total allocation to an individual issuer does not exceed 2%.

## Appendix VI (Continued)

### GLOSSARY OF INDICES (UNAUDITED) (CONTINUED)

<b>ICE BofA 0-1 Year AAA Euro Government Index (Total Return, EUR)</b>	The index is a subset of ICE BofA All Maturity Euro Government Index including all securities with a remaining term to final maturity less than 1 year and rated AAA. The index tracks the performance of EUR denominated sovereign debt publicly issued by Euro member countries in either the eurobond market or the issuer's own domestic market. Qualifying countries must be Euro members, have an investment grade foreign currency long-term sovereign debt rating (based on an average of Moody's, S&P and Fitch), and must have at least one readily available, transparent price source for their securities. To be considered for inclusion a country must be a Euro member as of the first of the month.
<b>ICE BofA 3-Month US Treasury Bill Index (Total Return, USD)</b>	The index is comprised of a single US Treasury Bill issue purchased at the beginning of each month and held for a full month. At the end of the month that issue is sold and rolled into a newly selected which has a maturity date closest to, but not beyond, three months from the rebalance date.
<b>JP Morgan Asia Credit Index (JACI) (Total Return, USD)</b>	The index tracks the total return performance for actively traded USD denominated debt instruments in the Asia region (excluding Japan). JACI is a market cap-weighted index comprising sovereign, quasi-sovereign and corporate bonds and it is partitioned by country, sector and credit rating.
<b>JPMorgan ESG Asia Credit High Yield Index (Total Return, USD) (JESG JACI)</b>	The index tracks the total return performance for actively traded below investment grade rated USD denominated debt instruments in the Asia region (excluding Japan) which meet certain ESG criteria.
<b>JPMorgan Corporate Emerging Markets Bond Index (CEMBI)-Diversified (Total Return, USD)</b>	The index tracks the performance of US dollar-denominated corporate emerging market bonds, including emerging market countries from Asia, Europe, Latin America and the Middle East/Africa. The Diversified version of the index is market capitalisation-weighted and limits the weights of those index countries with larger corporate debt stocks by including only specified portions of those countries' eligible current face amounts of debt outstanding. Effective March 31, 2022, Russia and Belarus were excluded from the JPMorgan fixed income indices. The index market value for all Russian and Belarus debt was set to zero, reflecting a total return loss due to market disruption.
<b>JPMorgan Emerging Markets Bond Index (EMBI) - Global Diversified (Total Return, USD)</b>	The index tracks the performance of US dollar-denominated debt instruments issued by emerging market sovereign and quasi-sovereign entities (Brady bonds, loans and Eurobonds), including emerging market countries from Asia, Europe, Latin America and the Middle East/Africa. The Global version of the index captures a broad, comprehensive universe of emerging market issues. The Diversified version of the index is market capitalisation-weighted and limits the weights of those index countries with larger debt stocks by including only specified portions of those countries' eligible current face amounts of debt outstanding. Effective March 31, 2022, Russia and Belarus were excluded from the JPMorgan fixed income indices. The index market value for all Russian and Belarus debt was set to zero, reflecting a total return loss due to market disruption.
<b>JPMorgan ESG CEMBI - Broad Diversified (Total Return, USD)</b>	The index tracks liquid, USD denominated emerging market fixed and floating-rate debt instruments issued by corporates. The index applies an ESG scoring and screening methodology to tilt toward issuers ranked higher on ESG criteria and green bond issues, and to underweight and remove issuers that rank lower.

## Appendix VI (Continued)

### GLOSSARY OF INDICES (UNAUDITED) (CONTINUED)

<b>JPMorgan ESG Emerging Markets Bond Index (EMBI) Global Diversified Index (Total Return, USD)</b>	The index tracks the performance of liquid, US dollar-denominated fixed and floating-rate debt instruments issued by emerging market sovereign and quasi-sovereign entities (Brady bonds, loans and Eurobonds) with at least 2.5 years until maturity. The index applies an ESG scoring and screening methodology to tilt toward issuers ranked higher on ESG criteria and green bond issues, and to underweight and remove issuers that rank lower.
<b>JPMorgan Government Bond Index (GBI) Emerging Markets - Global Diversified (Total Return, Unhedged, USD)</b>	The index tracks the performance of local currency denominated bonds issued by emerging market governments, including emerging market countries from Asia, Europe, Latin America and the Middle East/Africa. The Global version of the index includes only countries that are accessible by most of the international investor base, while countries with explicit capital controls are excluded. The Diversified version of the index is market capitalisation-weighted, with a maximum weight to a country capped at 10%. Effective March 31, 2022, Russia and Belarus were excluded from the JPMorgan fixed income indices. The index market value for all Russian and Belarus debt was set to zero, reflecting a total return loss due to market disruption.
<b>MSCI All Country World Index (Total Return, Net of Tax, USD)</b>	The index is a free float-adjusted, market capitalisation-weighted index that is designed to measure the equity market performance of developed and emerging markets. The index consists of 47 country indexes comprising 23 developed and 24 emerging market country indexes. The developed market country indexes included are: Australia, Austria, Belgium, Canada, Denmark, Finland, France, Germany, Hong Kong, Ireland, Israel, Italy, Japan, the Netherlands, New Zealand, Norway, Portugal, Singapore, Spain, Sweden, Switzerland, the United Kingdom and the United States. The emerging market country indexes included are: Brazil, Chile, China, Colombia, Czech Republic, Egypt, Greece, Hungary, India, Indonesia, Korea, Kuwait, Malaysia, Mexico, Peru, the Philippines, Poland, Qatar, Saudi Arabia, South Africa, Taiwan, Thailand, Turkey, and the UAE. China A shares are included starting from June 1, 2018 and are partially represented at 20% of their free float-adjusted market capitalisation as of November 2019. Net total return indexes reinvest dividends after the deduction of withholding taxes, using (for international indexes) a tax rate applicable to non-resident institutional investors who do not benefit from double taxation treaties. Effective after the close on March 9, 2022, MSCI reclassified MSCI Russia Indexes from Emerging Markets to Standalone Markets status. At that time, all Russian securities were removed from this index at a final price of 0.00001, including both locally traded Russian equity constituents and Russian ADRs/GDRs constituents.
<b>MSCI All Country World (ACWI) Value Index</b>	The index is a free float-adjusted market capitalisation weighted index that is designed to represent performance of large- and mid-cap stocks exhibiting overall value style characteristics across 23 developed and 24 emerging markets. The value investment style characteristics for this index are defined using three variables: book value to price, 12-month forward earnings to price and dividend yield.
<b>MSCI China A Onshore Index (Total Return, Net, CNY)</b>	The index is a capitalisation-weighted index, which consists of the large and mid-market capitalisation A-share securities of PRC companies that are listed on the Shanghai and Shenzhen exchanges. The index captures large and mid-cap representation across China securities listed on the Shanghai and Shenzhen exchanges. The index is based on the MSCI Global Investable Indexes ("GIMI") Methodology- a comprehensive and consistent approach to index construction that lends a global perspective cross regions, and variations in market capitalisation size, sector and style. This methodology aims to provide thorough coverage of the relevant investment opportunity set with a strong emphasis on index liquidity, investability and replicability. The index is reviewed quarterly - in February, May, August and November - with the objective of reflecting changes in the underlying equity markets in a timely manner, while limiting undue index turnover.

## Appendix VI (Continued)

### GLOSSARY OF INDICES (UNAUDITED) (CONTINUED)

#### **MSCI China All Shares Net Index (Total Return, USD)**

The index is a free float-adjusted, market capitalisation weighted index that is designed to measure the equity market performance of China share classes listed in Hong Kong, Shanghai, Shenzhen and outside of China. It covers the integrated MSCI China equity universe comprising A-shares, B-shares, H-shares, Red chips, P-chips and foreign listings listed outside China or Hong Kong (e.g. ADRs). A-shares are incorporated in China and trade on the Shanghai and Shenzhen exchanges; they are quoted in local renminbi and entail foreign investment regulations (QFII). B-shares are incorporated in China, and trade on the Shanghai and Shenzhen exchanges; they are quoted in foreign currencies (Shanghai USD, Shenzhen HKD) and are open to foreign investors. H-shares are incorporated in China and trade on the Hong Kong exchange and other foreign exchanges. Red chips and P-chips are incorporated outside of China and trade on the Hong Kong exchange. Red chips are usually controlled by the state or a province or municipality. P-chips are non state-owned Chinese companies incorporated outside the mainland and traded in Hong Kong. Net total return indexes reinvest dividends after the deduction of withholding taxes, using (for international indexes) a tax rate applicable to non-resident institutional investors who do not benefit from double taxation treaties.

#### **MSCI Emerging Markets Index (Total Return, Net of Tax, USD)**

The index is a free float-adjusted market capitalisation-weighted index that is designed to measure the equity market performance of emerging markets. The index consists of the following 24 emerging market country indexes: Brazil, Chile, China, Colombia, Czech Republic, Egypt, Greece, Hungary, India, Indonesia, Korea, Kuwait, Malaysia, Mexico, Peru, the Philippines, Poland, Qatar, Saudi Arabia, South Africa, Taiwan, Thailand, Turkey, and the UAE. China A shares are included starting from 1 June 2018 and are partially represented at 20% of their free float-adjusted market capitalisation as of November 2019. Net total return indexes reinvest dividends after the deduction of withholding taxes, using (for international indexes) a tax rate applicable to non-resident institutional investors who do not benefit from double taxation treaties. Effective after the close on March 9, 2022, MSCI reclassified MSCI Russia Indexes from Emerging Markets to Standalone Markets status. At that time, all Russian securities were removed from this index at a final price of 0.00001, including both locally traded Russian equity constituents and Russian ADRs/GDRs constituents.

#### **MSCI Europe Index (Total Return, Net of Tax, EUR)**

The index is a free float-adjusted market capitalisation weighted index that is designed to measure the equity market performance of developed markets in Europe.

#### **MSCI Japan Small Cap Net Index (Total Return, JPY)**

The index is designed to measure the performance of the small capitalisation segment of the Japanese market.

#### **MSCI World Index (Total Return, Net of Tax, USD)**

The index is a free float-adjusted market capitalisation weighted index that is designed to measure the equity market performance of 23 developed markets.

#### **Russell 1000 Value Index (Total Return, Net of Tax, USD)**

The index is a float-adjusted, market capitalisation-weighted index that measures the performance of the large-cap value segment of the US equity market. It includes those Russell 1000 Index companies with lower price-to-book ratios and lower forecasted growth rates. The index is rebalanced annually in June.

#### **Russell 2000 Index (Total Return, Net of Tax, USD)**

The index is a float-adjusted, market capitalisation-weighted index that measures the performance of the small-cap segment of the US equity market. It includes approximately 2,000 of the smallest securities in the Russell 3000 Index (which measures the performance of the 3,000 largest US public companies based on total market capitalisation). The index is rebalanced annually in June.

## Appendix VI (Continued)

### GLOSSARY OF INDICES (UNAUDITED) (CONTINUED)

**Russell 2000 Value Index (Total Return, Net of Tax, USD)**

The index is a float-adjusted, market capitalisation-weighted index that measures the performance of the small-cap value segment of the US equity market. It includes those Russell 2000 Index companies with lower price-to-book ratios and lower forecasted growth rates. The index is rebalanced annually in June.

**S&P 500 Index (Total Return, Net of Tax, USD)**

The index is a float-adjusted, market capitalisation-weighted index that focuses on the large-cap segment of the US equity market, and includes a significant portion of the total value of the market.

**Weighted average of 2/3 JP Morgan Emerging Markets Bond Index Global Diversified Investment Grade Index (Total Return, USD) and 1/3 of JP Morgan GBI EM Global Diversified Investment Grade 15% Cap Index (Total Return, Unhedged, USD)**

The blended index is composed of the weighted average of 2/3 JP Morgan EMBI Global Diversified Investment Grade Index (Total return, USD) (described previously) and 1/3 of JP Morgan GBI-EM Global Diversified Index Investment Grade 15% Cap Index (USD unhedged total return) (described previously), and is rebalanced monthly.

**50% weighting to JP Morgan GBI Emerging Markets Global Diversified Index (Total Return, Unhedged, USD), 25% weighting to JP Morgan EMBI Global Diversified Index (Total Return, USD), and 25% weighting to JP Morgan CEMBI Diversified Index (Total Return, USD)**

The blended index is composed of 25% JP Morgan Emerging Markets Bond Index Global Diversified Index (described previously), 25% of JP Morgan Corporate Emerging Markets Bond Index Diversified (described previously) and 50% of JP Morgan GBI EM Global Diversified Index (described previously), and is rebalanced monthly.

**50% Cboe S&P 500 One-Week PutWrite Index / 50% Cboe S&P 500 PutWrite Index**

The blended index is composed of 50% CBOE S&P 500 One-Week PutWrite Index (described previously), 50% CBOE S&P 500 PutWrite Index (described previously).

### SUSTAINABLE FINANCE DISCLOSURE REGULATION (UNAUDITED)

The following Portfolios have been categorised as an Article 6 Portfolio for the purposes of Sustainable Finance Disclosure Regulation (EU) 2019/2088 of the European Parliament and of the Council of 27 November 2019 on sustainability-related disclosures in the financial services sector ("SFDR"): Neuberger Berman CLO Income Fund (CLO Bond Portfolio), Neuberger Berman US Equity Index Putwrite Fund, Neuberger Berman Macro Opportunities FX Fund (Liquid Alternatives Portfolios), Neuberger Berman US Small Cap Intrinsic Value Fund (US Equity Portfolios), Neuberger Berman China Equity Fund (China Portfolios), Neuberger Berman Uncorrelated Strategies Fund, Neuberger Berman Uncorrelated Trading Fund (Multi Strategy Portfolios), Neuberger Berman Commodities Fund (Quantitative and Multi Asset Portfolios) and Neuberger Berman Event Driven Fund (Global Equity Portfolios).

For the purpose of the Taxonomy Regulation, it should be noted that the investments underlying the Article 6 Portfolios do not take into account the EU criteria for environmentally sustainable economic activities.

The following Portfolios have been classified as an Article 8 Portfolio for the purposes of SFDR: Neuberger Berman High Yield Bond Fund, Neuberger Berman Short Duration High Yield SDG Engagement Fund, Neuberger Berman European High Yield Bond Fund, Neuberger Berman Global High Yield SDG Engagement Fund, Neuberger Berman Global High Yield Sustainable Action Fund (High Yield Bond Portfolios), Neuberger Berman Emerging Market Debt – Local Currency Fund, Neuberger Berman Emerging Market Debt – Hard Currency Fund, Neuberger Berman Sustainable Emerging Market Corporate Debt Fund, Neuberger Berman Short Duration Emerging Market Debt Fund, Neuberger Berman Emerging Market Debt Blend Fund, Neuberger Berman Emerging Market Debt Sustainable Investment Grade Blend Fund, Neuberger Berman Asian Debt – Hard Currency Fund, Neuberger Berman Sustainable Asia High Yield Fund (Emerging Market Debt Portfolios), Neuberger Berman China Bond Fund (China Bond Portfolios), Neuberger Berman Global Bond Fund, Neuberger Berman Strategic Income Fund, Neuberger Berman Corporate Hybrid Bond Fund, Neuberger Berman Global Opportunistic Bond Fund, Neuberger Berman Global Flexible Credit Income Fund, Neuberger Berman Global Investment Grade Credit Fund (Fixed Income Portfolios), Neuberger Berman Global Diversified Income FMP – 2024 (Fixed Maturity Portfolios), Neuberger Berman Euro Bond Absolute Return Fund, Neuberger Berman Ultra Short Term Euro Bond Fund, Neuberger Berman Euro Opportunistic Bond Fund (Euro Fixed Income Portfolios), Neuberger Berman Multi-Asset Income Fund, Neuberger Berman Systematic Global Sustainable Value Fund (Quantitative and Multi Asset Portfolios), Neuberger Berman US Long Short Equity Fund (Liquid Alternatives Portfolios), Neuberger Berman US Equity Fund, Neuberger Berman US Small Cap Fund, Neuberger Berman US Multi Cap Opportunities Fund, Neuberger Berman US Large Cap Value Fund (US Equity Portfolios), Neuberger Berman Emerging Markets Equity Fund, Neuberger Berman Emerging Markets Select Equity Fund, Neuberger Berman Japan Equity Engagement Fund (Global Equity Portfolios), Neuberger Berman US Real Estate Securities Fund, Neuberger Berman Global Real Estate Securities Fund (Real Estate Portfolios), Neuberger Berman China A-Share Equity Fund (China Portfolios), Neuberger Berman 5G Connectivity Fund, Neuberger Berman Global Equity Megatrends Fund, Neuberger Berman InnovAsia 5G Fund, Neuberger Berman Next Generation Mobility Fund, Neuberger Berman Metaverse Fund, Neuberger Berman Next Generation Space Economy Fund (Thematic Equity Portfolios), Neuberger Berman Global Sustainable Equity Fund and Neuberger Berman European Sustainable Equity Fund (Sustainable Equity Portfolios) (the "Article 8 Portfolios"). Information about the environmental and social characteristics of the Article 8 Portfolios, with the exception of unlaunched funds, is available in the Appendix below. We will not provide further disclosure of the Neuberger Berman Metaverse Fund as it has not launched.

The Neuberger Berman Sustainable Emerging Market Debt – Hard Currency Fund (Emerging Market Debt Portfolios) has been categorised as an Article 9 Portfolio for the purposes of SFDR (the "Article 9 Portfolio").

In accordance with the requirements of Article 11 of SFDR, information in respect of each Article 8 Portfolio and the Article 9 Portfolio has been included in this Appendix. Unless otherwise defined in this Appendix, capitalised terms used shall have the meaning ascribed to them in the Prospectus.

**Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852**

**Product name:** Neuberger Berman Emerging Market Debt – Local Currency Fund (the “Portfolio”)

**Legal entity identifier:** 549300VLRPBFFXL0DB81

## Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?	
<input checked="" type="radio"/> <input checked="" type="radio"/> <input type="checkbox"/> <b>Yes</b>	<input checked="" type="radio"/> <input type="radio"/> <input checked="" type="checkbox"/> <b>No</b>
<input type="checkbox"/> It made <b>sustainable investments with an environmental objective</b> : ____% <ul style="list-style-type: none"> <li><input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy</li> <li><input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</li> </ul>	<input type="checkbox"/> It <b>promoted Environmental/Social (E/S) characteristics</b> and while it did not have as its objective a sustainable investment, it had a proportion of ____% of sustainable investments <ul style="list-style-type: none"> <li><input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy</li> <li><input type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</li> <li><input type="checkbox"/> with a social objective</li> </ul>
<input type="checkbox"/> It made <b>sustainable investments with a social objective</b> : ____%	<input checked="" type="checkbox"/> It promoted E/S characteristics, but <b>did not make any sustainable investments</b>

## To what extent were the environmental and/or social characteristics promoted by this financial product met?

The following environmental and social characteristics were promoted by the Portfolio for sovereign issuers:

- **Environmental Characteristics:** sovereign energy efficiency; climate change adaptation; deforestation; greenhouse gas ("GHG") emissions; air and household pollution; and unsafe sanitation.
- **Social Characteristics:** progress towards UN Sustainable Development Goals ("SDGs"); health and education levels; regulatory quality; political stability and freedoms; gender equality; and research and development.

The following environmental and social characteristics were promoted by the Portfolio for corporate issuers:

- **Environmental Characteristics:** biodiversity and land usage; carbon emissions; opportunities in clean technologies; water stress; toxic emissions & waste; financing environmental impact; product carbon footprint; environmental policy; environmental management system; GHG reduction programme; green procurement policy; and non-GHG air emissions programmes.
- **Social Characteristics:** health & safety; human capital development; labour management; privacy & data security; product safety & quality; financial products safety; discrimination policy; community involvement programmes; diversity programmes and human rights policy.

Performance in relation to these environmental and social characteristics was measured through the NB ESG Quotient, and is reported, in aggregate, below.

### ● **How did the sustainability indicators perform?**

As part of the investment process, the Manager and the Sub-Investment Manager considered a variety of sustainability indicators to measure the environmental and/or social characteristics promoted by the Portfolio. These sustainability indicators are listed below:

1. The NB ESG Quotient:

The proprietary Neuberger Berman ESG rating system (the "NB ESG Quotient"), is built around the concept of sector specific ESG risk and opportunity, and produced an overall ESG rating for issuers by assessing them against certain ESG metrics.

The NB ESG Quotient assigned weightings to environmental, social and governance characteristics for each sector to derive the NB ESG Quotient rating for issuers. The Manager and the Sub-Investment Manager used the NB ESG Quotient to promote the environmental and social characteristics listed by prioritising investment in securities issued by issuers with a relatively favourable and/or an improving NB ESG Quotient rating. Pursuant to this, the Manager and the Sub-Investment Manager limited exposure to issuers with the poorest NB ESG Quotient rating unless there was a reasonable expectation that the NB ESG Quotient rating would improve over time.

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

31 December 2022	Rating	Combined coverage
NB ESG Quotient	54	96%
Third-party Data	4.8	

With regards to the NB ESG Quotient rating, a rating between 1 – 100 is used where 1 is the lowest rating and 100 is the highest rating. This Portfolio does not have a minimum NB ESG Quotient rating. The average NB ESG Quotient rating is a weighted average and is not a rating of the Portfolio strategy itself.

Third-party data was also used to measure the environmental and social characteristics promoted by the Portfolio. The third-party data ratings range from 0-10, with 0 being the lowest rating and 10 being the highest rating.

2. ESG exclusion policies:

To ensure that the environmental or social characteristics promoted by the Portfolio were attained, the Portfolio did not invest in securities issued by issuers whose activities breached, or were not consistent with, the Neuberger Berman Controversial Weapons Policy and the Neuberger Berman Thermal Coal Involvement Policy. The Portfolio is phasing out its exposure to thermal coal and prohibited investment in securities issued by issuers that derived more than 10% of revenue from thermal coal mining or were expanding new thermal coal power generation, as determined by internal screens. The Portfolio also prohibited investments in issuers in the power generation industry that used thermal coal as an energy source for more than 95% of their installed power generation capacity, were expanding into new thermal coal power generation, or whose expansionary capital expenditure budgets did not include a minimum threshold for non-coal investments, as determined by internal screens. From 6 April 2022 onwards, investments held by the Portfolio did not invest in securities issued by issuers whose activities had been identified as breaching the Neuberger Berman Global Standards Policy which excluded identified violators of (i) the United Nations Global Compact Principles (“**UNGC Principles**”), (ii) the OECD Guidelines for Multinational Enterprises (“**OECD Guidelines**”), (iii) the United Nations Guiding Principles on Business and Human Rights (“**UNGPs**”) and (iv) the International Labour Standards (“**ILO Standards**”). In addition, the Portfolio excluded securities issued by issuers which were involved in direct child labour, in the tobacco industry, as well as certain issuers with significant exposure to oil sands.

When applying ESG exclusions to the Portfolio, the Manager and the Sub-Investment Manager used third-party data to identify issuers in breach of the ESG exclusions listed above. Where possible, the Manager and the Sub-Investment Manager sought to overlay this third-party data with qualitative expertise from their research analysts to establish a current and holistic picture of the issuer. The Manager and the Sub-Investment Manager discussed and debated the differences between the violators identified by the third-party data and those identified as a result of their research, which drew upon data from the NB ESG Quotient and direct engagements with the issuer.

● ***...and compared to previous periods?***

N/A – this is the first reference period.

● ***What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?***

N/A - the Portfolio did not commit to holding sustainable investments.

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

**How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

N/A - the Portfolio did not commit to holding sustainable investments.

*How were the indicators for adverse impacts on sustainability factors taken into account?*

N/A - the Portfolio did not commit to holding sustainable investments.

*Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:*

The Portfolio did not commit to holding sustainable investments, however from 6 April 2022 onwards, the Manager and the Sub-Investment Manager did not invest in issuers whose activities had been identified as breaching the OECD Guidelines, UNGC Principles, ILO Standards and UNGPs, captured through the Neuberger Berman Global Standards Policy.

*The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.*

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments.

### **How did this financial product consider principal adverse impacts on sustainability factors?**

A selection of the principal adverse impact indicators were considered directly (e.g. through the ESG exclusion policies listed above) and/or indirectly (e.g. as part of the Manager’s and the Sub-Investment Manager’s assessment of issuers) throughout the 2022 reference period.

From 28 November 2022 onwards, the Manager and the Sub-Investment Manager considered the following principal adverse impacts with respect to the Portfolio, namely: GHG intensity and investee countries subject to social violations (the “**Sovereign PAIs**”) for the sovereign issuers and GHG emissions, carbon footprint, GHG intensity, fossil fuel exposure, board gender diversity, UNGC Principles & OECD Guidelines violations and controversial weapons for the corporate issuers (together the “**Product Level PAIs**”).

Consideration of the Product Level PAIs was limited by the availability (in the Manager’s and the Sub-Investment Manager’s subjective view) of adequate, reliable and verifiable data coverage. The Manager and the Sub-Investment Manager utilised third-party data and proxy data along with internal

research to consider the Product Level PAIs.

Consideration of the Product Level PAIs by the Manager and the Sub-Investment Manager was through a combination of:

- Monitoring the Portfolio, in particular where it fell below the quantitative and qualitative tolerance thresholds set for each Product Level PAI by the Manager and the Sub-Investment Manager;
- Stewardship and/or setting engagement objectives where the Portfolio fell below the quantitative and qualitative tolerance thresholds set for a Product Level PAI; and
- Application of the ESG exclusion policies referenced above, which included consideration of several of the Product Level PAIs.

### What were the top investments of this financial product?

The Manager and the Sub-Investment Manager have used the EU statistical classification of economic activities (“NACE”) economic sector breakdown to identify the economic sectors of the Portfolio’s top 15 investments. The following data is as at 31 December 2022.

Largest investments	Sector	% Assets	Country
MEX BONOS DE DESARROLLO	O - Public administration and defence; compulsory social security	5.4%	Mexico
SOUTH AFRICA (REPUBLIC OF)	O - Public administration and defence; compulsory social security	4.7%	South Africa
POLAND GOVERNMENT BOND	O - Public administration and defence; compulsory social security	3.8%	Poland
SOUTH AFRICA (REPUBLIC OF)	O - Public administration and defence; compulsory social security	3.6%	South Africa
MALAYSIA GOVERNMENT	O - Public administration and defence; compulsory social security	1.8%	Malaysia
MEXICO (UNITED MEXICAN STATES) (GO	O - Public administration and defence; compulsory social security	1.7%	Mexico
SOUTH AFRICA (REPUBLIC OF)	O - Public administration and defence; compulsory social security	1.7%	South Africa
SOUTH AFRICA (REPUBLIC OF)	O - Public administration and defence; compulsory social security	1.6%	South Africa
POLAND GOVERNMENT BOND	O - Public administration and defence; compulsory social security	1.6%	Poland
ROMANIA (REPUBLIC OF)	O - Public administration and defence; compulsory social security	1.6%	Romania
INDONESIA (REPUBLIC OF)	O - Public administration and defence; compulsory social security	1.4%	Indonesia
TURKEY (REPUBLIC OF)	O - Public administration and defence; compulsory social security	1.4%	Turkey
TITULOS DE TESORERIA	O - Public administration and defence; compulsory social security	1.3%	Colombia
COLOMBIA (REPUBLIC OF)	O - Public administration and defence; compulsory social security	1.3%	Colombia
CZECH REPUBLIC RegS	O - Public administration and defence; compulsory social security	1.3%	Czech Republic

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 1 January 2022 - 31 December 2022

## What was the proportion of sustainability-related investments?

**Asset allocation** describes the share of investments in specific assets.

### ● **What was the asset allocation?**

The Manager and the Sub-Investment Manager calculated the proportion of environmentally and/or socially aligned investments in the Portfolio by reference to the proportion of issuers in the Portfolio: i) that held either an NB ESG Quotient rating or a third-party equivalent ESG rating that was used as part of the portfolio construction and investment management process of the Portfolio; and/or ii) with whom the Manager and the Sub-Investment Manager had engaged directly. This calculation was based on a mark-to-market assessment of the Portfolio and may rely on incomplete or inaccurate issuer or third-party data. For the 2022 reference period only, this calculation is based on the Portfolio's holdings as at 31 December 2022, being the only quarter end in the reference period that followed the publication of the Portfolio's SFDR Annex detailing its planned asset allocation. For all subsequent reference periods, this calculation will be based on the average of the four quarter ends.

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

**In which economic sectors were the investments made?**

Data as at 31 December 2022	
Economic Sector – NACE	% Assets
C - Manufacturing	0.12%
D - Electricity, gas, steam, and air conditioning supply	1.53%
F - Construction	0.05%
G - Wholesale and retail trade; repair of motor vehicles and motorcycles	0.03%
H - Transporting and storage	0.07%
K - Financial and insurance activities	1.19%
N - Administrative and support service activities	0.05%
O - Public administration and defense; compulsory social security	94.57%
None	2.39%

**To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?**

The analysis and disclosure requirements introduced by the EU Taxonomy are very detailed and compliance with them requires the availability of multiple, specific data points in respect of each investment which the Portfolio made. The Manager and the Sub-Investment Manager cannot confirm that the Portfolio invested in any investments that qualified as environmentally sustainable for the purposes of the EU Taxonomy. Disclosures and reporting on Taxonomy alignment will develop as the EU framework evolves and data is made available by issuers. The Manager and the Sub-Investment Manager will keep the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy under active review as data availability and quality improves.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

- **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

**Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?**

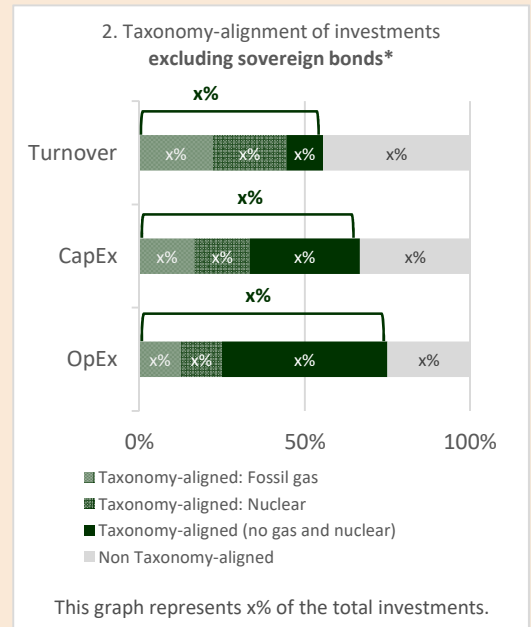

Yes:

In fossil gas     In nuclear energy

No

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

- **What was the share of investments made in transitional and enabling activities?**

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments.

- **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments.

### **What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?**

N/A – the Portfolio did not commit to holding sustainable investments.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

### **What was the share of socially sustainable investments?**

N/A – the Portfolio did not commit to holding sustainable investments.

### **What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?**

“Other” included the remaining investments of the Portfolio (including but not limited to any derivatives or any security collateralized by a pool of similar assets or receivables listed in the Supplement for the Portfolio) which were neither aligned with the environmental or social characteristics, nor qualified as sustainable investments.

The “Other” section in the Portfolio was held for a number of reasons that the Manager and the Sub-Investment Manager felt was beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover.

As noted above, the Portfolio was invested in compliance with ESG exclusion policies, on a continuous basis. This ensured that investments made by the Portfolio sought to align with international environmental and social safeguards such as the UNGC Principles, UNGPs, OECD Guidelines and ILO Standards.

The Manager and the Sub-Investment Manager believe that these policies prevented investment in issuers that most egregiously violated environmental and/or social minimum standards and ensured that the Portfolio could successfully promote its environmental and social characteristics.

The above steps ensured that robust environmental and social safeguards were in place.

## What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Portfolio was managed in-line with the investment objective and the following actions were taken:

### I. Integrating proprietary ESG analysis:

The NB ESG Quotient ratings were generated for issuers in the Portfolio. The NB ESG Quotient rating for issuers was utilised to help to better identify risks and opportunities in the overall credit and value assessment.

The NB ESG Quotient was a key component of the internal credit ratings and helped to identify business risks (including ESG risks), which would cause deterioration in an issuer's credit profile. Internal credit ratings can be notched up or down based on the NB ESG Quotient rating, and this was monitored by the Manager and the Sub-Investment Manager as an important component of the investment process for the Portfolio.

By integrating the investment team's proprietary ESG analysis (the NB ESG Quotient) into their internal credit ratings, there was a direct link between their analysis of material ESG characteristics and portfolio construction activities across their strategy.

Issuers with a favourable and/or an improving NB ESG Quotient rating had a higher chance of ending up in the Portfolio. Issuers with a poor NB ESG Quotient rating especially where these were not being addressed by that issuer, were more likely to be removed from the investment universe or divested from the Portfolio.

### II. Engagement:

The Manager and the Sub-Investment Manager engaged with issuers through a robust ESG engagement program. They sought to prioritise constructive engagements and sought to engage on topics (including ESG topics) they determined to be financially material for the relevant issuer. The Manager and the Sub-Investment Manager viewed this engagement with issuers, as an important part of its investment process. Progress on engagement was tracked centrally in the Manager and the Sub-Investment Manager's engagement tracker.

### III. ESG sectoral exclusion policies:

To ensure that the environmental and social characteristics promoted by the Portfolio were attained, the Portfolio applied the ESG exclusion policies referenced above, which placed limitations on the investable universe.

## How did this financial product perform compared to the reference benchmark?

N/A – The Portfolio's benchmark has not been designated as a reference benchmark. Therefore, it is not consistent with the environmental or social characteristics promoted by the Portfolio.

### *How does the reference benchmark differ from a broad market index?*

N/A

- 
- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***

N/A

- ***How did this financial product perform compared with the reference benchmark?***

N/A

- ***How did this financial product perform compared with the broad market index?***

N/A

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

---

**Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852**

**Product name:** Neuberger Berman Emerging Market Debt – Hard Currency Fund (the “Portfolio”)

**Legal entity identifier:** 549300M7KHGG3BTZ3979

## Environmental and/or social characteristics

### Did this financial product have a sustainable investment objective?

**Yes**

**No**

It made **sustainable investments with an environmental objective:** \_\_\_%

\_\_\_\_\_ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

\_\_\_\_\_ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective:** \_\_\_%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of \_\_\_% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

## To what extent were the environmental and/or social characteristics promoted by this financial product met?

The following environmental and social characteristics were promoted by the Portfolio for sovereign issuers:

- **Environmental Characteristics:** sovereign energy efficiency; climate change adaptation; deforestation; greenhouse gas (“GHG”) emissions; air and household pollution; and unsafe sanitation.
- **Social Characteristics:** progress towards UN Sustainable Development Goals (“SDGs”); health and education levels; regulatory quality; political stability and freedoms; gender equality; and research & development.

The following environmental and social characteristics were promoted by the Portfolio for corporate issuers:

- **Environmental Characteristics:** biodiversity and land usage; carbon emissions; opportunities in clean technologies; water stress; toxic emissions & waste; financing environmental impact; product carbon footprint; environmental policy; environmental management system; GHG reduction programme; green procurement policy; and non-GHG air emissions programmes.
- **Social Characteristics:** health & safety; human capital development; labour management; privacy & data security; product safety & quality; financial products safety; discrimination policy; community involvement programmes; diversity programmes and human rights policy.

Performance in relation to these environmental and social characteristics was measured through the NB ESG Quotient, and is reported, in aggregate, below.

### ● **How did the sustainability indicators perform?**

As part of the investment process, the Manager and the Sub-Investment Manager considered a variety of sustainability indicators to measure the environmental and/or social characteristics promoted by the Portfolio. These sustainability indicators are listed below:

1. The NB ESG Quotient:

The proprietary Neuberger Berman ESG rating system (the “NB ESG Quotient”), is built around the concept of sector specific ESG risk and opportunity, and produced an overall ESG rating for issuers by assessing them against certain ESG metrics.

The NB ESG Quotient assigned weightings to environmental, social and governance characteristics for each sector to derive the NB ESG Quotient rating for issuers. The Manager and the Sub-Investment Manager used the NB ESG Quotient to promote the environmental and social characteristics listed by prioritising investment in securities issued by issuers with a relatively favourable and/or an improving NB ESG Quotient rating. Pursuant to this, the Manager and the Sub-Investment Manager limited exposure to issuers with the poorest NB ESG Quotient rating unless there was a reasonable expectation that the NB ESG Quotient rating would improve over time.

31 December 2022	Rating	Combined coverage
NB ESG Quotient	51	96%
Third-party Data	3.8	

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

With regards to the NB ESG Quotient rating, a rating between 1 – 100 is used where 1 is the lowest rating and 100 is the highest rating. This Portfolio does not have a minimum NB ESG Quotient rating. The average NB ESG Quotient rating is a weighted average and is not a rating of the Portfolio strategy itself.

Third-party data was also used to measure the environmental and social characteristics promoted by the Portfolio. The third-party data ratings range from 0-10, with 0 being the lowest rating and 10 being the highest rating.

2. ESG exclusion policies:

To ensure that the environmental or social characteristics promoted by the Portfolio were attained, the Portfolio did not invest in securities issued by issuers whose activities breached, or were not consistent with, the Neuberger Berman Controversial Weapons Policy and the Neuberger Berman Thermal Coal Involvement Policy. The Portfolio is phasing out its exposure to thermal coal and prohibited investment in securities issued by issuers that derived more than 10% of revenue from thermal coal mining or were expanding new thermal coal power generation, as determined by internal screens. The Portfolio also prohibited investments in issuers in the power generation industry that used thermal coal as an energy source for more than 95% of their installed power generation capacity, were expanding into new thermal coal power generation, or whose expansionary capital expenditure budgets did not include a minimum threshold for non-coal investments, as determined by internal screens. From 6 April 2022 onwards, the investments held by the Portfolio did not invest in securities issued by issuers whose activities had been identified as breaching the Neuberger Berman Global Standards Policy which excluded identified violators of (i) the United Nations Global Compact Principles (“**UNGC Principles**”), (ii) the OECD Guidelines for Multinational Enterprises (“**OECD Guidelines**”), (iii) the United Nations Guiding Principles on Business and Human Rights (“**UNGPs**”) and (iv) the International Labour Standards (“**ILO Standards**”). In addition, the Portfolio excluded securities issued by issuers which were involved in direct child labour, in the tobacco industry, as well as certain issuers with significant exposure to oil sands.

When applying ESG exclusions to the Portfolio, the Manager and the Sub-Investment Manager used third-party data to identify issuers in breach of the ESG exclusions listed above. Where possible, the Manager and the Sub-Investment Manager sought to overlay this third-party data with qualitative expertise from their research analysts to establish a current and holistic picture of the issuer. The Manager and the Sub-Investment Manager discussed and debated the differences between the violators identified by the third-party data and those identified as a result of their research, which drew upon data from the NB ESG Quotient and direct engagements with the issuer.

● ***...and compared to previous periods?***

N/A – this is the first reference period.

● ***What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?***

N/A - the Portfolio did not commit to holding sustainable investments.

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

**How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

N/A - the Portfolio did not commit to holding sustainable investments.

*How were the indicators for adverse impacts on sustainability factors taken into account?*

N/A - the Portfolio did not commit to holding sustainable investments.

*Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:*

The Portfolio did not commit to holding sustainable investments, however from 6 April 2022 onwards, the Manager and the Sub-Investment Manager did not invest in issuers whose activities had been identified as breaching the OECD Guidelines, UNGC Principles, ILO Standards and UNGPs, captured through the Neuberger Berman Global Standards Policy.

*The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.*

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments.

**How did this financial product consider principal adverse impacts on sustainability factors?**

A selection of the principal adverse impact indicators were considered directly (e.g. through the ESG exclusion policies listed above) and/or indirectly (e.g. as part of the Manager’s and the Sub-Investment Manager’s assessment of issuers) throughout the 2022 reference period.

From 28 November 2022 onwards, the Manager and the Sub-Investment Manager considered the following principal adverse impacts with respect to the Portfolio, namely: GHG intensity and investee countries subject to social violations (the “**Sovereign PAIs**”) for the sovereign issuers and GHG emissions, carbon footprint, GHG intensity, fossil fuel exposure, board gender diversity, UNGC Principles & OECD Guidelines violations and controversial weapons for the corporate issuers (together the “**Product Level PAIs**”).

Consideration of the Product Level PAIs was limited by the availability (in the Manager’s and the Sub-Investment Manager’s subjective view) of adequate, reliable and verifiable data coverage. The

Manager and the Sub-Investment Manager utilised third party data and proxy data along with internal research to consider the Product Level PAIs.

Consideration of the Product Level PAIs by the Manager and the Sub-Investment Manager was through a combination of:

- Monitoring the Portfolio, in particular where it fell below the quantitative and qualitative tolerance thresholds set for each Product Level PAI by the Manager and the Sub-Investment Manager;
- Stewardship and/or setting engagement objectives where the Portfolio fell below the quantitative and qualitative tolerance thresholds set for a Product Level PAI; and
- Application of the ESG exclusion policies referenced above, which included consideration of several of the Product Level PAIs.

### What were the top investments of this financial product?

The Manager and the Sub-Investment Manager have used the EU statistical classification of economic activities (“**NACE**”) economic sector breakdown to identify the economic sectors of the Portfolio’s top 15 investments. The following data is as at 31 December 2022.

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 1 January 2022 - 31 December 2022

Largest investments	Sector	% Assets	Country
SOUTHERN GAS CORRIDOR CJSC RegS	H - Transporting and storage	2.6%	Azerbaijan
PETROLEOS MEXICANOS	B - Mining and quarrying	2.4%	Mexico
ECUADOR REPUBLIC OF (GOVERNMENT) RegS	O - Public administration and defence; compulsory social security	1.7%	Ecuador
ARGENTINA REPUBLIC OF GOVERNMENT	O - Public administration and defence; compulsory social security	1.6%	Argentina
OMAN GOVERNMENT BOND MTN RegS	O - Public administration and defence; compulsory social security	1.6%	Oman
MEXICO (UNITED MEXICAN STATES)	O - Public administration and defence; compulsory social security	1.6%	Mexico
ANGOLA GOVERNMENT BOND RegS	O - Public administration and defence; compulsory social security	1.5%	Angola
QATAR GOVERNMENT BOND RegS	O - Public administration and defence; compulsory social security	1.4%	Qatar
1MDB GLOBAL INVESTMENTS LTD RegS	K - Financial and insurance activities	1.4%	Malaysia

STATE OIL CO OF THE AZERBAIJAN REP RegS	B - Mining and quarrying	1.2%	Azerbaijan
COTE D IVOIRE REPUBLIC OF RegS	O - Public administration and defence; compulsory social security	1.1%	Cote D'Ivoire
ARGENTINA REPUBLIC OF GOVERNMENT	O - Public administration and defence; compulsory social security	1.1%	Argentina
INDONESIA REPUBLIC OF	O - Public administration and defence; compulsory social security	1.1%	Indonesia
SERBIA (REPUBLIC OF) RegS	O - Public administration and defence; compulsory social security	1.0%	Serbia, Republic of

## What was the proportion of sustainability-related investments?

**Asset allocation** describes the share of investments in specific assets.

### ● **What was the asset allocation?**

The Manager and the Sub-Investment Manager calculated the proportion of environmentally and/or socially aligned investments in the Portfolio by reference to the proportion of issuers in the Portfolio: i) that held either an NB ESG Quotient rating or a third-party equivalent ESG rating that was used as part of the portfolio construction and investment management process of the Portfolio; and/or ii) with whom the Manager and/or the Sub-Investment Manager had engaged directly. This calculation was based on a mark-to-market assessment of the Portfolio and may rely on incomplete or inaccurate issuer or third party data. For the 2022 reference period only, this calculation is based on the Portfolio's holdings as at 31 December 2022, being the only quarter end in the reference period that followed the publication of the Portfolio's SFDR Annex detailing its planned asset allocation. For all subsequent reference periods, this calculation will be based on the average of the four quarter ends.

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

***In which economic sectors were the investments made?***

**Data as at 31 December 2022**

<b>Economic Sector – NACE</b>	<b>% Assets</b>
B - Mining and quarrying	7.33%
C - Manufacturing	6.11%
D - Electricity, gas, steam, and air conditioning supply	2.86%
E - Water supply; sewerage; waste management and remediation activities	0.00%
F - Construction	0.11%
G - Wholesale and retail trade; repair of motor vehicles and motorcycles	1.32%
H - Transporting and storage	3.41%
I - Accommodation and food service activities	0.00%
J - Information and communication	0.29%
K - Financial and insurance activities	12.27%
L - Real estate activities	0.03%
N - Administrative and support service activities	0.25%
O - Public administration and defense; compulsory social security	63.37%
R - Arts, entertainment, and recreation	0.00%
U - Activities of extraterritorial organisations and bodies	1.67%
None	0.96%

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

- **Transitional activities are** activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

## To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The analysis and disclosure requirements introduced by the EU Taxonomy are very detailed and compliance with them requires the availability of multiple, specific data points in respect of each investment which the Portfolio made. The Manager and the Sub-Investment Manager cannot confirm that the Portfolio invested in any investments that qualified as environmentally sustainable for the purposes of the EU Taxonomy. Disclosures and reporting on Taxonomy alignment will develop as the EU framework evolves and data is made available by issuers. The Manager and the Sub-Investment Manager will keep the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy under active review as data availability and quality improves.

### ● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?

Yes:

In fossil gas

In nuclear energy

No

---

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

● **What was the share of investments made in transitional and enabling activities?**

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments.

### **What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?**

N/A – the Portfolio did not commit to holding sustainable investments.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

### **What was the share of socially sustainable investments?**

N/A – the Portfolio did not commit to holding sustainable investments.

### **What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?**

“Other” included the remaining investments of the Portfolio (including but not limited to any derivatives or any security collateralized by a pool of similar assets or receivables listed in the Supplement for the Portfolio) which were neither aligned with the environmental or social characteristics, nor qualified as sustainable investments.

The “Other” section in the Portfolio was held for a number of reasons that the Manager and the Sub-Investment Manager felt was beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover.

As noted above, the Portfolio was invested in compliance with ESG exclusion policies, on a continuous basis. This ensured that investments made by the Portfolio sought to align with international environmental and social safeguards such as the UNGC Principles, UNGPs, OECD Guidelines and ILO Standards.

The Manager and the Sub-Investment Manager believe that these policies prevented investment in issuers that most egregiously violated environmental and/or social minimum standards and ensured that the Portfolio could successfully promote its environmental and social characteristics.

The above steps ensured that robust environmental and social safeguards were in place.

## What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Portfolio was managed in-line with the investment objective and the following actions were taken:

### I. Integrating proprietary ESG analysis:

The NB ESG Quotient ratings were generated for issuers in the Portfolio. The NB ESG Quotient rating for issuers was utilised to help to better identify risks and opportunities in the overall credit and value assessment.

The NB ESG Quotient was a key component of the internal credit ratings and helped to identify business risks (including ESG risks), which would cause deterioration in an issuer's credit profile. Internal credit ratings can be notched up or down based on the NB ESG Quotient rating, and this was monitored by the Manager and the Sub-Investment Manager as an important component of the investment process for the Portfolio.

By integrating the investment team's proprietary ESG analysis (the NB ESG Quotient) into their internal credit ratings, there was a direct link between their analysis of material ESG characteristics and portfolio construction activities across their strategy. Issuers with a favourable and/or an improving NB ESG Quotient rating had a higher chance of ending up in the Portfolio. Issuers with a poor NB ESG Quotient rating especially where these were not being addressed by that issuer, were more likely to be removed from the investment universe or divested from the Portfolio.

### II. Engagement:

The Manager and the Sub-Investment Manager engaged with issuers through a robust ESG engagement program. They sought to prioritise constructive engagements and sought to engage on topics (including ESG topics) they determined to be financially material for the relevant issuer. The Manager and the Sub-Investment Manager viewed this engagement with issuers, as an important part of its investment process. Progress on engagement was tracked centrally in the Manager and the Sub-Investment Manager's engagement tracker.

### III. ESG sectoral exclusion policies:

To ensure that the environmental and social characteristics promoted by the Portfolio were attained, the Portfolio applied the ESG exclusion policies referenced above, which placed limitations on the investable universe.

## How did this financial product perform compared to the reference benchmark?

N/A – The Portfolio's benchmark has not been designated as a reference benchmark. Therefore, it is not consistent with the environmental or social characteristics promoted by the Portfolio.

- ***How does the reference benchmark differ from a broad market index?***  
N/A
- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***  
N/A
- ***How did this financial product perform compared with the reference benchmark?***  
N/A
- ***How did this financial product perform compared with the broad market index?***  
N/A

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

---

**Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852**

**Product name:** Neuberger Berman Emerging Market Debt Blend Fund (the “Portfolio”)

**Legal entity identifier:** 549300JASQ1JIDYO8X22

## Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?	
<input checked="" type="radio"/> <input checked="" type="radio"/> <input type="radio"/> <b>Yes</b>	<input checked="" type="radio"/> <input type="radio"/> <input checked="" type="checkbox"/> <b>No</b>
<input type="checkbox"/> It made <b>sustainable investments with an environmental objective</b> : ____% <ul style="list-style-type: none"> <li><input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy</li> <li><input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</li> </ul> <input type="checkbox"/> It made <b>sustainable investments with a social objective</b> : ____%	<input type="checkbox"/> It <b>promoted Environmental/Social (E/S) characteristics</b> and while it did not have as its objective a sustainable investment, it had a proportion of ____% of sustainable investments <ul style="list-style-type: none"> <li><input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy</li> <li><input type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</li> <li><input type="checkbox"/> with a social objective</li> </ul> <input checked="" type="checkbox"/> It promoted E/S characteristics, but <b>did not make any sustainable investments</b>

## To what extent were the environmental and/or social characteristics promoted by this financial product met?

The following environmental and social characteristics were promoted by the Portfolio for sovereign issuers:

- **Environmental Characteristics:** sovereign energy efficiency; climate change adaptation; deforestation; greenhouse gas (“GHG”) emissions; air and household pollution; and unsafe sanitation.
- **Social Characteristics:** progress towards UN Sustainable Development Goals (“SDGs”); health and education levels; regulatory quality; political stability and freedoms; gender equality; and research & development.

The following environmental and social characteristics were promoted by the Portfolio for corporate issuers:

- **Environmental Characteristics:** biodiversity and land usage; carbon emissions; opportunities in clean technologies; water stress; toxic emissions & waste; financing environmental impact; product carbon footprint; environmental policy; environmental management system; GHG reduction programme; green procurement policy; and non-GHG air emissions programmes.
- **Social Characteristics:** health & safety; human capital development; labour management; privacy & data security; product safety & quality; financial products safety; discrimination policy; community involvement programmes; diversity programmes; and human rights policy.

Performance in relation to these environmental and social characteristics was measured through the NB ESG Quotient, and is reported, in aggregate, below.

### ● How did the sustainability indicators perform?

As part of the investment process, the Manager and the Sub-Investment Manager considered a variety of sustainability indicators to measure the environmental and/or social characteristics promoted by the Portfolio. These sustainability indicators are listed below:

1. The NB ESG Quotient:

The proprietary Neuberger Berman ESG rating system (the “NB ESG Quotient”), is built around the concept of sector specific ESG risk and opportunity, and produced an overall ESG rating for issuers by assessing them against certain ESG metrics.

The NB ESG Quotient assigned weightings to environmental, social and governance characteristics for each sector to derive the NB ESG Quotient rating for issuers. The Manager and the Sub-Investment Manager used the NB ESG Quotient to promote the environmental and social characteristics listed by prioritising investment in securities issued by issuers with a relatively favourable and/or an improving NB ESG Quotient rating. Pursuant to this, the Manager and the Sub-Investment Manager limited exposure to issuers with the poorest NB ESG Quotient rating unless there was a reasonable expectation that the NB ESG Quotient rating would improve over time.

31 December 2022	Rating	Combined coverage
NB ESG Quotient	54	95%
Third-party Data	4.6	

With regards to the NB ESG Quotient rating, a rating between 1 – 100 is used where 1 is the lowest rating and 100 is the highest rating. This Portfolio does not have a minimum NB ESG Quotient rating. The average NB ESG Quotient rating is a weighted average and is not a rating of the Portfolio strategy itself.

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

Third-party data was also used to measure the environmental and social characteristics promoted by the Portfolio. The third-party data ratings range from 0-10, with 0 being the lowest rating and 10 being the highest rating.

2. ESG exclusion policies:

To ensure that the environmental or social characteristics promoted by the Portfolio were attained, the Portfolio did not invest in securities issued by issuers whose activities breached, or were not consistent with, the Neuberger Berman Controversial Weapons Policy and the Neuberger Berman Thermal Coal Involvement Policy. The Portfolio is phasing out its exposure to thermal coal and prohibited investment in securities issued by issuers that derived more than 10% of revenue from thermal coal mining or were expanding new thermal coal power generation, as determined by internal screens. The Portfolio also prohibited investments in issuers in the power generation industry that used thermal coal as an energy source for more than 95% of their installed power generation capacity, were expanding into new thermal coal power generation, or whose expansionary capital expenditure budgets did not include a minimum threshold for non-coal investments, as determined by internal screens. From 6 April 2022 onwards, investments held by the Portfolio did not invest in securities issued by issuers whose activities had been identified as breaching the Neuberger Berman Global Standards Policy which excluded identified violators of (i) the United Nations Global Compact Principles ("**UNGC Principles**"), (ii) the OECD Guidelines for Multinational Enterprises ("**OECD Guidelines**"), (iii) the United Nations Guiding Principles on Business and Human Rights ("**UNGPs**") and (iv) the International Labour Standards ("**ILO Standards**"). In addition, the Portfolio excluded securities issued by issuers which were involved in direct child labour, in the tobacco industry, as well as certain issuers with significant exposure to oil sands.

When applying ESG exclusions to the Portfolio, the Manager and the Sub-Investment Manager used third-party data to identify issuers in breach of the ESG exclusions listed above. Where possible, the Manager and the Sub-Investment Manager sought to overlay this third-party data with qualitative expertise from their research analysts to establish a current and holistic picture of the issuer. The Manager and the Sub-Investment Manager discussed and debated the differences between the violators identified by the third-party data and those identified as a result of their research, which drew upon data from the NB ESG Quotient and direct engagements with the issuer.

● ***...and compared to previous periods?***

N/A – this is the first reference period.

● ***What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?***

N/A - the Portfolio did not commit to holding sustainable investments.

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

**How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

N/A - the Portfolio did not commit to holding sustainable investments.

*How were the indicators for adverse impacts on sustainability factors taken into account?*

N/A - the Portfolio did not commit to holding sustainable investments.

*Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:*

The Portfolio did not commit to holding sustainable investments, however from 6 April 2022 onwards, the Manager and the Sub-Investment Manager did not invest in issuers whose activities had been identified as breaching the OECD Guidelines, UNGC Principles, ILO Standards and UNGPs, captured through the Neuberger Berman Global Standards Policy.

*The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.*

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments

**How did this financial product consider principal adverse impacts on sustainability factors?**

A selection of the principal adverse impact indicators were considered directly (e.g. through the ESG exclusion policies listed above) and/or indirectly (e.g. as part of the Manager’s and the Sub-Investment Manager’s assessment of issuers) throughout the 2022 reference period.

From 28 November 2022 onwards, the Manager and the Sub-Investment Manager considered the following principal adverse impacts with respect to the Portfolio, namely: GHG intensity and investee countries subject to social violations (the “**Sovereign PAIs**”) for the sovereign issuers, and GHG emissions, carbon footprint, GHG intensity, fossil fuel exposure, board gender diversity, UNGC Principles & OECD Guidelines violations and controversial weapons for the corporate issuers (together the “**Product Level PAIs**”).

Consideration of the Product Level PAIs was limited by the availability (in the Manager’s and the Sub-Investment Manager’s subjective view) of adequate, reliable and verifiable data coverage. The

Manager and the Sub-Investment Manager utilised third-party data and proxy data along with internal research to consider the Product Level PAIs.

Consideration of the Product Level PAIs by the Manager and the Sub-Investment Manager was through a combination of:

- Monitoring the Portfolio, in particular where it fell below the quantitative and qualitative tolerance thresholds set for each Product Level PAI by the Manager and the Sub-Investment Manager;
- Stewardship and/or setting engagement objectives where the Portfolio fell below the quantitative and qualitative tolerance thresholds set for a Product Level PAI; and
- Application of the ESG exclusion policies referenced above, which included consideration of several of the Product Level PAIs.

### What were the top investments of this financial product?

The Manager and the Sub-Investment Manager have used the EU statistical classification of economic activities (“NACE”) economic sector breakdown to identify the economic sectors of the Portfolio’s top15 investments. The following data is as at 31 December 2022.

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 1 January 2022 - 31 December 2022

Largest investments	Sector	% Assets	Country
SOUTH AFRICA (REPUBLIC OF)	O - Public administration and defence; compulsory social security	3.0%	South Africa
NB CHINA BOND FD USD ZA HEDGED	N/A	2.9%	China
POLAND GOVERNMENT BOND	O - Public administration and defence; compulsory social security	2.4%	Poland
MEX BONOS DE DESARROLLO	O - Public administration and defence; compulsory social security	1.9%	Mexico
SOUTH AFRICA (REPUBLIC OF)	O - Public administration and defence; compulsory social security	1.4%	South Africa
TITULOS DE TESORERIA B	O - Public administration and defence; compulsory social security	1.1%	Colombia
POLAND GOVERNMENT BOND	O - Public administration and defence; compulsory social security	1.0%	Poland
THAILAND KINGDOM OF (GOVERNMENT)	O - Public administration and defence; compulsory social security	0.9%	Thailand
CZECH REPUBLIC RegS	O - Public administration and defence; compulsory social security	0.9%	Czech Republic
INDONESIA (REPUBLIC OF)	O - Public administration and defence; compulsory social security	0.8%	Indonesia
ROMANIA (REPUBLIC OF)	O - Public administration and defence; compulsory social security	0.8%	Romania
SOUTH AFRICA (REPUBLIC OF)	O - Public administration and defence; compulsory social security	0.8%	South Africa
MEXICO (UNITED MEXICAN STATES) (GOVERNMENT)	O - Public administration and defence; compulsory social security	0.8%	Mexico
MALAYSIA GOVERNMENT INVESTMENT ISS	O - Public administration and defence; compulsory social security	0.7%	Malaysia
FONDO MIVIVIENDA SA RegS	O - Public administration and defence; compulsory social security	0.7%	Peru

## What was the proportion of sustainability-related investments?

**Asset allocation** describes the share of investments in specific assets.

### *What was the asset allocation?*

The Manager and the Sub-Investment Manager calculated the proportion of environmentally and/or socially aligned investments in the Portfolio by reference to the proportion of issuers in the Portfolio: i) that held either an NB ESG Quotient rating or a third-party equivalent ESG rating that was used as part of the portfolio construction and investment management process of the Portfolio; and/or ii) with whom the Manager and the Sub-Investment Manager had engaged directly. This calculation was based on a mark-to-market assessment of the Portfolio and may rely on incomplete or inaccurate issuer or third-party data. For the 2022 reference period only, this calculation is based on the Portfolio's holdings as at 31 December 2022, being the only quarter end in the reference period that followed the publication of the Portfolio's SFDR Annex detailing its planned asset allocation. For all subsequent reference periods, this calculation will be based on the average of the four quarter ends.

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

***In which economic sectors were the investments made?***

**Data as at 31 December 2022**

<b>Economic Sector – NACE</b>	<b>% Assets</b>
B - Mining and quarrying	4.61%
C - Manufacturing	4.89%
D - Electricity, gas, steam, and air conditioning supply	3.68%
F - Construction	0.39%
G - Wholesale and retail trade; repair of motor vehicles and motorcycles	0.76%
H - Transporting and storage	1.61%
I - Accommodation and food service activities	0.69%
J - Information and communication	1.23%
K - Financial and insurance activities	16.39%
L - Real estate activities	0.11%
N - Administrative and support service activities	0.76%
O - Public administration and defense; compulsory social security	63.27%
R - Arts, entertainment, and recreation	0.17%
U - Activities of extraterritorial organisations and bodies	0.38%
None	1.05%

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

- **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

## To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The analysis and disclosure requirements introduced by the EU Taxonomy are very detailed and compliance with them requires the availability of multiple, specific data points in respect of each investment which the Portfolio made. The Manager and the Sub-Investment Manager cannot confirm that the Portfolio invested in any investments that qualified as environmentally sustainable for the purposes of the EU Taxonomy. Disclosures and reporting on Taxonomy alignment will develop as the EU framework evolves and data is made available by issuers. The Manager and the Sub-Investment Manager will keep the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy under active review as data availability and quality improves.

### ● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?

Yes:

In fossil gas  In nuclear energy

No

---

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

● **What was the share of investments made in transitional and enabling activities?**

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments.

### **What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?**

N/A – the Portfolio did not commit to holding sustainable investments.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

### **What was the share of socially sustainable investments?**

N/A – the Portfolio did not commit to holding sustainable investments.

### **What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?**

“Other” included the remaining investments of the Portfolio (including but not limited to any derivatives or any security collateralized by a pool of similar assets or receivables listed in the Supplement for the Portfolio) which were neither aligned with the environmental or social characteristics, nor qualified as sustainable investments.

The “Other” section in the Portfolio was held for a number of reasons that the Manager and the Sub-Investment Manager felt was beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover.

As noted above, the Portfolio was invested in compliance with ESG exclusion policies, on a continuous basis. This ensured that investments made by the Portfolio sought to align with international environmental and social safeguards such as the UNGC Principles, UNGPs, OECD Guidelines and ILO Standards.

The Manager and the Sub-Investment Manager believe that these policies prevented investment in issuers that most egregiously violated environmental and/or social minimum standards and ensured that the Portfolio could successfully promote its environmental and social characteristics.

The above steps ensured that robust environmental and social safeguards were in place.

## What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Portfolio was managed in-line with the investment objective and the following actions were taken:

### I. Integrating proprietary ESG analysis:

The NB ESG Quotient ratings were generated for issuers in the Portfolio. The NB ESG Quotient rating for issuers was utilised to help to better identify risks and opportunities in the overall credit and value assessment.

The NB ESG Quotient was a key component of the internal credit ratings and helped to identify business risks (including ESG risks), which would cause deterioration in an issuer's credit profile. Internal credit ratings can be notched up or down based on the NB ESG Quotient rating, and this was monitored by the Manager and the Sub-Investment Manager as an important component of the investment process for the Portfolio.

By integrating the investment team's proprietary ESG analysis (the NB ESG Quotient) into their internal credit ratings, there was a direct link between their analysis of material ESG characteristics and portfolio construction activities across their strategy.

Issuers with a favourable and/or an improving NB ESG Quotient rating had a higher chance of ending up in the Portfolio. Issuers with a poor NB ESG Quotient rating especially where these were not being addressed by that issuer, were more likely to be removed from the investment universe or divested from the Portfolio.

### II. Engagement:

The Manager and the Sub-Investment Manager engaged with issuers through a robust ESG engagement program. They sought to prioritise constructive engagements and sought to engage on topics (including ESG topics) they determined to be financially material for the relevant issuer. The Manager and the Sub-Investment Manager viewed this engagement with issuers, as an important part of its investment process. Progress on engagement was tracked centrally in the Manager and the Sub-Investment Manager's engagement tracker.

### III. ESG sectoral exclusion policies:

To ensure that the environmental and social characteristics promoted by the Portfolio were attained, the Portfolio applied the ESG exclusion policies referenced above, which placed limitations on the investable universe.

## How did this financial product perform compared to the reference benchmark?

N/A – The Portfolio's benchmark has not been designated as a reference benchmark. Therefore, it is not consistent with the environmental or social characteristics promoted by the Portfolio.

- ***How does the reference benchmark differ from a broad market index?***  
N/A

## Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?	
<input checked="" type="radio"/> <input checked="" type="radio"/> <input type="checkbox"/> <b>Yes</b>	<input checked="" type="radio"/> <input type="radio"/> <input checked="" type="checkbox"/> <b>No</b>
<input type="checkbox"/> It made <b>sustainable investments with an environmental objective:</b> ___% <ul style="list-style-type: none"> <li><input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy</li> <li><input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</li> </ul>	<input type="checkbox"/> It <b>promoted Environmental/Social (E/S) characteristics</b> and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments <ul style="list-style-type: none"> <li><input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy</li> <li><input type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</li> <li><input type="checkbox"/> with a social objective</li> </ul>
<input type="checkbox"/> It made <b>sustainable investments with a social objective:</b> ___%	<input checked="" type="checkbox"/> It promoted E/S characteristics, but <b>did not make any sustainable investments</b>

## To what extent were the environmental and/or social characteristics promoted by this financial product met?

The following environmental and social characteristics were promoted by the Portfolio for corporates:

- **Environmental Characteristics:** biodiversity and land usage; carbon emissions; opportunities in clean technologies; water stress; toxic emissions & waste; financing environmental impact; product carbon footprint; environmental policy; environmental management system; greenhouse gas (“GHG”) reduction programme; green procurement policy; and non-GHG air emissions programmes.

The Portfolio achieved a carbon emission intensity level that was at least 10% lower than the broader Asia debt investment universe, represented by the JP Morgan Asian Credit Index (Total Return, USD) (the “Benchmark”).

The Portfolio is actively managed and does not intend to track the Benchmark which is included here for performance comparison purposes. For the 2022 reference period only, this calculation was based on an average of data from 30 September 2022 and 31 December 2022, being the only two quarter ends in the reference period that followed the introduction of this commitment (which was introduced on 19 August 2022). For all subsequent reference periods, this calculation will be based on the average of the four quarter ends.

As at 31 December 2022, the Portfolio achieved a higher ESG score as compared to the broader Asia debt investment universe, represented by the Benchmark based on third-party ESG scores from an established external provider.

- **Social Characteristics:** health & safety; human capital development; labour management; privacy & data security; product safety & quality; financial products safety; discrimination policy; community involvement programmes; diversity programmes; and human rights policy.

Performance in relation to these environmental and social characteristics was measured through the NB ESG Quotient, and is reported, in aggregate, below.

### ● **How did the sustainability indicators perform?**

As part of the investment process, the Manager and the Sub-Investment Manager considered a variety of sustainability indicators to measure the environmental and/or social characteristics promoted by the Portfolio. These sustainability indicators are listed below:

#### 1. The NB ESG Quotient:

The proprietary Neuberger Berman ESG rating system (the “NB ESG Quotient”), is built around the concept of sector specific ESG risk and opportunity, and produced an overall ESG rating for issuers by assessing them against certain ESG metrics.

The NB ESG Quotient assigned weightings to environmental, social and governance characteristics for each sector to derive the NB ESG Quotient rating for issuers. The Manager and the Sub-Investment Manager used the NB ESG Quotient to promote the environmental and social characteristics listed by prioritising investment in securities issued by issuers with a relatively favourable and/or an improving NB ESG Quotient rating. Pursuant to this, the Manager and the Sub-Investment Manager limited exposure to issuers with the poorest NB ESG Quotient rating unless there was a reasonable expectation that the NB ESG Quotient rating would improve over time.

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

31 December 2022	Rating	Combined coverage
NB ESG Quotient	59	97%
Third-party Data	5.6	

With regards to the NB ESG Quotient rating, a rating between 1 – 100 is used where 1 is the lowest rating and 100 is the highest rating. This Portfolio does not have a minimum NB ESG Quotient rating. The average NB ESG Quotient rating is a weighted average and is not a rating of the Portfolio strategy itself.

Third-party data was also used to measure the environmental and social characteristics promoted by the Portfolio. The third-party data ratings range from 0-10, with 0 being the lowest rating and 10 being the highest rating.

2. ESG exclusion policies:

To ensure that the environmental or social characteristics promoted by the Portfolio were attained, the Portfolio did not invest in securities issued by issuers whose activities breached, or were not consistent with, the Neuberger Berman Controversial Weapons Policy and the Neuberger Berman Thermal Coal Involvement Policy. The Portfolio is phasing out its exposure to thermal coal and prohibited investment in securities issued by issuers that derived more than 10% of revenue from thermal coal mining or were expanding new thermal coal power generation, as determined by internal screens. The Portfolio also prohibited investments in issuers in the power generation industry that used thermal coal as an energy source for more than 95% of their installed power generation capacity, were expanding into new thermal coal power generation, or whose expansionary capital expenditure budgets did not include a minimum threshold for non-coal investments, as determined by internal screens. In addition, from 19 August 2022 onwards, the Portfolio excluded securities issued by issuers which were involved in direct child labour, in the tobacco industry, as well as certain issuers with significant revenues from palm oil, adult entertainment, and nuclear power generation. Furthermore, from 6 April 2022 onwards, investments held by the Portfolio did not invest in issuers whose activities had been identified as breaching the Neuberger Berman Global Standards Policy which excluded identified violators of (i) the United Nations Global Compact Principles (“**UNGC Principles**”), (ii) the OECD Guidelines for Multinational Enterprises (“**OECD Guidelines**”), (iii) the United Nations Guiding Principles on Business and Human Rights (“**UNGPs**”) and (iv) the International Labour Standards (“**ILO Standards**”).

When applying ESG exclusions to the Portfolio, the Manager and the Sub-Investment Manager used third-party data to identify issuers in breach of the ESG exclusions listed above. Where possible, the Manager and the Sub-Investment Manager sought to overlay this third-party data with qualitative expertise from their research analysts to establish a current and holistic picture of the issuer. The Manager and the Sub-Investment Manager discussed and debated the differences between the violators identified by the third-party data and those identified as a result of their research, which drew upon data from the NB ESG Quotient and direct engagements with the issuer.

● ***...and compared to previous periods?***

N/A – this is the first reference period.

● ***What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?***

N/A - the Portfolio did not commit to holding sustainable investments.

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

***How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?***

N/A - the Portfolio did not commit to holding sustainable investments.

*How were the indicators for adverse impacts on sustainability factors taken into account?*

N/A - the Portfolio did not commit to holding sustainable investments.

*Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:*

The Portfolio did not commit to holding sustainable investments, however from 6 April 2022 onwards, the Manager and the Sub-Investment Manager did not invest in issuers whose activities had been identified as breaching the OECD Guidelines, UNGC Principles, ILO Standards and UNGPs, captured through the Neuberger Berman Global Standards Policy.

*The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.*

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments.

## How did this financial product consider principal adverse impacts on sustainability factors?

A selection of the principal adverse impact indicators were considered directly (e.g. through the ESG exclusion policies listed above) and/or indirectly (e.g. as part of the Manager's and the Sub-Investment Manager's assessment of issuers) throughout the 2022 reference period.

From 28 November 2022 onwards, the Manager and the Sub-Investment Manager considered the following principal adverse impacts, namely: GHG emissions, carbon footprint, GHG intensity, fossil fuel exposure, board gender diversity, UNGC Principles & OECD Guidelines violations and controversial weapons (the "**Product Level PAIs**").

Consideration of the Product Level PAIs was limited by the availability (in the Manager's and the Sub-Investment Manager's subjective view) of adequate, reliable and verifiable data coverage. The Manager and the Sub-Investment Manager utilised third-party data and proxy data along with internal research to consider the Product Level PAIs.

Consideration of the Product Level PAIs by the Manager and the Sub-Investment Manager was through a combination of:

- Monitoring the Portfolio, in particular where it fell below the quantitative and qualitative tolerance thresholds set for each Product Level PAI by the Manager and the Sub-Investment Manager;
- Stewardship and/or setting engagement objectives where the Portfolio fell below the quantitative and qualitative tolerance thresholds set for a Product Level PAI; and
- Application of the ESG exclusion policies referenced above, which included consideration of several of the Product Level PAIs.

## What were the top investments of this financial product?

The Manager and the Sub-Investment Manager have used the EU statistical classification of economic activities ("**NACE**") economic sector breakdown to identify the economic sectors of the Portfolio's top 15 investments. The following data is as at 31 December 2022.

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 1 January 2022 - 31 December 2022

Largest investments	Sector	% Assets	Country
INDONESIA REPUBLIC OF	O - Public administration and defence; compulsory social security	2.9%	Indonesia
INDONESIA (REPUBLIC OF) RegS	O - Public administration and defence; compulsory social security	2.1%	Indonesia
TSMC ARIZONA CORP	C - Manufacturing	1.5%	Taiwan (Republic of China)
MINMETALS BOUNTEOUS FINANCE (BVI) RegS	K - Financial and insurance activities	1.4%	China
CMB INTERNATIONAL LEASING MANAGEME MTN	K - Financial and insurance activities	1.3%	China
LENOVO GROUP LTD RegS	C - Manufacturing	1.3%	China
SINOPEC GROUP OVERSEAS DEVELOPMENT	K - Financial and insurance activities	1.3%	China
HUARONG FINANCE II CO LTD MTN RegS	K - Financial and insurance activities	1.1%	China
RELIANCE INDUSTRIES LTD RegS	C - Manufacturing	1.0%	India
AIA GROUP LTD RegS	K - Financial and insurance activities	1.0%	Hong Kong
CHINA RESOURCES LAND LTD MTN RegS	F - Construction	0.9%	China
PERTAMINA PT RegS	G - Wholesale and retail trade; repair of motor vehicles and motorcycles	0.9%	Indonesia
SK TELECOM CO LTD RegS	J - Information and communication	0.9%	Korea (South), Republic of
CHINA CONSTRUCTION BANK CORP RegS	K - Financial and insurance activities	0.9%	China
INDONESIA (REPUBLIC OF) RegS	O - Public administration and defence; compulsory social security	0.9%	Indonesia

## What was the proportion of sustainability-related investments?

**Asset allocation** describes the share of investments in specific assets.

### ● **What was the asset allocation?**

The Manager and the Sub-Investment Manager calculated the proportion of environmentally and/or socially aligned investments in the Portfolio by reference to the proportion of issuers in the Portfolio: i) that held either an NB ESG Quotient rating or a third-party equivalent ESG rating that was used as part of the portfolio construction and investment management process of the Portfolio; and/or ii) with whom the Manager and the Sub-Investment Manager had engaged directly. This calculation was based on a mark-to-market assessment of the Portfolio and may rely on incomplete or inaccurate issuer or third-party data. For the 2022 reference period only, this calculation is based on the Portfolio's holdings as at 31 December 2022, being the only quarter end in the reference period that followed the publication of the Portfolio's SFDR Annex detailing its planned asset allocation. For all subsequent reference periods, this calculation will be based on the average of the four quarter ends.

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

***In which economic sectors were the investments made?***

**Data as at 31 December 2022**

<b>Economic Sector – NACE</b>	<b>% Assets</b>
B - Mining and quarrying	1.71%
C - Manufacturing	9.63%
D - Electricity, gas, steam, and air conditioning supply	5.91%
F - Construction	4.54%
G - Wholesale and retail trade; repair of motor vehicles and motorcycles	4.38%
H - Transporting and storage	1.50%
I - Accommodation and food service activities	0.94%
J - Information and communication	4.36%
K - Financial and insurance activities	53.18%
N - Administrative and support service activities	3.45%
O - Public administration and defence; compulsory social security	7.78%
R - Arts, entertainment and recreation	0.84%
None	1.77%

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

- **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

## To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The analysis and disclosure requirements introduced by the EU Taxonomy are very detailed and compliance with them requires the availability of multiple, specific data points in respect of each investment which the Portfolio made. The Manager and the Sub-Investment Manager cannot confirm that the Portfolio invested in any investments that qualified as environmentally sustainable for the purposes of the EU Taxonomy. Disclosures and reporting on Taxonomy alignment will develop as the EU framework evolves and data is made available by issuers. The Manager and the Sub-Investment Manager will keep the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy under active review as data availability and quality improves.

### ● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?

Yes:

In fossil gas       In nuclear energy

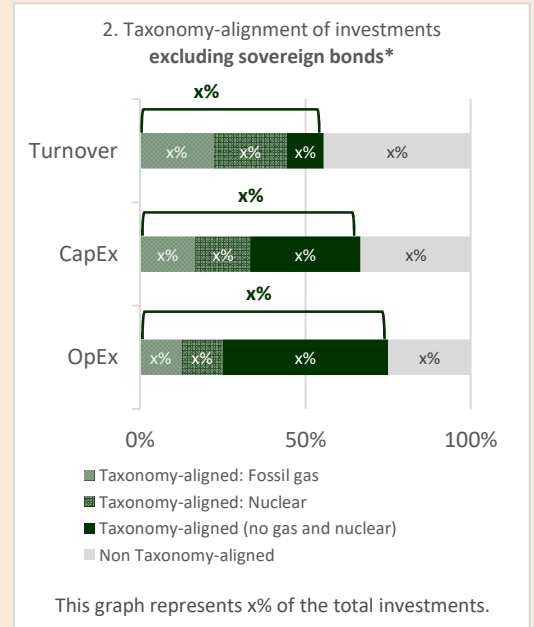

No

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

- **What was the share of investments made in transitional and enabling activities?**  
N/A – the Portfolio did not commit to holding Taxonomy-aligned investments.
- **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**  
N/A – the Portfolio did not commit to holding Taxonomy-aligned investments.

### **What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?**

N/A – the Portfolio did not commit to holding sustainable investments.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

### **What was the share of socially sustainable investments?**

N/A – the Portfolio did not commit to holding sustainable investments.

### **What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?**

“Other” included the remaining investments of the Portfolio (including but not limited to any derivatives or any security collateralized by a pool of similar assets or receivables listed in the Supplement for the Portfolio) which were neither aligned with the environmental or social characteristics, nor qualified as sustainable investments.

The “Other” section in the Portfolio was held for a number of reasons that the Manager and the Sub-Investment Manager felt was beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover.

As noted above, the Portfolio was invested in compliance with ESG exclusion policies, on a continuous basis. This ensured that investments made by the Portfolio sought to align with international environmental and social safeguards such as the UNGC Principles, UNGPs, OECD Guidelines and ILO Standards.

The Manager and the Sub-Investment Manager believe that these policies prevented investment in issuers that most egregiously violated environmental and/or social minimum standards and ensured that the Portfolio could successfully promote its environmental and social characteristics.

The above steps ensured that robust environmental and social safeguards were in place.

## What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Portfolio was managed in-line with the investment objective and the following actions were taken:

### I. Integrating proprietary ESG analysis:

The NB ESG Quotient ratings were generated for issuers in the Portfolio. The NB ESG Quotient rating for issuers was utilised to help to better identify risks and opportunities in the overall credit and value assessment.

The NB ESG Quotient was a key component of the internal credit ratings and helped to identify business risks (including ESG risks), which would cause deterioration in an issuer's credit profile. Internal credit ratings can be notched up or down based on the NB ESG Quotient rating, and this was monitored by the Manager and the Sub-Investment Manager as an important component of the investment process for the Portfolio.

By integrating the investment team's proprietary ESG analysis (the NB ESG Quotient) into their internal credit ratings, there was a direct link between their analysis of material ESG characteristics and portfolio construction activities across their strategy. Issuers with a favourable and/or an improving NB ESG Quotient rating had a higher chance of ending up in the Portfolio. Issuers with a poor NB ESG Quotient rating especially where these were not being addressed by that issuer, were more likely to be removed from the investment universe or divested from the Portfolio.

### II. Engagement:

The Manager and the Sub-Investment Manager engaged with issuers through a robust ESG engagement program. They sought to prioritise constructive engagements and sought to engage on topics (including ESG topics) they determined to be financially material for the relevant issuer. The Manager and the Sub-Investment Manager viewed this engagement with issuers, as an important part of its investment process. Progress on engagement was tracked centrally in the Manager and the Sub-Investment Manager's engagement tracker.

### III. ESG sectoral exclusion policies:

To ensure that the environmental and social characteristics promoted by the Portfolio were attained, the Portfolio applied the ESG exclusion policies referenced above, which placed limitations on the investable universe.

## How did this financial product perform compared to the reference benchmark?

N/A – The Portfolio's benchmark has not been designated as a reference benchmark. Therefore, it is not consistent with the environmental or social characteristics promoted by the Portfolio.

### *How does the reference benchmark differ from a broad market index?*

N/A

---

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***  
N/A
  - ***How did this financial product perform compared with the reference benchmark?***  
N/A
  - ***How did this financial product perform compared with the broad market index?***  
N/A
-

**Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852**

**Product name:** Neuberger Berman Short Duration Emerging Market Debt Fund (the “Portfolio”)

**Legal entity identifier:** 549300J30SXW5866TW70

## Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?	
<input checked="" type="radio"/> <input checked="" type="radio"/> <input type="checkbox"/> <b>Yes</b>	<input checked="" type="radio"/> <input type="radio"/> <input checked="" type="checkbox"/> <b>No</b>
<input type="checkbox"/> It made <b>sustainable investments with an environmental objective: ___%</b> <ul style="list-style-type: none"> <li><input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy</li> <li><input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</li> </ul>	<input checked="" type="checkbox"/> It <b>promoted Environmental/Social (E/S) characteristics</b> and while it did not have as its objective a sustainable investment, it had a proportion of 28.08%* of sustainable investments <ul style="list-style-type: none"> <li><input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy</li> <li><input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</li> <li><input checked="" type="checkbox"/> with a social objective</li> </ul>
<input type="checkbox"/> It made <b>sustainable investments with a social objective: ___%</b>	<input type="checkbox"/> It promoted E/S characteristics, but <b>did not make any sustainable investments</b>

\*Please refer to the "What was the proportion of sustainability-related investments?" question below for further detail in respect of the minimum proportion of sustainable investments which promoted the environmental or social characteristics.

## To what extent were the environmental and/or social characteristics promoted by this financial product met?

The following environmental and social characteristics were promoted by the Portfolio for sovereign issuers:

- **Environmental Characteristics:** sovereign energy efficiency; climate change adaptation; deforestation; greenhouse gas (“GHG”) emissions; air and household pollution; and unsafe sanitation.
- **Social Characteristics:** progress towards UN Sustainable Development Goals (“SDGs”); health and education levels; regulatory quality; political stability and freedoms; gender equality; and research & development.

The following environmental and social characteristics were promoted by the Portfolio for corporate issuers:

- **Environmental Characteristics:** biodiversity and land usage; carbon emissions; opportunities in clean technologies; water stress; toxic emissions & waste; financing environmental impact; product carbon footprint; environmental policy; environmental management system; GHG reduction programme; green procurement policy; and non-GHG air emissions programmes.
- **Social Characteristics:** health & safety; human capital development; labour management; privacy & data security; product safety & quality; financial products safety; discrimination policy; community involvement programmes; diversity programmes; and human rights policy.

Performance in relation to these environmental and social characteristics was measured through the NB ESG Quotient, and is reported, in aggregate, below.

## ● How did the sustainability indicators perform?

As part of the investment process, the Manager and the Sub-Investment Manager considered a variety of sustainability indicators to measure the environmental and/or social characteristics promoted by the Portfolio. These sustainability indicators are listed below:

1. The NB ESG Quotient:

The proprietary Neuberger Berman ESG rating system (the “NB ESG Quotient”), is built around the concept of sector specific ESG risk and opportunity, and produced an overall ESG rating for issuers by assessing them against certain ESG metrics.

The NB ESG Quotient assigned weightings to environmental, social and governance characteristics for each sector to derive the NB ESG Quotient rating for issuers. The Manager and the Sub-Investment Manager used the NB ESG Quotient to promote the environmental and social characteristics listed by prioritising investment in securities issued by issuers with a relatively favourable and/or an improving NB ESG Quotient rating. Pursuant to this, the Manager and the Sub-Investment Manager limited exposure to issuers with the poorest NB ESG Quotient rating unless there was a reasonable expectation that the NB ESG Quotient rating would improve over time.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

31 December 2022	Rating	Combined coverage
NB ESG Quotient	55	95%
Third-party Data	4.2	

With regards to the NB ESG Quotient rating, a rating between 1 – 100 is used where 1 is the lowest rating and 100 is the highest rating. This Portfolio does not have a minimum NB ESG Quotient rating. The average NB ESG Quotient rating is a weighted average and is not a rating of the Portfolio strategy itself.

Third-party data was also used to measure the environmental and social characteristics promoted by the Portfolio. The third-party data ratings range from 0-10, with 0 being the lowest rating and 10 being the highest rating.

2. ESG exclusion policies:

To ensure that the environmental or social characteristics promoted by the Portfolio were attained, the Portfolio did not invest in securities issued by issuers whose activities breached, or were not consistent with, the Neuberger Berman Controversial Weapons Policy and the Neuberger Berman Thermal Coal Involvement Policy. The Portfolio is phasing out its exposure to thermal coal and prohibited investment in securities issued by issuers that derived more than 10% of revenue from thermal coal mining or were expanding new thermal coal power generation, as determined by internal screens. The Portfolio also prohibited investments in issuers in the power generation industry that used thermal coal as an energy source for more than 95% of their installed power generation capacity, were expanding into new thermal coal power generation, or whose expansionary capital expenditure budgets did not include a minimum threshold for non-coal investments, as determined by internal screens. Furthermore, from 6 April 2022 onwards, the investments held by the Portfolio did not invest in securities issued by issuers whose activities had been identified as breaching the Neuberger Berman Global Standards Policy which excluded identified violators of (i) the United Nations Global Compact Principles (“**UNGC Principles**”), (ii) the OECD Guidelines for Multinational Enterprises (“**OECD Guidelines**”), (iii) the United Nations Guiding Principles on Business and Human Rights (“**UNGPs**”) and (iv) the International Labour Standards (“**ILO Standards**”). In addition, the Portfolio excluded securities issued by issuers which were involved in direct child labour, in the tobacco industry, as well as certain issuers with significant exposure to oil sands.

When applying ESG exclusions to the Portfolio, the Manager and the Sub-Investment Manager used third-party data to identify issuers in breach of the ESG exclusions listed above. Where possible, the Manager and the Sub-Investment Manager sought to overlay this third-party data with qualitative expertise from their research analysts to establish a current and holistic picture of the issuer. The Manager and the Sub-Investment Manager discussed and debated the differences between the violators identified by the third-party data and those identified as a result of their research, which drew upon data from the NB ESG Quotient and direct engagements with the issuer.

● ***...and compared to previous periods?***

N/A – this is the first reference period.

● ***What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?***

While the Portfolio promoted environmental and social characteristics, this Portfolio did not have a sustainable investment objective. However, the Portfolio held sustainable investments which promoted the environmental & social characteristics listed above.

The consideration of investments made by the Portfolio as sustainable investments was determined by reference to the NB sustainable investment framework. This framework included an assessment as to (i) whether the investment contributes to an environmental and/or social objective, (ii) whether the investment causes significant harm to those objectives (as described below), and (iii) an assessment of an issuers' overall governance rating to determine whether the issuer passes a good governance assessment.

Under this sustainable investment framework, the Manager and the Sub-Investment Manager utilised multiple datapoints that measured the alignment of an issuer's economic activity with environmental or social characteristics.

The Manager and the Sub-Investment Manager screened issuers for controversies, significant harm and violations of minimum safeguards. If the issuers passed this screen, the Manager and the Sub-Investment Manager then proceeded to measure the issuers' environmental or social economic contribution.

For corporate issuers, the Manager and the Sub-Investment Manager measured this in two ways:

- Revenue alignment to the EU taxonomy (if any); and
- Revenue alignment to the UN Sustainable Development Goals (“SDGs”).

Consideration of revenue alignment with the SDGs, in the Manager's and the Sub-Investment Manager's subjective view, was limited by the availability of adequate, reliable and verifiable data coverage. To mitigate instances of poor data coverage, the Manager and the Sub-Investment Manager utilised third-party data and proxy data along with internal research and qualitative analysis as part of NB's sustainable investment framework.

For sovereign issuers, the Manager and the Sub-Investment Manager measured this in the following ways:

- Advancement in climate change adaptation and mitigation; and
- Advancement in achieving the SDGs, with emphasis on life expectancy and education

### ***How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?***

As part of the Manager and the Sub-Investment Manager's sustainable investment framework, investments that caused significant harm to environmental or social objectives were excluded. To determine whether an investment caused significant harm, the Manager and the Sub-Investment Manager considered significant harm with reference to certain principal adverse impact indicators and violations of minimum safeguards.

The Manager and the Sub-Investment Manager considered the following principal adverse impacts indicators when determining whether the sustainable investments that the Portfolio made, did not cause significant harm to any environmental or social sustainable investment objective: GHG emissions; carbon footprint; GHG intensity of issuers; exposure to issuers active in the fossil fuel sector; share of non-renewable energy consumption and production; energy consumption intensity per high impact climate sector; activities negatively affecting biodiversity-sensitive areas; emissions to water; hazardous waste and radioactive waste ratio; violations of UNGC principles and OECD Guidelines; lack of processes and compliance mechanisms to monitor compliance with UNGC Principles and OECD Guidelines; unadjusted gender pay gap, board gender diversity; and exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons) (the “PAIs”) for the corporate issuers and GHG intensity and investee countries subject to social violations (the “Sovereign PAIs”) for the sovereign issuers.

Consideration of the PAIs was limited by the availability (in the Manager's and the Sub-Investment Manager's subjective view) of adequate, reliable and verifiable data coverage. The Manager and the Sub-Investment Manager utilised third-party data and proxy data along with internal research to consider the PAIs.

The Manager and the Sub-Investment Manager also considered violations of minimum safeguards. From 6 April 2022 onwards, the Manager and the Sub-Investment Manager did not invest in issuers whose activities had been identified as breaching the OECD Guidelines,

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

UNGC Principles, ILO Standards and UNGPs, captured through the Neuberger Berman Global Standards Policy.

The combination of all of these factors generated a quantitative validation for “sustainability” which was used to ensure the sustainable investments that the Portfolio made, did not cause significant harm to any environmental or social sustainable objective.

*How were the indicators for adverse impacts on sustainability factors taken into account?*

Consideration of the PAIs by the Manager and the Sub-Investment Manager, when determining whether the sustainable investments that the Portfolio made did not cause significant harm to any environmental or social sustainable investment objective of the Portfolio's sustainable investments, was through a combination of:

- Monitoring issuers which fell below the quantitative and qualitative tolerance thresholds set for each PAI by the Manager and the Sub-Investment Manager;
- Stewardship and/or setting engagement objectives with issuers which fell below the quantitative and qualitative tolerance thresholds set for a PAI by the Manager and the Sub-Investment Manager; and
- Application of the ESG exclusion policies referenced above, which included consideration of several of the PAIs.

*Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:*

From 6 April 2022 onwards, the Manager and the Sub-Investment Manager did not invest in issuers whose activities had been identified as breaching the OECD Guidelines, UNGC Principles, ILO Standards and UNGPs, captured through the Neuberger Berman Global Standards Policy.

*The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.*

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments.

## How did this financial product consider principal adverse impacts on sustainability factors?

A selection of the principal adverse impact indicators were considered directly (e.g. through the ESG exclusion policies listed above) and/or indirectly (e.g. as part of the Manager's and the Sub-Investment Manager's assessment of issuers) throughout the 2022 reference period.

The Manager and the Sub-Investment Manager considered PAIs with respect to the Portfolio in two ways:

1. All PAIs were considered when determining whether sustainable investments that the Portfolio made did not cause significant harm to any environmental or social sustainable investment objective as explained above.
2. From 28 November 2022 onwards, the Manager and the Sub-Investment Manager considered the following principal adverse impacts on sustainability factors with respect to those investments within the Portfolio which promoted environmental or social characteristics, namely: the Sovereign PAIs for the sovereign issuers and GHG emissions, carbon footprint, GHG intensity, fossil fuel exposure, and board gender diversity for the corporate issuers (together the "**Product Level PAIs**").

Consideration of the Product Level PAIs was limited by the availability (in the Manager's and the Sub-Investment Manager's subjective view) of adequate, reliable and verifiable data coverage. The Manager and the Sub-Investment Manager utilised third-party data and proxy data along with internal research to consider the Product Level PAIs.

Consideration of the Product Level PAIs by the Manager and the Sub-Investment Manager was through a combination of:

- Monitoring the Portfolio, in particular where it fell below the quantitative and qualitative tolerance thresholds set for each Product Level PAI by the Manager and the Sub-Investment Manager;
- Stewardship and/or setting engagement objectives where the Portfolio fell below the quantitative and qualitative tolerance thresholds set for a Product Level PAI by the Manager and the Sub-Investment Manager; and
- Application of the ESG exclusion policies referenced above, which included consideration of several of the Product Level PAIs.

## What were the top investments of this financial product?

The Manager and the Sub-Investment Manager have used the EU statistical classification of economic activities (“NACE”) economic sector breakdown to identify the economic sectors of the Portfolio’s top 15 investments. The following data is as at 31 December 2022.

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 1 January 2022 - 31 December 2022

Largest investments	Sector	% Assets	Country
STATE OIL CO OF AZERBAIJAN REPUBLI MTN	B - Mining and quarrying	1.4%	Azerbaijan
NB EURO SHORT TERM ENHANC USD CL Z	N/A	1.4%	Ireland
BRAZIL MINAS SPE RegS	K - Financial and insurance activities	1.3%	Brazil
REPUBLIC OF COLOMBIA	O - Public administration and defence; compulsory social security	1.2%	Colombia
SOUTHERN GAS CORRIDOR CJSC RegS	H - Transporting and storage	1.1%	Azerbaijan
1MDB GLOBAL INVESTMENTS LTD RegS	K - Financial and insurance activities	1.1%	Malaysia
PETROLEOS MEXICANOS	B - Mining and quarrying	1.0%	Mexico
ANGOLA GOVERNMENT BOND RegS	O - Public administration and defence; compulsory social security	1.0%	Angola
QNB FINANCE LTD MTN RegS	K - Financial and insurance activities	0.9%	Qatar
QATAR PETROLEUM RegS	B - Mining and quarrying	0.9%	Qatar
EGYPT (ARAB REPUBLIC OF) MTN RegS	O - Public administration and defence; compulsory social security	0.9%	Egypt
SAUDI ARABIAN OIL CO MTN RegS	B - Mining and quarrying	0.9%	Saudi Arabia
COMISION FEDERAL DE ELECTRICIDAD RegS	D - Electricity, gas, steam and air conditioning supply	0.9%	Mexico
QATAR GOVERNMENT BOND RegS	O - Public administration and defence; compulsory social security	0.8%	Qatar
SASOL FINANCING USA LLC	K - Financial and insurance activities	0.8%	South Africa

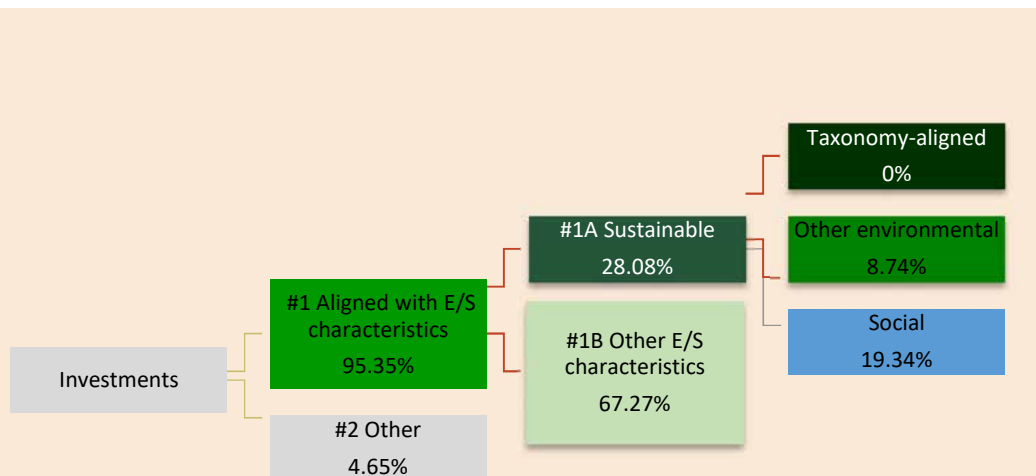

## What was the proportion of sustainability-related investments?

**Asset allocation** describes the share of investments in specific assets.

### What was the asset allocation?

The Manager and the Sub-Investment Manager calculated the proportion of investments aligned with the environmental and/or social characteristics promoted by the Portfolio by reference to the proportion of issuers in the Portfolio: i) that held either an NB ESG Quotient rating or a third party equivalent ESG rating that was used as part of the portfolio construction and investment management process of the Portfolio; and/or ii) with whom the Manager and the Sub-Investment Manager had engaged directly. This calculation was based on a mark-to-market assessment of the Portfolio and may rely on incomplete or inaccurate issuer or third-party data. For the 2022 reference period only, this calculation is based on the Portfolio’s holdings as at 31 December 2022, being the only quarter end in the reference period that followed the publication of the Portfolio’s SFDR Annex detailing its planned asset allocation. For all subsequent reference periods, this calculation will be based on the average of the four quarter ends.

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.

- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

### ● ***In which economic sectors were the investments made?***

Data as at 31 December 2022	
Economic Sector – NACE	% Assets
B - Mining and quarrying	8.89%
C - Manufacturing	4.58%
D - Electricity, gas, steam and air conditioning supply	3.35%
E - Water supply; sewerage; waste management and remediation activities	0.00%
F - Construction	0.44%
G - Wholesale and retail trade; repair of motor vehicles and motorcycles	0.34%
H - Transporting and storage	2.36%
I - Accommodation and food service activities	0.73%
J - Information and communication	0.30%
K - Financial and insurance activities	51.31%
L - Real estate activities	0.52%
M - Professional, scientific, and technical activities	0.07%
N - Administrative and support service activities	0.83%
O - Public administration and defense; compulsory social security	23.36%
R - Arts, entertainment and recreation	0.35%
U - Activities of extraterritorial organizations and bodies	1.36%
None	1.22%

## To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The analysis and disclosure requirements introduced by the EU Taxonomy are very detailed and compliance with them requires the availability of multiple, specific data points in respect of each investment which the Portfolio made. The Manager and the Sub-Investment Manager cannot confirm that the Portfolio invested in any investments that qualified as environmentally sustainable for the purposes of the EU Taxonomy. Disclosures and reporting on Taxonomy alignment will develop as the EU framework evolves and data is made available by issuers. The Manager and the Sub-Investment Manager will keep the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy under active review as data availability and quality improves.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

- **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

### ● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?

Yes:

In fossil gas  In nuclear energy

No

---

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

- **What was the share of investments made in transitional and enabling activities?**

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments.

- **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments.

### What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

8.74%

While the Portfolio invested in sustainable investments with an environmental objective, such sustainable investments did not commit to being Taxonomy-aligned investments.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

### What was the share of socially sustainable investments?

19.34%

### What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

“Other” included the remaining investments of the Portfolio (including but not limited to any derivatives or any security collateralized by a pool of similar assets or receivables listed in the Supplement for the Portfolio) which were neither aligned with the environmental or social characteristics, nor qualified as sustainable investments.

The “Other” section in the Portfolio was held for a number of reasons that the Manager and the Sub-Investment Manager felt was beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover.

As noted above, the Portfolio was invested in compliance with ESG exclusion policies, on a continuous basis. This ensured that investments made by the Portfolio sought to align with international environmental and social safeguards such as the UNGC Principles, UNGPs, OECD Guidelines and ILO Standards.

The Manager and the Sub-Investment Manager believe that these policies prevented investment in issuers that most egregiously violated environmental and/or social minimum standards and ensured that the Portfolio could successfully promote its environmental and social characteristics.

The above steps ensured that robust environmental and social safeguards were in place.

## What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Portfolio was managed in-line with the investment objective and the following actions were taken:

### I. Integrating proprietary ESG analysis:

The NB ESG Quotient ratings were generated for issuers in the Portfolio. The NB ESG Quotient rating for issuers was utilised to help to better identify risks and opportunities in the overall credit and value assessment.

The NB ESG Quotient was a key component of the internal credit ratings and helped to identify business risks (including ESG risks), which would cause deterioration in an issuer's credit profile. Internal credit ratings can be notched up or down based on the NB ESG Quotient rating, and this was monitored by the Manager and the Sub-Investment Manager as an important component of the investment process for the Portfolio.

By integrating the investment team's proprietary ESG analysis (the NB ESG Quotient) into their internal credit ratings, there was a direct link between their analysis of material ESG characteristics and portfolio construction activities across their strategy.

Issuers with a favourable and/or an improving NB ESG Quotient rating had a higher chance of ending up in the Portfolio. Issuers with a poor NB ESG Quotient rating especially where these were not being addressed by that issuer, were excluded from the Portfolio.

### II. Engagement:

The Manager and the Sub-Investment Manager engaged with issuers through a robust ESG engagement program. They sought to prioritise constructive engagements and sought to engage on topics (including ESG topics) they determined to be financially material for the relevant issuer. The Manager and the Sub-Investment Manager viewed this engagement with issuers, as an important part of its investment process. Progress on engagement was tracked centrally in the Manager's and the Sub-Investment Manager's engagement tracker.

### III. ESG sectoral exclusion policies:

To ensure that the environmental and social characteristics promoted by the Portfolio were attained, the Portfolio applied the ESG exclusion policies referenced above, which placed limitations on the investable universe.

## **How did this financial product perform compared to the reference benchmark?**

N/A – The Portfolio's benchmark has not been designated as a reference benchmark. Therefore, it is not consistent with the environmental or social characteristics promoted by the Portfolio.

- ***How does the reference benchmark differ from a broad market index?***  
N/A
- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***  
N/A
- ***How did this financial product perform compared with the reference benchmark?***  
N/A
- ***How did this financial product perform compared with the broad market index?***  
N/A

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

**Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852**

**Product name:** Neuberger Berman Sustainable Emerging Market Corporate Debt Fund (the “Portfolio”)

**Legal entity identifier:** 549300GFVJSXLRLRQ502

## Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

### Did this financial product have a sustainable investment objective?

**Yes**

**No**

It made **sustainable investments with an environmental objective**: \_\_\_\_%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective**: \_\_\_\_%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 47.90%\* of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

\*Please refer to the "What was the proportion of sustainability-related investments?" question below for further detail in respect of the minimum proportion of sustainable investments which promoted the environmental or social characteristics.

## To what extent were the environmental and/or social characteristics promoted by this financial product met?

The following environmental and social characteristics were promoted by the Portfolio:

- **Environmental Characteristics:** biodiversity and land usage; carbon emissions; opportunities in clean technologies; water stress; toxic emissions & waste; financing environmental impact; product carbon footprint; environmental policy; environmental management system; greenhouse gas (“GHG”) reduction programme; green procurement policy; and non-GHG air emissions programmes.

In aiming to align the Portfolio with a net zero goal, the Manager and the Sub-Investment Manager promoted and will continue to promote the reduction of the Portfolio's carbon footprint across scope 1, 2, and material scope 3 GHG emissions<sup>1</sup>. There is no annual reduction target, instead the reduction target focuses on the 2030 interim target and the 2050 net zero goal.

The Portfolio achieved a carbon emission intensity level that was at least 30% lower than the broader Emerging Markets corporate debt investment universe, represented by the JPMorgan CEMBI Diversified (USD) index (the “**Index**”) (excluding securities issued by non-corporate issuers, which include public or quasi-public issuers (i.e. sovereign issuers), and cash or cash equivalents) (“**Excluded Securities**”). For the 2022 reference period only, this calculation was based on the holdings as at 31 December 2022, being the only quarter end in the reference period that followed the introduction of this commitment (which was introduced on 3 October 2022). For all subsequent reference periods, this calculation will be based on the average of the four quarter ends. The Portfolio was actively managed and did not track the Index which was included here for carbon emission intensity reduction and ESG comparison purposes.

As at 31 December 2022, the Portfolio achieved a higher ESG score (as assigned by a third party data provider) as compared to the broader Emerging Markets corporate debt investment universe, represented by the Index.

- **Social Characteristics:** health & safety; human capital development; labour management; privacy & data security; product safety & quality; financial products safety; discrimination policy; community involvement programmes; diversity programmes; and human rights policy.

Performance in relation to these environmental and social characteristics was measured through the NB ESG Quotient, and is reported, in aggregate, below.

While the sustainable investments held by the Portfolio had either a social or an environmental objective, such sustainable investments do not qualify as environmentally sustainable investments (or Taxonomy aligned investments) as defined under the EU Taxonomy.

### How did the sustainability indicators perform?

As part of the investment process, the Manager and the Sub-Investment Manager considered a variety of sustainability indicators to measure the environmental and/or social characteristics promoted by the Portfolio. These sustainability indicators are listed below:

1. The NB ESG Quotient:

Third party data and the proprietary Neuberger Berman ESG rating system (the “**NB ESG Quotient**”) were used to measure the environmental and social characteristics promoted by the Portfolio. The NB ESG Quotient is built around the concept of sector specific ESG risk and opportunity, and produced an overall ESG rating for issuers by assessing them against certain ESG metrics.

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

<sup>1</sup> Scope 1 emissions are direct emissions from an issuer's owned or controlled sources (such as emissions created directly by the issuer's business processes or from vehicles owned by the issuer). Scope 2 emissions are indirect emissions from the generation of electricity, steam, heating and cooling consumed by the issuer. Scope 3 emissions are all other indirect emissions that occur in an issuer's value chain (such as emissions from products or services consumed by the issuer, disposal of its waste, employee commuting, distribution and transport of its products or its investments).

The NB ESG Quotient assigned weightings to environmental, social and governance factors for each sector to derive the NB ESG Quotient rating for issuers. Issuers with a favourable and/or an improving NB ESG Quotient rating had a higher chance of being included in the Portfolio. Issuers with a poor NB ESG Quotient rating, especially where a poor NB ESG Quotient rating was not being addressed by an issuer, were more likely to be removed from the investment universe or divested from the Portfolio. In addition, the Manager and the Sub-Investment Manager sought to prioritise constructive engagements with issuers that had a poor NB ESG Quotient rating, in order to assess whether concerns were being addressed adequately.

<b>31 December 2022</b>	<b>Rating</b>	<b>Combined coverage</b>
NB ESG Quotient	59	98%
Third-party Data	5.5	

With regards to the NB ESG Quotient rating, a rating between 1 – 100 is used where 1 is the lowest rating and 100 is the highest rating. This Portfolio does not have a minimum NB ESG Quotient rating. The average NB ESG Quotient rating is a weighted average and is not a rating of the Portfolio strategy itself.

Third-party data was also used to measure the environmental and social characteristics promoted by the Portfolio. The third-party data ratings range from 0-10, with 0 being the lowest rating and 10 being the highest rating.

## 2. ESG exclusion policies:

To ensure that the environmental or social characteristics promoted by the Portfolio were attained, the Portfolio did not invest in issuers whose activities breached, or were not consistent with, the Neuberger Berman Controversial Weapons Policy; the Neuberger Berman Thermal Coal Involvement Policy; and the Neuberger Berman Sustainable Exclusion Policy. The Neuberger Berman Sustainable Exclusion Policy was applied by the Portfolio from 3 October 2022 onwards. The Portfolio is phasing out its exposure to thermal coal and prohibited investment in securities issued by issuers that derived more than 10% of revenue from thermal coal mining or were expanding new thermal coal power generation, as determined by internal screens. The Portfolio also prohibited investments in issuers in the power generation industry that use thermal coal as an energy source for more than 95% of their installed power generation capacity, were expanding into new thermal coal power generation, or whose expansionary capital expenditure budgets did not include a minimum threshold for non-coal investments, as determined by internal screens. Furthermore, from 6 April 2022 onwards, investments held by the Portfolio did not invest in issuers whose activities had been identified as breaching the Neuberger Berman Global Standards Policy which excluded identified violators of (i) the United Nations Global Compact Principles (“**UNGC Principles**”), (ii) the OECD Guidelines for Multinational Enterprises (“**OECD Guidelines**”), (iii) the United Nations Guiding Principles on Business and Human Rights (“**UNGPs**”) and (iv) the International Labour Standards (“**ILO Standards**”). In addition, the Portfolio excluded securities issued by issuers which were involved in direct child labour, in the tobacco industry, as well as certain issuers with significant exposure to oil sands.

When applying ESG exclusions to the Portfolio, the Manager and the Sub-Investment Manager used third-party data to identify issuers in breach of the ESG exclusions listed above. Where possible, the Manager and the Sub-Investment Manager sought to overlay this third-party data with qualitative expertise from their research analysts to establish a current and holistic picture of the issuer. The Manager and the Sub-Investment Manager discussed and debated the differences between the violators identified by the third-party data and those identified as a result of their research, which drew upon data from the NB ESG Quotient and direct engagements with the issuer.

● **...and compared to previous periods?**

N/A – this is the first reference period.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

While the Portfolio promoted environmental and social characteristics, this Portfolio did not have a sustainable investment objective. However, the Portfolio held sustainable investments which promoted the environmental & social characteristics listed above.

The consideration of investments made by the Portfolio as sustainable investments was determined by reference to NB's sustainable investment framework. This framework included an assessment as to (i) whether the investment contributes to an environmental and/or social objective; (ii) whether the investment causes significant harm to those objectives as described below; and (iii) an assessment of an issuers' overall governance rating to determine whether the issuer passes a good governance assessment.

Under this sustainable investment framework, the Manager and the Sub-Investment Manager utilised multiple datapoints that measured the alignment of an issuer's economic activity with environmental or social characteristics.

The Manager and the Sub-Investment Manager screened issuers for controversies, significant harm and violations of minimum safeguards. If the issuers passed this screen, the Manager and the Sub-Investment Manager then proceeded to measure the issuers' environmental or social economic contribution.

For corporate issuers, the Manager and the Sub-Investment Manager measured this in two ways:

- Revenue alignment to the EU taxonomy (if any); and
- Revenue alignment to the Sustainable Development Goals ("**SDGs**").

For sovereign issuers, the Manager and the Sub-Investment Manager measured this in the following ways:

- Advancement in climate change adaptation and mitigation; and
- Advancement in achieving the SDGs, with emphasis on life expectancy and education

Consideration of revenue alignment with the SDGs, in the Manager's and the Sub-Investment Manager's subjective view, was limited by the availability of adequate, reliable and verifiable data coverage. To mitigate instances of poor data coverage, the Manager and the Sub-Investment Manager utilised third party data and proxy data along with internal research and qualitative analysis as part of NB's sustainable investment framework.

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

### *How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?*

As part of the Manager's and the Sub-Investment Manager's sustainable investment framework, investments that cause significant harm to environmental or social objectives were excluded. To determine whether an investment caused significant harm, the Manager and the Sub-Investment Manager considered significant harm with reference to certain principal adverse impact indicators and violations of minimum safeguards.

The Manager and the Sub-Investment Manager considered the following principal adverse impacts indicators when determining whether the sustainable investments that the Portfolio made did not cause significant harm to any environmental or social sustainable investment objective: GHG intensity and investee countries subject to social violations (the "**Sovereign PAIs**") for the sovereign issuers. GHG emissions; carbon footprint; GHG intensity of investee issuers; exposure to issuers active in the fossil fuel sector; share of non-renewable energy consumption and production; energy consumption intensity per high impact climate sector; activities negatively affecting biodiversity-sensitive areas; emissions to water; hazardous waste and radioactive waste ratio; violations of UNGC Principles and OECD Guidelines; lack of processes and compliance mechanisms to monitor compliance with UNGC Principles and OECD Guidelines; unadjusted gender pay gap, board gender diversity; and exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons) (for corporate issuers, together the "**PAIs**").

Consideration of the PAIs was limited by the availability (in the Manager's and Sub-Investment Manager's subjective view) of adequate, reliable and verifiable data coverage. The Manager and the Sub-Investment Manager utilised third party data and proxy data along with internal research to consider the PAIs.

The Manager and the Sub-Investment Manager also considered violations of minimum safeguards. From 6 April 2022 onwards, the Manager and the Sub-Investment Manager did not invest in issuers whose activities had been identified as breaching the OECD Guidelines, UNGC Principles, ILO Standards and UNGPs, captured through the Neuberger Berman Global Standards Policy.

The combination of all of these factors generated a quantitative validation for "sustainability" which was used to ensure the sustainable investments that the Portfolio made, did not cause significant harm to any environmental or social sustainable objective.

### *How were the indicators for adverse impacts on sustainability factors taken into account?*

Consideration of the PAIs by the Manager and the Sub-Investment Manager, when determining whether the sustainable investments that the Portfolio made did not cause significant harm to any environmental or social sustainable investment objective of the Portfolio's sustainable investments, was through a combination of:

- Monitoring issuers which fell below the quantitative and qualitative tolerance thresholds set for each PAI by the Manager and the Sub-Investment Manager;
- Stewardship and/or setting engagement objectives with issuers which fell below the quantitative and qualitative tolerance thresholds set for a PAI by the Manager and the Sub-Investment Manager; and
- Application of the ESG exclusion policies referenced above, which included consideration of several of the PAIs.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

From 6 April 2022 onwards, the Manager and the Sub-Investment Manager did not invest in issuers whose activities had been identified as breaching the OECD Guidelines, UNGC Principles, ILO Standards and UNGPs, captured through the Neuberger Berman Global Standards Policy.

*The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.*

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

N/A - The Portfolio did not commit to holding Taxonomy-aligned investments.

### **How did this financial product consider principal adverse impacts on sustainability factors?**

A selection of the principal adverse impact indicators were considered directly (e.g. through the ESG exclusion policies listed above) and/or indirectly (e.g. as part of the Manager's and the Sub-Investment Manager's assessment of issuers) throughout the 2022 reference period.

The Manager and the Sub-Investment Manager considered PAIs with respect to the Portfolio in two ways:

- I. All PAIs were considered when determining whether sustainable investments that the Portfolio made did not cause significant harm to any environmental or social sustainable investment objective as explained above.
- II. From 28 November 2022 onwards, the Manager and the Sub-Investment Manager considered the following principal adverse impacts on sustainability factors with respect to those investments within the Portfolio which promoted environmental or social characteristics, namely: GHG emissions, carbon footprint, GHG intensity, fossil fuel exposure, board gender diversity, UNGC & OECD violations and controversial weapons (the “**Product Level PAIs**”).

Consideration of the Product Level PAIs was limited by the availability (in the Manager’s and the Sub-Investment Manager’s subjective view) of adequate, reliable and verifiable data coverage. The Manager and the Sub-Investment Manager utilised third party data and proxy data along with internal research to consider the Product Level PAIs.

Consideration of the Product Level PAIs by the Manager and the Sub-Investment Manager was through a combination of:

- Monitoring the Portfolio, in particular where it fell below the quantitative and qualitative tolerance thresholds set for each Product Level PAI by the Manager and the Sub-Investment Manager;
- Stewardship and/or setting engagement objectives where the Portfolio fell below the quantitative and qualitative tolerance thresholds set for a Product Level PAI by the Manager and the Sub-Investment Manager; and
- Application of the ESG exclusion policies referenced above, which included consideration of several of the Product Level PAIs.

## What were the top investments of this financial product?

The Manager and the Sub-Investment Manager used the EU statistical classification of economic activities (“**NACE**”) economic sector breakdown to identify the economic sectors of the Portfolio’s top 15 investments. The following data is as at 31 December 2022.

The list includes the investments constituting the **greatest proportion of investments of the financial product during the reference period which is: 1 January 2022 - 31 December 2022**

Largest investments	Sector	% Assets	Country
ROMANIA (REPUBLIC OF) MTN RegS	O - Public administration and defence; compulsory social security	1.3%	Romania
COTE D IVOIRE (REPUBLIC OF) RegS	O - Public administration and defence; compulsory social security	1.1%	Cote D'Ivoire
1MDB GLOBAL INVESTMENTS LTD RegS	K - Financial and insurance activities	1.0%	Malaysia
SANDS CHINA LTD	I - Accommodation and food service activities	0.9%	Macau
TSMC ARIZONA CORP	C - Manufacturing	0.9%	Taiwan (Republic of China)
TSMC GLOBAL LTD RegS	K - Financial and insurance activities	0.8%	Taiwan (Republic of China)
BANGKOK BANK PUBLIC CO LTD (HONG KONG) MTN RegS	K - Financial and insurance activities	0.7%	Thailand
WYNN MACAU LTD RegS	I - Accommodation and food service activities	0.7%	Macau
COLOMBIA (REPUBLIC OF)	O - Public administration and defence; compulsory social security	0.7%	Colombia
FIRST QUANTUM MINERALS LTD RegS	B - Mining and quarrying	0.7%	Zambia

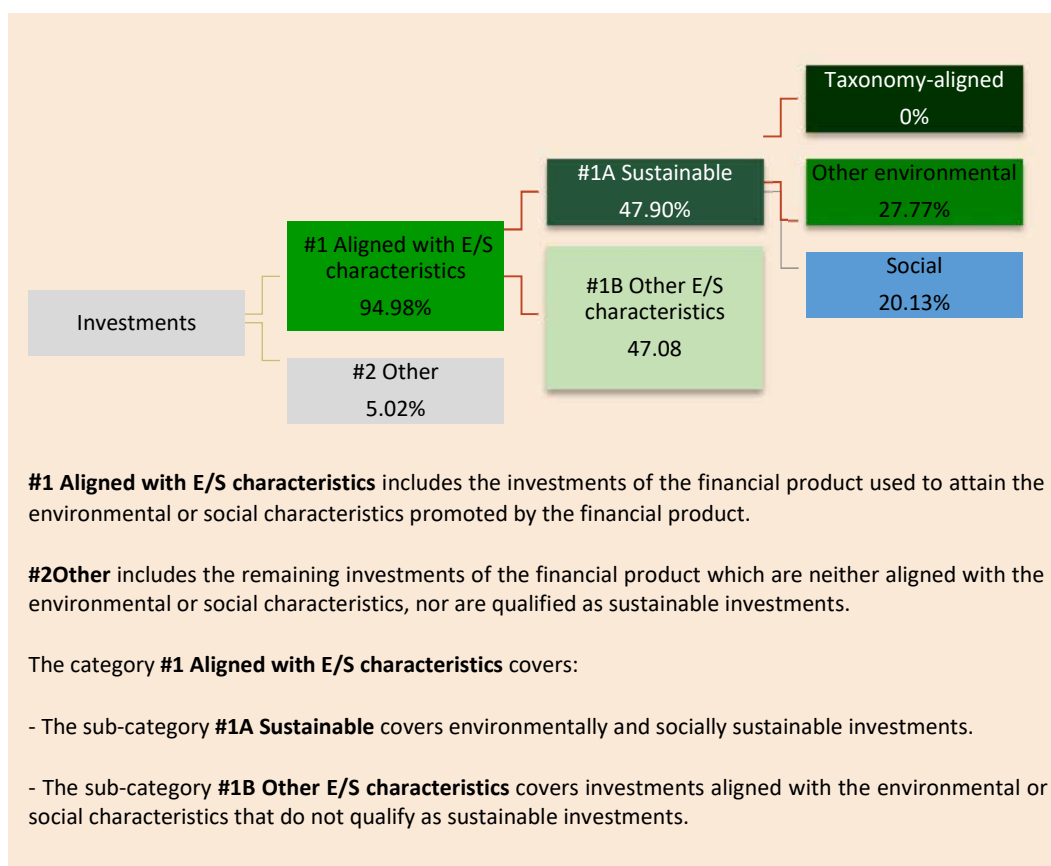

TEVA PHARMACEUTICAL NETHER	FINANCE	K - Financial and insurance activities	0.6%	Israel
BOC AVIATION LTD MTN	RegS	N - Administrative and support service activities	0.6%	Singapore
TEVA PHARMACEUTICAL NETHER	FINANCE	K - Financial and insurance activities	0.6%	Israel
CELESTIAL MILES LTD	RegS	K - Financial and insurance activities	0.6%	Hong Kong
VEDANTA RESOURCES FINANCE II PLC	RegS	K - Financial and insurance activities	0.6%	India

## What was the proportion of sustainability-related investments?

**Asset allocation** describes the share of investments in specific assets.

### What was the asset allocation?

The Manager and the Sub-Investment Manager calculated the proportion of investments aligned with the environmental and/or social characteristics promoted by the Portfolio by reference to the proportion of issuers in the Portfolio: i) that held either an NB ESG Quotient rating or a third party equivalent ESG rating that was used as part of the portfolio construction and investment management process of the Portfolio; and/or ii) with whom the Manager and the Sub-Investment Manager had engaged directly. This calculation was based on a mark-to-market assessment of the Portfolio and may rely on incomplete or inaccurate issuer or third party data. For the 2022 reference period only, this calculation is based on the Portfolio's holdings as at 31 December 2022, being the only quarter end in the reference period that followed the publication of the Portfolio's SFDR Annex detailing its planned asset allocation. For all subsequent reference periods, this calculation will be based on the average of the four quarter ends.

As at 31 December 2022, the Portfolio held 48% sustainable investments. It should be noted that the information provided in the pre-contractual disclosures is for the 2023 reporting period whereas this periodic report relates to the 2022 reference period (before the SFDR Level 2 entered into force).

The Portfolio does expect to attain its 50% sustainable investments commitment during the 2023 reporting period.

● ***In which economic sectors were the investments made?***

<b>Data as at 31 December 2022</b>	
<b>Economic Sector – NACE</b>	<b>% Assets</b>
B - Mining and quarrying	8.91%
C - Manufacturing	13.35%
D - Electricity, gas, steam and air conditioning supply	2.51%
F - Construction	1.25%
G - Wholesale and retail trade; repair of motor vehicles and motorcycles	1.94%
H - Transporting and storage	0.94%
I - Accommodation and food service activities	3.03%
J - Information and communication	4.57%
K - Financial and insurance activities	55.07%
L - Real estate activities	0.38%
N - Administrative and support service activities	2.06%
O - Public administration and defence; compulsory social security	4.34%
R - Arts, entertainment and recreation	1.03%
U - Activities of extraterritorial organisations and bodies	0.24%
None	0.38%

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

- **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

## To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

- **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>2</sup>?**

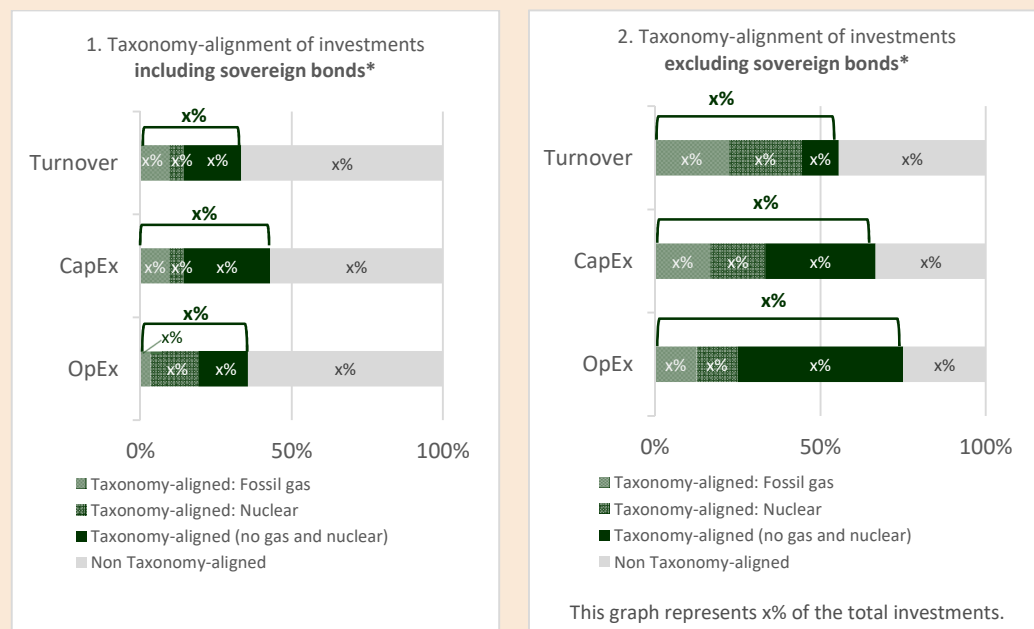

Yes:

In fossil gas  In nuclear energy

No

<sup>2</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

The analysis and disclosure requirements introduced by the EU Taxonomy are very detailed and compliance with them requires the availability of multiple, specific data points in respect of each investment which the Portfolio made. The Manager and the Sub-Investment Manager cannot confirm that the Portfolio invested in any investments that qualified as environmentally sustainable for the purposes of the EU Taxonomy. Disclosures and reporting on Taxonomy alignment will develop as the EU framework evolves and data is made available by issuers. The Manager and the Sub-Investment Manager will keep the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy under active review as data availability and quality improves.

● **What was the share of investments made in transitional and enabling activities?**

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments.

### What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

27.77%

While the Portfolio invested in sustainable investments with an environmental objective, such sustainable investments did not commit to being Taxonomy-aligned investments.

are

sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

### What was the share of socially sustainable investments?

20.13%

### What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

“Other” included the remaining investments of the Portfolio (including but not limited to any derivatives or any security collateralized by a pool of similar assets or receivables listed in the Supplement for the Portfolio) which were neither aligned with the environmental or social characteristics, nor qualified as sustainable investments.

The “Other” section in the Portfolio was held for a number of reasons that the Manager and the Sub-Investment Manager felt was beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover.

As noted above, the Portfolio was invested in compliance with ESG exclusion policies, on a continuous basis. This ensured that investments made by the Portfolio sought to align with international environmental and social safeguards such as the UNGC Principles, UNGPs, OECD Guidelines and ILO Standards.

The Manager and the Sub-Investment Manager believe that these policies prevented investment in issuers that most egregiously violated environmental and/or social minimum standards and ensured that the Portfolio could successfully promote its environmental and social characteristics.

The above steps ensured that robust environmental and social safeguards were in place.

## What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Portfolio was managed in-line with the investment objective and the following actions were taken:

### I. Integrating proprietary ESG analysis:

The NB ESG Quotient ratings were generated for issuers in the Portfolio. The NB ESG Quotient rating for issuers was utilised to help to better identify risks and opportunities in the overall credit and value assessment.

The NB ESG Quotient was a key component of the internal credit ratings and helped to identify business risks (including ESG risks), which would cause deterioration in an issuer's credit profile. Internal credit ratings can be notched up or down based on the NB ESG Quotient rating, and this was monitored by the Manager and the Sub-Investment Manager as an important component of the investment process for the Portfolio.

By integrating the investment team's proprietary ESG analysis (the NB ESG Quotient) into their internal credit ratings, there was a direct link between their analysis of material ESG characteristics and portfolio construction activities across their strategy. Issuers with a favourable and/or an improving NB ESG Quotient rating had a higher chance of ending up in the Portfolio. Issuers with a poor NB ESG Quotient rating especially where these were not being addressed by that issuer, were more likely to be removed from the investment universe or divested from the Portfolio.

### II. Engagement:

The Manager and the Sub-Investment Manager engaged with issuers through a robust ESG engagement program. They sought to prioritise constructive engagements and sought to engage on topics (including ESG topics) they determined to be financially material for the relevant issuer. The Manager and the Sub-Investment Manager viewed this engagement with issuers, as an important part of its investment process. Progress on engagement was tracked centrally in the Manager and the Sub-Investment Manager's engagement tracker.

### III. ESG sectoral exclusion policies:

To ensure that the environmental and social characteristics promoted by the Portfolio were attained, the Portfolio applied the ESG exclusion policies referenced above, which placed limitations on the investable universe.

## How did this financial product perform compared to the reference benchmark?

N/A – The Portfolio's benchmark has not been designated as a reference benchmark. Therefore, it is not consistent with the environmental or social characteristics promoted by the Portfolio.

- ***How does the reference benchmark differ from a broad market index?***  
N/A
- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***  
N/A
- ***How did this financial product perform compared with the reference benchmark?***  
N/A
- ***How did this financial product perform compared with the broad market index?***  
N/A

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

**Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852**

**Product name:** Neuberger Berman Emerging Market Debt Sustainable Investment Grade Blend (the “Portfolio”)

**Legal entity identifier:** 5493001FJK0FPOE1X496

## Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?	
<input checked="" type="radio"/> <input checked="" type="radio"/> <input type="checkbox"/> <b>Yes</b>	<input checked="" type="radio"/> <input type="radio"/> <input checked="" type="checkbox"/> <b>No</b>
<input type="checkbox"/> It made <b>sustainable investments with an environmental objective: ___%</b> <ul style="list-style-type: none"> <li><input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy</li> <li><input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</li> </ul>	<input checked="" type="checkbox"/> It <b>promoted Environmental/Social (E/S) characteristics</b> and while it did not have as its objective a sustainable investment, it had a proportion of 58.24%* of sustainable investments <ul style="list-style-type: none"> <li><input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy</li> <li><input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</li> <li><input checked="" type="checkbox"/> with a social objective</li> </ul>
<input type="checkbox"/> It made <b>sustainable investments with a social objective: ___%</b>	<input type="checkbox"/> It promoted E/S characteristics, but <b>did not make any sustainable investments</b>

\*Please refer to the "What was the proportion of sustainability-related investments?" question below for further detail in respect of the minimum proportion of sustainable investments which promoted the environmental or social characteristics.

## To what extent were the environmental and/or social characteristics promoted by this financial product met?

The following environmental and social characteristics were promoted by the Portfolio, for sovereign issuers:

- **Environmental Characteristics:** sovereign energy efficiency; climate change adaptation; deforestation; greenhouse gas (“GHG”) emissions; air and household pollution; and unsafe sanitation.
- **Social Characteristics:** progress towards UN Sustainable Development Goals (“SDGs”); health and education levels; regulatory quality; political stability and freedoms; gender equality; and research & development.

The following environmental and social characteristics were promoted by the Portfolio for corporate issuers:

- **Environmental Characteristics:** biodiversity and land usage; carbon emissions; opportunities in clean technologies; water stress; toxic emissions & waste; financing environmental impact; product carbon footprint; environmental policy; environmental management system; GHG reduction programme; green procurement policy; and non-GHG air emissions programmes.
- **Social Characteristics:** health & safety; human capital development; labour management; privacy & data security; product safety & quality; financial products safety; discrimination policy; community involvement programmes; diversity programmes; and human rights policy.

In aiming to align the Portfolio with a net zero goal, the Manager and the Sub-Investment Manager promoted and will continue to promote the reduction of the Portfolio’s carbon footprint across scope 1, 2, and material scope 3 GHG emissions<sup>1</sup>. There is no annual reduction target, instead the reduction target focuses on the 2030 interim target and 2050 net zero goal.

Performance in relation to these environmental and social characteristics was measured through the NB ESG Quotient, and is reported, in aggregate, below.

While the sustainable investments held by the Portfolio had either a social or an environmental objective, such sustainable investments do not qualify as environmentally sustainable investments (or Taxonomy aligned investments) as defined under the EU Taxonomy.

## ● **How did the sustainability indicators perform?**

As part of the investment process, the Manager and the Sub-Investment Manager considered a variety of sustainability indicators to measure the environmental and/or social characteristics promoted by the Portfolio. These sustainability indicators are listed below:

1. The NB ESG Quotient:

Third-party data and the proprietary Neuberger Berman ESG rating system (the “**NB ESG Quotient**”) were used to measure the environmental and social characteristics promoted by the Portfolio. The NB ESG Quotient is built around the concept of sector specific ESG risk and opportunity, and produced an overall ESG rating for issuers by assessing them against certain ESG metrics.

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

<sup>1</sup> Scope 1 emissions are direct emissions from an issuer’s owned or controlled sources (such as emissions created directly by the issuer’s business processes or from vehicles owned by the issuer). Scope 2 emissions are indirect emissions from the generation of electricity, steam, heating and cooling consumed by the issuer. Scope 3 emissions are all other indirect emissions that occur in an issuer’s value chain (such as emissions from products or services consumed by the issuer, disposal of its waste, employee commuting, distribution and transport of its products or its investments).

The NB ESG Quotient assigned weightings to environmental, social and governance characteristics for each sector to derive the NB ESG Quotient rating. The Manager and the Sub-Investment Manager used the NB ESG Quotient to promote the environmental and social characteristics listed by prioritising investment in securities issued by issuers with a relatively favourable and/or an improving NB ESG Quotient rating. The Portfolio did not invest in issuers which rank in the bottom quartile in terms of their NB ESG Quotient.

<b>31 December 2022</b>	<b>Rating</b>	<b>Combined coverage</b>
NB ESG Quotient	56	97%
Third-party Data	4.8	

With regards to the NB ESG Quotient rating, a rating between 1 – 100 is used where 1 is the lowest rating and 100 is the highest rating. This Portfolio does not have a minimum NB ESG Quotient rating. The average NB ESG Quotient rating is a weighted average and is not a rating of the Portfolio strategy itself.

Third-party data was also used to measure the environmental and social characteristics promoted by the Portfolio. The third-party data ratings range from 0-10, with 0 being the lowest rating and 10 being the highest rating.

2. ESG exclusion policies:

To ensure that the environmental or social characteristics promoted by the Portfolio were attained, the Portfolio did not invest in issuers whose activities breached, or were not consistent with, the Neuberger Berman Controversial Weapons Policy; the Neuberger Berman Thermal Coal Involvement Policy; the Neuberger Berman Sustainable Exclusion Policy; and the Neuberger Berman the Enhanced Sustainable Exclusion Policy. Furthermore, from 6 April 2022 onwards, investments held by the Portfolio did not invest in issuers whose activities had been identified as breaching the Neuberger Berman Global Standards Policy which excluded identified violators of (i) the United Nations Global Compact Principles (“**UNGC Principles**”), (ii) the OECD Guidelines for Multinational Enterprises (“**OECD Guidelines**”), (iii) the United Nations Guiding Principles on Business and Human Rights (“**UNGPs**”) and (iv) the International Labour Standards (“**ILO Standards**”). The Portfolio also excluded issuers from the investment universe that were involved in controversial activities and behaviour, such as fur manufacturers, gambling and nuclear power.

When applying ESG exclusions to the Portfolio, the Manager and the Sub-Investment Manager used third-party data to identify issuers in breach of the ESG exclusions listed above. Where possible, the Manager and the Sub-Investment Manager sought to overlay this third-party data with qualitative expertise from their research analysts to establish a current and holistic picture of the issuer. The Manager and the Sub-Investment Manager discussed and debated the differences between the violators identified by the third-party data and those identified as a result of their research, which drew upon data from the NB ESG Quotient and direct engagements with the issuer.

● **...and compared to previous periods?**

N/A – this is the first reference period.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

While the Portfolio promoted environmental and social characteristics, this Portfolio did not have a sustainable investment objective. However, the Portfolio held sustainable investments which promoted the environmental & social characteristics listed above.

The consideration of investments made by the Portfolio as sustainable investments was determined by reference to the NB sustainable investment framework. This framework included an assessment as to (i) whether the investment contributes to an environmental and/or social objective; (ii) whether the investment causes significant harm to those objectives as described below; and (iii) an assessment of an issuers' overall governance rating to determine whether the issuer passes a good governance assessment.

Under this sustainable investment framework, the Manager and the Sub-Investment Manager utilised multiple datapoints that measured the alignment of an issuer's economic activity with environmental or social characteristics.

The Manager and the Sub-Investment Manager screened issuers for controversies, significant harm and violations of minimum safeguards. If the issuers passed this screen, the Manager and the Sub-Investment Manager then proceeded to measure the issuers' environmental or social economic contribution.

For corporate issuers, the Manager and the Sub-Investment Manager measured this in two ways:

- Revenue alignment to the EU taxonomy (if any); and
- Revenue alignment to the UN Sustainable Development Goals ("**SDGs**").

Consideration of revenue alignment with the SDGs, in the Manager's and the Sub-Investment Manager's subjective view, was limited by the availability of adequate, reliable and verifiable data coverage. To mitigate instances of poor data coverage, the Manager and the Sub-Investment Manager utilised third-party data and proxy data along with internal research and qualitative analysis as part of NB's sustainable investment framework.

For sovereign issuers, the Manager and the Sub-Investment Manager measured this in the following ways:

- Advancement in climate change adaptation and mitigation; and
- Advancement in achieving the SDGs, with emphasis on life expectancy and education

### ***How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?***

As part of the Manager and the Sub-Investment Manager's sustainable investment framework, investments that caused significant harm to environmental or social objectives were excluded. To determine whether an investment caused significant harm, the Manager and the Sub-Investment Manager considered significant harm with reference to certain principal adverse impact indicators and violations of minimum safeguards.

The Manager and the Sub-Investment Manager considered the following principal adverse impacts indicators when determining whether the sustainable investments that the Portfolio made did not cause significant harm to any environmental or social sustainable investment objective: GHG intensity and investee countries subject to social violations (the "**Sovereign PAIs**") for the sovereign issuers. GHG emissions; carbon footprint; GHG intensity of issuers; exposure to issuers active in the fossil fuel sector; share of non-renewable energy consumption and production; energy consumption intensity per high impact climate sector; activities negatively affecting biodiversity-sensitive areas; emissions to water; hazardous waste and radioactive waste ratio; violations of UNGC Principles and OECD Guidelines; lack of processes and compliance mechanisms to monitor compliance with UNGC Principles and OECD Guidelines; unadjusted gender pay gap, board gender diversity; and exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons) for the corporate issuers (together the "**PAIs**").

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Consideration of the PAIs was limited by the availability (in the Manager's and the Sub-Investment Manager's subjective view) of adequate, reliable and verifiable data coverage. The Manager and the Sub-Investment Manager utilised third-party data and proxy data along with internal research to consider the PAIs.

The Manager and the Sub-Investment Manager also considered violations of minimum safeguards. From 6 April 2022 onwards, the Manager and the Sub-Investment Manager did not invest in issuers whose activities had been identified as breaching the OECD Guidelines, UNGC Principles, ILO Standards and UNGPs, captured through the Neuberger Berman Global Standards Policy.

The combination of all of these factors generated a quantitative validation for "sustainability" which was used to ensure the sustainable investments that the Portfolio made, did not cause significant harm to any environmental or social sustainable objective.

*How were the indicators for adverse impacts on sustainability factors taken into account?*

Consideration of the PAIs by the Manager and the Sub-Investment Manager, when determining whether the sustainable investments that the Portfolio made did not cause significant harm to any environmental or social sustainable investment objective of the Portfolio's sustainable investments, was through a combination of:

- Monitoring issuers which fell below the quantitative and qualitative tolerance thresholds set for each PAI by the Manager and the Sub-Investment Manager;
- Stewardship and/or setting engagement objectives with issuers which fell below the quantitative and qualitative tolerance thresholds set for a PAI; and
- Application of the ESG exclusion policies referenced above, which included consideration of several of the PAIs.

*Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:*

From 6 April 2022 onwards, the Manager and the Sub-Investment Manager did not invest in issuers whose activities had been identified as breaching the OECD Guidelines, UNGC Principles, ILO Standards and UNGPs, captured through the Neuberger Berman Global Standards Policy.

*The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.*

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

N/A - The Portfolio did not commit to holding Taxonomy-aligned investments.

### **How did this financial product consider principal adverse impacts on sustainability factors?**

A selection of the principal adverse impact indicators were considered directly (e.g. through the ESG exclusion policies listed above) and/or indirectly (e.g. as part of the Manager’s and the Sub-Investment Manager’s assessment of issuers) throughout the 2022 reference period.

The Manager and the Sub-Investment Manager considered PAIs with respect to the Portfolio in two ways:

1. All PAIs were considered when determining whether sustainable investments that the Portfolio made did not cause significant harm to any environmental or social sustainable investment objective as explained above.
2. From 28 November 2022 onwards, the Manager and the Sub-Investment Manager considered the following principal adverse impacts on sustainability factors with respect to those investments within the Portfolio which promoted environmental or social characteristics, namely: The Sovereign PAIs for the sovereign issuers, and GHG emissions, carbon footprint, GHG intensity, fossil fuel exposure, board gender diversity, UNGC Principles & OECD Guidelines violations and controversial weapons for the corporate issuers (together the “**Product Level PAIs**”).

Consideration of the Product Level PAIs was limited by the availability (in the Manager’s and the Sub-Investment Manager’s subjective view) of adequate, reliable and verifiable data coverage,. The Manager and the Sub-Investment Manager utilised third-party data and proxy data along with internal research to consider the Product Level PAIs.

Consideration of the Product Level PAIs by the Manager and the Sub-Investment Manager was through a combination of:

- Monitoring the Portfolio, in particular where it fell below the quantitative and qualitative tolerance thresholds set for each Product Level PAI by the Manager and the Sub-Investment Manager;
- Stewardship and/or setting engagement objectives where the Portfolio fell below the quantitative and qualitative tolerance thresholds set for a Product Level PAI; and

- Application of the ESG exclusion policies referenced above, which included consideration of several of the Product Level PAIs.

## What were the top investments of this financial product?

The Manager and the Sub-Investment Manager have used the EU statistical classification of economic activities (“**NACE**”) economic sector breakdown to identify the economic sectors of the Portfolio’s top 15 investments. The following data is as at 31 December 2022.

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 1 January 2022 - 31 December 2022

Largest investments	Sector	% Assets	Country
PANAMA (REPUBLIC OF)	O - Public administration and defence; compulsory social security	4.5%	Panama
PERU THE REPUBLIC OF	O - Public administration and defence; compulsory social security	4.2%	Peru
INDONESIA (REPUBLIC OF) RegS	O - Public administration and defence; compulsory social security	3.5%	Indonesia
CHILE GOVERNMENT BOND	O - Public administration and defence; compulsory social security	2.6%	Chile
MEXICO (UNITED MEXICAN STATES)	O - Public administration and defence; compulsory social security	2.4%	Mexico
INDONESIA REPUBLIC OF	O - Public administration and defence; compulsory social security	2.3%	Indonesia
MEX BONOS DE DESARROLLO	O - Public administration and defence; compulsory social security	1.9%	Mexico
MEXICO (UNITED MEXICAN STATES) (GO	O - Public administration and defence; compulsory social security	1.9%	Mexico
ROMANIA (REPUBLIC OF) RegS	O - Public administration and defence; compulsory social security	1.8%	Romania
KAZAKHSTAN GOVERNMENT BOND MTN RegS	O - Public administration and defence; compulsory social security	1.7%	Kazakhstan
BERMUDA (GOVERNMENT OF) RegS	O - Public administration and defence; compulsory social security	1.5%	Bermuda
BANQUE OUEST AFRICAINE DE DEVELOPP RegS	U - Activities of extraterritorial organisations and bodies	1.4%	Supranational
PHILIPPINES REPUBLIC OF	O - Public administration and defence; compulsory social security	1.4%	Philippines
URUGUAY GOVERNMENT BOND	O - Public administration and defence; compulsory social security	1.3%	Uruguay
INDONESIA REPUBLIC OF	O - Public administration and defence; compulsory social security	1.3%	Indonesia

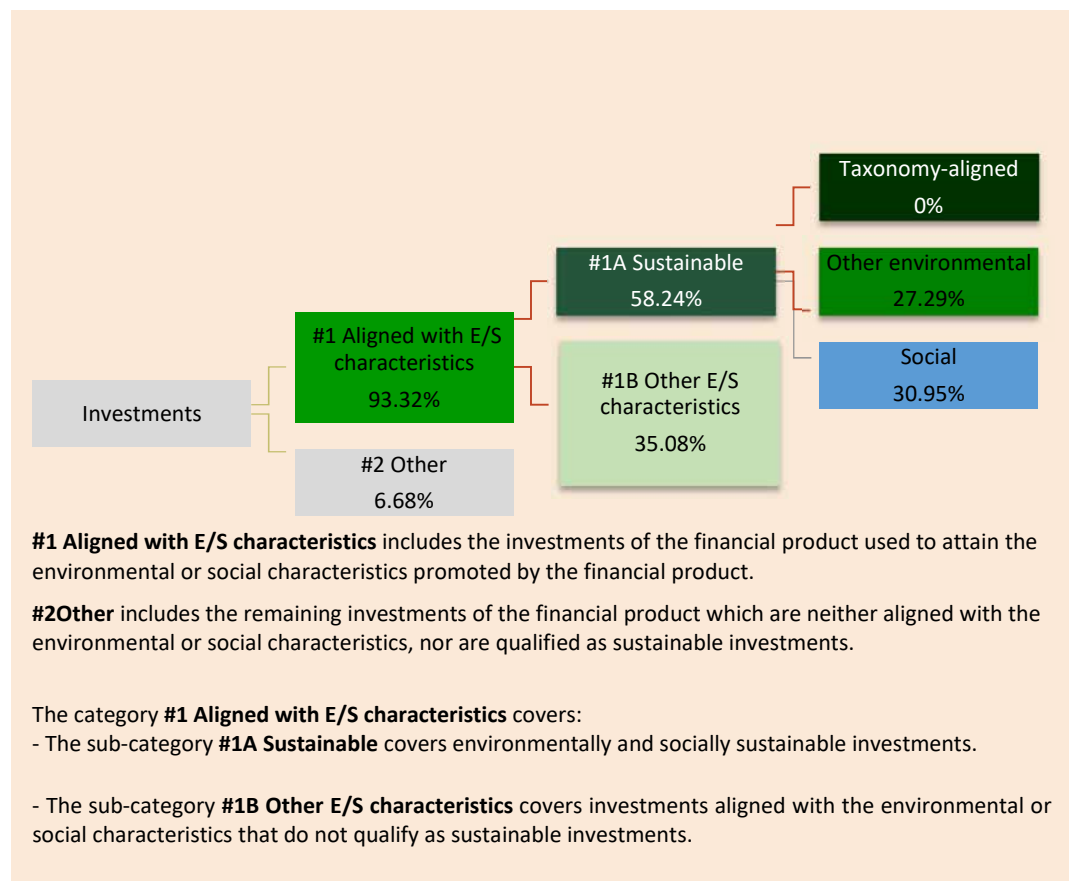

## What was the proportion of sustainability-related investments?

**Asset allocation** describes the share of investments in specific assets.

### What was the asset allocation?

The Manager and the Sub-Investment Manager calculated the proportion of investments aligned with the environmental and/or social characteristics promoted by the Portfolio by reference to the proportion of issuers in the Portfolio: i) that held either an NB ESG Quotient rating or a third-party equivalent ESG rating that was used as part of the portfolio construction and investment management process of the Portfolio; and/or ii) with whom the Manager and the Sub-Investment Manager had engaged directly. This calculation was based on a mark-to-market assessment of the Portfolio and may rely on incomplete or inaccurate issuer or third-party data. For the 2022 reference period only, this calculation is based on the Portfolio's holdings as at 31 December 2022, being the only quarter end in the reference period that followed the publication of the Portfolio's SFDR Annex detailing its planned asset allocation. For all subsequent reference periods, this calculation will be based on the average of the four quarter ends.

**In which economic sectors were the investments made?**

Data as at 31 December 2022	
Economic Sector – NACE	% Assets
B - Mining and quarrying	1.83%
C - Manufacturing	2.05%
D - Electricity, gas, steam, and air conditioning supply	0.32%
G - Wholesale and retail trade; repair of motor vehicles and motorcycles	0.76%
H - Transporting and storage	1.73%
J - Information and communication	1.02%
K - Financial and insurance activities	7.11%
O - Public administration and defense; compulsory social security	82.76%
U - Activities of extraterritorial organizations and bodies	2.06%
None	0.36%

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

- **Transitional activities are** activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

**To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?**

The analysis and disclosure requirements introduced by the EU Taxonomy are very detailed and compliance with them requires the availability of multiple, specific data points in respect of each investment which the Portfolio made. The Manager and the Sub-Investment Manager cannot confirm that the Portfolio invested in any investments that qualified as environmentally sustainable for the purposes of the EU Taxonomy. Disclosures and reporting on Taxonomy alignment will develop as the EU framework evolves and data is made available by issuers. The Manager and the Sub-Investment Manager will keep the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy under active review as data availability and quality improves.

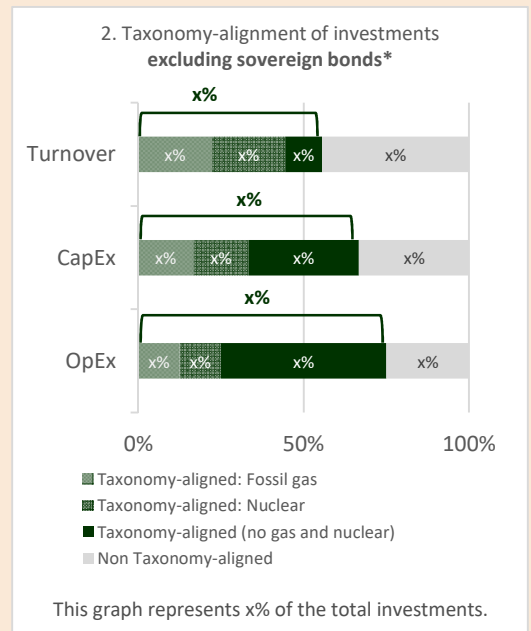

● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>2</sup>?

- Yes:
- In fossil gas  In nuclear energy
- No

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

<sup>2</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

● **What was the share of investments made in transitional and enabling activities?**

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments.

**What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?**

27.29%

While the Portfolio invested in sustainable investments with an environmental objective, such sustainable investments did not commit to being Taxonomy-aligned investments.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

**What was the share of socially sustainable investments?**

30.95%

**What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?**

“Other” included the remaining investments of the Portfolio (including but not limited to any derivatives or any security collateralized by a pool of similar assets or receivables listed in the Supplement for the Portfolio) which were neither aligned with the environmental or social characteristics, nor qualified as sustainable investments.

The “Other” section in the Portfolio was held for a number of reasons that the Manager and the Sub-Investment Manager felt was beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover.

As noted above, the Portfolio was invested in compliance with ESG exclusion policies, on a continuous basis. This ensured that investments made by the Portfolio sought to align with international environmental and social safeguards such as the UNGC Principles, UNGPs, OECD Guidelines and ILO Standards.

The Manager and the Sub-Investment Manager believe that these policies prevented investment in issuers that most egregiously violated environmental and/or social minimum standards and ensured that the Portfolio could successfully promote its environmental and social characteristics.

The above steps ensured that robust environmental and social safeguards were in place.

## What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Portfolio was managed in-line with the investment objective and the following actions were taken:

### I. Integrating proprietary ESG analysis:

The NB ESG Quotient ratings were generated for issuers in the Portfolio. The NB ESG Quotient rating for issuers was utilised to help to better identify risks and opportunities in the overall credit and value assessment.

The NB ESG Quotient was a key component of the internal credit ratings and helped to identify business risks (including ESG risks), which would cause deterioration in an issuer's credit profile. Internal credit ratings can be notched up or down based on the NB ESG Quotient rating, and this was monitored by the Manager and the Sub-Investment Manager as an important component of the investment process for the Portfolio.

By integrating the investment team's proprietary ESG analysis (the NB ESG Quotient) into their internal credit ratings, there was a direct link between their analysis of material ESG characteristics and portfolio construction activities across their strategy. Issuers with a favourable and/or an improving NB ESG Quotient rating had a higher chance of ending up in the Portfolio. The Portfolio did not invest in issuers which ranked in the bottom quartile in terms of their NB ESG Quotient.

### II. Engagement:

The Manager and the Sub-Investment Manager engaged with issuers through a robust ESG engagement program. They sought to prioritise constructive engagements and sought to engage on topics (including ESG topics) they determined to be financially material for the relevant issuer. The Manager and the Sub-Investment Manager viewed this engagement with issuers, as an important part of its investment process. Progress on engagement was tracked centrally in the Manager's and the Sub-Investment Manager's engagement tracker.

### III. ESG sectoral exclusion policies:

To ensure that the environmental and social characteristics promoted by the Portfolio were attained, the Portfolio applied the ESG exclusion policies referenced above, which placed limitations on the investable universe.

## How did this financial product perform compared to the reference benchmark?

N/A – The Portfolio's benchmark has not been designated as a reference benchmark. Therefore, it is not consistent with the environmental or social characteristics promoted by the Portfolio.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

---

- ***How does the reference benchmark differ from a broad market index?***  
N/A
- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***  
N/A
- ***How did this financial product perform compared with the reference benchmark?***  
N/A
- ***How did this financial product perform compared with the broad market index?***  
N/A

**Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852**

**Product name:** Neuberger Berman Sustainable Asia High Yield Fund (the “Portfolio”)

**Legal entity identifier:** 5493005FAT85HZ73DG37

## Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?	
<input checked="" type="radio"/> <input checked="" type="radio"/> <input type="checkbox"/> <b>Yes</b>	<input checked="" type="radio"/> <input type="radio"/> <input checked="" type="checkbox"/> <b>No</b>
<input type="checkbox"/> It made <b>sustainable investments with an environmental objective: ___%</b> <ul style="list-style-type: none"> <li><input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy</li> <li><input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</li> </ul>	<input checked="" type="checkbox"/> It <b>promoted Environmental/Social (E/S) characteristics</b> and while it did not have as its objective a sustainable investment, it had a proportion of 59.95%* of sustainable investments <ul style="list-style-type: none"> <li><input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy</li> <li><input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</li> <li><input checked="" type="checkbox"/> with a social objective</li> </ul>
<input type="checkbox"/> It made <b>sustainable investments with a social objective: ___%</b>	<input type="checkbox"/> It promoted E/S characteristics, but <b>did not make any sustainable investments</b>

\*Please refer to the "What was the proportion of sustainability-related investments?" question below for further detail in respect of the minimum proportion of sustainable investments which promoted the environmental or social characteristics.

## To what extent were the environmental and/or social characteristics promoted by this financial product met?

The following environmental and social characteristics were promoted by the Portfolio for corporate issuers:

- **Environmental Characteristics:** biodiversity and land usage, carbon emissions, opportunities in clean technologies, water stress, toxic emissions & waste, financing environmental impact, product carbon footprint, environmental policy, environmental management system, greenhouse gas (“GHG”) reduction programme, green procurement policy and non-GHG air emissions programmes.

In aiming to align the Portfolio with a net zero goal, the Sub-Investment Manager promoted and will continue to promote the reduction of the Portfolio’s carbon footprint across scope 1, 2, and material scope 3 GHG emissions<sup>1</sup>. There is no annual reduction target, instead the reduction target focuses on the 2030 interim target and the 2050 net zero goal.

The Portfolio achieved a carbon emission intensity level that was at least 30% lower than that of the broader Asia high yield debt investment universe, represented by the JPMorgan Asian Credit High Yield Index (the “Index”). The average carbon emission intensity was measured and calculated based on the Portfolio’s carbon emission intensity struck at each of the four calendar quarter ends in the 2022 reference period. The Portfolio is actively managed and does not intend to track the Index which is included here for carbon emission intensity reduction and ESG comparison purposes.

As at 31 December 2022, the Portfolio achieved a higher ESG score as compared to the broader Asia high yield debt investment universe, represented by the Index, based on third-party ESG scores from an established external provider.

- **Social Characteristics:** health & safety, human capital development, labour management, privacy & data security, product safety & quality, financial products safety, discrimination policy, community involvement programmes, diversity programmes and human rights policy.

Performance in relation to these environmental and social characteristics was measured through the NB ESG Quotient, and is reported, in aggregate, below.

While the sustainable investments held by the Portfolio had either a social or an environmental objective, such sustainable investments do not qualify as environmentally sustainable investments (or Taxonomy aligned investments) as defined under the EU Taxonomy.

---

<sup>1</sup> Scope 1 emissions are direct emissions from an issuer’s owned or controlled sources (such as emissions created directly by the issuer’s business processes or from vehicles owned by the issuer). Scope 2 emissions are indirect emissions from the generation of electricity, steam, heating and cooling consumed by the issuer. Scope 3 emissions are all other indirect emissions that occur in an issuer’s value chain (such as emissions from products or services consumed by the issuer, disposal of its waste, employee commuting, distribution and transport of its products or its investments).

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

## How did the sustainability indicators perform?

As part of the investment process, the Sub-Investment Manager considered a variety of sustainability indicators to measure the environmental and/or social characteristics promoted by the Portfolio. These sustainability indicators are listed below:

### 1. The NB ESG Quotient:

Third-party data and the proprietary Neuberger Berman ESG rating system (the “**NB ESG Quotient**”) were used to measure the environmental and social characteristics promoted by the Portfolio. The NB ESG Quotient is built around the concept of sector specific ESG risk and opportunity and produced an overall ESG rating for issuers by assessing them against certain ESG metrics.

The NB ESG Quotient assigned weightings to environmental, social and governance characteristics for each sector to derive the NB ESG Quotient rating. Issuers with a favourable and/or an improving NB ESG Quotient rating had a higher chance of being included in the Portfolio.

The Sub-Investment Manager excluded issuers with a poor NB ESG Quotient rating unless there was reasonable expectation that the NB ESG Quotient rating would improve over time.

	Rating	Combined coverage
<b>31 December 2022</b>		
NB ESG Quotient	55	95%
Third-party Data	5.5	

With regards to the NB ESG Quotient rating, a rating between 1 – 100 is used where 1 is the lowest rating and 100 is the highest rating. This Portfolio does not have a minimum NB ESG Quotient rating. The average NB ESG Quotient rating is a weighted average and is not a rating of the Portfolio strategy itself.

Third-party data was also used to measure the environmental and social characteristics promoted by the Portfolio. The third-party data ratings range from 0-10, with 0 being the lowest rating and 10 being the highest rating.

### 2. ESG exclusion policies:

To ensure that the environmental or social characteristics promoted by the Portfolio were attained, the Portfolio did not invest in issuers whose activities breached, or were not consistent with, the Neuberger Berman Controversial Weapons Policy; the Neuberger Berman Thermal Coal Involvement Policy; and the Neuberger Berman Sustainable Exclusion Policy. The Portfolio is phasing out its exposure to thermal coal and prohibited investment in securities issued by issuers that derived more than 10% of revenue from thermal coal mining or were expanding new thermal coal power generation, as determined by internal screens. The Portfolio also prohibited investments in issuers in the power generation industry that used thermal coal as an energy source for more than 95% of their installed power generation capacity, were expanding into new thermal coal power generation, or whose expansionary capital expenditure budgets did not include a minimum threshold for non-coal investments, as determined by internal screens. Furthermore, from 6 April 2022 onwards, investments held by the Portfolio did not invest in issuers whose activities had been identified as breaching the Neuberger Berman Global Standards Policy which excluded identified violators of (i) the United Nations Global Compact Principles (“**UNGC Principles**”), (ii) the OECD Guidelines for Multinational Enterprises (“**OECD Guidelines**”), (iii) the United Nations Guiding Principles on Business and Human Rights (“**UNGPs**”) and (iv) the International Labour Standards (“**ILO Standards**”). Additionally, issuers which were involved in, direct child labour and the tobacco industry were excluded.

When applying ESG exclusions to the Portfolio, the Sub-Investment Manager used third-party data to identify issuers in breach of the ESG exclusions listed above. Where possible, the Sub-Investment Manager sought to overlay this third-party data with qualitative expertise from their research analysts to establish a current and holistic picture of the issuer. The Sub-Investment Manager discussed and debated the differences between the violators identified by the third-party data and those identified as a result of their research, which drew upon data from the NB ESG Quotient and direct engagements with the issuer.

● ***...and compared to previous periods?***

N/A – this is the first reference period.

● ***What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?***

While the Portfolio promoted environmental and social characteristics, this Portfolio did not have a sustainable investment objective. However, the Portfolio held sustainable investments which promoted the environmental & social characteristics listed above.

The consideration of investments made by the Portfolio as sustainable investments was determined by reference to the NB sustainable investment framework. This framework included an assessment as to (i) whether the investment contributes to an environmental and/or social objective; (ii) whether the investment causes significant harm to those objectives as described below; and (iii) an assessment of an issuers' overall governance rating to determine whether the issuer passes a good governance assessment.

Under this sustainable investment framework, the Sub-Investment Manager utilised multiple datapoints that measured the alignment of a issuer's economic activity with environmental or social characteristics.

The Sub-Investment Manager screened issuers for controversies, significant harm and violations of minimum safeguards. If the issuers passed this screen, the Sub-Investment Manager then proceeded to measure the issuers' environmental or social economic contribution.

For corporate issuers, the Sub-Investment Manager measured this in two ways:

- Revenue alignment to the EU taxonomy (if any); and
- Revenue alignment to the UN Sustainable Development Goals ("**SDGs**").

For sovereign issuers, the Sub-Investment Manager measured this in the following ways:

- Advancement in climate change adaptation and mitigation; and
- Advancement in achieving the SDGs, with emphasis on life expectancy and education

Consideration of revenue alignment with the SDGs, in the Sub-Investment Manager's subjective view, was limited by the availability of adequate, reliable and verifiable data coverage. To mitigate instances of poor data coverage, the Sub-Investment Manager utilised third-party data and proxy data along with internal research and qualitative analysis as part of NB's sustainable investment framework.

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

### ***How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?***

As part of the Sub-Investment Manager's sustainable investment framework, investments that caused significant harm to environmental or social objectives were excluded. To determine whether an investment caused significant harm, the Sub-Investment Manager considered significant harm with reference to certain principal adverse impact indicators and violations of minimum safeguards.

The Sub-Investment Manager considered the following principal adverse impacts indicators when determining whether the sustainable investments that the Portfolio made did not cause significant harm to any environmental or social sustainable investment objective: GHG intensity and investee countries subject to social violations (the “**Sovereign PAIs**”) for the sovereign issuers. GHG emissions; carbon footprint; GHG intensity of investee issuers; exposure to issuers active in the fossil fuel sector; share of non-renewable energy consumption and production; energy consumption intensity per high impact climate sector; activities negatively affecting biodiversity-sensitive areas; emissions to water; hazardous waste and radioactive waste ratio; violations of UNGC principles and OECD; lack of processes and compliance mechanisms to monitor compliance with UNGC Principles and OECD Guidelines; unadjusted gender pay gap, board gender diversity; and exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons) (for corporate issuers, together the “**PAIs**”).

Consideration of the PAIs was limited by the availability (in the Sub-Investment Manager's subjective view) of adequate, reliable and verifiable data coverage. The Sub-Investment Manager utilised third-party data and proxy data along with internal research to consider the PAIs.

The Sub-Investment Manager also considered violations of minimum safeguards. From 6 April 2022 onwards, the Sub-Investment Manager did not invest in issuers whose activities had been identified as breaching the OECD Guidelines, UNGC Principles, ILO Standards and UNGPs, captured through the Neuberger Berman Global Standards Policy.

The combination of all of these factors generated a quantitative validation for “sustainability” which was used to ensure the sustainable investments that the Portfolio made, did not cause significant harm to any environmental or social sustainable objective.

### ***How were the indicators for adverse impacts on sustainability factors taken into account?***

Consideration of the PAIs by the Sub-Investment Manager, when determining whether the sustainable investments that the Portfolio made did not cause significant harm to any environmental or social sustainable investment objective of the Portfolio's sustainable investments, was through a combination of:

- Monitoring issuers which fell below the quantitative and qualitative tolerance thresholds set for each PAI by the Sub-Investment Manager;
- Stewardship and/or setting engagement objectives with issuers which fell below the quantitative and qualitative tolerance thresholds set for a PAI by the Sub-Investment Manager; and
- Application of the ESG exclusion policies referenced above, which included consideration of several of the PAIs.

— — —  
*Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:*

From 6 April 2022 onwards, the Sub-Investment Manager did not invest in issuers whose activities had been identified as breaching the OECD Guidelines, UNGC Principles, ILO Standards and UNGPs, captured through the Neuberger Berman Global Standards Policy.

*The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.*

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

N/A - The Portfolio did not commit to holding Taxonomy-aligned investments.

## **How did this financial product consider principal adverse impacts on sustainability factors?**

A selection of the principal adverse impact indicators were considered directly (e.g. through the ESG exclusion policies listed above) and/or indirectly (e.g. as part of the Sub-Investment Manager’s assessment of issuers) throughout the 2022 reference period.

The Sub-Investment Manager considered PAIs with respect to the Portfolio in two ways:

1. All PAIs were considered when determining whether sustainable investments that the Portfolio made did not cause significant harm to any environmental or social sustainable investment objective as explained above.
2. From 28 November 2022 onwards, the Sub-Investment Manager considered the following principal adverse impacts on sustainability factors with respect to those investments within the Portfolio which promoted environmental or social characteristics, namely: GHG emissions, carbon footprint, GHG intensity, fossil fuel exposure, board gender diversity, UNGC & OECD violations and controversial weapons (the “**Product Level PAIs**”).

Consideration of the Product Level PAIs was limited by the availability (in the Sub-Investment Manager’s subjective view) of adequate, reliable and verifiable data coverage. The Sub-Investment Manager utilised third-party data and proxy data along with internal research to consider the Product Level PAIs.

Consideration of the Product Level PAIs by the Sub-Investment Manager was through a combination of:

- Monitoring the Portfolio, in particular where it fell below the quantitative and qualitative tolerance thresholds set for each Product Level PAI by the Sub-Investment Manager;
- Stewardship and/or setting engagement objectives where the Portfolio fell below the quantitative and qualitative tolerance thresholds set for a Product Level PAI by the Sub-Investment Manager; and
- Application of the ESG exclusion policies referenced above, which included consideration of several of the Product Level PAIs.

### What were the top investments of this financial product?

The Sub-Investment Manager has used the EU statistical classification of economic activities (“NACE”) economic sector breakdown to identify the economic sectors of the Portfolio’s top 15 investments. The following data is as at 31 December 2022.

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: 1 January 2022 – 31 December 2022

Largest investments	Sector	% Assets	Country
GREENKO POWER II LIMITED RegS	K - Financial and insurance activities	4.1%	India
SANDS CHINA LTD	I - Accommodation and food service activities	4.0%	Macau
MEDCO BELL PTE LTD RegS	K - Financial and insurance activities	2.7%	Indonesia
RKPF OVERSEAS 2020 A LTD RegS	K - Financial and insurance activities	2.3%	China
MELCO RESORTS FINANCE LTD RegS	R - Arts, entertainment and recreation	2.2%	Macau
CAS CAPITAL NO 1 LTD RegS	K - Financial and insurance activities	2.1%	Hong Kong
GLOBE TELECOM INC RegS	J - Information and communication	2.1%	Philippines
KASIKORNBANK PCL MTN RegS	K - Financial and insurance activities	2.0%	Thailand
STAR ENERGY GEOTHERMAL WAYANG WIND RegS	D - Electricity, gas, steam and air conditioning supply	2.0%	Indonesia
CONTINUUM ENERGY LEVANTER PTE LTD RegS	K - Financial and insurance activities	2.0%	India
ADANI GREEN ENERGY UP LTD RegS	D - Electricity, gas, steam and air conditioning supply	1.9%	India
NETWORK I2I LTD RegS	K - Financial and insurance activities	1.8%	India
PERIAMA HOLDINGS LLC	F - Construction	1.8%	India
BANK NEGARA INDONESIA PERSERO TBK	K - Financial and insurance activities	1.8%	Indonesia
COUNTRY GARDEN HOLDINGS CO LTD	F - Construction	1.7%	China

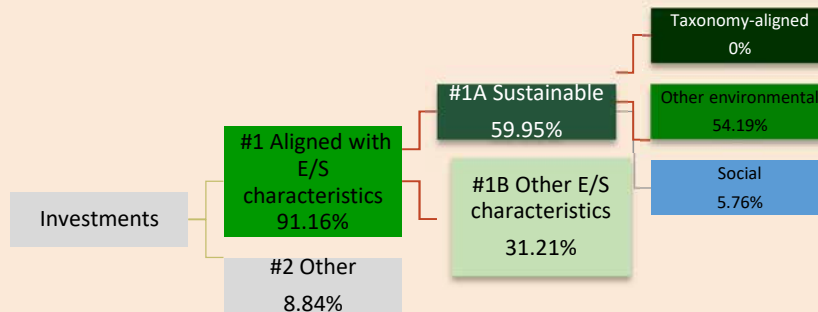

## What was the proportion of sustainability-related investments?

### Asset allocation

describes the share of investments in specific assets.

### What was the asset allocation?

The Sub-Investment Manager calculated the proportion of investments aligned with the environmental and/or social characteristics promoted by the Portfolio by reference to the proportion of issuers in the Portfolio: i) that held either an NB ESG Quotient rating or a third-party equivalent ESG rating that was used as part of the portfolio construction and investment management process of the Portfolio; and/or ii) with whom the Sub-Investment Manager had engaged directly. This calculation was based on a mark-to-market assessment of the Portfolio and may rely on incomplete or inaccurate issuer or third-party data. For the 2022 reference period only, this calculation is based on the Portfolio's holdings as at 31 December 2022, being the only quarter end in the reference period that followed the publication of the Portfolio's SFDR Annex detailing its planned asset allocation. For all subsequent reference periods, this calculation will be based on the average of the four quarter ends.

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.

- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

***In which economic sectors were the investments made?***

<b>Data as at 31 December 2022</b>	
<b>Economic Sector – NACE</b>	<b>% Assets</b>
C - Manufacturing	3.84%
D - Electricity, gas, steam and air conditioning supply	10.46%
F - Construction	10.10%
G - Wholesale and retail trade; repair of motor vehicles and motorcycles	0.82%
H - Transporting and storage	1.28%
I - Accommodation and food service activities	11.17%
J - Information and communication	4.31%
K - Financial and insurance activities	47.02%
M - Professional, scientific, and technical activities	2.01%
N - Administrative and support service activities	1.13%
O - Public administration and defence; compulsory social security	2.85%
R - Arts, entertainment, and recreation	5.03%

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

- **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

## To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The analysis and disclosure requirements introduced by the EU Taxonomy are very detailed and compliance with them requires the availability of multiple, specific data points in respect of each investment which the Portfolio made. The Sub-Investment Manager cannot confirm that the Portfolio invested in any investments that qualified as environmentally sustainable for the purposes of the EU Taxonomy. Disclosures and reporting on Taxonomy alignment will develop as the EU framework evolves and data is made available by issuers. The Sub-Investment Manager will keep the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy under active review as data availability and quality improves.

### ● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>2</sup>?

Yes:

In fossil gas  In nuclear energy

No

<sup>2</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

- **What was the share of investments made in transitional and enabling activities?**

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments

- **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments.

### What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

54.19%

While the Portfolio invested in sustainable investments with an environmental objective, such sustainable investments did not commit to being Taxonomy-aligned investments.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

### What was the share of socially sustainable investments?

5.76%

### What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

“Other” included the remaining investments of the Portfolio (including but not limited to any derivatives or any security collateralized by a pool of similar assets or receivables listed in the Supplement for the Portfolio) which were neither aligned with the environmental or social characteristics, nor qualified as sustainable investments.

The “Other” section in the Portfolio was held for a number of reasons that the Sub-Investment Manager felt was beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover.

As noted above, the Portfolio was invested in compliance with ESG exclusion policies, on a continuous basis. This ensured that investments made by the Portfolio sought to align with international environmental and social safeguards such as the UNGC Principles, UNGPs, OECD Guidelines and ILO Standards.

The Sub-Investment Manager believes that these policies prevented investment in issuers that most egregiously violated environmental and/or social minimum standards and ensured that the Portfolio could successfully promote its environmental and social characteristics.

The above steps ensured that robust environmental and social safeguards were in place.

## What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Portfolio was managed in-line with the investment objective and the following actions were taken:

### I. Integrating proprietary ESG analysis:

The NB ESG Quotient ratings were generated for issuers in the Portfolio. The NB ESG Quotient rating for issuers was utilised to help to better identify risks and opportunities in the overall credit and value assessment.

The NB ESG Quotient was an important component of the internal credit ratings and helped to identify business risks (including ESG risks), which would cause deterioration in an issuer's credit profile. Internal credit ratings can be notched up or down based on the NB ESG Quotient rating, and this was monitored by the Sub-Investment Manager as an important component of the investment process for the Portfolio.

By integrating the investment team's proprietary ESG analysis (the NB ESG Quotient) into their internal credit ratings, there was a direct link between their analysis of material ESG characteristics and portfolio construction activities across their strategy.

Issuers with a favourable and/or an improving NB ESG Quotient rating had a higher chance of ending up in the Portfolio. The Sub-Investment Manager excluded issuers with a poor NB ESG Quotient rating unless there was reasonable expectation that the NB ESG Quotient rating would improve over time.

### II. Engagement:

The Sub-Investment Manager engaged with issuers through a robust ESG engagement program. They sought to prioritise constructive engagements and sought to engage on topics (including ESG topics) they determined to be financially material for the relevant issuer. The Sub-Investment Manager viewed this engagement with issuers, as an important part of its investment process. Progress on engagement was tracked centrally in the Sub-Investment Manager's engagement tracker.

### III. ESG sectoral exclusion policies:

To ensure that the environmental and social characteristics promoted by the Portfolio were attained, the Portfolio applied the ESG exclusion policies referenced above, which placed limitations on the investable universe.

## **How did this financial product perform compared to the reference benchmark?**

N/A – The Portfolio's benchmark has not been designated as a reference benchmark. Therefore, it is not consistent with the environmental or social characteristics promoted by the Portfolio.

- ***How does the reference benchmark differ from a broad market index?***  
N/A
- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***  
N/A
- ***How did this financial product perform compared with the reference benchmark?***  
N/A
- ***How did this financial product perform compared with the broad market index?***  
N/A

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

**Template periodic disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852**

**Product name:** Neuberger Berman Sustainable Emerging Market Debt – Hard Currency Fund (the "Portfolio")

**Legal entity identifier:** 549300OWRIKGBWGY0X93

## Sustainable investment objective

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852 establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?	
<span style="color: green;">●●</span> <input checked="" type="checkbox"/> <b>Yes</b>	<span style="color: green;">●</span> <span style="color: grey;">●</span> <input type="checkbox"/> <b>No</b>
<input checked="" type="checkbox"/> It made <b>sustainable investments with an environmental objective: 42.09%</b> <ul style="list-style-type: none"> <li><input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy</li> <li><input checked="" type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</li> </ul>	<input type="checkbox"/> It <b>promoted Environmental/Social (E/S) characteristics</b> and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments <ul style="list-style-type: none"> <li><input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy</li> <li><input type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</li> <li><input type="checkbox"/> with a social objective</li> </ul>
<input checked="" type="checkbox"/> It made <b>sustainable investments with a social objective: 51.23%</b>	<input type="checkbox"/> It promoted E/S characteristics, but <b>did not make any sustainable investments</b>

## To what extent was the sustainable investment objective of this financial product met?

The Portfolio invested in securities issued by those issuers that contributed to environmental and social objectives. Issuers were assessed against the sustainable investment objective by reference to the parameters outlined below.

### **Environmental Objective**

The Sub-Investment Manager targeted investment in issuers which demonstrated better advancement in climate change adaptation and mitigation, reducing greenhouse gas (“**GHG**”) emissions and net zero alignment.

#### Sovereign issuer objectives:

Countries in the top 25% percentile or improving in the next 25% percentile in the sovereign climate transition risk indicator (which is proprietary to the Sub-Investment Manager and combined data focused on climate risk mitigation, climate adaptation, GHG emissions and net zero alignment) were considered to be aligned to the environmental objective.

Net zero commitments and targets were set in the expectation that governments followed through on their own commitments to ensure that the objectives of the Paris Agreement were met, including increasing the ambition of their Nationally Determined Contributions (“**NDCs**”).

#### Corporate issuer objectives:

The Sub-Investment Manager intends to reduce the Portfolio’s carbon footprint for corporate securities across scope 1, 2, and material scope 3 GHG emissions, equating to a 50% reduction by 2030 relative to a 2019 baseline and a subsequent decline to net zero by 2050. The 2019 baseline may be subject to re-calculation as data quality and disclosure expands over time, particularly with respect to scope 3 emissions.<sup>1</sup> There is no annual reduction target, instead the reduction target focuses on the 2030 milestone and the 2050 net zero goal.

### **Social Objective**

The Sub-Investment Manager targeted investment in issuers which demonstrated better progress in achieving the UN Sustainable Development Goals (“**SDGs**”), with a particular focus on public health and education.

Countries in the top 25% percentile or improving in the next 25% percentile in the sovereign sustainable development indicator (which is proprietary to the Sub-Investment Manager and combined data focused on life expectancy, education and broader progress towards achieving SDGs) were considered to be aligned to the social objective.

The Portfolio met its sustainable investment objective. Performance in relation to the sustainable investment objective was measured through the sustainability indicators and is reported, in aggregate, below.

---

<sup>1</sup> Scope 1 emissions are direct emissions from an issuer’s owned or controlled sources (such as emissions created directly by the issuer’s business processes or from vehicles owned by the issuer). Scope 2 emissions are indirect emissions from the generation of electricity, steam, heating and cooling consumed by the issuer. Scope 3 emissions are all other indirect emissions that occur in an issuer’s value chain (such as emissions from products or services consumed by the issuer, disposal of its waste, employee commuting, distribution and transport of its products or its investments).

## Sustainability

**indicators** measure how the sustainable objectives of this financial product are attained.

### ● **How did the sustainability indicators perform?**

As part of the investment process, the Sub-Investment Manager considered a variety of sustainability indicators to measure the attainment of the sustainable investment objectives of the Portfolio. These sustainability indicators are listed below:

#### **i. Independent third party reports and assessments:**

The Sub-Investment Manager used the following third party reports, indexes and assessments to measure the Portfolio's progress towards achieving its sovereign sustainable investment objectives:

##### **Advancement in climate change adaptation and mitigation:**

- Notre Dame Global Adaptation Initiative Country Index ("**ND-GAIN**")

The Sub-Investment Manager used the ND-GAIN index to measure and assess a country's vulnerability to climate change and climate transition risks.

The Sub-Investment Manager focused its assessment on income-adjusted climate change adaptation.

- GHG Sovereign Emissions:

The Sub-Investment Manager tracked sovereign GHG Territorial Emissions defined as tons of CO<sub>2</sub> emissions per \$ million invested. Carbon emission is apportioned to the Portfolio based on the share of countries' gross general debt that is held by the Portfolio. Issuers with the highest weighted carbon intensity – defined as bottom quartile and increasing – were excluded from the Portfolio. This allowed the Sub-Investment Manager to measure progress in reducing emissions per GDP.

- Net Zero Alignment - GermanWatch's Climate Change Performance Index ("**CCPI**") and Climate Action Tracker

The Sub-Investment Manager tracked sovereign bonds issuing country's net-zero alignment according to CCPI and the Climate Action Tracker's measurement of national and global efforts towards mitigating global warming. This allowed the Sub-Investment Manager to target countries with Net Zero commitments by 2050 or earlier.

##### **Advancement in UN Sustainable Development Goals, with emphasis on life expectancy, education and purchasing power parity income:**

- Sustainable Development Report Index

The Sub-Investment Manager used the Bertelsmann Stiftung and the Sustainable Development Solutions Network Sustainable Development Report Index to assess country performance on the SDGs. This allowed the Sub-Investment Manager to target investment in issuers which demonstrated better progress in achieving the SDGs.

- UNDP Human Development Index

The Sub-Investment Manager used the UNDP Human Development Index to measure achievements in key dimensions of life expectancy and education globally. This allowed the Sub-Investment Manager to target investment in issuers which demonstrated better progress in achieving human development.

The above listed independent third party reports and assessments (namely, ND-GAIN, CCPI, Sustainable Development Report Index and UNDP Human Development Index) were aggregated to identify "Top Performers" (countries in the top 25% percentile which were aligned with the Portfolio's environmental and/or social objectives) or "Top Improvers" (countries improving in the next 25% percentile which were aligned and are aligning further towards the Portfolio's sovereign environmental and/or social objectives).

Below is an overview of the aggregated list of emerging market sovereign issuers which met the Portfolio's sovereign environmental and/or social objectives, and which were classified as a Top Performer or Top Improver.

All emerging market sovereign issuers held by the Portfolio were classified as a Top Performer or a Top Improver. The classification of countries as a Top Performer or Top Improver is indicative of the Portfolio's meeting its sovereign environmental and social objectives.

Country Name	Combined Environmental Sustainability Indicator		Combined Social Sustainability Indicator		SFDR Classification (E/S)	SFDR Classification
	Top Performer	Top Improver	Top Performer	Top Improver

ii. **ESG exclusion policies:**

To ensure that the sustainable investment objective of the Portfolio was attained, the Portfolio did not invest in securities issued by issuers whose activities breached, or were not consistent with, the Neuberger Berman Controversial Weapons Policy; the Neuberger Berman Thermal Coal Involvement Policy; the Neuberger Berman Sustainable Exclusion Policy; or the Neuberger Berman Enhanced Sustainable Exclusions Policy.

From 6 April 2022 onwards, investments held by the Portfolio did not invest in securities issued by issuers whose activities have been identified as breaching the Neuberger Berman Global Standards Policy which excludes identified violators of (i) the United Nations Global Compact Principles ("**UNGC Principles**"), (ii) the OECD Guidelines for Multinational Enterprises ("**OECD Guidelines**"), (iii) the United Nations Guiding Principles on Business and Human Rights ("**UNGPs**") and (iv) the International Labour Standards ("**ILO Standards**").

The Sub-Investment Manager also excluded securities issued by corporate issuers that were involved in controversial activities and behaviour and those corporate issuers which were rated worst in terms of the NB ESG Quotient<sup>2</sup> from the investment universe.

Furthermore, the Sub-Investment Manager excluded sovereign issuers which were assessed as having weak and deteriorating human rights metrics and where top officials have been sanctioned by the UN Security Council based on human rights violations, or sovereign issuers which were assessed as having high and increasing greenhouse gas intensity levels, or sovereign issuers which were non-compliant with the standard put forth by the OECD's Global Forum on Transparency and Exchange of Information for Tax Purposes, or sovereign issuers that were classified as a high risk jurisdiction subject to a call for action by the Financial Action Task Force ("**FATF**").

At least 20% of the investment universe were excluded on these bases.

When applying ESG exclusions to the Portfolio, the Sub-Investment Manager used third-party data to identify issuers in breach of the ESG exclusions listed above. Where possible, the Sub-Investment Manager sought to overlay this third-party data with qualitative expertise from their research analysts to establish a current and holistic picture of the issuer. The Sub-Investment Manager discussed and debated the differences between the violators identified by the third-party data and those identified as a result of their research, which drew upon data from the NB ESG Quotient and direct engagements with the issuer.

● ***...and compared to previous periods?***

N/A - this is the first reference period.

---

<sup>2</sup> The NB ESG Quotient is a proprietary NB ESG rating system built around the concept of sector specific ESG risk and opportunity, and produces an overall ESG rating for issuers by assessing them against certain ESG metrics.

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

### *How did the sustainable investments not cause significant harm to any sustainable investment objective?*

As part of the Sub-Investment Manager's sustainable investment framework, investments that cause significant harm to environmental or social objectives were excluded. To determine whether an investment would cause significant harm, the Sub-Investment Manager considered significant harm with reference to certain principal adverse impact indicators and violations of minimum safeguards.

The Sub-Investment Manager considered the following principal adverse impacts indicators when determining whether the sustainable investments that the Portfolio made, did not cause significant harm to any environmental or social sustainable investment objective. In respect of sovereign issuers (which made up the majority of the Portfolio) these were: GHG intensity and investee countries subject to social violations; and in respect of corporate issuers these were: GHG emissions; carbon footprint; GHG intensity of investee issuers; exposure to issuers active in the fossil fuel sector; share of non-renewable energy consumption and production; energy consumption intensity per high impact climate sector; activities negatively affecting biodiversity-sensitive areas; emissions to water; hazardous waste and radioactive waste ratio; violations of UNGC Principles and OECD Guidelines; lack of processes and compliance mechanisms to monitor compliance with UNGC Principles and OECD Guidelines; unadjusted gender pay gap, board gender diversity; and exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons) (together the "**PAIs**").

Consideration of the PAIs was limited by the availability (in the Sub-Investment Manager's subjective view) of adequate, reliable and verifiable data coverage. The Sub-Investment Manager utilised third party data and proxy data along with internal research to consider the PAIs.

The Sub-Investment Manager also considered violations of minimum safeguards. From 6 April 2022 onwards, the Sub-Investment Manager did not invest in issuers whose activities had been identified as breaching the OECD Guidelines, UNGC Principles, ILO Standards and UNGPs, captured through the Neuberger Berman Global Standards Policy.

### *How were the indicators for adverse impacts on sustainability factors taken into account?*

Consideration of the PAIs by the Sub-Investment Manager, when determining whether the sustainable investments that the Portfolio made did not cause significant harm to any environmental or social sustainable investment objective of the Portfolio's sustainable investments, was through a combination of:

- Monitoring issuers, in particular where they fell below the quantitative and qualitative tolerance thresholds set for the relevant PAIs by the Sub-Investment Manager;
- Stewardship and/or setting engagement objectives with issuers which fell below the quantitative and qualitative tolerance thresholds set for the relevant PAIs by the Sub-Investment Manager; and
- Application of the NB ESG exclusion policies detailed above, which included consideration of several of the PAIs.

— — —  
*Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:*

From 6 April 2022 onwards, the Sub-Investment Manager did not invest in issuers whose activities had been identified as breaching the OECD Guidelines, UNGC Principles, ILO Standards and UNGPs, identified through the Neuberger Berman Global Standards Policy.

### **How did this financial product consider principal adverse impacts on sustainability factors?**

The Sub-Investment Manager considered the impacts of the PAIs on sustainability factors.

Consideration of the PAIs was limited by the availability (in the Sub-Investment Manager's subjective view) of adequate, reliable and verifiable data coverage. The Sub-Investment Manager utilised third party data and proxy data along with internal research to consider the PAIs.

With respect to the Portfolio, consideration of the PAIs by the Sub-Investment Manager, was through a combination of:

- Monitoring issuers which fell below the quantitative and qualitative tolerance thresholds set for the relevant PAI by the Sub-Investment Manager;
- Stewardship and/or setting engagement objectives with issuers which fell below the quantitative and qualitative tolerance thresholds set for the relevant by the Sub-Investment Manager; and
- Application of the NB ESG exclusion policies detailed above, which included consideration of several of the PAIs.

## What were the top investments of this financial product?

The Sub-Investment Manager has used the EU statistical classification of economic activities (“NACE”) economic sector breakdown to identify the economic sectors of the Portfolio's top 15 investments. The following data is as at 31 December 2022.

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 1 January 2022 – 31 December 2022

Largest investments	Sector	% Assets	Country
CHILE (REPUBLIC OF)	O - Public administration and defence; compulsory social security	3.4%	Chile
COSTA RICA REPUBLIC OF (GOVERNMENT) RegS	O - Public administration and defence; compulsory social security	3.4%	Costa Rica
OMAN GOVERNMENT BOND MTN RegS	O - Public administration and defence; compulsory social security	3.1%	Oman
ARGENTINA REPUBLIC OF GOVERNMENT	O - Public administration and defence; compulsory social security	2.9%	Argentina
REPUBLIC OF PERU	O - Public administration and defence; compulsory social security	2.6%	Peru
UZBEKISTAN (REPUBLIC OF) MTN RegS	O - Public administration and defence; compulsory social security	2.5%	Uzbekistan
COLOMBIA REPUBLIC OF	O - Public administration and defence; compulsory social security	2.4%	Colombia
REPUBLIC OF ARMENIA RegS	O - Public administration and defence; compulsory social security	2.2%	Armenia
COTE D'IVOIRE REPUBLIC OF RegS	O - Public administration and defence; compulsory social security	2.2%	Cote D'Ivoire
OMAN GOVERNMENT INTERNATIONAL BOND RegS	O - Public administration and defence; compulsory social security	2.0%	Oman
DOMINICAN REPUBLIC (GOVERNMENT) RegS	O - Public administration and defence; compulsory social security	1.9%	Dominican Republic
ECUADOR REPUBLIC OF (GOVERNMENT) RegS	O - Public administration and defence; compulsory social security	1.8%	Ecuador
MEXICO (UNITED MEXICAN STATES)	O - Public administration and defence; compulsory social security	1.8%	Mexico
DOMINICAN REPUBLIC RegS	O - Public administration and defence; compulsory social security	1.7%	Dominican Republic
MOROCCO (KINGDOM OF) RegS	O - Public administration and defence; compulsory social security	1.7%	Morocco

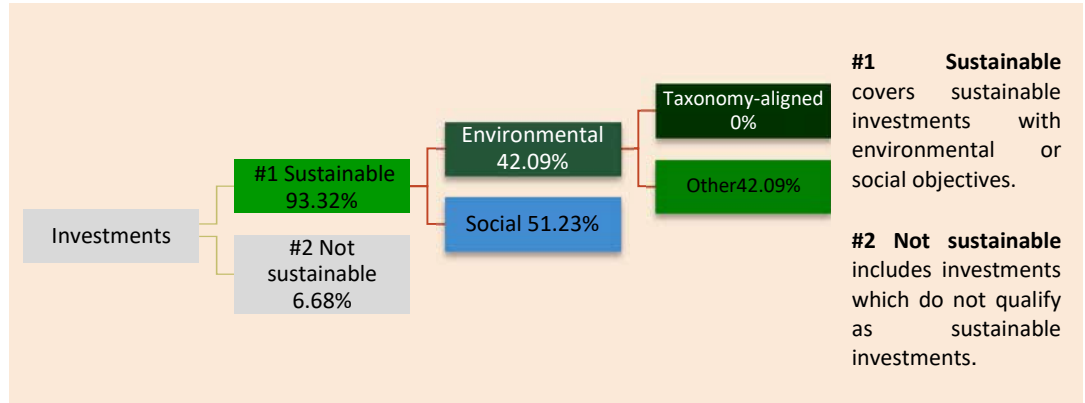

## What was the proportion of sustainability-related investments?

**Asset allocation** describes the share of investments in specific assets.

### ● *What was the asset allocation?*

The calculation was based on a mark-to-market assessment of the Portfolio and may rely on incomplete or inaccurate issuer or third party data. For the 2022 reference period only, this calculation is based on the Portfolio's holdings as at 31 December 2022, being the only quarter end in the reference period that followed the publication of the Portfolio's SFDR Annex detailing its planned asset allocation. For all subsequent reference periods, this calculation will be based on the average of the four quarter ends.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

### *In which economic sectors were the investments made?*

Data as at 31 December 2022	
Economic Sector – NACE	% Assets
C - Manufacturing	1.95%
H - Transporting and storage	1.01%
J - Information and communication	0.13%
K - Financial and insurance activities	1.85%
O - Public administration and defense; compulsory social security	90.93%
U - Activities of extraterritorial organizations and bodies	0.91%
None	3.22%

## To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective

**Transitional activities are economic activities** for which low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

The analysis and disclosure requirements introduced by the EU Taxonomy are very detailed and compliance with them requires the availability of multiple, specific data points in respect of each investment which the Portfolio makes. The Sub-Investment Manager cannot confirm that the Portfolio invested in any investments that qualified as environmentally sustainable for the purposes of the EU Taxonomy. Disclosures and reporting on Taxonomy alignment will develop as the EU framework evolves and data is made available by issuers. The Sub-Investment Manager will keep the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy under active review as data availability and quality improves.

### ● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>3</sup>?

Yes:

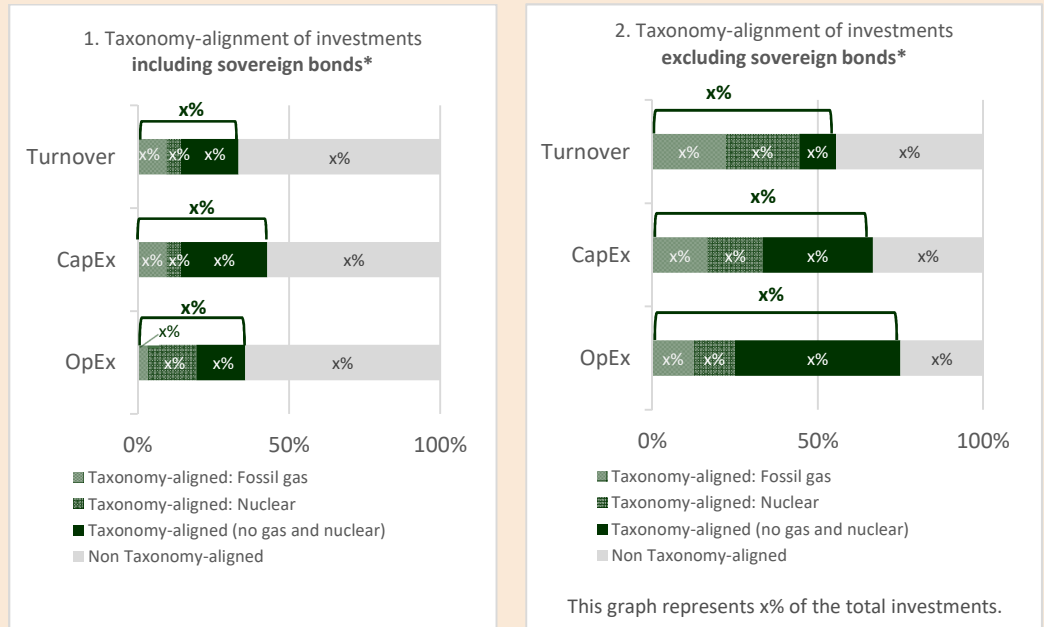

In fossil gas

In nuclear energy

No

<sup>3</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

● **What was the share of investments made in transitional and enabling activities?**

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments

### What was the share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy?

42.09%

While, the Portfolio invested in sustainable investments with an environmental objective, such sustainable investments did not commit to being Taxonomy-aligned investments.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

### What was the share of socially sustainable investments?

51.23%

### What investments were included under “not sustainable”, what was their purpose and were there any minimum environmental or social safeguards?

“Other” included the remaining investments (including but not limited to any derivatives listed in the Supplement for the Portfolio) of the Portfolio which did not qualify as sustainable investments.

The “Other” section in the Portfolio was held for a number of reasons that the Sub-Investment Manager felt were necessary for the proper functioning of the Portfolio such as ensuring adequate liquidity, hedging and collateral cover.

As noted above, the Portfolio was invested in compliance with ESG exclusion policies, on a continuous basis. This ensured that investments made by the Portfolio sought to align with international environmental and social safeguards such as the UNGC Principles, UNGPs, OECD Guidelines and ILO Standards.

The Sub-Investment Manager believed that these policies prevented investment in issuers that most egregiously violated environmental and/or social minimum standards and ensured that the Portfolio could successfully promote its sustainable investment objective.

The above steps ensured that robust environmental and social safeguards were in place.

## What actions have been taken to attain the sustainable investment objective during the reference period?

The Portfolio was managed in-line with the sustainable investment objective and the following actions were taken:

### i. Integrating proprietary ESG analysis:

The sovereign sustainability development indicator, which is proprietary to the Sub-Investment Manager, assessed sovereign issuers' advancement of climate change adaptation and mitigation, reducing GHG emissions and net zero alignment, and in achieving the SDGs, with a particular focus on public health and education.

The Sub-Investment Manager also conducted ongoing analysis of ESG factors by generating and utilising NB ESG Quotient ratings for issuers to help to better identify risks and opportunities in the overall credit and value assessment.

The NB ESG Quotient was a key component of the internal credit ratings and helped to identify business risks (including ESG risks), which would cause deterioration in an issuer's credit profile. Internal credit ratings could be increased or decreased based on the NB ESG Quotient rating, and this was monitored by the Sub-Investment Manager as an important component of the investment process for the Portfolio.

By integrating the investment team's proprietary ESG analysis (the NB ESG Quotient) into their internal credit ratings, there was a direct link between their analysis of material ESG characteristics and portfolio construction activities across their strategy.

Issuers with a favourable NB ESG Quotient rating had a higher chance of ending up in the Portfolio. Issuers with a poor NB ESG Quotient rating, especially where these were not being addressed by that issuer, were not included in the Portfolio.

<b>31 December 2022</b>	<b>Rating</b>	<b>Combined coverage</b>
NB ESG Quotient	53	97%
Third-party Data	4.3	

With regards to the NB ESG Quotient, a rating between 1 – 100 is used where 1 is lowest rating and 100 is the highest rating. This Portfolio does not have a minimum NB ESG Quotient rating. The average ESG rating is a weighted average and is not a rating of the Portfolio strategy itself.

Third-party data was also used to measure the environmental and social characteristics promoted by the Portfolio. The third-party data ratings range from 0-10, with 0 being the lowest rating and 10 being the highest rating.

The Sub-Investment Manager did not invest in sovereign issuers which were identified by the Sub-Investment Manager as having weak ESG practices. Such exclusions were based on a number of ESG criteria including the following:

- Sovereign issuers which were ranked in the bottom decile based on the NB ESG Quotient, with no near-term improvement prospects;
- Sovereign issuers which were excluded from the Benchmark based on ESG considerations;

- Sovereign issuers where top officials had been sanctioned by the UN Security Council based on human rights violations;
- Sovereign issuers which were assessed as having high and increasing GHG intensity levels;
- Sovereign issuers which were assessed as having poor and deteriorating human rights and rule of law metrics; and
- Sovereign issuers which were non-compliant with the standard put forth by the OECD's Global Forum on Transparency and Exchange of Information for Tax Purposes, or sovereign issuers that are classified as a high risk jurisdiction subject to a call for action by the FATF.

**ii. Engagement:**

The Sub-Investment Manager engaged with issuers through a robust ESG engagement program. They sought to prioritise constructive engagements and sought to engage on topics (including ESG topics) they determined to be financially material for the relevant issuer. The Sub-Investment Manager viewed this engagement with issuers, as an important part of its investment process. Progress on engagement was tracked centrally in the Sub-Investment Manager's engagement tracker.

**ii. ESG sectoral exclusion policies:**

To ensure that the sustainable investment objective of the Portfolio was attained, the Portfolio applied the ESG exclusion policies referenced above, which placed limitations on the investable universe.

**How did this financial product perform compared to the reference sustainable benchmark?**

N/A - The Portfolio's Benchmark has not been designated as a reference benchmark. Therefore, it is not consistent with the Portfolio's sustainable objectives.

● ***How does the reference benchmark differ from a broad market index?***

N/A

● ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the sustainable investment objective?***

N/A

● ***How did this financial product perform compared with the reference benchmark?***

N/A

---

**Reference benchmarks** are indexes to measure whether the financial product attains the sustainable objective.

---

- ***How did this financial product perform compared with the broad market index?***  
N/A

**Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852**

**Product name:** Neuberger Berman China Bond Fund (the “Portfolio”)

**Legal entity identifier:** 54930013S2HFIMB3V932

## Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?	
<input checked="" type="radio"/> <input checked="" type="radio"/> <input type="checkbox"/> <b>Yes</b>	<input checked="" type="radio"/> <input type="radio"/> <input checked="" type="checkbox"/> <b>No</b>
<input type="checkbox"/> It made <b>sustainable investments with an environmental objective</b> : ____% <ul style="list-style-type: none"> <li><input type="checkbox"/> _____ in economic activities that qualify as environmentally sustainable under the EU Taxonomy</li> <li><input type="checkbox"/> _____ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</li> </ul>	<input type="checkbox"/> It <b>promoted Environmental/Social (E/S) characteristics</b> and while it did not have as its objective a sustainable investment, it had a proportion of ____% of sustainable investments <ul style="list-style-type: none"> <li><input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy</li> <li><input type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</li> <li><input type="checkbox"/> with a social objective</li> </ul>
<input type="checkbox"/> It made <b>sustainable investments with a social objective</b> : ____%	<input checked="" type="checkbox"/> It promoted E/S characteristics, but <b>did not make any sustainable investments</b>

## To what extent were the environmental and/or social characteristics promoted by this financial product met?

The following environmental and social characteristics were promoted by the Portfolio for corporate issuers:

- **Environmental Characteristics:** biodiversity and land usage; carbon emissions; opportunities in clean technologies; water stress; toxic emissions & waste; financing environmental impact; product carbon footprint; environmental policy; environmental management system; greenhouse gas (“GHG”) reduction programme; green procurement policy; and non-GHG air emissions programmes.
- **Social Characteristics:** health & safety; human capital development; labour management; privacy & data security; product safety & quality; financial products safety; discrimination policy; community involvement programmes; diversity programmes; and human rights policy.

Performance in relation to these environmental and social characteristics was measured through the NB ESG Quotient, and is reported, in aggregate, below.

### ● **How did the sustainability indicators perform?**

As part of the investment process, the Manager and the Sub-Investment Manager considered a variety of sustainability indicators to measure the environmental and/or social characteristics promoted by the Portfolio. These sustainability indicators are listed below:

#### 1. The NB ESG Quotient:

The proprietary Neuberger Berman ESG rating system (the “NB ESG Quotient”), is built around the concept of sector specific ESG risk and opportunity, and produced an overall ESG rating for issuers by assessing them against certain ESG metrics.

The NB ESG Quotient assigned weightings to environmental, social and governance characteristics for each sector to derive the NB ESG Quotient rating for issuers. The Manager and the Sub-Investment Manager used the NB ESG Quotient to promote the environmental and social characteristics listed by prioritising investment in securities issued by issuers with a relatively favourable and/or an improving NB ESG Quotient rating. Pursuant to this, the Manager and the Sub-Investment Manager limited exposure to issuers with the poorest NB ESG Quotient rating unless there was a reasonable expectation that the NB ESG Quotient rating would improve over time.

31 December 2022	Rating	Combined coverage
NB ESG Quotient	50	67%
Third-party Data	4.4	

With regards to the NB ESG Quotient rating, a rating between 1 – 100 is used where 1 is the lowest rating and 100 is the highest rating. This Portfolio does not have a minimum NB ESG Quotient rating. The average NB ESG Quotient rating is a weighted average and is not a rating of the Portfolio strategy itself.

Third-party data was also used to measure the environmental and social characteristics promoted by the Portfolio. The third-party data ratings range from 0-10, with 0 being the lowest rating and 10 being the highest rating.

#### 2. ESG exclusion policies:

To ensure that the environmental or social characteristics promoted by the Portfolio were attained, the Portfolio did not invest in securities issued by issuers whose

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

activities had been identified as breaching the Neuberger Berman Controversial Weapons Policy and the Neuberger Berman Thermal Coal Involvement Policy. From 19 August 2022 onwards, the Portfolio is phasing out its exposure to thermal coal and prohibited investment in securities issued by issuers that derived more than 10% of revenue from thermal coal mining or were expanding new thermal coal power generation, as determined by internal screens. From 19 August 2022 onwards, the Portfolio also prohibited investments in issuers in the power generation industry that used thermal coal as an energy source for more than 95% of their installed power generation capacity, were expanding into new thermal coal power generation, or whose expansionary capital expenditure budgets did not include a minimum threshold for non-coal investments, as determined by internal screens. From 6 April 2022 onwards, the Portfolio did not invest in securities issued by issuers whose activities had been identified as breaching the Neuberger Berman Global Standards Policy which excluded identified violators of (i) the United Nations Global Compact Principles (“**UNGC Principles**”), (ii) the OECD Guidelines for Multinational Enterprises (“**OECD Guidelines**”), (iii) the United Nations Guiding Principles on Business and Human Rights (“**UNGPs**”) and (iv) the International Labour Standards (“**ILO Standards**”). In addition, the Portfolio excluded securities issued by issuers which were involved in direct child labour, in the tobacco industry, as well as certain issuers with significant exposure to oil sands.

When applying ESG exclusions to the Portfolio, the Manager and the Sub-Investment Manager used third-party data to identify issuers in breach of the ESG exclusions listed above. Where possible, the Manager and the Sub-Investment Manager sought to overlay this third-party data with qualitative expertise from their research analysts to establish a current and holistic picture of the issuer. The Manager and the Sub-Investment Manager discussed and debated the differences between the violators identified by the third-party data and those identified as a result of their research, which drew upon data from the NB ESG Quotient and direct engagements with the issuer.

● **...and compared to previous periods?**

N/A - this is the first reference period.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

N/A - the Portfolio did not commit to holding sustainable investments.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

N/A - the Portfolio did not commit to holding sustainable investments.

— **How were the indicators for adverse impacts on sustainability factors taken into account?**

N/A - the Portfolio did not commit to holding sustainable investments.

— **Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:**

The Portfolio did not commit to holding sustainable investments, however from 6 April 2022 onwards, the Manager and the Sub-Investment Manager did not invest in issuers whose activities had been identified as breaching the OECD Guidelines, UNGC Principles, ILO Standards and UNGPs, captured through the Neuberger Berman Global Standards Policy.

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

*The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.*

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments.

### **How did this financial product consider principal adverse impacts on sustainability factors?**

A selection of the principal adverse impact indicators were considered directly (e.g. through the ESG exclusion policies listed above) and/or indirectly (e.g. as part of the Manager's and the Sub-Investment Manager's assessment of issuers) throughout the 2022 reference period.

From 28 November 2022 onwards, the Manager and the Sub-Investment Manager considered the following principal adverse impacts with respect to the Portfolio, namely: GHG emissions, carbon footprint, GHG intensity, fossil fuel exposure, board gender diversity, UNGC Principles & OECD Guidelines violations and controversial weapons (the “**Product Level PAIs**”).

Consideration of the Product Level PAIs was limited by the availability (in the Manager's and the Sub-Investment Manager's subjective view) of adequate, reliable and verifiable data coverage. The Manager and the Sub-Investment Manager utilised third-party data and proxy data along with internal research to consider the Product Level PAIs.

Consideration of the Product Level PAIs by the Manager and the Sub-Investment Manager was through a combination of:

- Monitoring the Portfolio, in particular where it fell below the quantitative and qualitative tolerance thresholds set for each Product Level PAI by the Manager and the Sub-Investment Manager;
- Stewardship and/or setting engagement objectives where the Portfolio fell below the quantitative and qualitative tolerance thresholds set for a Product Level PAI; and
- Application of the ESG exclusion policies referenced above, which included consideration of several of the Product Level PAIs.

## What were the top investments of this financial product?

The Manager and the Sub-Investment Manager have used the EU statistical classification of economic activities (“NACE”) economic sector breakdown to identify the economic sectors of the Portfolio’s top 15 investments. The following data is as at 31 December 2022.

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: 1 January 2022 - 31 December 2022

Largest investments	Sector	% Assets	Country
BANK OF CHINA LTD RegS	K - Financial and insurance activities	6.7%	China
CHINA PEOPLES REPUBLIC OF (GOVERNMENT)	O - Public administration and defence; compulsory social security	6.6%	China
GD POWER DEVELOPMENT CO LTD	D - Electricity, gas, steam and air conditioning supply	4.5%	China
BRIGHT FOOD (GROUP) CO LTD	C - Manufacturing	4.5%	China
GUANGZHOU YUEXIU HOLDING LTD MTN	F - Construction	4.5%	China
SHENZHEN METRO GROUP CO LTD	H - Transporting and storage	4.5%	China

GUANGZHOU METRO INVESTMENT FINANCE MTN	K - Financial and insurance activities	2.7%	China
AGRICULTURAL BANK OF CHINA LTD	K - Financial and insurance activities	2.3%	China
CHINA POST GROUP	K - Financial and insurance activities	2.2%	China
CHINA RESOURCES CO LTD MTN	G - Wholesale and retail trade; repair of motor vehicles and motorcycles	2.2%	China
CHINA PEOPLES REPUBLIC OF (GOVERNMENT)	O - Public administration and defence; compulsory social security	2.2%	China

## What was the proportion of sustainability-related investments?

**Asset allocation** describes the share of investments in specific assets.

### What was the asset allocation?

The Manager and the Sub-Investment Manager calculated the proportion of environmentally and/or socially aligned investments in the Portfolio by reference to the proportion of issuers in the Portfolio: i) that held either an NB ESG Quotient rating or a third-party equivalent ESG rating that was used as part of the portfolio construction and investment management process of the Portfolio; and/or ii) with whom the Manager and the Sub-Investment Manager had engaged directly. This calculation was based on a mark-to-market assessment of the Portfolio and may rely on incomplete or inaccurate issuer or third-party data. For the 2022 reference period only, this calculation is based on the Portfolio’s holdings as at 31 December 2022, being the only quarter end in the reference period that followed the publication of the Portfolio’s SFDR Annex detailing its planned asset allocation. For all subsequent reference periods, this calculation will be based on the average of the four quarter ends.

● ***In which economic sectors were the investments made?***

Data as at 31 December 2022	
Economic Sector – NACE	% Assets
B - Mining and quarrying	0.7%
C - Manufacturing	13.1%
D - Electricity, gas, steam, and air conditioning supply	7.5%
F - Construction	5.6%
G - Wholesale and retail trade; repair of motor vehicles and motorcycles	2.8%
H - Transporting and storage	7.6%
K - Financial and insurance activities	33.5%
N - Administrative and support service activities	5.6%
O - Public administration and defense; compulsory social security	16.7%
None	6.8%

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

- **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

## To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The analysis and disclosure requirements introduced by the EU Taxonomy are very detailed and compliance with them requires the availability of multiple, specific data points in respect of each investment which the Portfolio made. The Manager and the Sub-Investment Manager cannot confirm that the Portfolio invested in any investments that qualified as environmentally sustainable for the purposes of the EU Taxonomy. Disclosures and reporting on Taxonomy alignment will develop as the EU framework evolves and data is made available by issuers. The Manager and the Sub-Investment Manager will keep the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy under active review as data availability and quality improves.

### ● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?

Yes:

In fossil gas  In nuclear energy

No

---

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

- **What was the share of investments made in transitional and enabling activities?**

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments.

- **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments.

**What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?**

N/A – the Portfolio did not commit to holding sustainable investments.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

**What was the share of socially sustainable investments?**

N/A – the Portfolio did not commit to holding sustainable investments.

**What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?**

“Other” included the remaining investments of the Portfolio (including but not limited to any derivatives or any security collateralized by a pool of similar assets or receivables listed in the Supplement for the Portfolio) which were neither aligned with the environmental or social characteristics, nor qualified as sustainable investments.

The “Other” section in the Portfolio was held for a number of reasons that the Manager and the Sub-Investment Manager felt was beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover.

As noted above, the Portfolio was invested in compliance with ESG exclusion policies, on a continuous basis. This ensured that investments made by the Portfolio sought to align with international environmental and social safeguards such as the UNGC Principles, UNGPs, OECD Guidelines and ILO Standards.

The Manager and the Sub-Investment Manager believe that these policies prevented investment in issuers that most egregiously violated environmental and/or social minimum standards and ensured that the Portfolio could successfully promote its environmental and social characteristics.

The above steps ensured that robust environmental and social safeguards were in place.

## What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Portfolio was managed in-line with the investment objective and the following actions were taken:

### I. Integrating proprietary ESG analysis:

The NB ESG Quotient ratings were generated for issuers in the Portfolio. The NB ESG Quotient rating for issuers was utilised to help to better identify risks and opportunities in the overall credit and value assessment.

The NB ESG Quotient was a key component of the internal credit ratings and helped to identify business risks (including ESG risks), which would cause deterioration in an issuer's credit profile. Internal credit ratings can be notched up or down based on the NB ESG Quotient rating, and this was monitored by the Manager and the Sub-Investment Manager as an important component of the investment process for the Portfolio.

By integrating the investment team's proprietary ESG analysis (the NB ESG Quotient) into their internal credit ratings, there was a direct link between their analysis of material ESG characteristics and portfolio construction activities across their strategy.

Issuers with a favourable and/or an improving NB ESG Quotient rating had a higher chance of ending up in the Portfolio. Issuers with a poor NB ESG Quotient rating especially where these were not being addressed by that issuer, were more likely to be removed from the investment universe or divested from the Portfolio.

### II. Engagement:

The Manager and the Sub-Investment Manager engaged with issuers through a robust ESG engagement program. They sought to prioritise constructive engagements and sought to engage on topics (including ESG topics) they determined to be financially material for the relevant issuer. The Manager and the Sub-Investment Manager viewed this engagement with issuers, as an important part of its investment process. Progress on engagement was tracked centrally in the Manager and the Sub-Investment Manager's engagement tracker.

### III. ESG sectoral exclusion policies:

To ensure that the environmental and social characteristics promoted by the Portfolio were attained, the Portfolio applied the ESG exclusion policies referenced above, which placed limitations on the investable universe.

## How did this financial product perform compared to the reference benchmark?

N/A – The Portfolio's benchmark has not been designated as a reference benchmark. Therefore, it is not consistent with the environmental or social characteristics promoted by the Portfolio.

- ***How does the reference benchmark differ from a broad market index?***  
N/A
- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***  
N/A
- ***How did this financial product perform compared with the reference benchmark?***  
N/A
- ***How did this financial product perform compared with the broad market index?***  
N/A

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

---

**Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852**

**Product name:** Neuberger Berman High Yield Bond Fund (the “Portfolio”)

**Legal entity identifier:** 549300IJY8N43QRUU802

## Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?	
<input checked="" type="radio"/> <input checked="" type="radio"/> <input type="checkbox"/> <b>Yes</b>	<input checked="" type="radio"/> <input type="radio"/> <input checked="" type="checkbox"/> <b>No</b>
<input type="checkbox"/> It made <b>sustainable investments with an environmental objective</b> : ____% <ul style="list-style-type: none"> <li><input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy</li> <li><input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</li> </ul>	<input type="checkbox"/> It <b>promoted Environmental/Social (E/S) characteristics</b> and while it did not have as its objective a sustainable investment, it had a proportion of ____% of sustainable investments <ul style="list-style-type: none"> <li><input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy</li> <li><input type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</li> <li><input type="checkbox"/> with a social objective</li> </ul>
<input type="checkbox"/> It made <b>sustainable investments with a social objective</b> : ____%	<input checked="" type="checkbox"/> It promoted E/S characteristics, but <b>did not make any sustainable investments</b>

## To what extent were the environmental and/or social characteristics promoted by this financial product met?

The following environmental and social characteristics were promoted by the Portfolio:

- **Environmental Characteristics:** biodiversity & responsible land usage; carbon footprint reduction; greenhouse gas (“GHG”) emissions; opportunities in clean technologies; opportunities in green building; responsible raw material sourcing; recycling practices & trends; toxic emissions & waste; waste management; and water management.
- **Social Characteristics:** access to finance; access to healthcare; access to medicines; business ethics & transparency of government relations; chemical safety; community relations; controversial sourcing; corporate behaviour; drug safety & side effects management; health & nutrition; health & safety; human capital development; labour management; data privacy & security; product safety & quality; and quality of care & patient satisfaction.

Performance in relation to these environmental and social characteristics was measured through the NB ESG Quotient, and is reported, in aggregate, below.

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

## How did the sustainability indicators perform?

As part of the investment process, the Sub-Investment Manager considered a variety of sustainability indicators to measure the environmental and/or social characteristics promoted by the Portfolio. These sustainability indicators are listed below:

### 1. The NB ESG Quotient:

The proprietary Neuberger Berman ESG rating system (the “**NB ESG Quotient**”), is built around the concept of sector specific ESG risk and opportunity, and produced an overall ESG rating for issuers by assessing them against certain ESG metrics.

Foundational to the NB ESG Quotient is the proprietary Neuberger Berman (“**NB**”) materiality matrix, which focuses on the ESG characteristics that were considered to be the most likely to be the material drivers of ESG risk and opportunity for each sector. The NB materiality matrix enabled the Sub-Investment Manager to derive the NB ESG Quotient rating, to compare sectors and issuers relative to their environmental and social characteristics. Each sector criteria is constructed using third-party and internally derived ESG data and supplemented with internal qualitative analysis, leveraging the Portfolio’s analyst team’s significant sector expertise.

The NB ESG Quotient assigned weightings to environmental, social and governance characteristics for each sector to derive the NB ESG Quotient rating for issuers. Issuers with a favourable and/or an improving NB ESG Quotient rating had a higher chance of being included in the Portfolio. Issuers with a poor NB ESG Quotient rating, especially where a poor NB ESG Quotient rating is not being addressed by an issuer, were more likely to be removed from the investment universe or divested from the Portfolio. In addition, the Sub-Investment Manager sought to prioritise constructive engagements with corporate issuers.

31 December 2022	Rating	Combined coverage
NB ESG Quotient	57	99%
Third-party Data	5.0	

With regards to the NB ESG Quotient rating, a rating between 1 – 100 is used where 1 is the lowest rating and 100 is the highest rating. This Portfolio does not have a minimum NB ESG Quotient rating. The average NB ESG Quotient rating is a weighted average and is not a rating of the Portfolio strategy itself.

Third-party data was also used to measure the environmental and social characteristics promoted by the Portfolio. The third-party data ratings range from 0-10, with 0 being the lowest rating and 10 being the highest rating.

### 2. Climate Value-at-Risk:

Over the reference period, Climate Value-at-Risk (“**CVaR**”) measured the exposure to transition and physical climate risks. CVaR is a scenario analysis tool evaluating economic risks under various degree scenarios (i.e., the amount of warming targeted) and potential regulatory environments in varying countries.

CVaR is a type of scenario analysis which is defined as the present value of aggregated future policy risk costs, technology opportunity profits, and extreme weather event costs and profits, expressed as a percentage of a security or portfolio’s market value according to the warming scenario targeted.

By calculating the financial risks from climate change per security and per scenario, CVaR provides a framework that helps quantify and understand these risks. The CVaR metric provides insight into the climate-stressed valuation of assets based on specific degree scenarios, providing an assessment on how much a security may stand to lose or gain from the impact of climate change.

As at 31 December 2022, CVaR projected that a warming climate scenario could result in a depreciation of 11.99% in the valuation of assets under assessment. The Portfolio had a CVaR coverage of 57%.

This analysis is intended as a broad overview of the investment team's style and investment process.

On a holistic basis, the results were evaluated by the Sub-Investment Manager's portfolio managers and analysts. The scenario analysis served as a starting point for further bottom-up analysis and identifying potential climate-related risks to address through issuer engagement.

Due to data limitations, CVaR was not applied across all issuers held by the Portfolio and was instead limited to the issuers for which the Sub-Investment Manager had sufficient and reliable data.

The analysis from CVaR is reviewed at least once a year.

### 3. ESG exclusion policies:

To ensure that the environmental or social characteristics promoted by the Portfolio were attained, the Portfolio did not invest in securities issued by issuers whose activities breached, or were not consistent with, the Neuberger Berman Controversial Weapons Policy and the Neuberger Berman Thermal Coal Involvement Policy. In addition to the application of the Neuberger Berman Thermal Coal Involvement Policy, the Sub-Investment Manager prohibited the initiation of new investment positions in securities issued by issuers that (i) derived more than 25% of their revenue from thermal coal mining; or (ii) were expanding new thermal coal power generation. Furthermore, from 6 April 2022 onwards, investments held by the Portfolio did not invest in securities issued by issuers whose activities had been identified as breaching the Neuberger Berman Global Standards Policy which excluded identified violators of (i) the United Nations Global Compact Principles ("**UNGC Principles**"), (ii) the OECD Guidelines for Multinational Enterprises ("**OECD Guidelines**"), (iii) the United Nations Guiding Principles on Business and Human Rights ("**UNGPs**") and (iv) the International Labour Standards ("**ILO Standards**").

When applying ESG exclusions to the Portfolio, the Sub-Investment Manager used third-party data to identify issuers in breach of the ESG exclusions listed above. Where possible, the Sub-Investment Manager sought to overlay this third-party data with qualitative expertise from their research analysts to establish a current and holistic picture of the issuer. The Sub-Investment Manager discussed and debated the differences between the violators identified by the third-party data and those identified as a result of their research, which drew upon data from the NB ESG Quotient and direct engagements with the issuer.

#### ● ***...and compared to previous periods?***

N/A – this is the first reference period.

#### ● ***What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?***

N/A – the Portfolio did not commit to holding sustainable investments.

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

*How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?*

N/A – the Portfolio did not commit to holding sustainable investments.

*How were the indicators for adverse impacts on sustainability factors taken into account?*

N/A

*Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:*

The Portfolio did not commit to holding sustainable investments, however from 6 April 2022 onwards, the Sub-Investment Manager did not invest in issuers whose activities had been identified as breaching the OECD Guidelines, UNGC Principles, ILO Standards and UNGPs, captured through the Neuberger Berman Global Standards Policy.

*The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.*

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

N/A - The Portfolio did not commit to holding Taxonomy-aligned investments.

**How did this financial product consider principal adverse impacts on sustainability factors?**

A selection of the principal adverse impact indicators were considered directly (e.g. through the ESG exclusion policies listed above) and/or indirectly (e.g. as part of the Sub-Investment Manager's assessment of issuers) throughout the 2022 reference period.

From 28 November 2022 onwards, the Sub-Investment Manager considered the following principal adverse impacts, namely: GHG emissions, carbon footprint, GHG intensity, fossil fuel exposure, board gender diversity, UNGC Principles & OECD violations and controversial weapons (the “**Product Level PAIs**”).

Consideration of the PAIs was limited by the availability (in the Sub-Investment Manager's subjective view) of adequate, reliable and verifiable data coverage. The Sub-Investment Manager utilised third-party data and proxy data along with internal research to consider the PAIs.

Consideration of the Product Level PAIs by the Sub-Investment Manager was through a combination of:

- Monitoring the Portfolio, in particular where it fell below the quantitative and qualitative tolerance thresholds set for each Product Level PAI by the Sub-Investment Manager;
- Stewardship and/or setting engagement objectives where the Portfolio fell below the quantitative and qualitative tolerance thresholds set for a Product Level PAI by the Sub-Investment Manager; and
- Application of the ESG exclusion policies referenced above, which included consideration of several of the Product Level PAIs.

### What were the top investments of this financial product?

The Sub-Investment Manager has used the EU statistical classification of economic activities ("NACE") economic sector breakdown to identify the economic sectors of the Portfolio's top15 investments. The following data is as at 31 December 2022.

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 1 January 2022 - 31 December 2022

Largest investments	Sector	% Assets	Country
AMERICAN AIRLINES INC 144A	H - Transporting and storage	1.2%	United States
LEVEL 3 FINANCING INC 144A	K - Financial and insurance activities	1.1%	United States
GLOBAL AIRCRAFT LEASING CO LTD 144A	N - Administrative and support service activities	1.0%	Cayman Islands
CSC HOLDINGS LLC 144A	J - Information and communication	0.9%	United States
AMERICAN AIRLINES INC 144A	H - Transporting and storage	0.8%	United States
ONEMAIN FINANCE CORP	K - Financial and insurance activities	0.8%	United States
NB GLOBAL MONTHLY INCOME FUND LTD	K - Financial and insurance activities	0.8%	Guernsey, Channel Islands
ALLIANT HOLDINGS INTERMEDIATE LLC 144A	K - Financial and insurance activities	0.8%	United States
CCO HOLDINGS LLC 144A	J - Information and communication	0.8%	United States
REALOGY GROUP LLC / REALOGY CO ISS 144A	L - Real estate activities	0.7%	United States
NEW FORTRESS ENERGY INC 144A	D - Electricity, gas, steam and air conditioning supply	0.7%	United States
MOZART DEBT MERGER SUB INC 144A	K - Financial and insurance activities	0.7%	United States
HARVEST MIDSTREAM I LP 144A	H - Transporting and storage	0.7%	United States
PAREXEL 2L TL-B 7/21 Pvt	N - Administrative and support service activities	0.6%	United States
REALOGY GROUP LLC 144A	L - Real estate activities	0.6%	United States

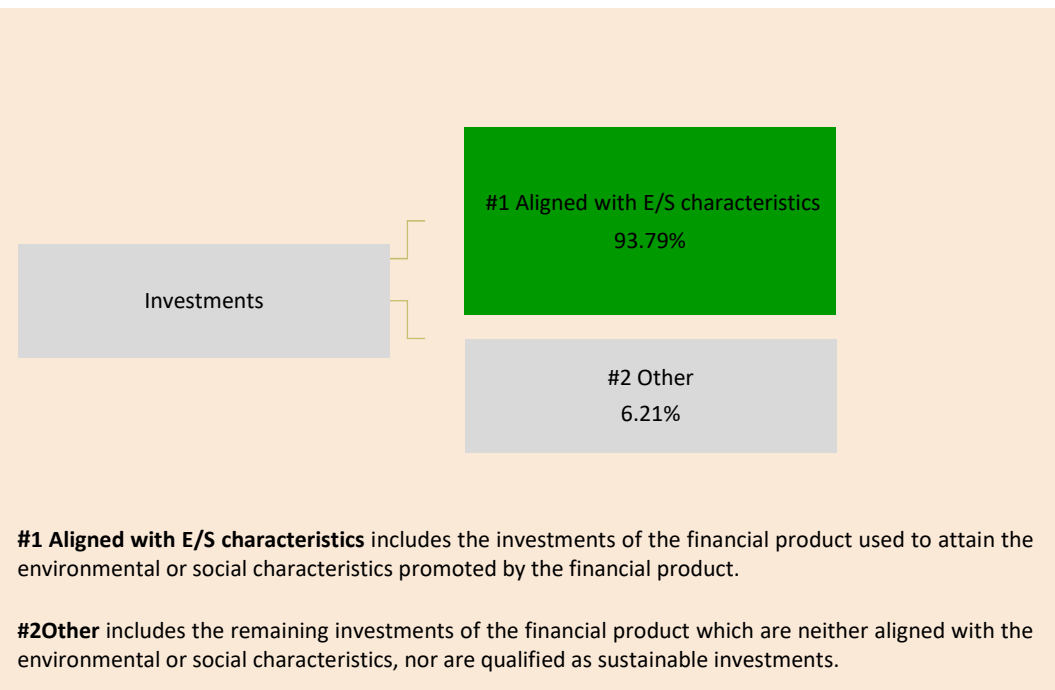

## What was the proportion of sustainability-related investments?

**Asset allocation** describes the share of investments in specific assets.

### ● **What was the asset allocation?**

The Sub-Investment Manager has calculated the proportion of investments aligned with the environmental and/or social characteristics promoted by the Portfolio by reference to the proportion of issuers in the Portfolio: i) that held either an NB ESG Quotient rating or a third-party equivalent ESG rating that was used as part of the portfolio construction and investment management process of the Portfolio; and/or ii) with whom the Sub-Investment Manager had engaged directly. This calculation was based on a mark-to-market assessment of the Portfolio and may rely on incomplete or inaccurate issuer or third-party data. For the 2022 reference period only, this calculation is based on the Portfolio's holdings as at 31 December 2022, being the only quarter end in the reference period that followed the publication of the Portfolio's SFDR Annex detailing its planned asset allocation. For all subsequent reference periods, this calculation will be based on the average of the four quarter ends.

## In which economic sectors were the investments made?

Data as of 31 December 2022	
Economic Sector – NACE	% Assets
B - Mining and quarrying	7.76%
C - Manufacturing	11.86%
D - Electricity, gas, steam and air conditioning supply	4.32%
F - Construction	1.57%
G - Wholesale and retail trade; repair of motor vehicles and motorcycles	3.10%
H - Transporting and storage	10.75%
I - Accommodation and food service activities	0.46%
J - Information and communication	15.88%
K - Financial and insurance activities	19.32%
L - Real estate activities	4.55%
M - Professional, scientific and technical activities	0.73%
N - Administrative and support service activities	10.24%
P - Education	0.04%
Q - Human health and social work activities	3.48%
R - Arts, entertainment and recreation	1.48%
S - Other services activities	0.35%
None	4.08%

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

- **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

## To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The analysis and disclosure requirements introduced by the EU Taxonomy are very detailed and compliance with them requires the availability of multiple, specific data points in respect of each investment which the Portfolio makes. The Sub-Investment Manager cannot confirm that the Portfolio invested in any investments that qualified as environmentally sustainable for the purposes of the EU Taxonomy. Disclosures and reporting on Taxonomy alignment will develop as the EU framework evolves and data is made available by issuers. The Sub-Investment Manager will keep the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy under active review as data availability and quality improves.

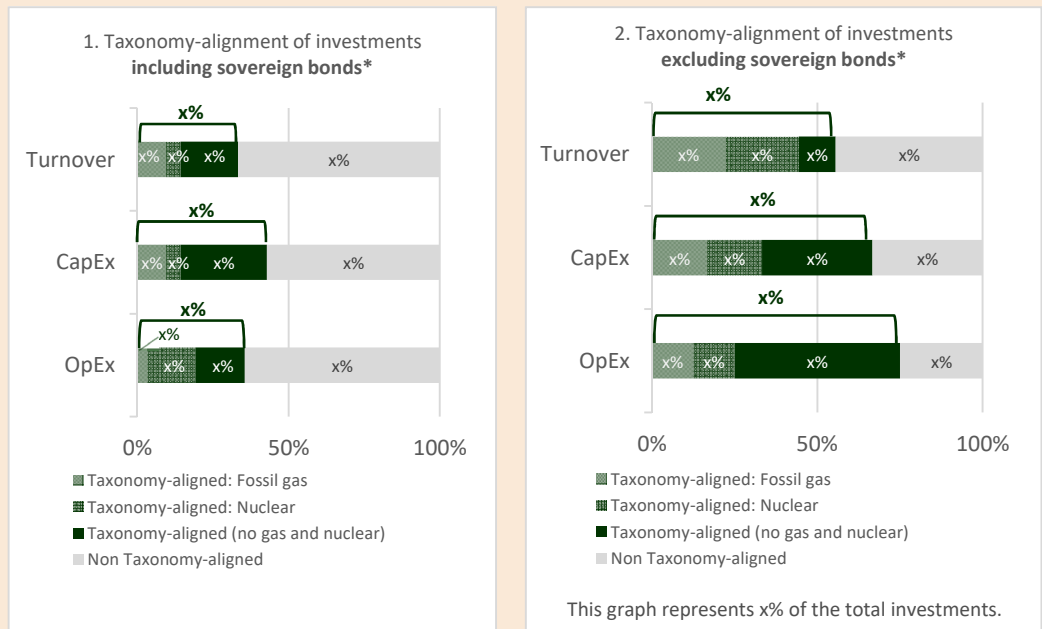

● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?

- Yes:
- In fossil gas     In nuclear energy
- No

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

- **What was the share of investments made in transitional and enabling activities?**

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments.

- **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments.

- **What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?**

N/A – the Portfolio did not commit to holding sustainable investments.

- **What was the share of socially sustainable investments?**

N/A – the Portfolio did not commit to holding sustainable investments.

- **What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?**

“Other” included the remaining investments of the Portfolio (including but not limited to any derivatives or any security collateralized by a pool of similar assets or receivables listed in the Supplement for the Portfolio) which were neither aligned with the environmental or social characteristics, nor qualified as sustainable investments.

The “Other” section in the Portfolio was held for a number of reasons that the Sub-Investment Manager felt was beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover.

As noted above, the Portfolio was invested in compliance with ESG exclusion policies, on a continuous basis. This ensured that investments made by the Portfolio sought to align with international environmental and social safeguards such as the UNGC Principles, UNGPs, OECD Guidelines and ILO Standards.

The Sub-Investment Manager believes that these policies prevented investment in issuers that most egregiously violated environmental and/or social minimum standards and ensured that the Portfolio could successfully promote its environmental and social characteristics.

The above steps ensured that robust environmental and social safeguards were in place.

## **What actions have been taken to meet the environmental and/or social characteristics during the reference period?**

The Portfolio was managed in-line with the investment objective and the following actions were taken:

### **I. Integrating proprietary ESG analysis:**

The NB ESG Quotient ratings were generated for issuers in the Portfolio. The NB ESG Quotient rating for issuers was utilised to help to better identify risks and opportunities in the overall credit and value assessment.

The NB ESG Quotient was a key component of the internal credit ratings and helped to identify business risks (including ESG risks), which would cause deterioration in an issuer's credit profile. Internal credit ratings can be notched up or down based on the NB ESG Quotient rating, and this was monitored by the Sub-Investment Manager as an important component of the investment process for the Portfolio.

By integrating the investment team's proprietary ESG analysis (the NB ESG Quotient) into their internal credit ratings, there was a direct link between their analysis of material ESG characteristics and portfolio construction activities across their strategy.

Issuers with a favourable and/or an improving NB ESG Quotient rating had a higher chance of ending up in the Portfolio. Issuers with a poor NB ESG Quotient rating especially where these were not being addressed by that issuer, were more likely to be removed from the investment universe or divested from the Portfolio.

### **II. Engagement:**

The Sub-Investment Manager engaged with issuers through a robust ESG engagement program. They sought to prioritise constructive engagements and sought to engage on topics (including ESG topics) they determined to be financially material for the relevant issuer. The Sub-Investment Manager viewed this engagement with issuers, as an important part of its investment process. Progress on engagement was tracked centrally in the Sub-Investment Manager's engagement tracker.

### **III. ESG sectoral exclusion policies:**

To ensure that the environmental and social characteristics promoted by the Portfolio were attained, the Portfolio applied the ESG exclusion policies referenced above, which placed limitations on the investable universe.

## How did this financial product perform compared to the reference benchmark?

N/A – The Portfolio's benchmark has not been designated as a reference benchmark. Therefore, it is not consistent with the environmental or social characteristics promoted by the Portfolio.

- ***How does the reference benchmark differ from a broad market index?***  
N/A

## Environmental and/or social characteristics

**Did this financial product have a sustainable investment objective?**

<p><input checked="" type="radio"/> <input checked="" type="radio"/> <input type="checkbox"/> <b>Yes</b></p> <p><input type="checkbox"/> It made <b>sustainable investments with an environmental objective</b>: ____%</p> <p style="padding-left: 40px;"><input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy</p> <p style="padding-left: 40px;"><input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</p> <p><input type="checkbox"/> It made <b>sustainable investments with a social objective</b>: ____%</p>	<p><input checked="" type="radio"/> <input type="radio"/> <input checked="" type="checkbox"/> <b>No</b></p> <p><input type="checkbox"/> It <b>promoted Environmental/Social (E/S) characteristics</b> and while it did not have as its objective a sustainable investment, it had a proportion of ____% of sustainable investments</p> <p style="padding-left: 40px;"><input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy</p> <p style="padding-left: 40px;"><input type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</p> <p style="padding-left: 40px;"><input type="checkbox"/> with a social objective</p> <p><input checked="" type="checkbox"/> It promoted E/S characteristics, but <b>did not make any sustainable investments</b></p>
---	---

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

## To what extent were the environmental and/or social characteristics promoted by this financial product met?

The following environmental and social characteristics were promoted by the Portfolio:

- **Environmental Characteristics:** biodiversity & responsible land usage; carbon footprint reduction; greenhouse gas (“GHG”) emissions; opportunities in clean technologies; opportunities in green building; responsible raw material sourcing; recycling practices & trends; toxic emissions & waste; waste management; and water management.

In aiming to align the Portfolio with a net zero goal, the Sub-Investment Manager promoted and continues to promote, the reduction of the Portfolio’s carbon footprint across scope 1, 2, and material scope 3 GHG emissions,<sup>1</sup> to meet the Portfolio’s ambition to deliver a 50% reduction by 2030 relative to a 2019 baseline and a subsequent decline to net zero by 2050. The 2019 baseline may be subject to re-calculation as data quality and disclosure expands over time, particularly with respect to scope 3 emissions.

- **Social Characteristics:** access to finance; access to healthcare; access to medicines; business ethics & transparency of government relations; chemical safety; community relations; controversial sourcing; corporate behaviour; drug safety & side effects management; health & nutrition; health & safety; human capital development; labour management; data privacy & security; product safety & quality; and quality of care & patient satisfaction.

The Sub-Investment Manager maintained an average ESG rating for the Portfolio that was above that of the broad U.S. high yield market, as represented by the ICE BofA U.S. High Yield Index, which was assessed based on third-party ESG ratings from an established external provider. This calculated was based on the Portfolio’s ESG rating at each of the four calendar quarter ends in the 2022 reference period. The Portfolio was actively managed, the ICE BofA U.S. High Yield Index was used exclusively for ESG rating comparison purposes and carbon intensity reduction comparison purposes only.

Performance in relation to these environmental and social characteristics was measured through the NB ESG Quotient, and is reported, in aggregate, below.

### ● **How did the sustainability indicators perform?**

As part of the investment process, the Sub-Investment Manager considered a variety of sustainability indicators to measure the environmental and/or social characteristics promoted by the Portfolio. These sustainability indicators are listed below:

#### 1. The NB ESG Quotient:

The proprietary Neuberger Berman ESG rating system (the “**NB ESG Quotient**”), is built around the concept of sector specific ESG risk and opportunity, and produced an overall ESG rating for issuers by assessing them against certain ESG metrics.

Foundational to the NB ESG Quotient is the proprietary NB materiality matrix, which focuses on the ESG characteristics that were considered to be the most likely to be the material drivers of ESG risk and opportunity for each sector. Each sector criteria is constructed using third-party and internally derived ESG data and supplemented with internal qualitative analysis, leveraging the Portfolio’s analyst team’s significant sector expertise. The NB materiality matrix enabled the Sub-Investment Manager to derive the NB ESG Quotient rating, to compare sectors and issuers relative to their environmental and social characteristics. Each sector criteria is was constructed using third-party and internally derived ESG data and supplemented with internal

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

<sup>1</sup> Scope 1 emissions are direct emissions from an issuer’s owned or controlled sources (such as emissions created directly by the issuer’s business processes or from vehicles owned by the issuer). Scope 2 emissions are indirect emissions from the generation of electricity, steam, heating and cooling consumed by the issuer. Scope 3 emissions are all other indirect emissions that occur in an issuer’s value chain (such as emissions from products or services consumed by the issuer, disposal of its waste, employee commuting, distribution and transport of its products or its investments).

qualitative analysis, leveraging the Sub-Investment Manager's analyst team's significant sector expertise.

The NB ESG Quotient assigned weightings to environmental, social and governance characteristics for each sector to derive the NB ESG Quotient rating for issuers. Issuers with a favourable and/or an improving NB ESG Quotient rating had a higher chance of being included in the Portfolio. Issuers with a poor NB ESG Quotient rating, especially where a poor NB ESG Quotient rating is not being addressed by an issuer, were excluded from the Portfolio. In addition, the Sub-Investment Manager sought to prioritise constructive engagements with 90% of corporate issuers.

31 December 2022	Rating	Combined coverage
NB ESG Quotient	57	100%
Third-party Data	5.3	

With regards to the NB ESG Quotient rating, a rating between 1 and 100 is used where 1 is the lowest rating and 100 is the highest rating. This Portfolio does not have a minimum NB ESG Quotient rating. The average NB ESG Quotient rating is a weighted average and is not a rating of the Portfolio strategy itself.

Third-party data was also used to measure the environmental and social characteristics promoted by the Portfolio. The third-party data ratings range from 0-10, with 0 being the lowest rating and 10 being the highest rating.

2. Engagement reporting:

Below the Sub-Investment Manager has included a summary of its engagement efforts. The below data covers the period from 01 January 2022 to 31 December 2022.

The Sub-Investment Manager engaged with 114 companies held by the Portfolio in 2022.
65% of the Sub-Investment Manager's engagements were direct one-to-one engagements (either remotely or in-person).
48% of the Sub-Investment Manager's engagements were with CEO / CFO level staff.
14 of the total 17 the UN Sustainable Development Goals ("SDGs") were covered by the Sub-Investment Manager's engagement objectives.
16% of companies engaged with over the 2022 reference period have either fully achieved their engagement objective or have taken partial action towards achieving their engagement objective.

Further information on the Sub-Investment Manager's engagement efforts is available here [https://www.nb.com/handlers/documents.ashx?item\\_id=454c682e-ea4b-4406-af2f-b6ef65c2ef00](https://www.nb.com/handlers/documents.ashx?item_id=454c682e-ea4b-4406-af2f-b6ef65c2ef00)

3. Climate Value-at-Risk:

Over the reference period, Climate Value-at-Risk ("CVaR") measured the exposure to transition and physical climate risks. CVaR is a scenario analysis tool evaluating economic risks under various degree scenarios (i.e., the amount of warming targeted) and potential regulatory environments in varying countries.

CVaR is a type of scenario analysis which is defined as the present value of aggregated future policy risk costs, technology opportunity profits, and extreme weather event costs and profits, expressed as a percentage of a security or portfolio's market value according to the warming scenario targeted.

By calculating the financial risks from climate change per security and per scenario, CVaR provides a framework that helps quantify and understand these risks. The CVaR metric provides insight into the climate-stressed valuation of assets based on specific degree scenarios, providing an assessment on how much a security may stand to lose or gain from the impact of climate change.

As at 31 December 2022, CVaR projected that a warming climate scenario could result in a depreciation of 12.37% in the valuation of assets under assessment.

This analysis is intended as a broad overview of the investment team's style and investment process.

On a holistic basis, the results were evaluated by the Sub-Investment Manager's portfolio managers and analysts. The scenario analysis served as a starting point for further bottom-up analysis and identifying potential climate-related risks to address through issuer engagement.

Due to data limitations, CVaR was not applied across all issuers held by the Portfolio and was instead limited to the issuers for which the Sub-Investment Manager had sufficient and reliable data. The Portfolio had a CVaR coverage of 60%.

The analysis from CVaR is reviewed at least once a year

#### 4. ESG exclusion policies:

To ensure that the environmental or social characteristics promoted by the Portfolio were attained, the Portfolio did not invest in securities issued by issuers whose activities breached, or were not consistent with, the Neuberger Berman Controversial Weapons Policy; the Neuberger Berman Thermal Coal Involvement Policy; and the Neuberger Berman Sustainable Exclusion Policy. In addition to the application of the Neuberger Berman Thermal Coal Involvement Policy, the Sub-Investment Manager prohibited the initiation of new investment positions in securities issued by issuers that (i) derived more than 25% of their revenue from thermal coal mining; or (ii) were expanding new thermal coal power generation. Furthermore, from 6 April 2022 onwards, investments held by the Portfolio did not invest in securities issued by issuers whose activities have been identified as breaching the Neuberger Berman Global Standards Policy which excluded identified violators of (i) the United Nations Global Compact Principles ("**UNGC Principles**"), (ii) the OECD Guidelines for Multinational Enterprises ("**OECD Guidelines**"), (iii) the United Nations Guiding Principles on Business and Human Rights ("**UNGPs**") and (iv) the International Labour Standards ("**ILO Standards**"). The Portfolio excluded issuers that were involved in controversial activities and behaviours, such as fur manufacturers, gambling or nuclear power.

When applying ESG exclusions to the Portfolio, the Sub-Investment Manager used third-party data to identify issuers in breach of the ESG exclusions listed above. Where possible, the Sub-Investment Manager sought to overlay this third-party data with qualitative expertise from their research analysts to establish a current and holistic picture of the issuer. The Sub-Investment Manager discussed and debated the differences between the violators identified by the third-party data and those identified as a result of their research, which drew upon data from the NB ESG Quotient and direct engagements with the issuer.

● **...and compared to previous periods?**

N/A – this is the first reference period.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

N/A – the Portfolio did not commit to holding sustainable investments.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

N/A – the Portfolio did not commit to holding sustainable investments.

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How were the indicators for adverse impacts on sustainability factors taken into account?

N/A

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Portfolio did not commit to holding sustainable investments, however from 6 April 2022 onwards, the Sub-Investment Manager did not invest in issuers whose activities had been identified as breaching the OECD Guidelines, UNGC Principles, ILO Standards and UNGPs, captured through the Neuberger Berman Global Standards Policy.

*The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.*

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

N/A – The Portfolio did not commit to holding Taxonomy-aligned investments.

## How did this financial product consider principal adverse impacts on sustainability factors?

A selection of the principal adverse impact indicators were considered directly (e.g. through the ESG exclusion policies listed above) and/or indirectly (e.g. as part of the Sub-Investment Manager's assessment of issuers) throughout the 2022 reference period.

From 28 November 2022 onwards, the Sub-Investment Manager considered the following principal adverse impacts, namely: GHG emissions, carbon footprint, GHG intensity, fossil fuel exposure, board gender diversity, UNGC Principles & OECD Guidelines violations and controversial weapons (the "Product Level PAIs").

Consideration of the Product Level PAIs was limited by the availability (in the Sub-Investment Manager's subjective view) of adequate, reliable and verifiable data coverage, The Sub-Investment Manager utilised third-party data and proxy data along with internal research to consider the above Product Level PAIs.

Consideration of the Product Level PAIs by the Sub-Investment Manager was through a combination of:

- Monitoring the Portfolio, in particular where it fell below the quantitative and qualitative tolerance thresholds set for each Product Level PAI by the Sub-Investment Manager;
- Stewardship and/or setting engagement objectives where the Portfolio fell below the quantitative and qualitative tolerance thresholds set for a Product Level PAI by the Sub-Investment Manager; and
- Application of the ESG exclusion policies referenced above, which included consideration of several of the Product Level PAIs.

## What were the top investments of this financial product?

The Sub-Investment Manager has used the EU statistical classification of economic activities ("NACE") economic sector breakdown to identify the economic sectors of the Portfolio's top 15 investments. The following data is as at 31 December 2022.

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 1 January 2022 – 31 December 2022

Largest investments	Sector	% Assets	Country
AMERICAN AIRLINES INC 144A	H – Transporting and storage	1.9%	United States
APX GROUP INC 144A	K – Financial and insurance activities	1.5%	United States
IRON MOUNTAIN INC 144A	L – Real estate activities	1.4%	United States
GENESIS ENERGY LP	C – Manufacturing	1.4%	United States
SUNNOVA ENERGY CORP 144A	D – Electricity, gas, steam and air conditioning supply	1.3%	United States
PERFORMANCE FOOD GROUP INC 144A	G – Wholesale and retail trade; repair of motor vehicles and motorcycles	1.3%	United States
GARDA WORLD SECURITY CORP 144A	N – Administrative and support service activities	1.1%	Canada
BUCKEYE PARTNERS LP	H – Transporting and storage	1.0%	United States
ASSUREDPARTNERS INC 144A	K – Financial and insurance activities	1.0%	United States
ALLIANT HOLDINGS INTERMEDIATE LLC 144A	K – Financial and insurance activities	1.0%	United States
BANIJAY ENTERTAINMENT SAS 144A	J – Information and communication	1.0%	France
CSC HOLDINGS LLC	J – Information and communication	0.9%	United States
TRIVIUM PACKAGING FINANCE BV 144A	K – Financial and insurance activities	0.9%	Netherlands

ANTERO MIDSTREAM PARTNERS LP 144A	H – Transporting and storage	0.9%	United States
XHR LP 144A	L – Real estate activities	0.9%	United States

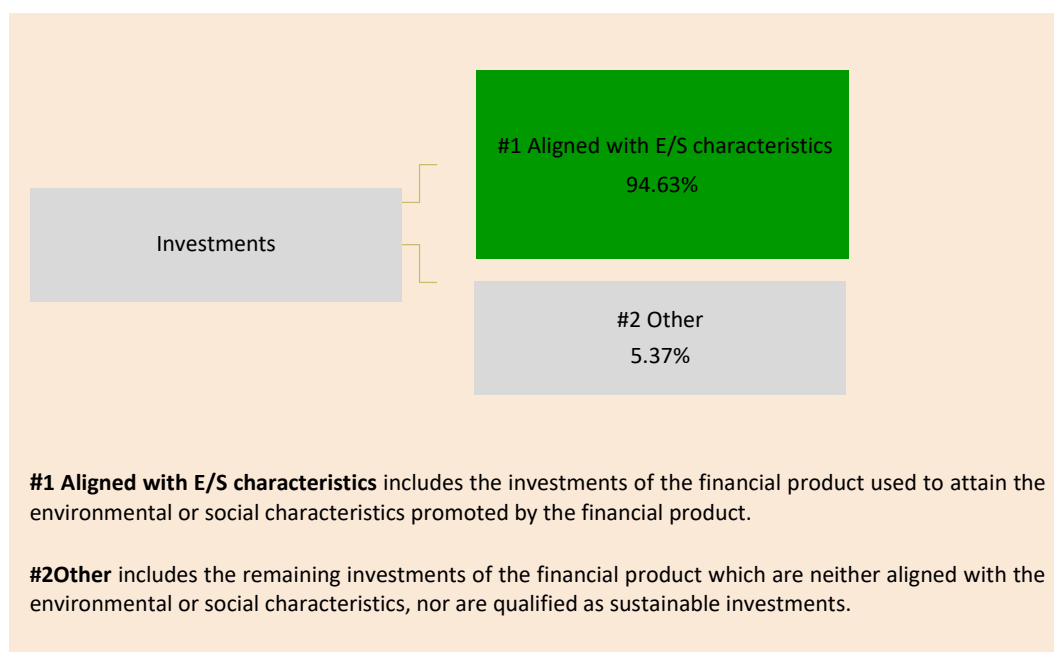

## What was the proportion of sustainability-related investments?

**Asset allocation** describes the share of investments in specific assets.

### ● **What was the asset allocation?**

The Sub-Investment Manager calculated the proportion of investments aligned with the environmental and/or social characteristics promoted by the Portfolio by reference to the proportion of issuers in the Portfolio: i) that held either an NB ESG Quotient rating or a third-party equivalent ESG rating that was used as part of the portfolio construction and investment management process of the Portfolio; and/or ii) with whom the Sub-Investment Manager had engaged directly. This calculation was based on a mark-to-market assessment of the Portfolio and may rely on incomplete or inaccurate issuer or third-party data. For the 2022 reference period only, this calculation is based on the Portfolio's holdings as at 31 December 2022, being the only quarter end in the reference period that followed the publication of the Portfolio's SFDR Annex detailing its planned asset allocation. For all subsequent reference periods, this calculation will be based on the average of the four quarter ends.

● ***In which economic sectors were the investments made?***

<b>Data as at 31 December 2022</b>	
<b>Economic Sector – NACE</b>	<b>% Assets</b>
B – Mining and quarrying	5.36%
C – Manufacturing	14.09%
D – Electricity, gas, steam and air conditioning supply	3.45%
E – Water supply; sewerage; waste management and remediation activities	1.01%
F – Construction	1.80%
G – Wholesale and retail trade; repair of motor vehicles and motorcycles	4.84%
H – Transporting and storage	10.98%
I – Accommodation and food service activities	1.39%
J – Information and communication	13.48%
K – Financial and insurance activities	19.09%
L – Real estate activities	5.14%
M – Professional, scientific and technical activities	0.60%
N – Administrative and support service activities	8.47%
P – Education	0.00%
Q – Human health and social work activities	2.86%
R – Arts, entertainment and recreation	2.70%
S – Other services activities	0.15%
None	4.60%

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

- **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

## To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The analysis and disclosure requirements introduced by the EU Taxonomy are very detailed and compliance with them requires the availability of multiple, specific data points in respect of each investment which the Portfolio made. The Sub-Investment Manager cannot confirm that the Portfolio invested in any investments that qualified as environmentally sustainable for the purposes of the EU Taxonomy. Disclosures and reporting on Taxonomy alignment will develop as the EU framework evolves and data is made available by issuers. The Sub-Investment Manager will keep the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy under active review as data availability and quality improves.

### ● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>2</sup>?

- Yes:
- In fossil gas     In nuclear energy
- No

<sup>2</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

● **What was the share of investments made in transitional and enabling activities?**

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

### **What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?**

N/A – the Portfolio did not commit to holding sustainable investments.

### **What was the share of socially sustainable investments?**

N/A – the Portfolio did not commit to holding sustainable investments.

### **What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?**

“Other” included the remaining investments of the Portfolio (including but not limited to any derivatives or any security collateralized by a pool of similar assets or receivables listed in the Supplement for the Portfolio) which were neither aligned with the environmental or social characteristics, nor qualified as sustainable investments.

The “Other” section in the Portfolio was held for a number of reasons that the Sub-Investment Manager felt was beneficial to

the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover.

As noted above, the Portfolio was invested in compliance with ESG exclusion policies, on a continuous basis. This ensured that investments made by the Portfolio sought to align with international environmental and social safeguards such as the UNGC Principles, UNGPs, OECD Guidelines and ILO Standards.

The Sub-Investment Manager believed that these policies prevent investment in issuers that most egregiously violated environmental and/or social minimum standards and ensured that the Portfolio could successfully promote its environmental and social characteristics.

The above steps ensured that robust environmental and social safeguards were in place.

## **What actions have been taken to meet the environmental and/or social characteristics during the reference period?**

The Portfolio was managed in-line with the investment objective and the following actions were taken:

### **I. Integrating proprietary ESG analysis:**

The NB ESG Quotient ratings were generated for issuers in the Portfolio. The NB ESG Quotient rating for issuers was utilised to help to better identify risks and opportunities in the overall credit and value assessment.

The NB ESG Quotient was a key component of the internal credit ratings and helped to identify business risks (including ESG risks), which would cause deterioration in an issuer's credit profile. Internal credit ratings can be notched up or down based on the NB ESG Quotient rating, and this was monitored by the Sub-Investment Manager as an important component of the investment process for the Portfolio.

By integrating the investment team's proprietary ESG analysis (the NB ESG Quotient) into their internal credit ratings, there was a direct link between their analysis of material ESG characteristics and portfolio construction activities across their strategy.

Issuers with a favourable and/or an improving NB ESG Quotient rating had a higher chance of ending up in the Portfolio. Issuers with a poor NB ESG Quotient rating especially where these were not being addressed by that issuer, were excluded from the Portfolio.

### **II. Engagement:**

The Sub-Investment Manager engaged with issuers through a robust ESG engagement program. They sought to prioritise constructive engagements and sought to engage on topics (including ESG topics) they determined to be financially material for the relevant issuer. The Sub-Investment Manager viewed this engagement with issuers, as an important part of its investment process.

This program was focused on in-person meetings and conference calls to understand ESG risks, opportunities, and assess good corporate governance practices of corporate issuers. As part of the direct engagement process, the Sub-Investment Manager set objectives for the issuers to attain. These objectives as well as the issuers' progress with respect to same were monitored and tracked by the Sub-Investment Manager through an internal NB engagement tracker (see Engagement reporting section above for further details).

The Portfolio:

- Contributed towards the achievement of the SDGs by engaging with at least 90% of corporate issuers on incremental actions that they could take within their products, services, operations or processes which were aligned with these goals (or where there is potential for increased alignment with these goals, following engagement with these corporate issuers).
- Maintained an average ESG rating for the Portfolio that was above that of the broad U.S. high yield market, as represented by the ICE BofA U.S. High Yield Index, which was assessed based on third-party ESG ratings

from an established external provider. This calculated was based on the Portfolio's ESG rating at each of the four calendar quarter ends in the 2022 reference period.

The Sub-Investment Manager used an in-house tool to screen for the likelihood of achieving success in engagement with an issuer prior to investment (the "**Engagement Potential Indicator**"). The Engagement Potential Indicator, on a scale of 1-5, provided a systematic evaluation of an issuer's willingness and ability to engage with the Sub-Investment Manager on the SDGs. For example, an issuer determined to be unwilling or unable to engage received an Engagement Potential Indicator of "1", whereas an issuer willing to engage on becoming a leader in contributing to the SDGs received an Engagement Potential Indicator of "5". The Sub-Investment Manager prioritised investments in issuers with an Engagement Potential Indicator rating between "2" and "5". The Engagement Potential Indicator considered a diverse set of factors including the relevance of the SDGs to an issuer's business operations, an issuer's disclosure practices and the Sub-Investment Manager's relationship with the issuer, in addition to the financial constraints of the issuers.

III. ESG sectoral exclusion policies:

To ensure that the environmental and social characteristics promoted by the Portfolio were attained, the Portfolio applied the ESG exclusion policies referenced above, which placed limitations on the investable universe.

**How did this financial product perform compared to the reference benchmark?**

N/A – The Portfolio does not use a benchmark.

● ***How does the reference benchmark differ from a broad market index?***

N/A

● ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***

N/A

● ***How did this financial product perform compared with the reference benchmark?***

N/A

---

---

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- *How did this financial product perform compared with the broad market index?*  
N/A

**Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852**

**Product name:** Neuberger Berman European High Yield Bond Fund (the “Portfolio”)

**Legal entity identifier:** 549300Z7RL5FC5H5DB41

## Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

### Did this financial product have a sustainable investment objective?

**Yes**

It made **sustainable investments with an environmental objective: \_\_\_%**

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective: \_\_\_%**

**No**

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of \_\_\_% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

## To what extent were the environmental and/or social characteristics promoted by this financial product met?

The following environmental and social characteristics were promoted by the Portfolio:

- **Environmental Characteristics:** biodiversity & responsible land usage; carbon footprint reduction; greenhouse gas (“GHG”) emissions; opportunities in clean technologies; opportunities in green building; responsible raw material sourcing; recycling practices & trends; toxic emissions & waste; waste management; and water management.
- **Social Characteristics:** access to finance; access to healthcare; access to medicines; business ethics & transparency of government relations; chemical safety; community relations; controversial sourcing; corporate behaviour; drug safety & side effects management; health & nutrition; health & safety; human capital development; labour management; data privacy & security; product safety & quality; and quality of care & patient satisfaction.

Performance in relation to these environmental and social characteristics was measured through the NB ESG Quotient, and is reported, in aggregate, below.

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

### How did the sustainability indicators perform?

As part of the investment process, the Sub-Investment Manager considered a variety of sustainability indicators to measure the environmental and/or social characteristics promoted by the Portfolio. These sustainability indicators are listed below:

1. The NB ESG Quotient:

The proprietary Neuberger Berman ESG rating system (the “**NB ESG Quotient**”), is built around the concept of sector specific ESG risk and opportunity, and produced an overall ESG rating for issuers by assessing them against certain ESG metrics.

Foundational to the NB ESG Quotient is the proprietary Neuberger Berman (“**NB**”) materiality matrix, which focuses on the ESG characteristics that were considered to be the most likely to be the material drivers of ESG risk and opportunity for each sector. The NB materiality matrix enabled the Sub-Investment Manager to derive the NB ESG Quotient rating, to compare sectors and issuers relative to their environmental and social characteristics. Each sector criteria is constructed using third-party and internally derived ESG data and supplemented with internal qualitative analysis, leveraging the Portfolio’s analyst team’s significant sector expertise.

The NB ESG Quotient assigned weightings to environmental, social and governance characteristics for each sector to derive the NB ESG Quotient rating for issuers. Issuers with a favourable and/or an improving NB ESG Quotient rating had a higher chance of being included in the Portfolio. Issuers with a poor NB ESG Quotient rating, especially where a poor NB ESG Quotient rating was not being addressed by an issuer, were more likely to be removed from the investment universe or were divested from the Portfolio. In addition, the Sub-Investment Manager sought to prioritise constructive engagements with corporate issuers.

31 December 2022	Rating	Combined coverage
NB ESG Quotient	59	98%
Third-party Data	5.5	

With regards to the NB ESG Quotient rating, a rating between 1-100 is used where 1 is the lowest rating and 100 is the highest rating. This Portfolio does not have a minimum NB ESG Quotient rating. The average NB ESG Quotient rating is a weighted average and is not a rating of the Portfolio strategy itself.

Third-party data was also used to measure the environmental and social characteristics promoted by the Portfolio. The third-party data ratings range from 0-10, with 0 being the lowest rating and 10 being the highest rating.

## 2. Climate Value-at-Risk:

Over the reference period, Climate Value-at-Risk (“**CVaR**”) measured the exposure to transition and physical climate risks. CvaR is a scenario analysis tool evaluating economic risks under various degree scenarios (i.e., the amount of warming targeted) and potential regulatory environments in varying countries.

CvaR is a type of scenario analysis which is defined as the present value of aggregated future policy risk costs, technology opportunity profits, and extreme weather event costs and profits, expressed as a percentage of a security or portfolio’s market value according to the warming scenario targeted.

By calculating the financial risks from climate change per security and per scenario, CvaR provides a framework that helps quantify and understand these risks. The CvaR metric provides insight into the climate-stressed valuation of assets based on specific degree scenarios, providing an assessment on how much a security may stand to lose or gain from the impact of climate change.

As of 31 December 2022, CvaR projected that a warming climate scenario could result in a depreciation of 8.73% in the valuation of assets under assessment.

This analysis is intended as a broad overview of the investment team’s style and investment process.

On a holistic basis, the results were evaluated by the Sub-Investment Manager’s portfolio managers and analysts. The scenario analysis served as a starting point for further bottom-up analysis and identifying potential climate-related risks to address through issuer engagement.

Due to data limitations, CvaR was not applied across all issuers held by the Portfolio and was instead limited to the issuers for which the Sub-Investment Manager had sufficient and reliable data. The Portfolio had a CvaR coverage of 34%.

The analysis from CvaR is reviewed at least once a year.

## 3. ESG exclusion policies:

To ensure that the environmental or social characteristics promoted by the Portfolio were attained, the Portfolio did not invest in securities issued by issuers whose activities breached or were not consistent with the Neuberger Berman Controversial Weapons Policy and the Neuberger Berman Thermal Coal Involvement Policy. In addition to the application of the Neuberger Berman Thermal Coal Involvement Policy, the Sub-Investment Manager prohibited the initiation of new investment positions in securities issued by issuers that (i) derived more than 25% of their revenue from thermal coal mining; or (ii) were expanding new thermal coal power generation. The Portfolio was prohibited from purchasing the securities of issuers which derived substantial revenue from the extraction of coal or used unconventional methods to extract oil and gas. Substantial revenue was defined for this purpose as follows: (i) issuers could not derive more than 10% of revenue from the mining of thermal coal; (ii) issuers could not derive more than 10% of revenue from oil sands extraction. The Portfolio only purchased the securities of issuers for which power generation made up more than 10% of revenue, where they were aligned with a lower carbon emissions economy.

The Portfolio was therefore prohibited from investing in generators where: (i) more than 30% of MWh generation was derived from thermal coal; (ii) more than 30% of MWh generation was derived from liquid fuels (oil) and (iii) Natural Gas Electricity Generation. More than 90% of MWh generation was derived from natural gas. This threshold may decline over time, to align with a glide path to greater renewables penetration.

Furthermore, from 6 April 2022 onwards, investments held by the Portfolio did not invest in securities issued by issuers whose activities had been identified as breaching the Neuberger Berman Global Standards Policy which excluded identified violators of (i) the United Nations Global Compact Principles (“**UNGC Principles**”), (ii) the OECD Guidelines for Multinational Enterprises (“**OECD Guidelines**”), (iii) the United Nations Guiding Principles on Business and Human Rights (“**UNGPs**”) and (iv) the International Labour Standards (“**ILO Standards**”).

The Portfolio was prohibited from purchasing the securities of issuers that were involved in tobacco production such as cigars, cigarettes, e-cigarettes, smokeless tobacco, dissolvable and chewing tobacco. This also included issuers that grow or process raw tobacco leaves. The Portfolio was also prohibited from purchasing the securities of issuers that owned, operated or primarily provided integral services to private prisons, given the significant social controversy, reputational risks, dependency on their local government policies and facilities which were not easily reconfigurable for alternate uses. The Portfolio was prohibited from purchasing the securities of issuers that were involved in the manufacturing of civilian firearms.

When applying ESG exclusions to the Portfolio, the Sub-Investment Manager used third-party data to identify issuers in breach of the ESG exclusions listed above. Where possible, the Sub-Investment Manager sought to overlay this third-party data with qualitative expertise from their research analysts to establish a current and holistic picture of the issuer. The Sub-Investment Manager discussed and debated the differences between the violators identified by the third-party data and those identified as a result of their research, which drew upon data from the NB ESG Quotient and direct engagements with the issuer.

● ***...and compared to previous periods?***

N/A – this is the first reference period.

● ***What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?***

N/A – the Portfolio did not commit to holding sustainable investments.

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

*How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?*

N/A

*How were the indicators for adverse impacts on sustainability factors taken into account?*

N/A

*Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:*

The Portfolio did not commit to holding sustainable investments, however from 6 April 2022 onwards, the Sub-Investment Manager will not invest in issuers whose activities had been identified as breaching the OECD Guidelines, UNGC Principles, ILO Standards and UNGPs, captured through the Neuberger Berman Global Standards Policy.

*The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.*

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments.

### **How did this financial product consider principal adverse impacts on sustainability factors?**

A selection of the principal adverse impact indicators were considered directly (e.g. through the ESG exclusion policies listed above) and/or indirectly (e.g. as part of the Sub-Investment Manager’s assessment of issuers) throughout the 2022 reference period.

From 28 November 2022 onwards, the Sub-Investment Manager considered the following principal adverse impacts, namely: GHG emissions, carbon footprint, GHG intensity, fossil fuel exposure, board gender diversity, UNGC Principles & OECD violations and controversial weapons (the “**Product Level PAIs**”).

Consideration of the PAIs was limited by the availability (in the Sub-Investment Manager's subjective view) of adequate, reliable and verifiable data coverage. The Sub-Investment Manager utilised third-party data and proxy data along with internal research to consider the PAIs.

Consideration of the Product Level PAIs by the Sub-Investment Manager was through a combination of:

- Monitoring the Portfolio, in particular where it fell below the quantitative and qualitative tolerance thresholds set for each Product Level PAI by the Sub-Investment Manager;
- Stewardship and/or setting engagement objectives where the Portfolio fell below the quantitative and qualitative tolerance thresholds set for a Product Level PAI by the Sub-Investment Manager; and
- Application of the ESG exclusion policies referenced above, which included consideration of several of the Product Level PAIs.

## What were the top investments of this financial product?

The Sub-Investment Manager has used the EU statistical classification of economic activities (“NACE”) economic sector breakdown to identify the economic sectors of the Portfolio's top 15 investments. The following data is as at 31 December 2022.

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: 1 January 2022 - 31 December 2022

Largest investments	Sector	% Assets	Country
ELECTRICITE DE FRANCE SA MTN RegS	D - Electricity, gas, steam and air conditioning supply	1.2%	France
SGL CARBON SE RegS	C - Manufacturing	1.2%	Germany
CELLNEX TELECOM SA MTN RegS	J - Information and communication	1.1%	Spain
ADIENT GLOBAL HOLDINGS LTD RegS	K - Financial and insurance activities	1.1%	United States
ELECTRICITE DE FRANCE SA MTN RegS	D - Electricity, gas, steam and air conditioning supply	1.1%	France
REPSOL INTL FINANCE RegS	K - Financial and insurance activities	1.1%	Spain
ALTICE FRANCE SA (FRANCE) RegS	J - Information and communication	1.1%	Luxembourg
VERISURE HOLDING AB RegS	C - Manufacturing	1.1%	Sweden
LORCA TELECOM BONDCO SAU RegS	J - Information and communication	1.1%	Spain
BAYER AKTIENGESELLSCHAFT RegS	C - Manufacturing	1.0%	Germany
ILIAD HOLDING SAS RegS	J - Information and communication	1.0%	France
THYSSENKRUPP AG RegS	G - Wholesale and retail trade; repair of motor vehicles and motorcycles	1.0%	Germany
SUMMIT PROPERTIES LTD RegS	L - Real estate activities	1.0%	Germany
PLAYTECH PLC RegS	R - Arts, entertainment and recreation	1.0%	United Kingdom
CMA CGM SA RegS	H - Transporting and storage	0.9%	France

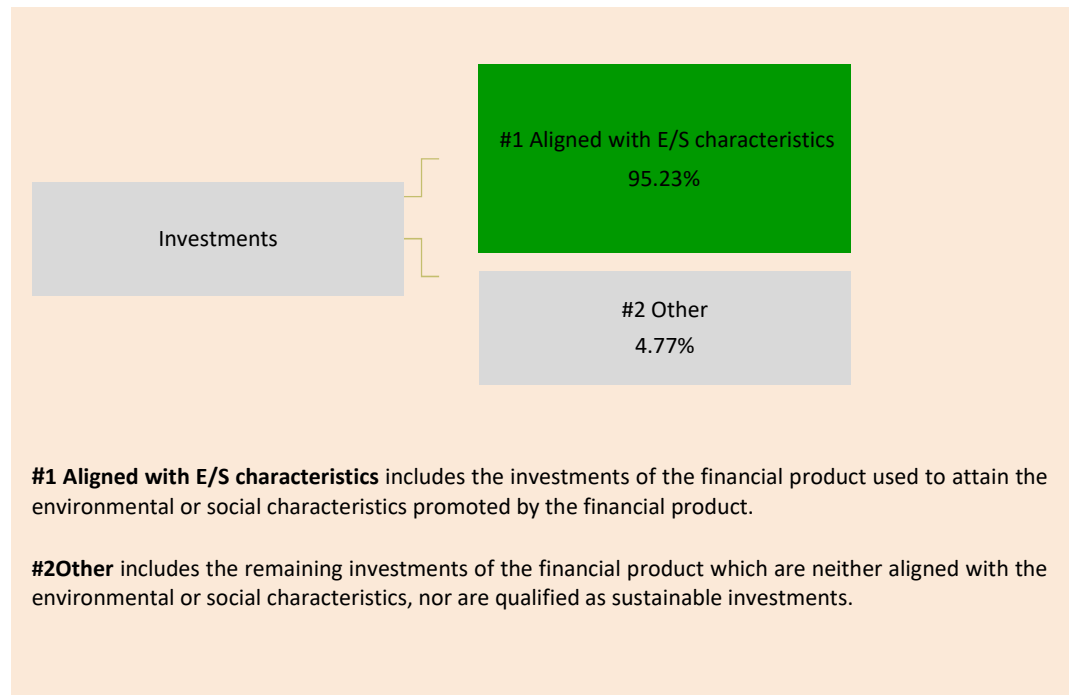

## What was the proportion of sustainability-related investments?

**Asset allocation** describes the share of investments in specific assets.

### What was the asset allocation?

The Sub-Investment Manager calculated the proportion of environmentally and/or socially aligned investments in the Portfolio by reference to the proportion of issuers in the Portfolio: i) that held an NB ESG Quotient rating or where a third-party equivalent ESG rating that was used as part of the portfolio construction and investment management process of the Portfolio; and/or ii) with whom the Sub-Investment Manager had engaged directly. The calculation was based on a mark-to-market assessment of the Portfolio and may rely on incomplete or inaccurate issuer or third-party data. For the 2022 reference period only, this calculation is based on the Portfolio's holdings as at 31 December 2022, being the only quarter end in the reference period that followed the publication of the Portfolio's SFDR Annex detailing its planned asset allocation. For all subsequent reference periods, this calculation will be based on the average of the four quarter ends.

● ***In which economic sectors were the investments made?***

<b>Data as of 31 December 2022</b>	
<b>Economic Sector – NACE</b>	<b>% Assets</b>
C - Manufacturing	25.20%
D - Electricity, gas, steam and air conditioning supply	3.19%
E - Water supply; sewerage; waste management and remediation activities	0.55%
F - Construction	0.48%
G - Wholesale and retail trade; repair of motor vehicles and motorcycles	4.46%
H - Transporting and storage	3.06%
I - Accommodation and food service activities	0.70%
J - Information and communication	13.35%
K - Financial and insurance activities	34.50%
L - Real estate activities	3.80%
M - Professional, scientific, and technical activities	0.44%
N - Administrative and support service activities	6.02%
P - Education	0.37%
Q - Human health and social work activities	0.48%
R - Arts, entertainment, and recreation	2.23%
None	1.17%

## To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

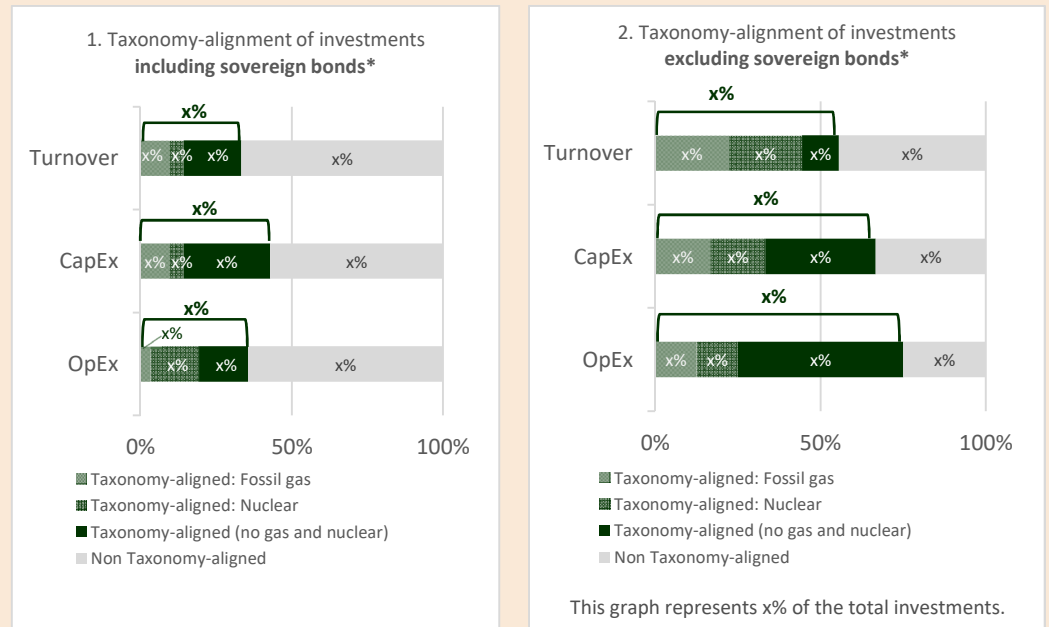

- **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

N/A - The analysis and disclosure requirements introduced by the EU Taxonomy are very detailed and compliance with them requires the availability of multiple, specific data points in respect of each investment which the Portfolio made. The Sub-Investment Manager cannot confirm that the Portfolio invested in investments that qualified as environmentally sustainable for the purposes of the EU Taxonomy. As such, the minimum proportion of the Portfolio's investments that contribute to environmentally sustainable economic activities for the purposes of the Taxonomy Regulation was 0%. Disclosures and reporting on Taxonomy alignment will develop as the EU framework evolves and data is made available by issuers.

● **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?**

- Yes:
- In fossil gas       In nuclear energy
- No

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

● **What was the share of investments made in transitional and enabling activities?**

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments.

 **What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?**

N/A – the Portfolio did not commit to holding sustainable investments.

 **What was the share of socially sustainable investments?**

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments.

 **What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?**

“Other” included the remaining investments of the financial product (including but not limited to any derivatives or any security collateralized by a pool of similar assets or receivables listed in the Supplement for the Portfolio) which were neither aligned with the environmental or social characteristics, nor qualified as sustainable investments.

The “Other” section in the Portfolio was held for a number of reasons that the Sub-Investment Manager felt was beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover.

As noted above, the Portfolio was invested in compliance with ESG exclusion policies, on a continuous basis. This ensured that investments made by the Portfolio sought to align with international environmental and social safeguards such as the UNGC Principles, UNGPs, OECD Guidelines and ILO Standards.

The Sub-Investment Manager believes that these policies prevent investment in issuers that most egregiously violated environmental and/or social minimum standards and ensured that the Portfolio could successfully promote its environmental and social characteristics.

The above steps ensured that robust environmental and social safeguards were in place.

## **What actions have been taken to meet the environmental and/or social characteristics during the reference period?**

The Portfolio was managed in-line with the investment objective and the following actions were taken:

### **I. Integrating proprietary ESG analysis:**

The NB ESG Quotient ratings were generated for issuers in the Portfolio. The NB ESG Quotient rating for issuers was utilised to help to better identify risks and opportunities in the overall credit and value assessment.

The NB ESG Quotient was a key component of the internal credit ratings and helped to identify business risks (including ESG risks), which would cause deterioration in an issuer's credit profile. Internal credit ratings can be notched up or down based on the NB ESG Quotient rating, and this was monitored by the Sub-Investment Manager as an important component of the investment process for the Portfolio.

By integrating the investment team's proprietary ESG analysis (the NB ESG Quotient) into their internal credit ratings, there was a direct link between their analysis of material ESG characteristics and portfolio construction activities across their strategy.

Issuers with a favourable and/or an improving NB ESG Quotient rating had a higher chance of ending up in the Portfolio. Issuers with a poor NB ESG Quotient rating especially where these were not being addressed by that issuer, were more likely to be removed from the investment universe or divested from the Portfolio.

### **II. Engagement:**

The Sub-Investment Manager engaged with issuers through a robust ESG engagement program. They sought to prioritise constructive engagements and sought to engage on topics (including ESG topics) they determined to be financially material for the relevant issuer. The Sub-Investment Manager viewed this engagement with issuers, as an important part of its investment process. Progress on engagement was tracked centrally in the Sub-Investment Manager's engagement tracker.

### **III. ESG sectoral exclusion policies:**

To ensure that the environmental and social characteristics promoted by the Portfolio were attained, the Portfolio applied the ESG exclusion policies referenced above, which placed limitations on the investable universe.

## How did this financial product perform compared to the reference benchmark?

N/A – The Portfolio's benchmark has not been designated as a reference benchmark. Therefore, it is not consistent with the environmental or social characteristics promoted by the Portfolio.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- ***How does the reference benchmark differ from a broad market index?***  
N/A
- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***  
N/A
- ***How did this financial product perform compared with the reference benchmark?***  
N/A
- ***How did this financial product perform compared with the broad market index?***  
N/A

**Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852**

**Product name:** Neuberger Berman Global High Yield SDG Engagement Fund (the “Portfolio”)

**Legal entity identifier:** 549300YE6BLJU5JCDI13

## Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?	
<input checked="" type="radio"/> <input checked="" type="radio"/> <input type="checkbox"/> <b>Yes</b>	<input checked="" type="radio"/> <input type="radio"/> <input checked="" type="checkbox"/> <b>No</b>
<input type="checkbox"/> It made <b>sustainable investments with an environmental objective: ___%</b> <ul style="list-style-type: none"> <li><input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy</li> <li><input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</li> </ul>	<input type="checkbox"/> It promoted <b>Environmental/Social (E/S) characteristics</b> and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments <ul style="list-style-type: none"> <li><input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy</li> <li><input type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</li> <li><input type="checkbox"/> with a social objective</li> </ul>
<input type="checkbox"/> It made <b>sustainable investments with a social objective: ___%</b>	<input checked="" type="checkbox"/> It promoted E/S characteristics, but <b>did not make any sustainable investments</b>

## To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Portfolio promoted the United Nations Sustainable Development Goals (“**SDGs**”) by engaging directly with 100% of corporate issuers. The Sub-Investment Manager set key performance indicators (“**KPIs**”) for corporate issuers that were aligned to the SDGs which related to the issuers’ products, services, operations or processes, with the goal of having a positive outcome on the environment and/or society. The Sub-Investment Manager prioritised investment in corporate issuers that had the ability and willingness to engage with the Sub-Investment Manager on specific KPIs aligned to the SDGs.

The following environmental and social characteristics were promoted by the Portfolio:

- **Environmental Characteristics:** biodiversity & responsible land usage; carbon footprint reduction; greenhouse gas (“**GHG**”) emissions; opportunities in clean technologies; opportunities in green building; responsible raw material sourcing; recycling practices & trends; toxic emissions & waste; waste management; and water management.
- **Social Characteristics:** access to finance; access to healthcare; access to medicines; business ethics & transparency of government relations; chemical safety; community relations; controversial sourcing; corporate behaviour; drug safety & side effects management; health & nutrition; health & safety; human capital development; labour management; data privacy & security; product safety & quality; and quality of care & patient satisfaction.

Performance in relation to these environmental and social characteristics was measured through the NB ESG Quotient, and is reported, in aggregate, below.

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

### ● **How did the sustainability indicators perform?**

As part of the investment process, the Sub-Investment Manager considered a variety of sustainability indicators to measure the environmental and/or social characteristics promoted by the Portfolio. These sustainability indicators are listed below:

#### 1. The NB ESG Quotient:

The proprietary Neuberger Berman ESG rating system (the “**NB ESG Quotient**”), is built around the concept of sector specific ESG risk and opportunity, and produced an overall ESG rating for issuers by assessing them against certain ESG metrics.

Foundational to the NB ESG Quotient is the proprietary Neuberger Berman (“**NB**”) materiality matrix, which focused on the ESG characteristics that were considered to be the most likely to be the material drivers of ESG risk and opportunity for each sector. The NB materiality matrix enabled the Sub-Investment Manager to derive the NB ESG Quotient rating, to compare sectors and issuers relative to their environmental and social characteristics. Each sector criteria was constructed using third party and internally derived ESG data and supplemented with internal qualitative analysis, leveraging the Portfolio’s analyst team’s significant sector expertise.

The NB ESG Quotient assigned weightings to environmental, social and governance characteristics for each sector to derive the NB ESG Quotient rating for issuers. Issuers with a favourable and/or an improving NB ESG Quotient rating had a higher chance of being included in the Portfolio. Issuers with a poor NB ESG Quotient rating, especially where a poor NB ESG Quotient rating was not being addressed by an issuer, were more likely to be removed from the investment universe or were divested from the Portfolio. In addition, the Sub-Investment Manager sought to prioritise constructive engagements with 100% of corporate issuers.

31 December 2022	Rating	Combined coverage
NB ESG Quotient	68	100%
Third-party Data	5.6	

With regards to the NB ESG Quotient, a rating between 1 and 100 is used where 1 is lowest rating and 100 is the highest rating. This Portfolio does not have a minimum NB ESG Quotient rating. The average NB ESG Quotient rating is a weighted average and is not a rating of the Portfolio strategy itself.

Third-party data was also used to measure the environmental and social characteristics promoted by the Portfolio. The third-party data ratings range from 0-10, with 0 being the lowest rating and 10 being the highest rating.

## 2. Engagement reporting:

Below the Sub-Investment Manager has included a summary of its engagement efforts. The below data covers the period from 01 January 2022 to 31 December 2022.

The Sub-Investment Manager engaged with 207 companies held by the Portfolio in 2022.
61% of the Sub-Investment Manager's engagements were direct one-to-one engagements (either remotely or in-person).
50% of the Sub-Investment Manager's engagements were with CEO / CFO level staff.
15 of the total 17 the UN Sustainable Development Goals (" <b>SDGs</b> ") were covered by the Sub-Investment Manager's engagement objectives.
20% of companies engaged with over the 2022 reference period have either fully achieved their engagement objective or have taken partial action towards achieving their engagement objective.

Further information on the Sub-Investment Manager's engagement efforts is available here: [https://www.nb.com/handlers/documents.ashx?item\\_id=4f53e43f-6a45-4977-be2f-1bb942b05536](https://www.nb.com/handlers/documents.ashx?item_id=4f53e43f-6a45-4977-be2f-1bb942b05536).

## 3. Climate Value-at-Risk:

Over the reference period, Climate Value-at-Risk ("**CVaR**") measured the exposure to transition and physical climate risks. CVaR is a scenario analysis tool evaluating economic risks under various degree scenarios (i.e., the amount of warming targeted) and potential regulatory environments in varying countries.

CVaR is a type of scenario analysis which is defined as the present value of aggregated future policy risk costs, technology opportunity profits, and extreme weather event costs and profits, expressed as a percentage of a security or portfolio's market value according to the warming scenario targeted.

By calculating the financial risks from climate change per security and per scenario, CVaR provides a framework that helps quantify and understand these risks. The CVaR metric provides insight into the climate-stressed valuation of assets based on specific degree scenarios, providing an assessment on how much a security may stand to lose or gain from the impact of climate change.

As of 31 December 2022, CVaR projected that a warming climate scenario could result in a depreciation of 9.05% in the valuation of assets under assessment.

This analysis is intended as a broad overview of the investment team's style and investment process.

On a holistic basis, the results were evaluated by the Sub-Investment Manager's portfolio managers and analysts. The scenario analysis served as a starting point for further bottom-up analysis and identifying potential climate-related risks to address through issuer engagement.

Due to data limitations, CVaR was not applied across all issuers held by the Portfolio and was instead limited to the issuers for which the Sub-Investment Manager had sufficient and reliable data. The Portfolio had a CVaR coverage of 53%.

The analysis from CVaR is reviewed at least once a year.

#### 4. ESG exclusion policies:

To ensure that the environmental or social characteristics promoted by the Portfolio were attained, the Portfolio did not invest in securities issued by issuers whose activities breached, or were not consistent with, the Neuberger Berman Controversial Weapons Policy and the Neuberger Berman Thermal Coal Involvement Policy. In addition to the application of the Neuberger Berman Thermal Coal Involvement Policy, the Sub-Investment Manager prohibited the initiation of new investment positions in securities issued by issuers that (i) derived more than 25% of their revenue from thermal coal mining; or (ii) were expanding new thermal coal power generation. Furthermore, from 6 April 2022 onwards, investments held by the Portfolio did not invest in securities issued by issuers whose activities have been identified as breaching the Neuberger Berman Global Standards Policy which excluded identified violators of (i) the United Nations Global Compact Principles ("**UNGC Principles**"), (ii) the OECD Guidelines for Multinational Enterprises ("**OECD Guidelines**"), (iii) the United Nations Guiding Principles on Business and Human Rights ("**UNGPs**") and (iv) the International Labour Standards ("**ILO Standards**"). From 6 April 2022 onwards, the Portfolio was prohibited from purchasing the securities of issuers that were involved in tobacco production such as cigars, cigarettes, e-cigarettes, smokeless tobacco, dissolvable and chewing tobacco. This also included issuers that grow or process raw tobacco leaves.

When applying ESG exclusions to the Portfolio, the Sub-Investment Manager used third-party data to identify issuers in breach of the ESG exclusions listed above. Where possible, the Sub-Investment Manager sought to overlay this third-party data with qualitative expertise from their research analysts to establish a current and holistic picture of the issuer. The Sub-Investment Manager discussed and debated the differences between the violators identified by the third-party data and those identified as a result of their research, which drew upon data from the NB ESG Quotient and direct engagements with the issuer.

#### ● **...and compared to previous periods?**

N/A – this is the first reference period.

#### ● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

N/A - the Portfolio did not commit to holding sustainable investments.

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

***How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?***

N/A - the Portfolio did not commit to holding sustainable investments.

*How were the indicators for adverse impacts on sustainability factors taken into account?*

N/A - the Portfolio did not commit to holding sustainable investments.

*Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:*

The Portfolio did not commit to holding sustainable investments, however from 6 April 2022 onwards, the Sub-Investment Manager did not invest in issuers whose activities had been identified as breaching the OECD Guidelines, UNGC Principles, ILO Standards and UNGPs, captured through the Neuberger Berman Global Standards Policy.

*The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.*

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments.

**How did this financial product consider principal adverse impacts on sustainability factors?**

A selection of the principal adverse impact indicators were considered directly (e.g. through the ESG exclusion policies listed above) and/or indirectly (e.g. as part of the Sub-Investment Manager’s assessment of issuers) throughout the 2022 reference period.

From 28 November 2022 onwards, the Sub-Investment Manager considered the following principal adverse impacts, namely: GHG emissions, carbon footprint, GHG intensity, fossil fuel exposure, board gender diversity, UNGC Principles & OECD violations and controversial weapons (the “**Product Level PAIs**”).

Consideration of the Product Level PAIs was limited by the availability (in the Sub-Investment Manager's subjective view) of adequate, reliable and verifiable data coverage. The Sub-Investment Manager utilised third party data and proxy data along with internal research to consider the above Product Level PAIs.

Consideration of the Product Level PAIs by the Sub-Investment Manager was through a combination of:

- Monitoring the Portfolio, in particular where it fell below the quantitative and qualitative tolerance thresholds set for each Product Level PAI by the Sub-Investment Manager;
- Stewardship and/or setting engagement objectives where the Portfolio fell below the quantitative and qualitative tolerance thresholds set for a Product Level PAI by the Sub-Investment Manager; and
- Application of the ESG exclusion policies referenced above, which included consideration of several of the Product Level PAIs.

### What were the top investments of this financial product?

The Sub-Investment Manager has used the EU statistical classification of economic activities ("NACE") economic sector breakdown to identify the economic sectors of the Portfolio's top 15 investments. The following data is as at 31 December 2022.

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: 1 January 2022 – 31 December 2022.

Largest investments	Sector	% Assets	Country
EQM MIDSTREAM PARTNERS LP 144A	H - Transporting and storage	0.7%	United States
ASCENT RESOURCES/ARU FIN 144A	B - Mining and quarrying	0.7%	United States

CHS/COMMUNITY HEALTH SYSTEMS INC 144A	Q - Human health and social work activities	0.5%	United States

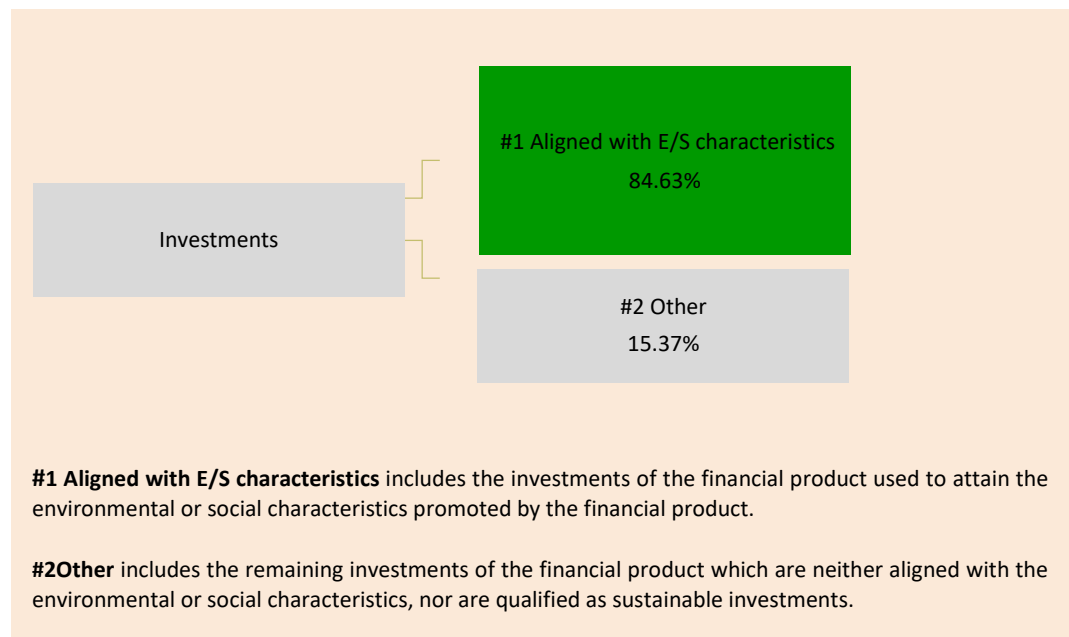

## What was the proportion of sustainability-related investments?

### Asset allocation

describes the share of investments in specific assets.

### ● *What was the asset allocation?*

The Sub-Investment Manager calculated the proportion of investments aligned with the environmental and/or social characteristics promoted by the Portfolio by reference to the proportion of issuers in the Portfolio: i) that held either an NB ESG Quotient rating or a third party equivalent ESG rating that was used as part of the portfolio construction and investment management process of the Portfolio; and/or ii) with whom the Sub-Investment Manager had engaged directly. This calculation was based on a mark-to-market assessment of the Portfolio and may rely on incomplete or inaccurate issuer or third-party data. For the 2022 reference period only, this calculation is based on the Portfolio's holdings as at 31 December 2022, being the only quarter end in the reference period that followed the publication of the Portfolio's SFDR Annex detailing its planned asset allocation. For all subsequent reference periods, this calculation will be based on the average of the four quarter ends.

● ***In which economic sectors were the investments made?***

<b>Data as at 31 December 2022</b>	
<b>Economic Sector – NACE</b>	<b>% Assets</b>
B - Mining and quarrying	4.61%
C - Manufacturing	16.84%
D - Electricity, gas, steam and air conditioning supply	3.48%
E - Water supply; sewerage; waste management and remediation activities	0.50%
F - Construction	2.58%
G - Wholesale and retail trade; repair of motor vehicles and motorcycles	4.78%
H - Transporting and storage	6.65%
I - Accommodation and food service activities	1.22%
J - Information and communication	13.13%
K - Financial and insurance activities	28.35%
L - Real estate activities	4.09%
M - Professional, scientific and technical activities	1.20%
N - Administrative and support service activities	6.62%
Q - Human health and social work activities	3.22%
R - Arts, entertainment and recreation	0.92%
S - Other services activities	0.24%
None	1.56%

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

- **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

## To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The analysis and disclosure requirements introduced by the EU Taxonomy are very detailed and compliance with them requires the availability of multiple, specific data points in respect of each investment which the Portfolio made. The Sub-Investment Manager cannot confirm that the Portfolio invested in any investments that qualified as environmentally sustainable for the purposes of the EU Taxonomy. Disclosures and reporting on Taxonomy alignment will develop as the EU framework evolves and data is made available by issuers. The Sub-Investment Manager will keep the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy under active review as data availability and quality improves.

### ● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?

Yes:

In fossil gas  In nuclear energy

No

---

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

● **What was the share of investments made in transitional and enabling activities?**

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

### **What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?**

N/A – the Portfolio did not commit to holding sustainable investments.

### **What was the share of socially sustainable investments?**

N/A – the Portfolio did not commit to holding sustainable investments.

### **What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?**

“Other” included the remaining investments of the Portfolio (including but not limited to any derivatives or any security collateralized by a pool of similar assets or receivables listed in the Supplement for the Portfolio) which were neither aligned with the environmental or social characteristics, nor qualified as sustainable investments.

The “Other” section in the Portfolio was held for a number of reasons that the Sub-Investment Manager felt was beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover.

As noted above, the Portfolio was invested in compliance with ESG exclusion policies, on a continuous basis. This ensured that investments made by the Portfolio sought to align with international environmental and social safeguards such as the UNGC Principles, UNGPs, OECD Guidelines and ILO Standards.

The Sub-Investment Manager believed that these policies prevented investment in issuers that most egregiously violated environmental and/or social minimum standards and ensured that the Portfolio could successfully promote its environmental and social characteristics.

The above steps ensured that robust environmental and social safeguards were in place.

## What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Portfolio was managed in-line with the investment objective and the following actions were taken:

### I. Integrating proprietary ESG analysis:

The NB ESG Quotient ratings were generated for issuers in the Portfolio. The NB ESG Quotient rating for issuers was utilised to help to better identify risks and opportunities in the overall credit and value assessment.

The NB ESG Quotient was a key component of the internal credit ratings and helped to identify business risks (including ESG risks), which would cause deterioration in an issuer's credit profile. Internal credit ratings can be notched up or down based on the NB ESG Quotient rating, and this was monitored by the Sub-Investment Manager as an important component of the investment process for the Portfolio.

By integrating the investment team's proprietary ESG analysis (the NB ESG Quotient) into their internal credit ratings, there was a direct link between their analysis of material ESG characteristics and portfolio construction activities across their strategy.

Issuers with a favourable and/or an improving NB ESG Quotient rating had a higher chance of ending up in the Portfolio. Issuers with a poor NB ESG Quotient rating especially where these were not being addressed by that issuer, were more likely to be removed from the investment universe or divested from the Portfolio.

### II. Engagement:

The Sub-Investment Manager engaged with issuers through a robust ESG engagement program. They sought to prioritise constructive engagements and sought to engage on topics (including ESG topics) they determined to be financially material for the relevant issuer. The Sub-Investment Manager viewed this engagement with issuers, as an important part of its investment process.

This program was focused on in-person meetings and conference calls to understand ESG risks, opportunities, and assess good corporate governance practices of corporate issuers. As part of the direct engagement process, the Sub-Investment Manager set objectives for the issuers to attain. These objectives as well as the issuers' progress with respect to same were monitored and tracked by the Sub-Investment Manager through an internal NB engagement tracker (see Engagement reporting section above for further details).

The Portfolio promoted environmental and social characteristics, whilst contributing towards the achievement of the SDGs by engaging directly with 100% of corporate issuers, primarily through in-person meetings and calls, setting key KPIs aligned to the SDGs which related to the issuers' products, services, operations or processes, with the goal of having a positive outcome on the environment and/or society. The Sub-Investment Manager prioritised investment in corporate issuers that had the ability and willingness to engage with the Sub-Investment Manager on specific KPIs aligned to the SDGs. The investee issuer's progress relative to the KPIs set was evaluated by the Sub-Investment Manager quarterly. This direct engagement with corporate issuers was an essential part of the investment process and the Portfolio's contribution towards the achievement of the SDGs.

The Sub-Investment Manager used an in-house tool to screen for the likelihood of achieving success in engagement with an issuer prior to investment (the "**Engagement Potential Indicator**"). The Engagement Potential Indicator, on a scale of 1-5, provided a systematic evaluation of an issuer's willingness and ability

to engage with the Sub-Investment Manager on the SDGs. For example, an issuer determined to be unwilling or unable to engage received an Engagement Potential Indicator of “1”, whereas an issuer willing to engage on becoming a leader in contributing to the SDGs received an Engagement Potential Indicator of “5”. The Sub-Investment Manager did not invest in issuers with an Engagement Potential Indicator rating of below “2”. The Engagement Potential Indicator considered a diverse set of factors including the relevance of the SDGs to an issuer’s business operations, an issuer’s disclosure practices and the Sub-Investment Manager’s relationship with the issuer, in addition to the financial constraints of the issuers.

III. ESG sectoral exclusion policies:

To ensure that the environmental and social characteristics promoted by the Portfolio were attained, the Portfolio applied the ESG exclusion policies referenced above, which placed limitations on the investable universe.

**How did this financial product perform compared to the reference benchmark?**

N/A – The Portfolio’s benchmark has not been designated as a reference benchmark. Therefore, it is not consistent with the environmental or social characteristics promoted by the Portfolio.

● ***How does the reference benchmark differ from a broad market index?***

N/A

● ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***

N/A

● ***How did this financial product perform compared with the reference benchmark?***

N/A

---

---

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

---

- ***How did this financial product perform compared with the broad market index?***  
N/A

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Neuberger Berman Global High Yield Sustainable Action Fund (the "Portfolio")

Legal entity identifier: 549300J4GX5K2889LG47

## Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?	
Yes	No
<input checked="" type="radio"/> <input checked="" type="radio"/> <input type="checkbox"/>	<input checked="" type="radio"/> <input type="radio"/> <input checked="" type="checkbox"/>
<input type="checkbox"/> It made <b>sustainable investments with an environmental objective</b> : ___% <ul style="list-style-type: none"> <li><input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy</li> <li><input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</li> </ul>	<input checked="" type="checkbox"/> It promoted <b>Environmental/Social (E/S) characteristics</b> and while it did not have as its objective a sustainable investment, it had a proportion of 51.21% of sustainable investments* <ul style="list-style-type: none"> <li><input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy</li> <li><input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</li> <li><input checked="" type="checkbox"/> with a social objective</li> </ul>
<input type="checkbox"/> It made <b>sustainable investments with a social objective</b> : ___%	<input type="checkbox"/> It promoted E/S characteristics, but <b>did not make any sustainable investments</b>

\*Please refer to the "What was the proportion of sustainability-related investments?" question below for further detail in respect of the minimum proportion of sustainable investments which promoted the environmental or social characteristics.

Following guidance from the European Commission on Article 8 Portfolio and Article 9 Portfolio categorisations under Regulation (EU) 2019/2088 ("SFDR"), the Portfolio re-categorised as an Article 8 Portfolio from an Article 9 Portfolio on 19 August 2022. This periodic disclosure has therefore been prepared on the basis of the requirements applicable to an Article 8 Portfolio under SFDR.

## To what extent were the environmental and/or social characteristics promoted by this financial product met?

The following environmental and social characteristics were promoted by the Portfolio:

- **Environmental Characteristics:** biodiversity & responsible land usage; carbon footprint reduction\*; greenhouse gas (“GHG”) emissions; opportunities in clean technologies; opportunities in green building; responsible raw material sourcing; recycling practices & trends; toxic emissions & waste; waste management; and water management.

\*In aiming to align the Portfolio with a net zero goal, the Sub-Investment Manager promoted and continues to promote the reduction of the Portfolio’s carbon footprint across scope 1, 2, and material scope 3 GHG emissions.<sup>1</sup> There is no annual reduction target, instead the reduction target focuses on the 2030 interim target and the 2050 net zero goal.

In addition, the Sub-Investment Manager used the ICE BofA Global High Yield Constrained Index, exclusively for ESG rating comparison purposes and carbon intensity reduction comparison purposes only. The Sub-Investment Manager maintained an average ESG rating for the Portfolio that was above that of the broad global high yield market, as represented by the ICE BofA Global High Yield Constrained Index, which was assessed based on third-party ESG ratings from an established external provider.

- **Social Characteristics:** access to finance; access to healthcare; access to medicines; business ethics & transparency of government relations; chemical safety; community relations; controversial sourcing; corporate behaviour; drug safety & side effects management; health & nutrition; health & safety; human capital development; labour management; data privacy & security; product safety & quality; and quality of care & patient satisfaction.

Performance in relation to these environmental and social characteristics was measured through the NB ESG Quotient, and is reported, in aggregate, below.

While the sustainable investments held by the Portfolio had either a social or an environmental objective, such sustainable investments do not qualify as environmentally sustainable investments (or Taxonomy aligned investments) as defined under the EU Taxonomy.

### ● **How did the sustainability indicators perform?**

As part of the investment process, the Sub-Investment Manager considered a variety of sustainability indicators to measure the environmental and/or social characteristics promoted by the Portfolio. These sustainability indicators are listed below:

- i. The NB ESG Quotient:

The proprietary Neuberger Berman ESG rating system (the “NB ESG Quotient”), is built around the concept of sector specific ESG risk and opportunity, and produced an overall ESG rating for issuers by assessing them against certain ESG metrics.

Foundational to the NB ESG Quotient is the proprietary Neuberger Berman (“NB”) materiality matrix, which focuses on the ESG characteristics that were considered to be the most likely to be the material drivers of ESG risk and opportunity for each sector. The NB materiality matrix enabled the Sub-Investment Manager to derive the NB ESG Quotient rating, to compare sectors and issuers relative to their environmental and social characteristics. Each sector criteria is constructed using third-party and internally derived ESG data and supplemented with internal qualitative analysis, leveraging the Portfolio’s analyst team’s significant sector expertise.

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

<sup>1</sup> Scope 1 emissions are direct emissions from an issuer’s owned or controlled sources (such as emissions created directly by the issuer’s business processes or from vehicles owned by the issuer). Scope 2 emissions are indirect emissions from the generation of electricity, steam, heating and cooling consumed by the issuer. Scope 3 emissions are all other indirect emissions that occur in an issuer’s value chain (such as emissions from products or services consumed by the issuer, disposal of its waste, employee commuting, distribution and transport of its products or its investments).

The NB ESG Quotient assigned weightings to environmental, social and governance characteristics for each sector to derive the NB ESG Quotient rating for issuers. Issuers with a favourable and/or an improving NB ESG Quotient rating had a higher chance of being included in the Portfolio. Issuers with a poor NB ESG Quotient rating, especially where a poor NB ESG Quotient rating is not being addressed by an issuer, were more likely to be removed from the investment universe or were divested from the Portfolio.

31 December 2022	Rating	Combined coverage
NB ESG Quotient	61	100%
Third-party Data	6.1	

With regards to the NB ESG Quotient rating, a rating between 1 and 100 is used where 1 is the lowest rating and 100 is the highest rating. This Portfolio does not have a minimum NB ESG Quotient rating. The average NB ESG Quotient rating is a weighted average and is not a rating of the Portfolio strategy itself.

Third-party data was also used to measure the environmental and social characteristics promoted by the Portfolio. The third-party data ratings range from 0-10, with 0 being the lowest rating and 10 being the highest rating.

ii. Climate Value-at-Risk:

Over the reference period, Climate Value-at-Risk (“**CVaR**”) measured the exposure to transition and physical climate risks. CVaR is a scenario analysis tool evaluating economic risks under various degree scenarios (i.e., the amount of warming targeted) and potential regulatory environments in varying countries.

CVaR is a type of scenario analysis which is defined as the present value of aggregated future policy risk costs, technology opportunity profits, and extreme weather event costs and profits, expressed as a percentage of a security or portfolio’s market value according to the warming scenario targeted.

By calculating the financial risks from climate change per security and per scenario, CVaR provides a framework that helps quantify and understand these risks. The CVaR metric provides insight into the climate-stressed valuation of assets based on specific degree scenarios, providing an assessment on how much a security may stand to lose or gain from the impact of climate change.

As at 31 December 2022, CVaR projected that a warming climate scenario could result in a depreciation of 4.30% in the valuation of assets under assessment.

This analysis is intended as a broad overview of the investment team’s style and investment process.

On a holistic basis, the results were evaluated by the Sub-Investment Manager’s portfolio managers and analysts. The scenario analysis served as a starting point for further bottom-up analysis and identifying potential climate-related risks to address through issuer engagement.

Due to data limitations, CVaR was not applied across all issuers held by the Portfolio and was instead limited to the issuers for which the Sub-Investment Manager had sufficient and reliable data. The Portfolio had a CVaR coverage of 62%.

The analysis from CVaR is reviewed at least once a year.

iii. ESG exclusion policies:

To ensure that the environmental or social characteristics promoted by the Portfolio were attained, the Portfolio did not invest in securities issued by issuers whose activities breached, or were not consistent with, the Neuberger Berman Controversial Weapons Policy; the Neuberger Berman Thermal Coal Involvement Policy; the Neuberger Berman Sustainable Exclusion Policy and the Neuberger Berman Enhanced Sustainable Exclusion Policy. In addition to the application of the Neuberger Berman Thermal Coal Involvement Policy, the Sub-Investment Manager prohibited the initiation of new investment positions in securities issued by issuers that (i) derived more than 25% of their revenue from thermal coal mining; or (ii) were expanding new thermal coal power generation. Furthermore, from 6 April 2022 onwards, investments held by the Portfolio did not invest in securities issued by issuers whose activities had been identified as breaching the Neuberger Berman Global Standards Policy which excluded identified violators of (i) the United Nations Global Compact Principles (“**UNGC Principles**”), (ii) the OECD Guidelines for Multinational Enterprises (“**OECD Guidelines**”), (iii) the United Nations Guiding Principles on Business and Human Rights (“**UNGPs**”) and (iv) the International Labour Standards (“**ILO Standards**”). The Portfolio also excluded issuers that were involved in controversial activities and behaviour, such as fur manufacturers, gambling and nuclear power.

When applying ESG exclusions to the Portfolio, the Sub-Investment Manager used third-party data to identify issuers in breach of the ESG exclusions listed above. Where possible, the Sub-Investment Manager sought to overlay this third-party data with qualitative expertise from their research analysts to establish a current and holistic picture of the issuer. The Sub-Investment Manager discussed and debated the differences between the violators identified by the third-party data and those identified as a result of their research, which drew upon data from the NB ESG Quotient and direct engagements with the issuer.

● ***...and compared to previous periods?***

N/A – this is the first reference period.

● ***What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?***

While the Portfolio promoted environmental and social characteristics, this Portfolio did not have a sustainable investment objective. However, the Portfolio held sustainable investments which promoted the environmental & social characteristics listed above.

The consideration of investments made by the Portfolio as sustainable investments was determined by reference to NB’s sustainable investment framework. This framework included an assessment as to (i) whether the investment contributes to an environmental and/or social objective, (ii) whether the investment causes significant harm to those objectives (as described below), and (iii) an assessment of an issuers’ overall good governance rating to determine whether the issuer passes a good governance assessment.

Under this sustainable investment framework, the Sub-Investment Manager utilised multiple datapoints that measured the alignment of an issuer’s economic activity with environmental or social characteristics.

The Sub-Investment Manager screened issuers for controversies, significant harm and violations of minimum safeguards. If the issuers passed this screen, the Sub-Investment

Manager then proceeded to measure the issuers' environmental or social economic contribution.

The Sub-Investment Manager measured this in two ways:

- Revenue alignment to the EU taxonomy (if any); and
- Revenue alignment to the Sustainable Development Goals (“SDGs”).

Consideration of revenue alignment with the SDGs was limited by the availability of adequate, reliable and verifiable data coverage. To mitigate instances of poor data coverage, the Sub-Investment Manager utilised third-party data and proxy data along with internal research and qualitative analysis as part of NB's sustainable investment framework.

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

### ***How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?***

As part of the Sub-Investment Manager's sustainable investment framework, investments that cause significant harm to environmental or social objectives were excluded. To determine whether an investment caused significant harm, the Sub-Investment Manager considered significant harm with reference to certain principal adverse impact indicators and violations of minimum safeguards.

The Sub-Investment Manager considered the following principal adverse impacts indicators when determining whether the sustainable investments that the Portfolio made, did not cause significant harm to any environmental or social sustainable investment objective: GHG emissions; carbon footprint; GHG intensity of investee issuers; exposure to issuers active in the fossil fuel sector; share of non-renewable energy consumption and production; energy consumption intensity per high impact climate sector; activities negatively affecting biodiversity-sensitive areas; emissions to water; hazardous waste and radioactive waste ratio; violations of UN Global Compact principles and OECD Guidelines for Multinational Enterprises; lack of processes and compliance mechanisms to monitor compliance with UN Global Compact Principles and OECD Guidelines for Multinational Enterprises; unadjusted gender pay gap, board gender diversity; and exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons) (the “PAIs”).

Consideration of the PAIs was limited by the availability (in the Sub-Investment Manager's subjective view) of adequate, reliable and verifiable data coverage. The Sub-Investment Manager utilised third-party data and proxy data along with internal research to consider the PAIs.

The Sub-Investment Manager also considered violations of minimum safeguards. From 6 April 2022 onwards, the Sub-Investment Manager did not invest in issuers whose activities had been identified as breaching the OECD Guidelines, UNGC Principles, ILO Standards and UNGPs, captured through the Neuberger Berman Global Standards Policy.

The combination of all of these factors generated a quantitative validation for “sustainability” which was used to ensure the sustainable investments that the Portfolio made, did not cause significant harm to any environmental or social sustainable objective.

### ***How were the indicators for adverse impacts on sustainability factors taken into account?***

Consideration of the PAIs by the Sub-Investment Manager, when determining whether the sustainable investments that the Portfolio made did not cause significant harm to any environmental or social sustainable investment objective of the Portfolio's sustainable investments, was through a combination of:

- Monitoring issuers which fell below the quantitative and qualitative tolerance thresholds set for each PAI by the Sub-Investment Manager;
- Stewardship and/or setting engagement objectives with issuers which fell below the quantitative and qualitative tolerance thresholds set for a PAI by the Sub-Investment Manager; and
- Application of the ESG exclusion policies referenced above, which included consideration of several of the PAIs.

*Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:*

From 6 April 2022 onwards, the Sub-Investment Manager did not invest in issuers whose activities had been identified as breaching the OECD Guidelines, UNGC Principles, ILO Standards and UNGPs, captured through the Neuberger Berman Global Standards Policy.

*The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.*

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

N/A - The Portfolio did not commit to holding Taxonomy-aligned investments.

### **How did this financial product consider principal adverse impacts on sustainability factors?**

A selection of the principal adverse impact indicators were considered directly (e.g. through the ESG exclusion policies listed above) and/or indirectly (e.g. as part of the Sub-Investment Manager's assessment of issuers) throughout the 2022 reference period.

The Sub-Investment Manager considered PAIs with respect to the Portfolio in two ways:

1. All PAIs were considered when determining whether sustainable investments that the Portfolio made did not cause significant harm to any environmental or social sustainable investment objective as explained above.
2. From 28 November 2022 onwards, the Sub-Investment Manager considered the following principal adverse impacts on sustainability factors with respect to those investments within the Portfolio which promoted environmental or social characteristics, namely: GHG emissions, carbon footprint, GHG intensity, fossil fuel exposure, board gender diversity, UNGC Principles & OECD Guidelines violations and controversial weapons (the “**Product Level PAIs**”).

Consideration of the Product Level PAIs was limited by the availability (in the Sub-Investment Manager’s subjective view) of adequate, reliable and verifiable data coverage. The Sub-Investment Manager utilised third-party data and proxy data along with internal research to consider the Product Level PAIs.

Consideration of the Product Level PAIs by the Sub-Investment Manager was through a combination of:

- Monitoring the Portfolio, in particular where it fell below the quantitative and qualitative tolerance thresholds set for each Product Level PAI by the Sub-Investment Manager;
- Stewardship and/or setting engagement objectives where the Portfolio fell below the quantitative and qualitative tolerance thresholds set for a Product Level PAI by the Sub-Investment Manager; and
- Application of the ESG exclusion policies referenced above, which included consideration of several of the Product Level PAIs.

## What were the top investments of this financial product?

The Sub-Investment Manager has used the EU statistical classification of economic activities (“**NACE**”) economic sector breakdown to identify the economic sectors of the Portfolio’s top15 investments. The following data is as at 31 December 2022.

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 1 January 2022 - 31 December 2022

Largest investments	Sector	% Assets	Country
IRON MOUNTAIN INC RegS	L - Real estate activities	1.8%	United States
FRONTIER COMMUNICATIONS CORP RegS	J - Information and communication	1.6%	United States
PRIME SECURITY SERVICES BORROWER L RegS	N - Administrative and support service activities	1.6%	United States
ONEMAIN FINANCE CORP	K - Financial and insurance activities	1.5%	United States
ALBERTSONS COMPANIES INC RegS	G - Wholesale and retail trade; repair of motor vehicles and motorcycles	1.5%	United States
VALVOLINE INC RegS	G - Wholesale and retail trade; repair of motor vehicles and motorcycles	1.4%	United States
ASSUREDPARTNERS INC RegS	K - Financial and insurance activities	1.4%	United States
HCA INC	Q - Human health and social work activities	1.3%	United States
SGL CARBON SE RegS	C - Manufacturing	1.2%	Germany
VMED O2 UK FINANCING II PLC RegS	N/A	1.2%	United Kingdom
TENET HEALTHCARE CORPORATION RegS	Q - Human health and social work activities	1.2%	United States
TERRAFORM POWER OPERATING LLC RegS	D - Electricity, gas, steam and air conditioning supply	1.2%	United States
RITCHIE BROS AUCTIONEERS INC RegS	G - Wholesale and retail trade; repair of motor vehicles and motorcycles	1.2%	Canada
ORGANON FINANCE 1 LLC RegS	N - Administrative and support service activities	1.2%	United States
GYP HOLDINGS III CORP RegS	G - Wholesale and retail trade; repair of motor vehicles and motorcycles	1.2%	United States

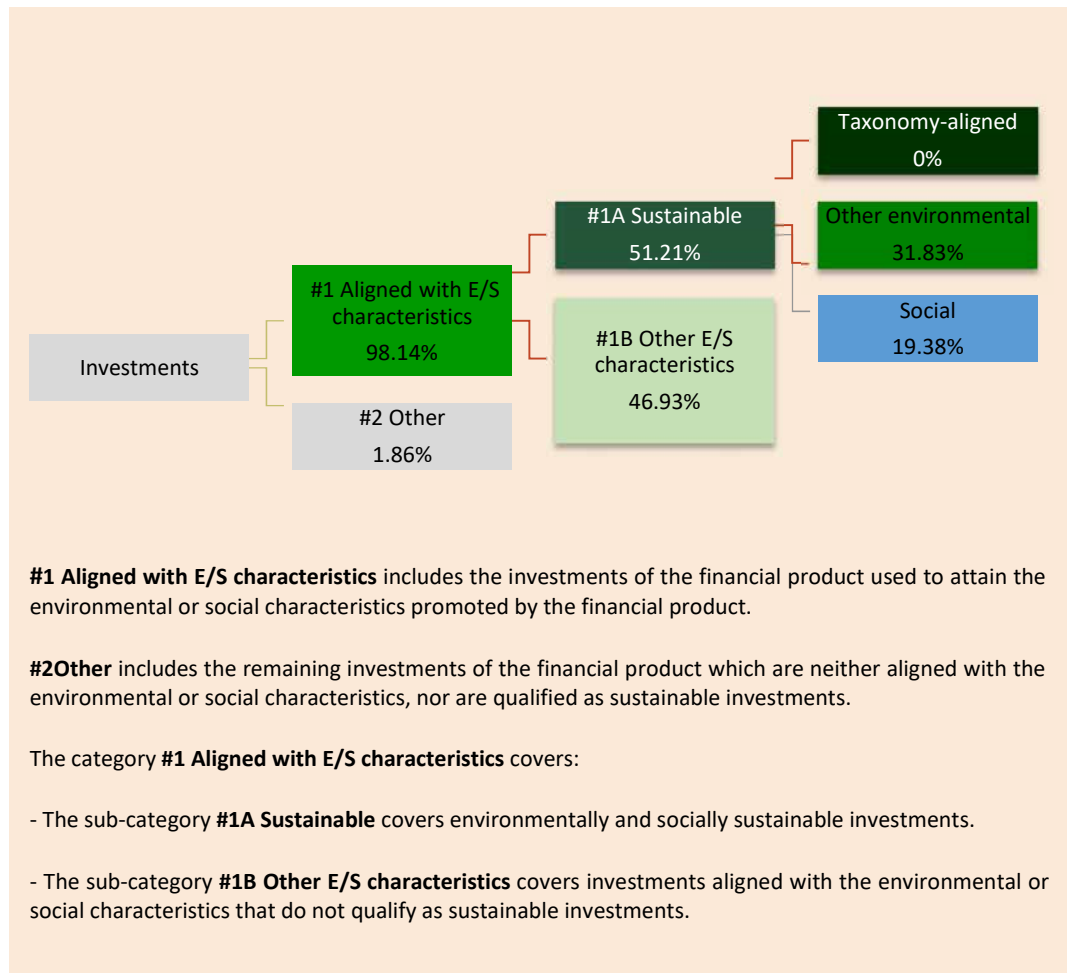

## What was the proportion of sustainability-related investments?

**Asset allocation** describes the share of investments in specific assets.

### ● **What was the asset allocation?**

The Sub-Investment Manager calculated the proportion of investments aligned with the environmental and/or social characteristics promoted by the Portfolio by reference to the proportion of issuers in the Portfolio: i) that held either an NB ESG Quotient rating or a third-party equivalent ESG rating that was used as part of the portfolio construction and investment management process of the Portfolio; and/or ii) with whom the Sub-Investment Manager had engaged directly. This calculation was based on a mark-to-market assessment of the Portfolio and may rely on incomplete or inaccurate issuer or third-party data. For the 2022 reference period only this calculation is based on the Portfolio's holdings as at 31 December 2022, being the only quarter end in the reference period that followed the publication of the Portfolio's SFDR Annex detailing its planned asset allocation. For all subsequent reference periods, this calculation will be based on the average of the four quarter ends.

***In which economic sectors were the investments made?***

**Data as at 31 December 2022**

<b>Economic Sector – NACE</b>	<b>% Assets</b>
B - Mining and quarrying	0.67%
C - Manufacturing	18.50%
D - Electricity, gas, steam, and air conditioning supply	3.84%
E - Water supply; sewerage; waste management and remediation activities	0.13%
F - Construction	1.73%
G - Wholesale and retail trade; repair of motor vehicles and motorcycles	10.48%
H - Transporting and storage	1.72%
I - Accommodation and food service activities	2.30%
J - Information and communication	9.12%
K - Financial and insurance activities	31.95%
L - Real estate activities	3.94%
M - Professional, scientific, and technical activities	0.62%
N - Administrative and support service activities	5.90%
Q - Human health and social work activities	6.03%
R - Arts, entertainment, and recreation	0.17%
None	2.89%

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

- **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

## To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The analysis and disclosure requirements introduced by the EU Taxonomy are very detailed and compliance with them requires the availability of multiple, specific data points in respect of each investment which the Portfolio made. The Sub-Investment Manager cannot confirm that the Portfolio invested in any investments that qualified as environmentally sustainable for the purposes of the EU Taxonomy. Disclosures and reporting on Taxonomy alignment will develop as the EU framework evolves and data is made available by issuers. The Sub-Investment Manager will keep the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy under active review as data availability and quality improves.

### ● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>2</sup>?

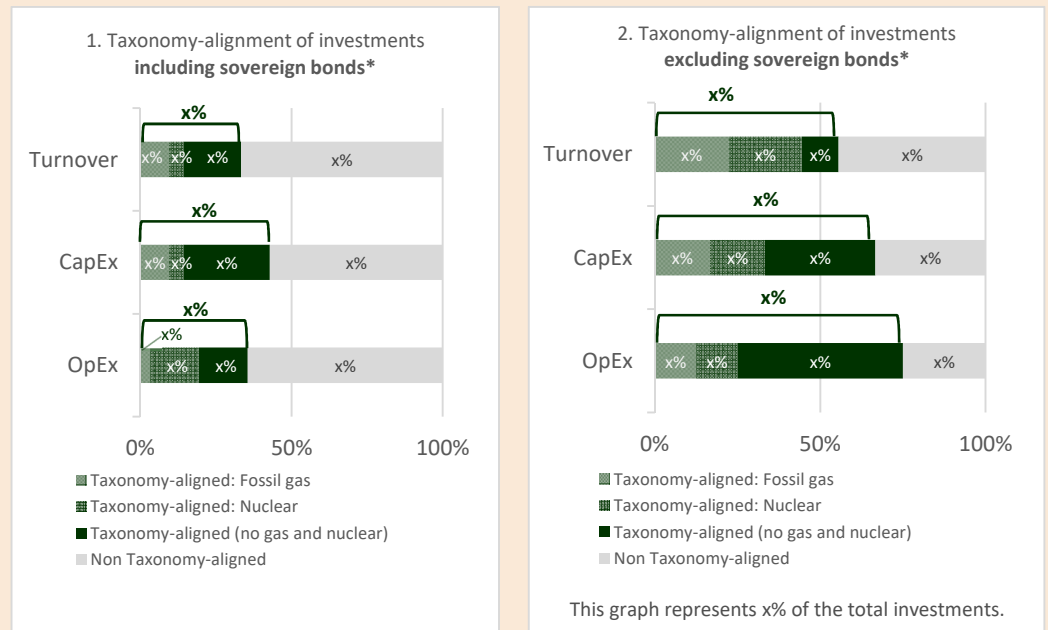

- Yes:
- In fossil gas  In nuclear energy
- No

<sup>2</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

● **What was the share of investments made in transitional and enabling activities?**

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

### What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

31.83%

While the Portfolio invested in sustainable investments with an environmental objective, such sustainable investments did not commit to being Taxonomy-aligned investments.

### What was the share of socially sustainable investments?

19.38%

### What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

“Other” included the remaining investments of the Portfolio (including but not limited to any derivatives or any security collateralized by a pool of similar assets or receivables listed in the Supplement for the Portfolio) which were neither aligned with the environmental or social characteristics, nor qualified as sustainable investments.

The “Other” section in the Portfolio was held for a number of reasons that the Sub-Investment Manager felt was beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover.

As noted above, the Portfolio was invested in compliance with ESG exclusion policies, on a continuous basis. This ensured that investments made by the Portfolio sought to align with international environmental and social safeguards such as the UNGC Principles, UNGPs, OECD Guidelines and ILO Standards.

The Sub-Investment Manager believes that these policies prevented investment in issuers that most egregiously violated environmental and/or social minimum standards and ensured that the Portfolio could successfully promote its environmental and social characteristics.

The above steps ensured that robust environmental and social safeguards were in place.

## What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Portfolio was managed in-line with the investment objective and the following actions were taken:

i. Integrating proprietary ESG analysis:

The NB ESG Quotient ratings were generated for issuers in the Portfolio. The NB ESG Quotient rating for issuers was utilised to help to better identify risks and opportunities in the overall credit and value assessment.

The NB ESG Quotient was a key component of the internal credit ratings and helped to identify business risks (including ESG risks), which would cause deterioration in an issuer's credit profile. Internal credit ratings can be notched up or down based on the NB ESG Quotient rating, and this was monitored by the Sub-Investment Manager as an important component of the investment process for the Portfolio.

By integrating the investment team's proprietary ESG analysis (the NB ESG Quotient) into their internal credit ratings, there was a direct link between their analysis of material ESG characteristics and portfolio construction activities across their strategy.

Issuers with a favourable and/or an improving NB ESG Quotient rating had a higher chance of ending up in the Portfolio. Issuers with a poor NB ESG Quotient rating especially where these were not being addressed by that issuer, were more likely to be removed from the investment universe or divested from the Portfolio.

ii. Engagement:

The Sub-Investment Manager engaged with issuers through a robust ESG engagement program. They sought to prioritise constructive engagements and sought to engage on topics (including ESG topics) they determined to be financially material for the relevant issuer. The Sub-Investment Manager viewed this engagement with issuers, as an important part of its investment process. Progress on engagement was tracked centrally in the Sub-Investment Manager's engagement tracker.

iii. ESG sectoral exclusion policies:

To ensure that the environmental and social characteristics promoted by the Portfolio were attained, the Portfolio applied the ESG exclusion policies referenced above, which placed limitations on the investable universe.

## How did this financial product perform compared to the reference benchmark?

N/A – The Portfolio does not use a benchmark.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

---

- ***How does the reference benchmark differ from a broad market index?***  
N/A
- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***  
N/A
- ***How did this financial product perform compared with the reference benchmark?***  
N/A
- ***How did this financial product perform compared with the broad market index?***  
N/A

**Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852**

**Product name:** Neuberger Berman Global Bond Fund (the “Portfolio”)

**Legal entity identifier:** 549300RDJHEJZZ6XVX05

## Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?	
<input checked="" type="radio"/> <input checked="" type="radio"/> <input type="checkbox"/> <b>Yes</b>	<input checked="" type="radio"/> <input type="radio"/> <input checked="" type="checkbox"/> <b>No</b>
<input type="checkbox"/> It made <b>sustainable investments with an environmental objective</b> : ____% <ul style="list-style-type: none"> <li><input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy</li> <li><input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</li> </ul>	<input type="checkbox"/> It <b>promoted Environmental/Social (E/S) characteristics</b> and while it did not have as its objective a sustainable investment, it had a proportion of ____% of sustainable investments <ul style="list-style-type: none"> <li><input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy</li> <li><input type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</li> <li><input type="checkbox"/> with a social objective</li> </ul>
<input type="checkbox"/> It made <b>sustainable investments with a social objective</b> : ____%	<input checked="" type="checkbox"/> It promoted E/S characteristics, but <b>did not make any sustainable investments</b>

## To what extent were the environmental and/or social characteristics promoted by this financial product met?

The following environmental and social characteristics were promoted by the Portfolio:

- **Environmental Characteristics:** biodiversity & responsible land usage; carbon footprint reduction; environmental management; greenhouse gas (“GHG”) emissions; opportunities in clean technologies; opportunities in green building; opportunities in renewable energy; responsible raw material sourcing; responsible & transparent underwriting; toxic emissions & waste; waste management; and water management.
- **Social Characteristics:** access to finance; access to medicines; affordability & fair pricing; business ethics & transparency of government relations; chemical safety; community relations; controversial sourcing; corporate behaviour; drug safety & side effects management; ethical marketing & practices; health & nutrition; health & safety; human capital development; labour management; data privacy & security; product safety & quality; and litigation & related controversy.

Performance in relation to these environmental and social characteristics was measured through the NB ESG Quotient, and is reported, in aggregate, below.

### ● How did the sustainability indicators perform?

As part of the investment process, the Manager and the Sub-Investment Manager considered a variety of sustainability indicators to measure the environmental and/or social characteristics promoted by the Portfolio. These sustainability indicators are listed below:

#### 1. The NB ESG Quotient:

The proprietary Neuberger Berman ESG rating system (the “**NB ESG Quotient**”), is built around the concept of sector specific ESG risk and opportunity, and produced an overall ESG rating for issuers by assessing them against certain ESG metrics.

Foundational to the NB ESG Quotient is the proprietary Neuberger Berman (“**NB**”) materiality matrix, which focuses on the ESG characteristics that were considered to be the most likely to be the material drivers of ESG risk and opportunity for each sector. Each sector criteria is constructed using third-party and internally derived ESG data and supplemented with internal qualitative analysis, leveraging the Portfolio’s analyst team’s significant sector expertise. The NB materiality matrix enabled the Manager and Sub-Investment Manager to derive the NB ESG Quotient rating, to compare sectors and issuers relative to their environmental and social characteristics.

The NB ESG Quotient assigned weightings to environmental, social and governance characteristics for each sector to derive the NB ESG Quotient rating for issuers. Issuers with a favourable and/or an improving NB ESG Quotient rating had a higher chance of being included in the Portfolio. Issuers with a poor NB ESG Quotient rating, especially where a poor NB ESG Quotient rating is not being addressed by an issuer, were more likely to be removed from the investment universe or were divested from the Portfolio. In addition, the Manager and the Sub-Investment Manager sought to prioritise constructive engagements with issuers that had a poor NB ESG Quotient rating, in order to assess whether concerns were being addressed adequately.

31 December 2022	Rating	Combined coverage
NB ESG Quotient	68	77%
Third-party Data	6.5	

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

With regards to the NB ESG Quotient rating, a rating between 1 – 100 is used where 1 is the lowest rating and 100 is the highest rating. This Portfolio does not have a minimum NB ESG Quotient rating. The average NB ESG Quotient rating is a weighted average and is not a rating of the Portfolio strategy itself.

Third-party data was also used to measure the environmental and social characteristics promoted by the Portfolio. The third-party data ratings range from 0-10, with 0 being the lowest rating and 10 being the highest rating.

## 2. Climate Value-at-Risk:

Over the reference period - Climate Value-at-Risk (“**CVaR**”) measured the exposure to transition and physical climate risks. CVaR is a scenario analysis tool evaluating economic risks under various degree scenarios (i.e., the amount of warming targeted) and potential regulatory environments in varying countries.

CVaR is a type of scenario analysis which is defined as the present value of aggregated future policy risk costs, technology opportunity profits, and extreme weather event costs and profits, expressed as a percentage of a security or portfolio’s market value according to the warming scenario targeted.

By calculating the financial risks from climate change per security and per scenario, CVaR provides a framework that helps quantify and understand these risks. The CVaR metric provides insight into the climate-stressed valuation of assets based on specific degree scenarios, providing an assessment on how much a security may stand to lose or gain from the impact of climate change.

As at 31 December 2022, CVaR projected that a warming climate scenario could result in a depreciation of 1.70% in the valuation of assets under assessment.

This analysis is intended as a broad overview of the investment team’s style and investment process.

On a holistic basis, the results were evaluated by the Sub-Investment Manager’s portfolio managers and analysts. The scenario analysis served as a starting point for further bottom-up analysis and identifying potential climate-related risks to address through issuer engagement.

Due to data limitations, CVaR was not applied across all issuers held by the Portfolio and was instead limited to the issuers for which the Sub-Investment Manager had sufficient and reliable data. The Portfolio had a CVaR coverage of 24%.

The analysis from CVaR is reviewed at least once a year.

## 3. ESG exclusion policies:

To ensure that the environmental or social characteristics promoted by the Portfolio were attained, the Portfolio did not invest in securities issued by issuers whose activities breached, or were not consistent with, the Neuberger Berman Controversial Weapons Policy and the Neuberger Berman Thermal Coal Involvement Policy. In addition to the application of the Neuberger Berman Thermal Coal Involvement Policy, the Manager and the Sub-Investment Manager prohibited the initiation of new investment positions in securities issued by issuers that (i) derived more than 25% of their revenue from thermal coal mining; or (ii) were expanding new thermal coal power generation. Furthermore, from 6 April 2022 onwards, investments held by the Portfolio did not invest in securities issued by issuers whose activities had been identified as breaching the Neuberger Berman Global Standards Policy which excluded identified violators of (i) the United Nations Global Compact Principles (“**UNGC Principles**”), (ii) the OECD Guidelines for Multinational Enterprises (“**OECD Guidelines**”), (iii) the United Nations Guiding Principles on Business and Human Rights (“**UNGPs**”) and (iv) the International Labour Standards (“**ILO Standards**”). The Portfolio also excluded emerging market corporate debt issuers that were involved in the tobacco industry and child labour.

When applying ESG exclusions to the Portfolio, the Manager and the Sub-Investment Manager used third-party data to identify issuers in breach of the ESG exclusions listed above. Where possible, the Manager and the Sub-Investment Manager sought to overlay this third-party data with qualitative expertise from their research analysts to establish a current and holistic picture of the issuer. The Manager and the Sub-Investment Manager discussed and debated the differences between the violators identified by the third-party data and those identified as a result of their research, which drew upon data from the NB ESG Quotient and direct engagements with the issuer.

● ***...and compared to previous periods?***

N/A - this is the first reference period.

● ***What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?***

N/A – the Portfolio did not commit to holding sustainable investments.

● ***How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?***

N/A – the Portfolio did not commit to holding sustainable investments.

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

— ***How were the indicators for adverse impacts on sustainability factors taken into account?***

N/A – the Portfolio did not commit to holding sustainable investments.

— ***Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

The Portfolio did not commit to holding sustainable investments, however from 6 April 2022 onwards, the Manager and the Sub-Investment Manager did not invest in issuers whose activities had been identified as breaching the OECD Guidelines, UNGC Principles, ILO Standards and UNGPs, captured through the Neuberger Berman Global Standards Policy.

*The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.*

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

N/A - The Portfolio did not commit to holding Taxonomy-aligned investments.

### **How did this financial product consider principal adverse impacts on sustainability factors?**

A selection of the principal adverse impact indicators were considered directly (e.g. through the ESG exclusion policies listed above) and/or indirectly (e.g. as part of the Manager's and the Sub-Investment Manager's assessment of issuers) throughout the 2022 reference period.

From 28 November 2022 onwards, the Manager and the Sub-Investment Manager considered the following principal adverse impacts with respect to the Portfolio, namely: GHG intensity and investee countries subject to social violations (the “**Sovereign PAIs**”) for the sovereign issuers; and GHG emissions, carbon footprint, GHG intensity, fossil fuel exposure, board gender diversity, UNGC Principles & OECD Guidelines violations and controversial weapons for the corporate issuers (together the “**Product Level PAIs**”).

Consideration of the Product Level PAIs was limited by the availability (in the Manager's and the Sub-Investment Manager's subjective view) of adequate, reliable and verifiable data coverage. The Manager and the Sub-Investment Manager utilised third-party data and proxy data along with internal research to consider the Product Level PAIs.

Consideration of the Product Level PAIs by the Manager and the Sub-Investment Manager was through a combination of:

- Monitoring the Portfolio, in particular where it fell below the quantitative and qualitative tolerance thresholds set for each Product Level PAI by the Manager and the Sub-Investment Manager;
- Stewardship and/or setting engagement objectives where the Portfolio fell below the quantitative and qualitative tolerance thresholds set for a Product Level PAI by the Manager and the Sub-Investment Manager; and
- Application of the ESG exclusion policies referenced above, which included consideration of several of the Product Level PAIs.

## What were the top investments of this financial product?

The Manager and the Sub-Investment Manager have used the EU statistical classification of economic activities (“NACE”) economic sector breakdown to identify the economic sectors of the Portfolio’s top 15 investments. The following data is as at 31 December 2022.

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: 1 January 2022 - 31 December 2022

Largest investments	Sector	% Assets	Country
CANADA (GOVERNMENT OF)	O - Public administration and defence; compulsory social security	4.3%	Canada
CANADA (GOVERNMENT)	O - Public administration and defence; compulsory social security	2.6%	Canada
KOREA (REPUBLIC OF)	O - Public administration and defence; compulsory social security	2.5%	Korea (South), Republic of
TREASURY NOTE	O - Public administration and defence; compulsory social security	2.3%	United States
JAPAN (GOVERNMENT OF) 5YR #149	O - Public administration and defence; compulsory social security	2.3%	Japan
MEX BONOS DE DESARROLLO	O - Public administration and defence; compulsory social security	2.1%	Mexico
TREASURY NOTE	O - Public administration and defence; compulsory social security	1.4%	United States
UK I/L GILT RegS	O - Public administration and defence; compulsory social security	1.3%	United Kingdom
KOREA (REPUBLIC OF)	O - Public administration and defence; compulsory social security	1.2%	Korea (South), Republic of
JAPAN (GOVERNMENT OF) 30YR #61	O - Public administration and defence; compulsory social security	1.1%	Japan
GERMANY (FEDERAL REPUBLIC OF) RegS	O - Public administration and defence; compulsory social security	1.0%	Germany
STACR 22-HQA1 M1A 144A	N/A	0.9%	United States
INDONESIA (REPUBLIC OF)	O - Public administration and defence; compulsory social security	0.9%	Indonesia
UMBS 30YR TBA(REG A)	N/A	0.9%	United States
TREASURY NOTE (2OLD)	O - Public administration and defence; compulsory social security	0.8%	United States

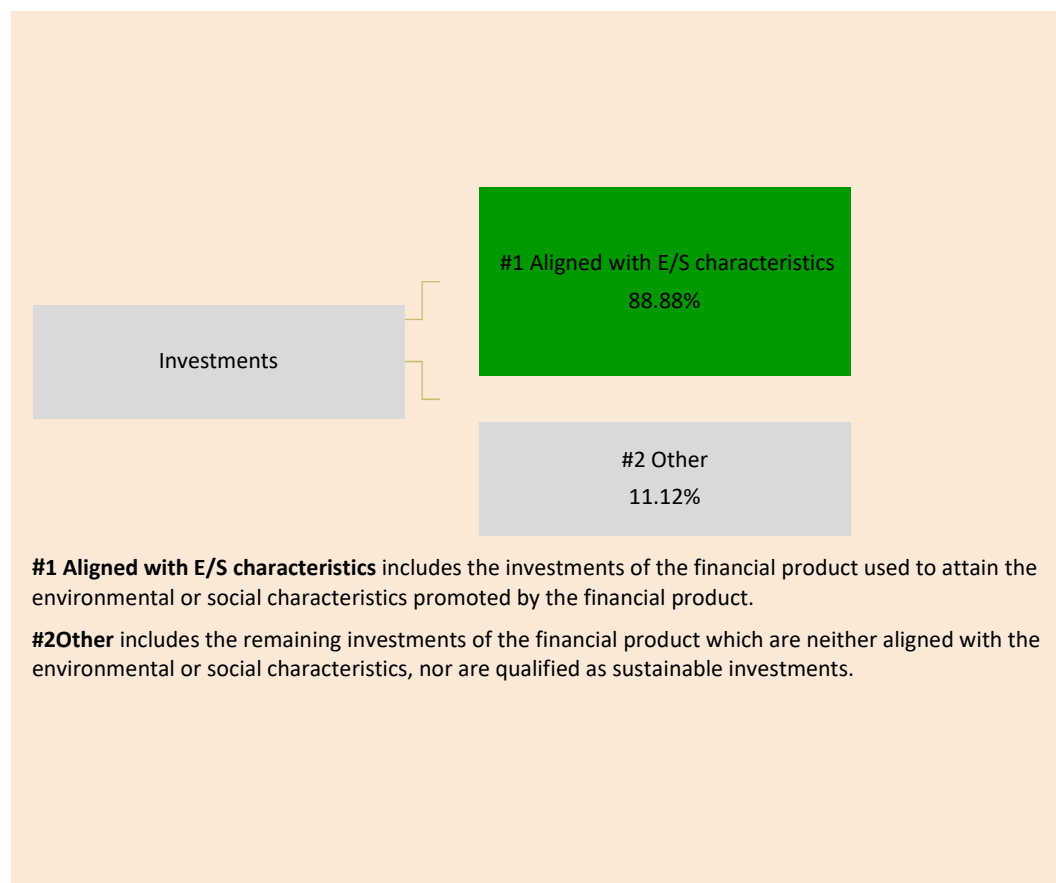

## What was the proportion of sustainability-related investments?

### What was the asset allocation?

The Manager and the Sub-Investment Manager calculated the proportion of investments aligned with the environmental and/or social characteristics promoted by the Portfolio by reference to the proportion of issuers in the Portfolio: i) that held either an NB ESG Quotient rating or a third-party equivalent ESG rating that was used as part of the portfolio construction and investment management process of the Portfolio; and/or ii) with whom the Manager and the Sub-Investment Manager had engaged directly. This calculation was based on a mark-to-market assessment of the Portfolio and may rely on incomplete or inaccurate issuer or third-party data. For the 2022 reference period only, this calculation is based on the Portfolio’s holdings as at 31 December 2022, being the only quarter end in the reference period that followed the publication of the Portfolio’s SFDR Annex detailing its planned asset allocation. For all subsequent reference periods, this calculation will be based on the average of the four quarter ends.

Asset allocation describes the share of investments in specific assets.

● ***In which economic sectors were the investments made?***

Data as at 31 December 2022	
Economic Sector – NACE	% Assets
B - Mining and quarrying	0.63%
C - Manufacturing	5.96%
D - Electricity, gas, steam and air conditioning supply	1.60%
E - Water supply; sewerage; waste management and remediation activities	0.08%
G - Wholesale and retail trade; repair of motor vehicles and motorcycles	0.50%
H - Transporting and storage	0.37%
I - Accommodation and food service activities	0.36%
J - Information and communication	4.98%
K - Financial and insurance activities	18.08%
L - Real estate activities	1.02%
N - Administrative and support service activities	0.22%
O - Public administration and defence; compulsory social security	40.21%
Q - Human health and social work activities	0.44%
U - Activities of extraterritorial organisations and bodies	2.44%
None	23.12%

## To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The analysis and disclosure requirements introduced by the EU Taxonomy are very detailed and compliance with them requires the availability of multiple, specific data points in respect of each investment which the Portfolio made. The Manager and the Sub-Investment Manager cannot confirm that the Portfolio invested in any investments that qualified as environmentally sustainable for the purposes of the EU Taxonomy. Disclosures and reporting on Taxonomy alignment will develop as the EU framework evolves and data is made available by issuers. The Manager and the Sub-Investment Manager will keep the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy under active review as data availability and quality improves.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

- **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

### ● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?

Yes:

In fossil gas

In nuclear energy

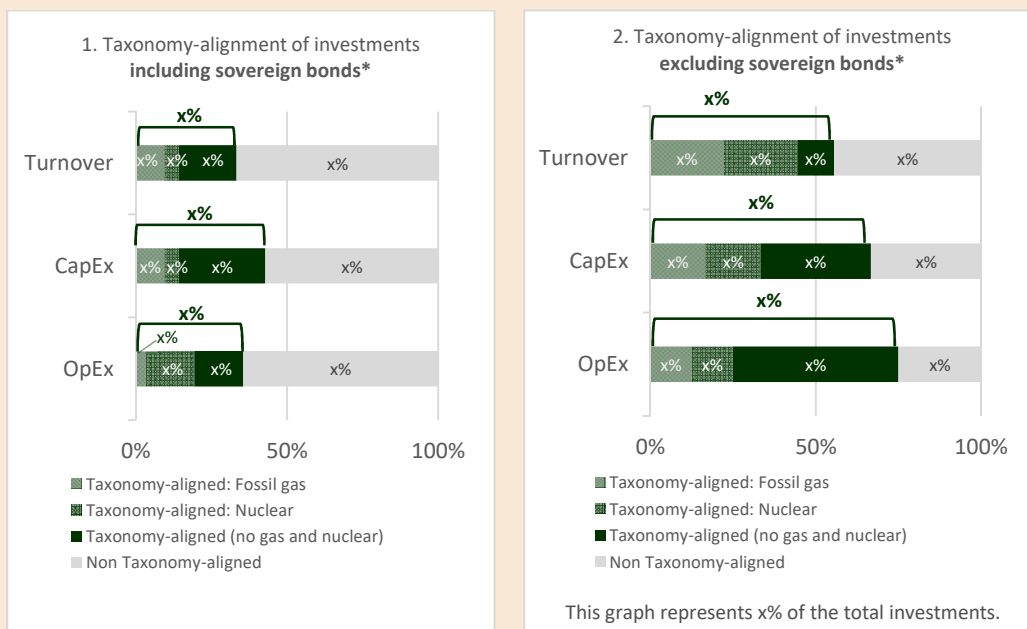

No

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

- **What was the share of investments made in transitional and enabling activities?**

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments.

- **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments.

### **What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?**

N/A – the Portfolio did not commit to holding sustainable investments.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

### **What was the share of socially sustainable investments?**

N/A - the Portfolio did not commit to holding sustainable investments.

### **What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?**

“Other” included the remaining investments of the Portfolio (including but not limited to any derivatives, any to-be-announced security (“**TBA**”), or any security collateralized by a pool of similar assets or receivables listed in the Supplement for the Portfolio) which were neither aligned with the environmental or social characteristics, nor qualified as sustainable investments.

The “Other” section in the Portfolio was held for a number of reasons that the Manager and the Sub-Investment Manager felt was beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover.

As noted above, the Portfolio was invested in compliance with ESG exclusion policies, on a continuous basis. This ensured that investments made by the Portfolio sought to align with international environmental and social safeguards such as the UNGC Principles, UNGPs, OECD Guidelines and the ILO Standards.

The Manager and the Sub-Investment Manager believe that these policies prevented investment in issuers that most egregiously violated environmental and/or social minimum standards and ensured that the Portfolio could successfully promote its environmental and social characteristics.

The above steps ensured that robust environmental and social safeguards were in place.

## What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Portfolio was managed in-line with the investment objective and the following actions were taken:

### I. Integrating proprietary ESG analysis:

The NB ESG Quotient ratings were generated for issuers in the Portfolio. The NB ESG Quotient rating for issuers was utilised to help to better identify risks and opportunities in the overall credit and value assessment.

The NB ESG Quotient was a key component of the internal credit ratings and helped to identify business risks (including ESG risks), which would cause deterioration in an issuer's credit profile. Internal credit ratings can be notched up or down based on the NB ESG Quotient rating, and this was monitored by the Manager and the Sub-Investment Manager as an important component of the investment process for the Portfolio.

By integrating the investment team's proprietary ESG analysis (the NB ESG Quotient) into their internal credit ratings, there was a direct link between their analysis of material ESG characteristics and portfolio construction activities across their strategy.

Issuers with a favourable and/or an improving NB ESG Quotient rating had a higher chance of ending up in the Portfolio. Issuers with a poor NB ESG Quotient rating especially where these were not being addressed by that issuer, were more likely to be removed from the investment universe or divested from the Portfolio.

### II. Engagement:

The Manager and the Sub-Investment Manager engaged with issuers through a robust ESG engagement program. They sought to prioritise constructive engagements and sought to engage on topics (including ESG topics) they determined to be financially material for the relevant issuer. The Manager and the Sub-Investment Manager viewed this engagement with issuers, as an important part of its investment process. Progress on engagement was tracked centrally in the Manager and the Sub-Investment Manager's engagement tracker.

### III. ESG sectoral exclusion policies:

To ensure that the environmental and social characteristics promoted by the Portfolio were attained, the Portfolio applied the ESG exclusion policies referenced above, which placed limitations on the investable universe.

## **How did this financial product perform compared to the reference benchmark?**

N/A – The Portfolio's benchmark has not been designated as a reference benchmark. Therefore, it is not consistent with the environmental or social characteristics promoted by the Portfolio.

- ***How does the reference benchmark differ from a broad market index?***  
N/A
- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***  
N/A
- ***How did this financial product perform compared with the reference benchmark?***  
N/A
- ***How did this financial product perform compared with the broad market index?***  
N/A

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

**Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852**

**Product name:** Neuberger Berman Global Opportunistic Bond Fund (the “Portfolio”)

**Legal entity identifier:** 549300ZNZZ2YDVTNRE14

## Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?	
<input checked="" type="radio"/> <input checked="" type="radio"/> <input type="checkbox"/> <b>Yes</b>	<input checked="" type="radio"/> <input type="radio"/> <input checked="" type="checkbox"/> <b>No</b>
<input type="checkbox"/> It made <b>sustainable investments with an environmental objective: ___%</b>  <input type="checkbox"/> _____ in economic activities that qualify as environmentally sustainable under the EU Taxonomy  <input type="checkbox"/> _____ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy  <input type="checkbox"/> It made <b>sustainable investments with a social objective: ___%</b>	<input type="checkbox"/> It promoted <b>Environmental/Social (E/S) characteristics</b> and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments  <input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy  <input type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy  <input type="checkbox"/> with a social objective  <input checked="" type="checkbox"/> It promoted E/S characteristics, but <b>did not make any sustainable investments</b>

## To what extent were the environmental and/or social characteristics promoted by this financial product met?

The following environmental and social characteristics were promoted by the Portfolio:

- **Environmental Characteristics:** biodiversity & responsible land usage; carbon footprint reduction; environmental management; greenhouse gas (“GHG”) emissions; opportunities in clean technologies; opportunities in green building; opportunities in renewable energy; responsible raw material sourcing; responsible & transparent underwriting; toxic emissions & waste; waste management; and water management.
- **Social Characteristics:** access to finance; access to medicines; affordability & fair pricing; business ethics & transparency of government relations; chemical safety; community relations; controversial sourcing; corporate behaviour; drug safety & side effects management; ethical marketing & practices; health & nutrition; health & safety; human capital development; labour management; data privacy & security; product safety & quality; and litigation & related controversy.

Performance in relation to these environmental and social characteristics was measured through the NB ESG Quotient, and is reported, in aggregate, below.

### How did the sustainability indicators perform?

As part of the investment process, the Manager and the Sub-Investment Manager considered a variety of sustainability indicators to measure the environmental and/or social characteristics promoted by the Portfolio. These sustainability indicators listed are below:

#### 1. The NB ESG Quotient:

The proprietary Neuberger Berman ESG rating system (the “**NB ESG Quotient**”), is built around the concept of sector specific ESG risk and opportunity, and produced an overall ESG rating for issuers by assessing them against certain ESG metrics.

Foundational to the NB ESG Quotient is the proprietary Neuberger Berman (“**NB**”) materiality matrix, which focuses on the ESG characteristics that were considered to be the most likely to be the material drivers of ESG risk and opportunity for each sector. Each sector criteria is constructed using third-party and internally derived ESG data and supplemented with internal qualitative analysis, leveraging the Portfolio’s analyst team’s significant sector expertise. The NB materiality matrix enabled the Manager and Sub-Investment Manager to derive the NB ESG Quotient rating, to compare sectors and issuers relative to their environmental and social characteristics.

The NB ESG Quotient assigned weightings to environmental, social and governance characteristics for each sector to derive the NB ESG Quotient rating for issuers. Issuers with a favourable and/or an improving NB ESG Quotient rating had a higher chance of being included in the Portfolio. Issuers with a poor NB ESG Quotient rating, especially where a poor NB ESG Quotient rating is not being addressed by an issuer, were more likely to be removed from the investment universe or were divested from the Portfolio. In addition, the Manager and the Sub-Investment Manager sought to prioritise constructive engagements with issuers that had a poor NB ESG Quotient rating, in order to assess whether concerns were being addressed adequately.

31 December 2022	Rating	Combined coverage
NB ESG Quotient	61	80%
Third-party Data	5.7	

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

With regards to the NB ESG Quotient rating, a rating between 1 – 100 is used where 1 is the lowest rating and 100 is the highest rating. This Portfolio does not have a minimum NB ESG Quotient rating. The average NB ESG Quotient rating is a weighted average and is not a rating of the Portfolio strategy itself.

Third-party data was also used to measure the environmental and social characteristics promoted by the Portfolio. The third-party data ratings range from 0-10, with 0 being the lowest rating and 10 being the highest rating.

## 2. Climate Value-at-Risk:

Over the reference period, Climate Value-at-Risk (“**CVaR**”) measured the exposure to transition and physical climate risks. CvaR is a scenario analysis tool evaluating economic risks under various degree scenarios (i.e., the amount of warming targeted) and potential regulatory environments in varying countries.

CvaR is a type of scenario analysis which is defined as the present value of aggregated future policy risk costs, technology opportunity profits, and extreme weather event costs and profits, expressed as a percentage of a security or portfolio’s market value according to the warming scenario targeted.

By calculating the financial risks from climate change per security and per scenario, CvaR provides a framework that helps quantify and understand these risks. The CvaR metric provides insight into the climate-stressed valuation of assets based on specific degree scenarios, providing an assessment on how much a security may stand to lose or gain from the impact of climate change.

As at 31 December 2022, CvaR projected that a warming climate scenario could result in a depreciation of 4.18% in the valuation of assets under assessment.

This analysis is intended as a broad overview of the investment team’s style and investment process.

On a holistic basis, the results were evaluated by the Sub-Investment Manager’s portfolio managers and analysts. The scenario analysis served as a starting point for further bottom-up analysis and identifying potential climate-related risks to address through issuer engagement.

Due to data limitations, CVaR was not applied across all issuers held by the Portfolio and was instead limited to the issuers for which the Sub-Investment Manager had sufficient and reliable data. The Portfolio had a CVaR coverage of 24%.

The analysis from CVaR is reviewed at least once a year.

## 3. ESG exclusion policies:

To ensure that the environmental or social characteristics promoted by the Portfolio were attained, the Portfolio did not invest in securities issued by issuers whose activities breached, or were not consistent with, the Neuberger Berman Controversial Weapons Policy and the Neuberger Berman Thermal Coal Involvement Policy. In addition to the application of the Neuberger Berman Thermal Coal Involvement Policy, the Manager and the Sub-Investment Manager prohibited the initiation of new investment positions in securities issued by issuers that (i) derived more than 25% of their revenue from thermal coal mining; or (ii) were expanding new thermal coal power generation. Furthermore, from 6 April 2022 onwards, investments held by the Portfolio did not invest in securities issued by issuers whose activities had been identified as breaching the Neuberger Berman Global Standards Policy which excluded identified violators of (i) the United Nations Global Compact Principles (“**UNGC Principles**”), (ii) the OECD Guidelines for Multinational Enterprises (“**OECD Guidelines**”), (iii) the United Nations Guiding Principles on Business and Human Rights (“**UNGPs**”) and (iv) the International Labour Standards (“**ILO Standards**”). The Portfolio also excluded emerging market corporate debt issuers that were involved in the tobacco industry and child labour.

When applying ESG exclusions to the Portfolio, the Manager and the Sub-Investment Manager used third-party data to identify issuers in breach of the ESG exclusions listed above. Where possible, the Manager and the Sub-Investment Manager sought to overlay this third-party data with qualitative expertise from their research analysts to establish a current and holistic picture of the issuer. The Manager and the Sub-Investment Manager discussed and debated the differences between the violators identified by the third-party data and those identified as a result of their research, which drew upon data from the NB ESG Quotient and direct engagements with the issuer.

● ***...and compared to previous periods?***

N/A - this is the first reference period.

● ***What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?***

N/A – the Portfolio did not commit to holding sustainable investments.

● ***How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?***

N/A – the Portfolio did not commit to holding sustainable investments.

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

— — ***How were the indicators for adverse impacts on sustainability factors taken into account?***

N/A – the Portfolio did not commit to holding sustainable investments.

— — ***Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

The Portfolio did not commit to holding sustainable investments, however from 6 April 2022 onwards, the Manager and the Sub-Investment Manager did not invest in issuers whose activities had been identified as breaching the OECD Guidelines, UNGC Principles, ILO Standards and UNGPs, captured through the Neuberger Berman Global Standards Policy.

*The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.*

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

N/A - The Portfolio did not commit to holding Taxonomy-aligned investments.

### **How did this financial product consider principal adverse impacts on sustainability factors?**

A selection of the principal adverse impact indicators were considered directly (e.g. through the ESG exclusion policies listed above) and/or indirectly (e.g. as part of the Manager's and the Sub-Investment Manager's assessment of issuers) throughout the 2022 reference period.

From 28 November 2022 onwards, the Manager and the Sub-Investment Manager considered the following principal adverse impacts with respect to the Portfolio, namely: GHG intensity and investee countries subject to social violations (the “**Sovereign PAIs**”) for the sovereign issuers; and GHG emissions, carbon footprint, GHG intensity, fossil fuel exposure, board gender diversity, UNGC Principles & OECD Guidelines violations and controversial weapons for the corporate issuers (together the “**Product Level PAIs**”).

Consideration of the Product Level PAIs was limited by the availability (in the Manager's and the Sub-Investment Manager's subjective view) of adequate, reliable and verifiable data coverage. The Manager and the Sub-Investment Manager utilised third-party data and proxy data along with internal research to consider the Product Level PAIs.

Consideration of the Product Level PAIs by the Manager and the Sub-Investment Manager was through a combination of:

- Monitoring the Portfolio, in particular where it fell below the quantitative and qualitative tolerance thresholds set for each Product Level PAI by the Manager and the Sub-Investment Manager;
- Stewardship and/or setting engagement objectives where the Portfolio fell below the quantitative and qualitative tolerance thresholds set for a Product Level PAI; and

Application of the ESG exclusion policies referenced above, which included consideration of several of the Product Level PAIs.

## What were the top investments of this financial product?

The Manager and the Sub-Investment Manager have used the EU statistical classification of economic activities (“NACE”) economic sector breakdown to identify the economic sectors of the Portfolio’s top 15 investments. The following data is as at 31 December 2022.

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: 1 January 2022 - 31 December 2022

Largest investments	Sector	% Assets	Country
NEW ZEALAND (GOVERNMENT OF) RegS	O - Public administration and defence; compulsory social security	4.5%	New Zealand
NB GLOB INV GRADE CR USD Z	N/A	2.3%	Ireland
CHINA PEOPLES REPUBLIC OF (GOVERNMENT)	O - Public administration and defence; compulsory social security	2.0%	China

UMBS 30YR TBA(REG A)	N/A	1.0%	United States
CHINA PEOPLES REPUBLIC OF (GOVERNMENT)	O - Public administration and defence; compulsory social security	0.9%	China
NGG FINANCE PLC RegS	K - Financial and insurance activities	0.8%	United Kingdom

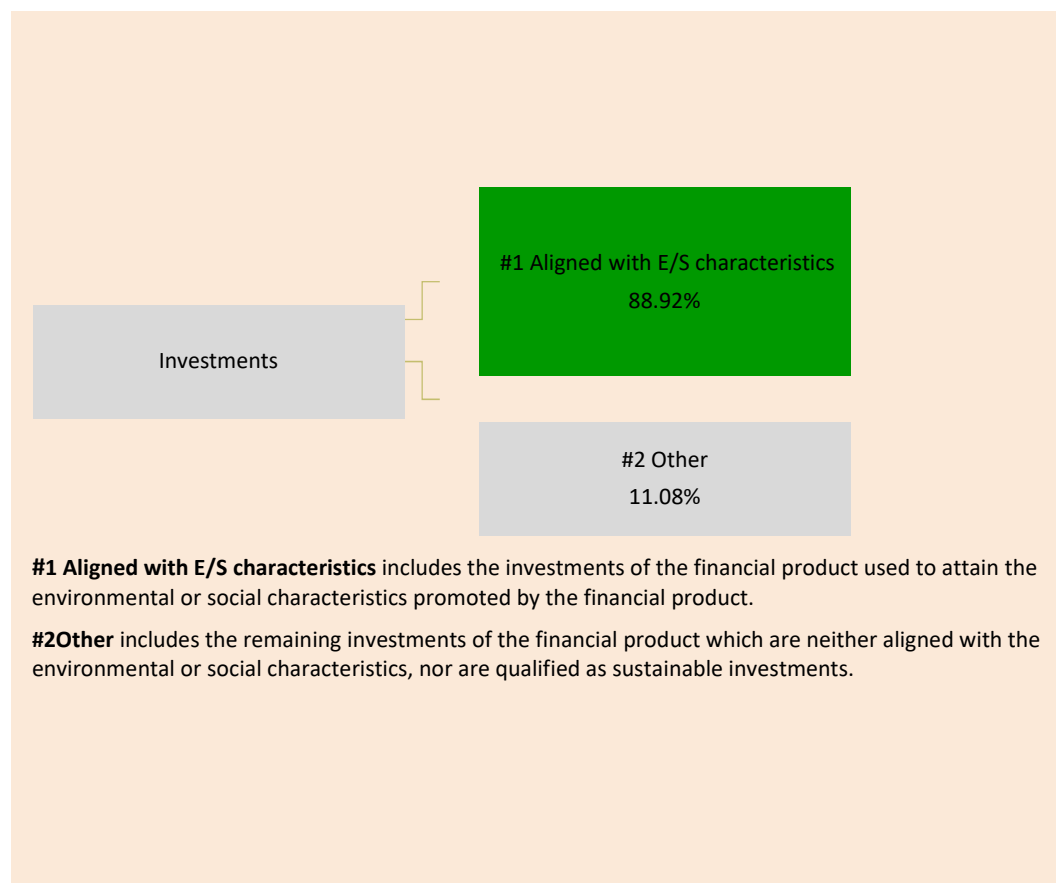

## What was the proportion of sustainability-related investments?

### What was the asset allocation?

The Manager and the Sub-Investment Manager calculated the proportion of investments aligned with the environmental and/or social characteristics promoted by the Portfolio by reference to the proportion of issuers in the Portfolio: i) that held either an NB ESG Quotient rating or a third-party equivalent ESG rating that was used as part of the portfolio construction and investment management process of the Portfolio; and/or ii) with whom the Manager and the Sub-Investment Manager had engaged directly. This calculation was based on a mark-to-market assessment of the Portfolio and may rely on incomplete or inaccurate issuer or third-party data. For the 2022 reference period only, this calculation is based on the Portfolio’s holdings as at 31 December 2022, being the only quarter end in the reference period that followed the publication of the Portfolio’s SFDR Annex detailing its planned asset allocation. For all subsequent reference periods, this calculation will be based on the average of the four quarter ends.

Asset allocation describes the share of investments in specific assets.

● ***In which economic sectors were the investments made?***

Data as at 31 December 2022	
Economic Sector – NACE	% Assets
B - Mining and quarrying	0.36%
C - Manufacturing	10.49%
D - Electricity, gas, steam and air conditioning supply	1.26%
E - Water supply; sewerage; waste management and remediation activities	0.24%
F - Construction	0.24%
G - Wholesale and retail trade; repair of motor vehicles and motorcycles	1.71%
H - Transporting and storage	2.14%
I - Accommodation and food service activities	0.45%
J - Information and communication	5.72%
K - Financial and insurance activities	20.77%
L - Real estate activities	1.62%
M - Professional, scientific and technical activities	0.18%
N - Administrative and support service activities	2.53%
O - Public administration and defence; compulsory social security	31.56%
P - Education	0.12%

Q - Human health and social work activities	0.26%
R - Arts, entertainment and recreation	0.52%
S - Other services activities	0.00%
U - Activities of extraterritorial organisations and bodies	0.35%
None	19.50%

### To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The analysis and disclosure requirements introduced by the EU Taxonomy are very detailed and compliance with them requires the availability of multiple, specific data points in respect of each investment which the Portfolio made. The Manager and the Sub-Investment Manager cannot confirm that the Portfolio invested in any investments that qualified as environmentally sustainable for the purposes of the EU Taxonomy. Disclosures and reporting on Taxonomy alignment will develop as the EU framework evolves and data is made available by issuers. The Manager and the Sub-Investment Manager will keep the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy under active review as data availability and quality improves.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

- **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

● **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?**

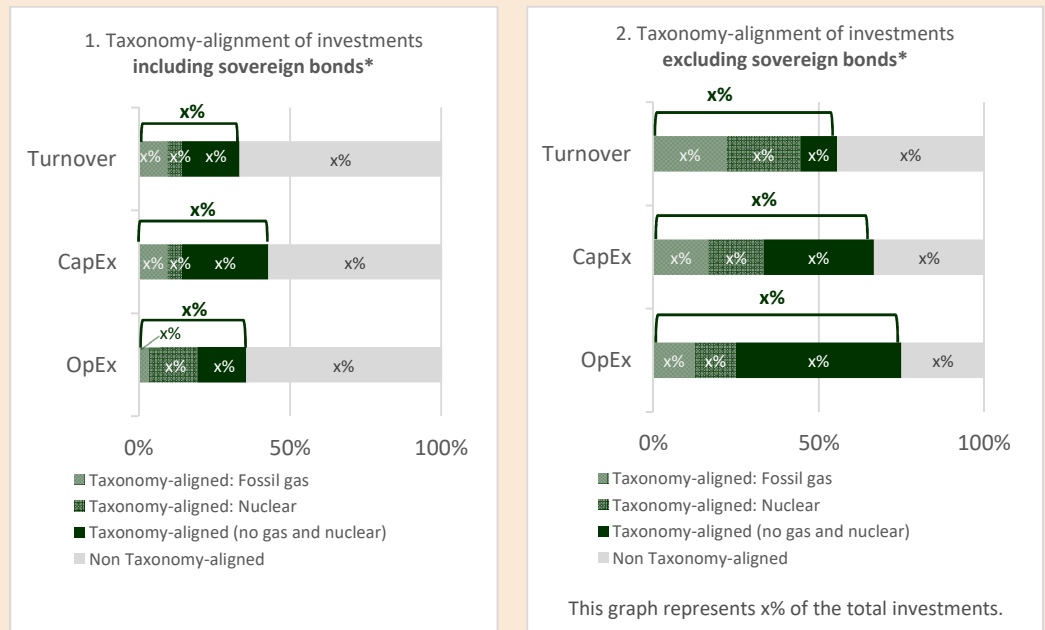

- Yes:
- In fossil gas     In nuclear energy
- No

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

● **What was the share of investments made in transitional and enabling activities?**

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments.

### **What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?**

N/A – the Portfolio did not commit to holding sustainable investments.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

### **What was the share of socially sustainable investments?**

N/A – the Portfolio did not commit to holding sustainable investments.

### **What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?**

“Other” included the remaining investments of the Portfolio (including but not limited to any derivatives, any to-be-announced security (“**TBA**”), or any security collateralized by a pool of similar assets or receivables listed in the Supplement for the Portfolio) which were neither aligned with the environmental or social characteristics, nor qualified as sustainable investments.

The “Other” section in the Portfolio was held for a number of reasons that the Manager and the Sub-Investment Manager felt was beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover.

As noted above, the Portfolio was invested in compliance with ESG exclusion policies, on a continuous basis. This ensured that investments made by the Portfolio sought to align with international environmental and social safeguards such as the UNGC Principles, UNGPs, OECD Guidelines and the ILO Standards.

The Manager and the Sub-Investment Manager believe that these policies prevented investment in issuers that most egregiously violated environmental and/or social minimum standards and ensured that the Portfolio could successfully promote its environmental and social characteristics.

The above steps ensured that robust environmental and social safeguards were in place.

## What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Portfolio was managed in-line with the investment objective and the following actions were taken:

### I. Integrating proprietary ESG analysis:

The NB ESG Quotient ratings were generated for issuers in the Portfolio. The NB ESG Quotient rating for issuers was utilised to help to better identify risks and opportunities in the overall credit and value assessment.

The NB ESG Quotient was a key component of the internal credit ratings and helped to identify business risks (including ESG risks), which would cause deterioration in an issuer's credit profile. Internal credit ratings can be notched up or down based on the NB ESG Quotient rating, and this was monitored by the Manager and the Sub-Investment Manager as an important component of the investment process for the Portfolio.

By integrating the investment team's proprietary ESG analysis (the NB ESG Quotient) into their internal credit ratings, there was a direct link between their analysis of material ESG characteristics and portfolio construction activities across their strategy.

Issuers with a favourable and/or an improving NB ESG Quotient rating had a higher chance of ending up in the Portfolio. Issuers with a poor NB ESG Quotient rating especially where these were not being addressed by that issuer, were more likely to be removed from the investment universe or divested from the Portfolio.

### II. Engagement:

The Manager and the Sub-Investment Manager engaged with issuers through a robust ESG engagement program. They sought to prioritise constructive engagements and sought to engage on topics (including ESG topics) they determined to be financially material for the relevant issuer. The Manager and the Sub-Investment Manager viewed this engagement with issuers, as an important part of its investment process. Progress on engagement was tracked centrally in the Manager and the Sub-Investment Manager's engagement tracker.

### III. ESG sectoral exclusion policies:

To ensure that the environmental and social characteristics promoted by the Portfolio were attained, the Portfolio applied the ESG exclusion policies referenced above, which placed limitations on the investable universe.

## **How did this financial product perform compared to the reference benchmark?**

N/A – The Portfolio's benchmark has not been designated as a reference benchmark. Therefore, it is not consistent with the environmental or social characteristics promoted by the Portfolio.

- ***How does the reference benchmark differ from a broad market index?***  
N/A
- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***  
N/A
- ***How did this financial product perform compared with the reference benchmark?***  
N/A
- ***How did this financial product perform compared with the broad market index?***  
N/A

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

**Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852**

**Product name:** Neuberger Berman Strategic Income Fund (the “Portfolio”)

**Legal entity identifier:** 549300RBLDK0PHH13M43

## Environmental and/or social characteristics

**Did this financial product have a sustainable investment objective?**

<p><input checked="" type="radio"/> <input checked="" type="radio"/> <input type="checkbox"/> <b>Yes</b></p> <p><input type="checkbox"/> It made <b>sustainable investments with an environmental objective: ___%</b></p> <p style="margin-left: 40px;"><input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy</p> <p style="margin-left: 40px;"><input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</p> <p><input type="checkbox"/> It made <b>sustainable investments with a social objective: ___%</b></p>	<p><input checked="" type="radio"/> <input type="radio"/> <input checked="" type="checkbox"/> <b>No</b></p> <p><input type="checkbox"/> It <b>promoted Environmental/Social (E/S) characteristics</b> and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments</p> <p style="margin-left: 40px;"><input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy</p> <p style="margin-left: 40px;"><input type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</p> <p style="margin-left: 40px;"><input type="checkbox"/> with a social objective</p> <p><input checked="" type="checkbox"/> It promoted E/S characteristics, but <b>did not make any sustainable investments</b></p>
---	---

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

## To what extent were the environmental and/or social characteristics promoted by this financial product met?

The following environmental and social characteristics were promoted by the Portfolio:

- **Environmental Characteristics:** biodiversity & responsible land usage; carbon footprint reduction; environmental management; greenhouse gas (“GHG”) emissions; opportunities in clean technologies; opportunities in green building; opportunities in renewable energy; responsible raw material sourcing; responsible & transparent underwriting; toxic emissions & waste; waste management; and water management.
- **Social Characteristics:** access to finance; access to medicines; affordability & fair pricing; business ethics & transparency of government relations; chemical safety; community relations; controversial sourcing; corporate behaviour; drug safety & side effects management; ethical marketing & practices; health & nutrition; health & safety; human capital development; labour management; data privacy & security; product safety & quality; and litigation & related controversy.

Performance in relation to these environmental and social characteristics was measured through the NB ESG Quotient, and is reported, in aggregate, below.

### ● How did the sustainability indicators perform?

As part of the investment process, the Sub-Investment Manager considered a variety of sustainability indicators to measure the environmental and/or social characteristics promoted by the Portfolio. These sustainability indicators listed below:

#### 1. The NB ESG Quotient:

The proprietary Neuberger Berman ESG rating system (the “NB ESG Quotient”), is built around the concept of sector specific ESG risk and opportunity, and produced an overall ESG rating for issuers by assessing them against certain ESG metrics.

Foundational to the NB ESG Quotient is the proprietary Neuberger Berman (“NB”) materiality matrix, which focuses on the ESG characteristics that were considered to be the most likely to be the material drivers of ESG risk and opportunity for each sector. Each sector criteria is constructed using third-party and internally derived ESG data and supplemented with internal qualitative analysis, leveraging the Portfolio’s analyst team’s significant sector expertise. The NB materiality matrix enabled the Manager and Sub-Investment Manager to derive the NB ESG Quotient rating, to compare sectors and issuers relative to their environmental and social characteristics.

The NB ESG Quotient assigned weightings to environmental, social and governance characteristics for each sector to derive the NB ESG Quotient rating for issuers. Issuers with a favourable and/or an improving NB ESG Quotient rating had a higher chance of being included in the Portfolio. Issuers with a poor NB ESG Quotient rating, especially where a poor NB ESG Quotient rating is not being addressed by an issuer, were more likely to be removed from the investment universe or were divested from the Portfolio. In addition, the Sub-Investment Manager sought to prioritise constructive engagements with issuers that had a poor NB ESG Quotient rating, in order to assess whether concerns were being addressed adequately.

31 December 2022	Rating	Combined coverage
NB ESG Quotient	72	66%
Third-party Data	5.7	

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

With regards to the NB ESG Quotient rating, a score between 1 – 100 is used where 1 is the lowest rating and 100 is the highest rating. This Portfolio does not have a minimum NB ESG Quotient rating. The average NB ESG Quotient rating is a weighted average and is not a rating of the Portfolio strategy itself.

Third-party data was also used to measure the environmental and social characteristics promoted by the Portfolio. The third-party data ratings range from 0-10, with 0 being the lowest rating and 10 being the highest rating.

## 2. Climate Value-at-Risk:

Over the reference period, Climate Value-at-Risk (“**CVaR**”) measured the exposure to transition and physical climate risks. CVaR is a scenario analysis tool evaluating economic risks under various degree scenarios (i.e., the amount of warming targeted) and potential regulatory environments in varying countries.

CVaR is a type of scenario analysis which is defined as the present value of aggregated future policy risk costs, technology opportunity profits, and extreme weather event costs and profits, expressed as a percentage of a security or portfolio's market value according to the warming scenario targeted.

By calculating the financial risks from climate change per security and per scenario, CVaR provides a framework that helps quantify and understand these risks. The CVaR metric provides insight into the climate-stressed valuation of assets based on specific degree scenarios, providing an assessment on how much a security may stand to lose or gain from the impact of climate change.

As at 31 December 2022, CVaR projected that a warming climate scenario could result in a depreciation of 10.17% in the valuation of assets under assessment.

This analysis is intended as a broad overview of the investment team's style and investment process.

On a holistic basis, the results were evaluated by the Sub-Investment Manager's portfolio managers and analysts. The scenario analysis served as a starting point for further bottom-up analysis and identifying potential climate-related risks to address through issuer engagement.

Due to data limitations, CVaR was not applied across all issuers held by the Portfolio and was instead limited to the issuers for which the Sub-Investment Manager had sufficient and reliable data. The Portfolio had a CVaR coverage of 33%.

The analysis from CVaR is reviewed at least once a year.

## 3. ESG exclusion policies:

To ensure that the environmental or social characteristics promoted by the Portfolio were attained, the Portfolio did not invest in securities issued by issuers whose activities breached, or were not consistent with, the Neuberger Berman Controversial Weapons Policy and the Neuberger Berman Thermal Coal Involvement Policy. In addition to the application of the Neuberger Berman Thermal Coal Involvement Policy, the Sub-Investment Manager prohibited the initiation of new investment positions in securities issued by issuers that (i) derived more than 25% of their revenue from thermal coal mining; or (ii) were expanding new thermal coal power generation. Furthermore, from 6 April 2022 onwards, investments held by the Portfolio did not invest in securities issued by issuers whose activities had been identified as breaching the Neuberger Berman Global Standards Policy which excluded identified violators of (i) the United Nations Global Compact Principles (“**UNGC Principles**”), (ii) the OECD Guidelines for Multinational Enterprises (“**OECD Guidelines**”), (iii) the United Nations Guiding Principles on Business and Human Rights (“**UNGPs**”) and (iv) the International Labour Standards (“**ILO Standards**”).

The Portfolio also excluded emerging market corporate debt issuers that were involved in the tobacco industry and child labour.

When applying ESG exclusions to the Portfolio, the Sub-Investment Manager used third-party data to identify issuers in breach of the ESG exclusions listed above. Where possible, the Sub-Investment Manager sought to overlay this third-party data with qualitative expertise from their research analysts to establish a current and holistic picture of the issuer. The Sub-Investment Manager discussed and debated the differences between the violators identified by the third-party data and those identified as a result of their research, which drew upon data from the NB ESG Quotient and direct engagements with the issuer.

● ***...and compared to previous periods?***

N/A - this is the first reference period.

● ***What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?***

N/A – the Portfolio did not commit to holding sustainable investments.

● ***How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?***

N/A – the Portfolio did not commit to holding sustainable investments.

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

— ***How were the indicators for adverse impacts on sustainability factors taken into account?***

N/A – the Portfolio did not commit to holding sustainable investments.

— ***Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

The Portfolio did not commit to holding sustainable investments, however from 6 April 2022 onwards, the Sub-Investment Manager did not invest in issuers whose activities had been identified as breaching the OECD Guidelines, UNGC Principles, ILO Standards and UNGPs, captured through the Neuberger Berman Global Standards Policy.

*The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.*

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments.

## How did this financial product consider principal adverse impacts on sustainability factors?

A selection of the principal adverse impact indicators were considered directly (e.g. through the ESG exclusion policies listed above) and/or indirectly (e.g. as part of the Sub-Investment Manager’s assessment of issuers) throughout the 2022 reference period.

From 28 November 2022 onwards, the Sub-Investment Manager considered the following principal adverse impacts with respect to the Portfolio, namely: GHG intensity and investee countries subject to social violations (the “**Sovereign PAIs**”) for the sovereign issuers; and GHG emissions, carbon footprint, GHG intensity, fossil fuel exposure, board gender diversity, UNGC Principles & OECD Guidelines violations and controversial weapons for the corporate issuers (together the “**Product Level PAIs**”).

Consideration of the Product Level PAIs was limited by the availability (in the Sub-Investment Manager’s subjective view) of adequate, reliable and verifiable data coverage. The Sub-Investment Manager utilised third party data and proxy data along with internal research to consider the Product Level PAIs.

Consideration of the Product Level PAIs by the Sub-Investment Manager was through a combination of:

- Monitoring the Portfolio, in particular where it fell below the quantitative and qualitative tolerance thresholds set for each Product Level PAI by the Sub-Investment Manager;
- Stewardship and/or setting engagement objectives where the Portfolio fell below the quantitative and qualitative tolerance thresholds set for a Product Level PAI; and
- Application of the ESG exclusion policies referenced above, which included consideration of several of the Product Level PAIs.

## What were the top investments of this financial product?

The Sub-Investment Manager has used the EU statistical classification of economic activities (“NACE”) economic sector breakdown to identify the economic sectors of the Portfolio's top 15 investments. The following data is as at 31 December 2022.

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: 1 January 2022 - 31 December 2022

Largest investments	Sector	% Assets	Country

NB CHINA BD FUND USD ZA UNHEDGED	N/A	0.9%	Ireland

## What was the proportion of sustainability-related investments?

### What was the asset allocation?

The Sub-Investment Manager calculated the proportion of investments aligned with the environmental and/or social characteristics promoted by the Portfolio by reference to the proportion of issuers in the Portfolio: i) that held either an NB ESG Quotient rating or a third party equivalent ESG rating that was used as part of the portfolio construction and investment management process of the Portfolio; and/or ii) with whom the Sub-Investment Manager had engaged directly. This calculation was based on a mark-to-market assessment of the Portfolio and may rely on incomplete or inaccurate issuer or third party data. For the 2022 reference period only, this calculation is based on the Portfolio's holdings as at 31 December 2022, being the only quarter end in the reference period that followed the publication of the Portfolio's SFDR Annex detailing its planned asset allocation. For all subsequent reference periods, this calculation will be based on the average of the four quarter ends.

Asset allocation describes the share of investments in specific assets.

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

● ***In which economic sectors were the investments made?***

Data as at 31 December 2022	
Economic Sector – NACE	% Assets
A - Agriculture, forestry and fishing	0.02%
B - Mining and quarrying	2.26%
C - Manufacturing	7.17%
D - Electricity, gas, steam and air conditioning supply	2.51%
E - Water supply; sewerage; waste management and remediation activities	0.02%
F - Construction	0.29%
G - Wholesale and retail trade; repair of motor vehicles and motorcycles	1.18%

U - Activities of extraterritorial organisations and bodies	0.02%
None	34.56%

## To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The analysis and disclosure requirements introduced by the EU Taxonomy are very detailed and compliance with them requires the availability of multiple, specific data points in respect of each investment which the Portfolio made. The Sub-Investment Manager cannot confirm that the Portfolio invested in any investments that qualified as environmentally sustainable for the purposes of the EU Taxonomy. Disclosures and reporting on Taxonomy alignment will develop as the EU framework evolves and data is made available by issuers. The Sub-Investment Manager will keep the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy under active review as data availability and quality improves.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

- **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

### ● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?

- Yes:
- In fossil gas  In nuclear energy
- No

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

● **What was the share of investments made in transitional and enabling activities?**

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments.

### What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

N/A – the Portfolio did not commit to holding sustainable investments.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

### What was the share of socially sustainable investments?

N/A – the Portfolio did not commit to holding sustainable investments.

### What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

“Other” included the remaining investments of the Portfolio (including but not limited to any derivatives, any to-be-announced security (“**TBA**”) or any security collateralized by a pool of similar assets or receivables listed in the Supplement for the Portfolio) which were neither aligned with the environmental or social characteristics, nor qualified as sustainable investments.

The “Other” section in the Portfolio was held for a number of reasons that the Sub-Investment Manager felt was beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover.

As noted above, the Portfolio was invested in compliance with ESG exclusion policies, on a continuous basis. This ensured that investments made by the Portfolio sought to align with international environmental and social safeguards such as the UNGC Principles, UNGPs, OECD Guidelines and the ILO Standards.

The Sub-Investment Manager believes that these policies prevented investment in issuers that most egregiously violated environmental and/or social minimum standards and ensured that the Portfolio could successfully promote its environmental and social characteristics.

The above steps ensured that robust environmental and social safeguards were in place.

## What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Portfolio was managed in-line with the investment objective and the following actions were taken:

### I. Integrating proprietary ESG analysis:

The NB ESG Quotient ratings were generated for issuers in the Portfolio. The NB ESG Quotient rating for issuers was utilised to help to better identify risks and opportunities in the overall credit and value assessment.

The NB ESG Quotient was a key component of the internal credit ratings and helped to identify business risks (including ESG risks), which would cause deterioration in an issuer's credit profile. Internal credit ratings can be notched up or down based on the NB ESG Quotient rating, and this was monitored by the Sub-Investment Manager as an important component of the investment process for the Portfolio.

By integrating the investment team's proprietary ESG analysis (the NB ESG Quotient) into their internal credit ratings, there was a direct link between their analysis of material ESG characteristics and portfolio construction activities across their strategy.

Issuers with a favourable and/or an improving NB ESG Quotient rating had a higher chance of ending up in the Portfolio. Issuers with a poor NB ESG Quotient rating especially where these were not being addressed by that issuer, were more likely to be removed from the investment universe or divested from the Portfolio.

### II. Engagement:

The Sub-Investment Manager engaged with issuers through a robust ESG engagement program. They sought to prioritise constructive engagements and sought to engage on topics (including ESG topics) they determined to be financially material for the relevant issuer. The Sub-Investment Manager viewed this engagement with issuers, as an important part of its investment process. Progress on engagement was tracked centrally in the Sub-Investment Manager's engagement tracker.

### III. ESG sectoral exclusion policies:

To ensure that the environmental and social characteristics promoted by the Portfolio were attained, the Portfolio applied the ESG exclusion policies referenced above, which placed limitations on the investable universe.

## How did this financial product perform compared to the reference benchmark?

N/A – The Portfolio's benchmark has not been designated as a reference benchmark. Therefore, it is not consistent with the environmental or social characteristics promoted by the Portfolio.

- ***How does the reference benchmark differ from a broad market index?***  
N/A
- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***  
N/A
- ***How did this financial product perform compared with the reference benchmark?***  
N/A
- ***How did this financial product perform compared with the broad market index?***  
N/A

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

---

**Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852**

**Product name:** Neuberger Berman Corporate Hybrid Bond Fund (the “Portfolio”)

**Legal entity identifier:** 549300TMYI9EFR4Q1G47

## Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?	
<input checked="" type="radio"/> <input checked="" type="radio"/> <input type="checkbox"/> <b>Yes</b>	<input checked="" type="radio"/> <input type="radio"/> <input checked="" type="checkbox"/> <b>No</b>
<input type="checkbox"/> It made <b>sustainable investments with an environmental objective:</b> ____% <ul style="list-style-type: none"> <li><input type="checkbox"/> _____ in economic activities that qualify as environmentally sustainable under the EU Taxonomy</li> <li><input type="checkbox"/> _____ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</li> </ul>	<input type="checkbox"/> It promoted <b>Environmental/Social (E/S) characteristics</b> and while it did not have as its objective a sustainable investment, it had a proportion of ____% of sustainable investments <ul style="list-style-type: none"> <li><input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy</li> <li><input type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</li> <li><input type="checkbox"/> with a social objective</li> </ul>
<input type="checkbox"/> It made <b>sustainable investments with a social objective:</b> ____%	<input checked="" type="checkbox"/> It promoted E/S characteristics, but <b>did not make any sustainable investments</b>

## To what extent were the environmental and/or social characteristics promoted by this financial product met?

The following environmental and social characteristics were promoted by the Portfolio:

- **Environmental Characteristics:** biodiversity & responsible land usage; carbon footprint reduction; environmental management; greenhouse gas (“**GHG**”) emissions; opportunities in clean technologies; opportunities in green building; opportunities in renewable energy; responsible raw material sourcing; responsible & transparent underwriting; toxic emissions & waste; waste management; and water management.
- **Social Characteristics:** access to finance; access to medicines; affordability & fair pricing; business ethics & transparency of government relations; chemical safety; community relations; controversial sourcing; corporate behaviour; drug safety & side effects management; ethical marketing & practices; health & nutrition; health & safety; human capital development; labour management; data privacy & security; product safety & quality; and litigation & related controversy.

Performance in relation to these environmental and social characteristics was measured through the NB ESG Quotient, and is reported, in aggregate, below.

### ● **How did the sustainability indicators perform?**

As part of the investment process, the Sub-Investment Manager considered a variety of sustainability indicators to measure the environmental and/or social characteristics promoted by the Portfolio. These sustainability indicators listed are below:

#### 1. The NB ESG Quotient:

The proprietary Neuberger Berman ESG rating system (the “**NB ESG Quotient**”), is built around the concept of sector specific ESG risk and opportunity, and produced an overall ESG rating for issuers by assessing them against certain ESG metrics.

Foundational to the NB ESG Quotient is the proprietary Neuberger Berman (“**NB**”) materiality matrix, which focuses on the ESG characteristics that were considered to be the most likely to be the material drivers of ESG risk and opportunity for each sector. Each sector criteria is constructed using third-party and internally derived ESG data and supplemented with internal qualitative analysis, leveraging the Portfolio’s analyst team’s significant sector expertise. The NB materiality matrix enabled the Manager and Sub-Investment Manager to derive the NB ESG Quotient rating, to compare sectors and issuers relative to their environmental and social characteristics.

The NB ESG Quotient assigned weightings to environmental, social and governance characteristics for each sector to derive the NB ESG Quotient rating for issuers. Pursuant to this, the Sub-Investment Manager engaged with issuers with a poor NB ESG Quotient with the aim of seeking improvement in the underlying environmental and social characteristics (which make up the NB ESG Quotient) over time.

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

31 December 2022	Rating	Combined coverage
NB ESG Quotient	58	96%
Third-party Data	6.9	

With regards to the NB ESG Quotient rating, a rating between 1 – 100 is used where 1 is the lowest rating and 100 is the highest rating. This Portfolio does not have a minimum NB ESG Quotient rating. The average NB ESG Quotient rating is a weighted average and is not a rating of the Portfolio strategy itself.

Third-party data was also used to measure the environmental and social characteristics promoted by the Portfolio. The third-party data ratings range from 0-10, with 0 being the lowest rating and 10 being the highest rating.

## 2. Climate Value-at-Risk:

Over the reference period, Climate Value-at-Risk (“**CVaR**”) measured the exposure to transition and physical climate risks. CVaR is a scenario analysis tool evaluating economic risks under various degree scenarios (i.e., the amount of warming targeted) and potential regulatory environments in varying countries.

CVaR is a type of scenario analysis which is defined as the present value of aggregated future policy risk costs, technology opportunity profits, and extreme weather event costs and profits, expressed as a percentage of a security or portfolio’s market value according to the warming scenario targeted.

By calculating the financial risks from climate change per security and per scenario, CVaR provides a framework that helps quantify and understand these risks. The CVaR metric provides insight into the climate-stressed valuation of assets based on specific degree scenarios, providing an assessment on how much a security may stand to lose or gain from the impact of climate change.

As at 31 December 2022, CVaR projected that a warming climate scenario could result in a depreciation of 5.22% in the valuation of assets under assessment.

This analysis is intended as a broad overview of the investment team’s style and investment process.

On a holistic basis, the results were evaluated by the Sub-Investment Manager’s portfolio managers and analysts. The scenario analysis served as a starting point for further bottom-up analysis and identifying potential climate-related risks to address through issuer engagement.

Due to data limitations, CVaR was not applied across all issuers held by the Portfolio and was instead limited to the issuers for which the Sub-Investment Manager has sufficient and reliable data. The Portfolio had a CVaR coverage of 41%.

The analysis from CVaR is reviewed at least once a year.

## 3. ESG exclusion policies:

To ensure that the environmental or social characteristics promoted by the Portfolio were attained, the Portfolio did not invest in securities issued by issuers whose activities breached, or were not consistent with, the Neuberger Berman Controversial Weapons Policy and the Neuberger Berman Thermal Coal Involvement Policy. In addition to the application of the Neuberger Berman Thermal Coal Involvement Policy, the Sub-Investment Manager prohibited the initiation of new investment positions in securities issued by issuers that (i) derived more than 25% of their revenue from thermal coal mining; or (ii) were expanding new thermal coal power generation. Furthermore, from 6 April 2022 onwards, investments held by the Portfolio did not invest in securities issued by issuers whose activities had been identified as breaching the Neuberger Berman Global Standards Policy which excluded identified violators of (i) the United Nations Global Compact Principles (“**UNGC Principles**”), (ii) the OECD Guidelines for Multinational Enterprises (“**OECD Guidelines**”), (iii) the United Nations Guiding Principles on Business and Human Rights (“**UNGPs**”) and (iv) the International Labour Standards (“**ILO Standards**”).

When applying ESG exclusions to the Portfolio, the Sub-Investment Manager used third-party data to identify issuers in breach of the ESG exclusions listed above. Where possible, the Sub-Investment Manager sought to overlay this third-party data with qualitative expertise from their research analysts to establish a current and holistic picture of the issuer. The Sub-Investment Manager discussed and debated the differences between the violators identified by the third-party data and those identified as a result of their research, which drew upon data from the NB ESG Quotient and direct engagements with the issuer.

● **...and compared to previous periods?**

N/A - this is the first reference period.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

N/A – the Portfolio did not commit to holding sustainable investments.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

N/A – the Portfolio did not commit to holding sustainable investments

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

— **How were the indicators for adverse impacts on sustainability factors taken into account?**

N/A – the Portfolio did not commit to holding sustainable investments.

— **Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:**

The Portfolio did not commit to holding sustainable investments, however from 6 April 2022 onwards, the Sub-Investment Manager did not invest in issuers whose activities had been identified as breaching the OECD Guidelines, UNGC Principles, ILO Standards and UNGPs, captured through the Neuberger Berman Global Standards Policy.

*The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.*

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

N/A - The Portfolio did not commit to holding Taxonomy-aligned investments.

### **How did this financial product consider principal adverse impacts on sustainability factors?**

A selection of the principal adverse impact indicators were considered directly (e.g. through the ESG exclusion policies listed above) and/or indirectly (e.g. as part of the Sub-Investment Manager’s assessment of issuers) throughout the 2022 reference period.

From 28 November 2022 onwards, the Sub-Investment Manager considered the following principal adverse impacts with respect to the Portfolio, namely: GHG emissions, carbon footprint, GHG intensity, fossil fuel exposure, board gender diversity, UNGC Principles & OECD Guidelines violations and controversial weapons (the “**Product Level PAIs**”).

Consideration of the Product Level PAIs was limited by the availability (in the Sub-Investment Manager’s subjective view) of adequate, reliable and verifiable data coverage. The Sub-Investment Manager utilised third-party data and proxy data along with internal research to consider the Product Level PAIs.

Consideration of the Product Level PAIs by the Sub-Investment Manager was through a combination of:

- Monitoring the Portfolio, in particular where it fell below the quantitative and qualitative tolerance thresholds set for each Product Level PAI by the Sub-Investment Manager;
- Stewardship and/or setting engagement objectives where the Portfolio fell below the quantitative and qualitative tolerance thresholds set for a Product Level PAI; and
- Application of the ESG exclusion policies referenced above, which included consideration of several of the Product Level PAIs.

## What were the top investments of this financial product?

The Sub-Investment Manager has used the EU statistical classification of economic activities (“NACE”) economic sector breakdown to identify the economic sectors of the Portfolio's top 15 investments. The following data is as at 31 December 2022.

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: 1 January 2022 - 31 December 2022

Largest investments	Sector	% Assets	Country
NGG FINANCE PLC RegS	K - Financial and insurance activities	7.0%	United Kingdom
ELECTRICITE DE FRANCE SA MTN RegS	D - Electricity, gas, steam and air conditioning supply	5.2%	France
SOUTHERN ELECTRIC GENERATING CO	D - Electricity, gas, steam and air conditioning supply	4.9%	United States
BAYER AG RegS	C - Manufacturing	4.4%	Germany
VODAFONE GROUP PLC \$60NC6 MTN RegS	J - Information and communication	3.8%	United Kingdom
CENTRICA PLC RegS	D - Electricity, gas, steam and air conditioning supply	3.7%	United Kingdom
VEOLIA ENVIRONNEMENT SA NC5.5 RegS	E - Water supply; sewerage; waste management and remediation activities	3.5%	France
ENBRIDGE INC	H - Transporting and storage	3.4%	Canada
BP CAPITAL MARKETS PLC RegS	K - Financial and insurance activities	3.1%	United Kingdom
VOLKSWAGEN INTERNATIONAL FINANCE N RegS	K - Financial and insurance activities	2.7%	Germany
SOLVAY SA RegS	C - Manufacturing	2.5%	Belgium
BAYER AG RegS	C - Manufacturing	2.4%	Germany
ENBW ENERGIE BADEN WUERTEMBERG AG RegS	D - Electricity, gas, steam and air conditioning supply	2.1%	Germany
VEOLIA ENVIRONNEMENT SA RegS	E - Water supply; sewerage; waste management and remediation activities	2.0%	France
EVONIK INDUSTRIES AG RegS	C - Manufacturing	1.9%	Germany

## What was the proportion of sustainability-related investments?

Asset allocation describes the share of investments in specific assets.

### What was the asset allocation?

The Sub-Investment Manager calculated the proportion of investments aligned with the environmental and/or social characteristics promoted by the Portfolio by reference to the proportion of issuers in the Portfolio: i) that held either an NB ESG Quotient rating or a third-party equivalent ESG rating that was used as part of the portfolio construction and investment management process of the Portfolio; and/or ii) with whom the Sub-Investment Manager had engaged directly. This calculation was based on a mark-to-market assessment of the Portfolio and may rely on incomplete or inaccurate issuer or third-party data. For the 2022 reference period only, this calculation is based on the Portfolio's holdings as at 31 December 2022, being the only quarter end in the reference period that followed the publication of the Portfolio's SFDR Annex detailing its planned asset allocation. For all subsequent reference periods, this calculation will be based on the average of the four quarter ends.

● ***In which economic sectors were the investments made?***

Data as at 31 December 2022	
Economic Sector – NACE	% Assets
B - Mining and quarrying	0.01%
C - Manufacturing	19.24%
D - Electricity, gas, steam and air conditioning supply	37.22%
E - Water supply; sewerage; waste management and remediation activities	7.48%
F - Construction	0.00%
G - Wholesale and retail trade; repair of motor vehicles and motorcycles	0.02%
H - Transporting and storage	3.79%
I - Accommodation and food service activities	0.00%
J - Information and communication	7.80%
K - Financial and insurance activities	23.95%
L - Real estate activities	0.45%
M - Professional, scientific and technical activities	0.00%
N - Administrative and support service activities	0.01%
O - Public administration and defence; compulsory social security	0.02%
Q - Human health and social work activities	0.00%
U - Activities of extraterritorial organisations and bodies	0.00%

## To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The analysis and disclosure requirements introduced by the EU Taxonomy are very detailed and compliance with them requires the availability of multiple, specific data points in respect of each investment which the Portfolio made. The Sub-Investment Manager cannot confirm that the Portfolio invested in any investments that qualified as environmentally sustainable for the purposes of the EU Taxonomy. Disclosures and reporting on Taxonomy alignment will develop as the EU framework evolves and data is made available by issuers. The Sub-Investment Manager will keep the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy under active review as data availability and quality improves.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

- **Transitional activities are** activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

### ● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?

- Yes:
- In fossil gas  In nuclear energy
- No

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

- **What was the share of investments made in transitional and enabling activities?**

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments.

- **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments.

### **What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?**

N/A - the Portfolio did not commit to holding sustainable investments.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

### **What was the share of socially sustainable investments?**

N/A - the Portfolio did not commit to holding sustainable investments.

### **What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?**

“Other” included the remaining investments of the Portfolio (including but not limited to any derivatives or any security collateralized by a pool of similar assets or receivables listed in the Supplement for the Portfolio) which were neither aligned with the environmental or social characteristics, nor qualified as sustainable investments.

The “Other” section in the Portfolio was held for a number of reasons that the Sub-Investment Manager felt was beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover.

As noted above, the Portfolio was invested in compliance with ESG exclusion policies, on a continuous basis. This ensured that investments made by the Portfolio sought to align with international environmental and social safeguards such as the UNGC Principles, UNGPs, OECD Guidelines and the ILO Standards.

The Sub-Investment Manager believe that these policies prevented investment in issuers that most egregiously violated environmental and/or social minimum standards and ensured that the Portfolio could successfully promote its environmental and social characteristics.

The above steps ensured that robust environmental and social safeguards were in place.

## What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Portfolio was managed in-line with the investment objective and the following actions were taken:

### I. Integrating proprietary ESG analysis:

The NB ESG Quotient ratings were generated for issuers in the Portfolio. The NB ESG Quotient rating for issuers was utilised to help to better identify risks and opportunities in the overall credit and value assessment.

The NB ESG Quotient was a key component of the internal credit ratings and helped to identify business risks (including ESG risks), which would cause deterioration in an issuer's credit profile. Internal credit ratings can be notched up or down based on the NB ESG Quotient rating, and this was monitored by the Sub-Investment Manager as an important component of the investment process for the Portfolio.

By integrating the investment team's proprietary ESG analysis (the NB ESG Quotient) into their internal credit ratings, there was a direct link between their analysis of material ESG characteristics and portfolio construction activities across their strategy.

Pursuant to this, the Sub-Investment Manager engaged with issuers with a poor NB ESG Quotient rating with the aim to seek improvement in the underlying environmental and social characteristics (which make up the NB ESG Quotient) over time.

### II. Engagement:

The Sub-Investment Manager engaged with issuers through a robust ESG engagement program. They sought to prioritise constructive engagements and sought to engage on topics (including ESG topics) they determined to be financially material for the relevant issuer. The Sub-Investment Manager viewed this engagement with issuers, as an important part of its investment process. Progress on engagement was tracked centrally in the Sub-Investment Manager's engagement tracker.

### III. ESG sectoral exclusion policies:

To ensure that the environmental and social characteristics promoted by the Portfolio were attained, the Portfolio applied the ESG exclusion policies referenced above, which placed limitations on the investable universe.

## **How did this financial product perform compared to the reference benchmark?**

N/A – The Portfolio's benchmark has not been designated as a reference benchmark. Therefore, it is not consistent with the environmental or social characteristics promoted by the Portfolio.

- ***How does the reference benchmark differ from a broad market index?***  
N/A

**Legal entity identifier:** 5493004BPE0UFYX6FZ81

## Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?	
<input checked="" type="radio"/> <input checked="" type="radio"/> <input type="checkbox"/> <b>Yes</b>	<input checked="" type="radio"/> <input type="radio"/> <input checked="" type="checkbox"/> <b>No</b>
<input type="checkbox"/> It made <b>sustainable investments with an environmental objective</b> : ____% <ul style="list-style-type: none"> <li><input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy</li> <li><input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</li> </ul> <input type="checkbox"/> It made <b>sustainable investments with a social objective</b> : ____%	<input type="checkbox"/> It promoted <b>Environmental/Social (E/S) characteristics</b> and while it did not have as its objective a sustainable investment, it had a proportion of ____% of sustainable investments <ul style="list-style-type: none"> <li><input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy</li> <li><input type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</li> <li><input type="checkbox"/> with a social objective</li> </ul> <input checked="" type="checkbox"/> It promoted E/S characteristics, but <b>did not make any sustainable investments</b>

## To what extent were the environmental and/or social characteristics promoted by this financial product met?

The following environmental and social characteristics were promoted by the Portfolio:

- **Environmental Characteristics:** biodiversity & responsible land usage; carbon footprint reduction; environmental management; greenhouse gas (“GHG”) emissions; opportunities in clean technologies; opportunities in green building; opportunities in renewable energy; responsible raw material sourcing; responsible & transparent underwriting; toxic emissions & waste; waste management; and water management.
- **Social Characteristics:** access to finance; access to medicines; affordability & fair pricing; business ethics & transparency of government relations; chemical safety; community relations; controversial sourcing; corporate behaviour; drug safety & side effects management; ethical marketing & practices; health & nutrition; health & safety; human capital development; labour management; data privacy & security; product safety & quality; and litigation & related controversy.

Performance in relation to these environmental and social characteristics was measured through the NB ESG Quotient, and is reported, in aggregate, below.

### How did the sustainability indicators perform?

As part of the investment process, the Sub-Investment Manager considered a variety of sustainability indicators to measure the environmental and/or social characteristics promoted by the Portfolio. These sustainability indicators are listed below:

#### 1. The NB ESG Quotient:

The proprietary Neuberger Berman ESG rating system (the “NB ESG Quotient”), is built around the concept of sector specific ESG risk and opportunity, and produced an overall ESG rating for issuers by assessing them against certain ESG metrics.

Foundational to the NB ESG Quotient is the proprietary Neuberger Berman (“NB”) materiality matrix, which focuses on the ESG characteristics that were considered to be the most likely to be the material drivers of ESG risk and opportunity for each sector. Each sector criteria is constructed using third-party and internally derived ESG data and supplemented with internal qualitative analysis, leveraging the Portfolio’s analyst team’s significant sector expertise. The NB materiality matrix enabled the Sub-Investment Manager to derive the NB ESG Quotient rating, to compare sectors and issuers relative to their environmental and social characteristics.

The NB ESG Quotient assigned weightings to environmental, social and governance characteristics for each sector to derive the NB ESG Quotient rating. Pursuant to this, the Sub-Investment Manager engaged with issuers with a poor NB ESG Quotient with the aim to seek improvement in the underlying environmental and social characteristics (which make up the NB ESG Quotient) over time.

31 December 2022	Rating	Combined coverage
NB ESG Quotient	62	93%
Third-party Data	5.1	

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

With regards to the NB ESG Quotient rating, a rating between 1 – 100 is used where 1 is the lowest rating and 100 is the highest rating. This Portfolio does not have a minimum NB ESG Quotient rating. The average NB ESG Quotient rating is a weighted average and is not a rating of the Portfolio strategy itself.

Third-party data was also used to measure the environmental and social characteristics promoted by the Portfolio. The third-party data ratings range from 0-10, with 0 being the lowest rating and 10 being the highest rating.

## 2. Climate Value-at-Risk:

Over the reference period, Climate Value-at-Risk (“**CVaR**”) measured the exposure to transition and physical climate risks. CVaR is a scenario analysis tool evaluating economic risks under various degree scenarios (i.e., the amount of warming targeted) and potential regulatory environments in varying countries.

CVaR is a type of scenario analysis which is defined as the present value of aggregated future policy risk costs, technology opportunity profits, and extreme weather event costs and profits, expressed as a percentage of a security or portfolio’s market value according to the warming scenario targeted.

By calculating the financial risks from climate change per security and per scenario, CVaR provides a framework that helps quantify and understand these risks. The CVaR metric provides insight into the climate-stressed valuation of assets based on specific degree scenarios, providing an assessment on how much a security may stand to lose or gain from the impact of climate change.

As at 31 December 2022, CVaR projected that a warming climate scenario could result in a depreciation of 12.92% in the valuation of assets under assessment.

This analysis is intended as a broad overview of the investment team’s style and investment process.

On a holistic basis, the results were evaluated by the Sub-Investment Manager’s portfolio managers and analysts. The scenario analysis served as a starting point for further bottom-up analysis and identifying potential climate-related risks to address through issuer engagement.

Due to data limitations, CVaR was not applied across all issuers held by the Portfolio and was instead limited to the issuers for which the Sub-Investment Manager has sufficient and reliable data. The Portfolio had a CVaR coverage of 48%.

The analysis from CVaR is reviewed at least once a year.

## 3. ESG exclusion policies:

To ensure that the environmental or social characteristics promoted by the Portfolio were attained, the Portfolio did not invest in securities issued by issuers whose activities breached, or were not consistent with, the Neuberger Berman Controversial Weapons Policy and the Neuberger Berman Thermal Coal Involvement Policy. In addition to the application of the Neuberger Berman Thermal Coal Involvement Policy, the Sub-Investment Manager prohibited the initiation of new investment positions in securities issued by issuers that (i) derived more than 25% of their revenue from thermal coal mining; or (ii) were expanding new thermal coal power generation. Furthermore, from 6 April 2022 onwards, investments held by the Portfolio did not invest in securities issued by issuers whose activities had been identified as breaching the Neuberger Berman Global Standards Policy which excluded identified violators of (i) the United Nations Global Compact Principles (“**UNGC Principles**”), (ii) the OECD Guidelines for Multinational Enterprises (“**OECD Guidelines**”), (iii) the United Nations Guiding Principles on Business and Human Rights (“**UNGPs**”) and (iv) the International Labour Standards (“**ILO Standards**”). The Portfolio also excluded emerging market corporate debt issuers that were

involved in, the tobacco industry and child labour.

When applying ESG exclusions to the Portfolio, the Sub-Investment Manager used third-party data to identify issuers in breach of the ESG exclusions listed above. Where possible, the Sub-Investment Manager sought to overlay this third-party data with qualitative expertise from their research analysts to establish a current and holistic picture of the issuer. The Sub-Investment Manager discussed and debated the differences between the violators identified by the third-party data and those identified as a result of their research, which drew upon data from the NB ESG Quotient and direct engagements with the issuer.

● ***...and compared to previous periods?***

N/A - this is the first reference period.

● ***What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?***

N/A – the Portfolio did not commit to holding sustainable investments.

● ***How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?***

N/A – the Portfolio did not commit to holding sustainable investments.

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

— ***How were the indicators for adverse impacts on sustainability factors taken into account?***

N/A – the Portfolio did not commit to holding sustainable investments.

— ***Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

The Portfolio did not commit to holding sustainable investments, however from 6 April 2022 onwards, the Sub-Investment Manager did not invest in issuers whose activities had been identified as breaching the OECD Guidelines, UNGC Principles, ILO Standards and UNGPs, captured through the Neuberger Berman Global Standards Policy.

*The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.*

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

N/A - The Portfolio did not commit to holding Taxonomy-aligned investments.

### **How did this financial product consider principal adverse impacts on sustainability factors?**

A selection of the principal adverse impact indicators were considered directly (e.g. through the ESG exclusion policies listed above) and/or indirectly (e.g. as part of the Sub-Investment Manager’s assessment of issuers) throughout the 2022 reference period.

From 28 November 2022 onwards, the Sub-Investment Manager considered the following principal adverse impacts with respect to the Portfolio, namely: GHG emissions, carbon footprint, GHG intensity, fossil fuel exposure, board gender diversity, UNGC Principles & OECD Guidelines violations and controversial weapons (the “**Product Level PAIs**”).

Consideration of the Product Level PAIs was limited by the availability (in the Sub-Investment Manager’s subjective view) of adequate, reliable and verifiable data coverage. The Sub-Investment Manager utilised third-party data and proxy data along with internal research to consider the Product Level PAIs.

Consideration of the Product Level PAIs by the Sub-Investment Manager was through a combination of:

- Monitoring the Portfolio, in particular where it fell below the quantitative and qualitative tolerance thresholds set for each Product Level PAI by the Sub-Investment Manager;
- Stewardship and/or setting engagement objectives where the Portfolio fell below the quantitative and qualitative tolerance thresholds set for a Product Level PAI; and
- Application of the ESG exclusion policies referenced above, which included consideration of several of the Product Level PAIs.

## What were the top investments of this financial product?

The Sub-Investment Manager has used the EU statistical classification of economic activities (“NACE”) economic sector breakdown to identify the economic sectors of the Portfolio's top 15 investments. The following data is as at 31 December 2022.

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 1 January 2022 - 31 December 2022

Largest investments	Sector	% Assets	Country
MCAFEE PIK PREF EQUITY Prvt	J - Information and communication	1.4%	United States
AMERICAN AIRLINES INC 144A	H - Transporting and storage	1.3%	United States
SUMMIT MIDSTREAM HOLDINGS LLC 144A	K - Financial and insurance activities	1.1%	United States
BOEING CO	C - Manufacturing	0.8%	United States
TRNTS_20-12X D RegS	N/A	0.8%	Cayman Islands
DRSLF 21-93X D RegS	N/A	0.8%	Cayman Islands
FORD MOTOR CREDIT COMPANY LLC	K - Financial and insurance activities	0.7%	United States
ASSUREDPARTNERS INC 144A	K - Financial and insurance activities	0.7%	United States
AERCAP IRELAND CAPITAL DAC / AERCA	K - Financial and insurance activities	0.7%	Ireland
UNITED AIR 2020-1 A PTT	H - Transporting and storage	0.6%	United States
IRON MOUNTAIN INC 144A	L - Real estate activities	0.6%	United States
AIMCO 21-16X D RegS	N/A	0.6%	Cayman Islands
PETROLEOS MEXICANOS MTN	B - Mining and quarrying	0.6%	Mexico
EPR PROPERTIES	L - Real estate activities	0.6%	United States

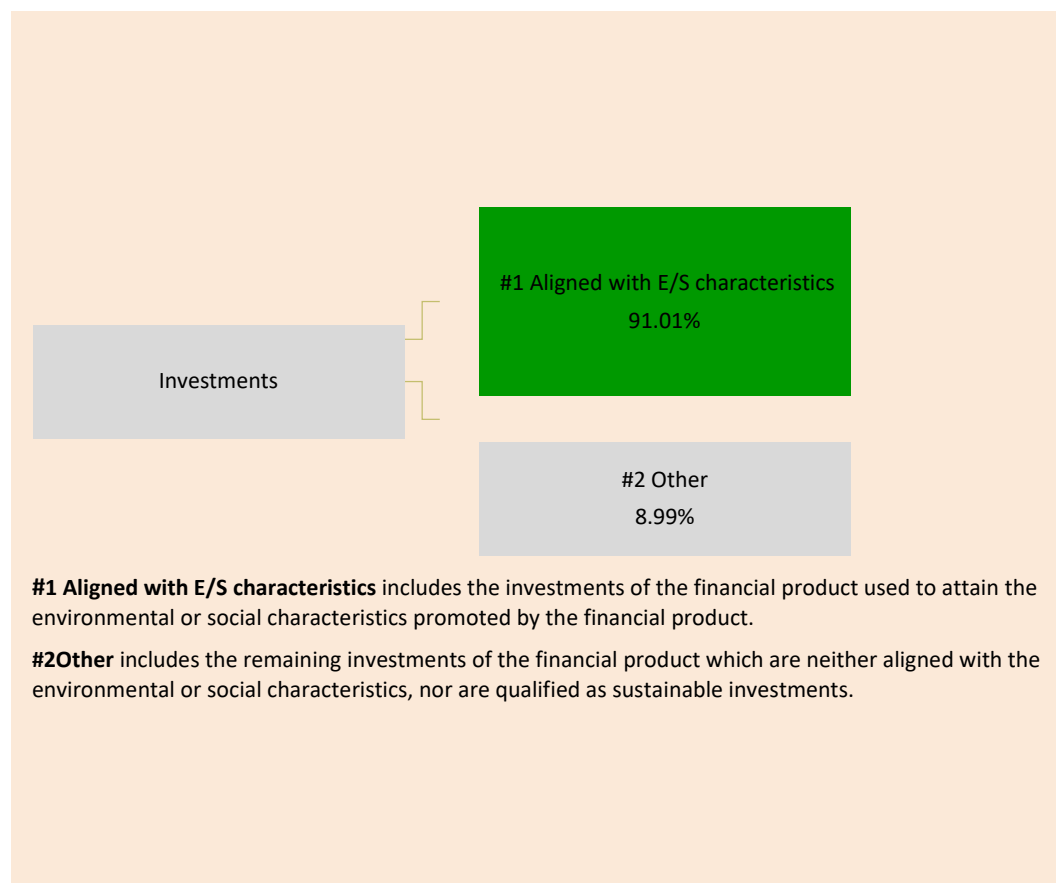

## What was the proportion of sustainability-related investments?

**Asset allocation** describes the share of investments in specific assets.

### ● **What was the asset allocation?**

The Sub-Investment Manager calculated the proportion of investments aligned with the environmental and/or social characteristics promoted by the Portfolio by reference to the proportion of issuers in the Portfolio: i) that held either an NB ESG Quotient rating or a third-party equivalent ESG rating that was used as part of the portfolio construction and investment management process of the Portfolio; and/or ii) with whom the Sub-Investment Manager had engaged directly. This calculation was based on a mark-to-market assessment of the Portfolio and may rely on incomplete or inaccurate issuer or third-party data. For the 2022 reference period only, this calculation is based on the Portfolio's holdings as at 31 December 2022, being the only quarter end in the reference period that followed the publication of the Portfolio's SFDR Annex detailing its planned asset allocation. For all subsequent reference periods, this calculation will be based on the average of the four quarter ends.

● ***In which economic sectors were the investments made?***

Data as at 31 December 2022	
Economic Sector – NACE	% Assets
B - Mining and quarrying	4.70%
C - Manufacturing	14.48%
D - Electricity, gas, steam and air conditioning supply	2.51%
E - Water supply; sewerage; waste management and remediation activities	0.44%
F - Construction	1.38%
G - Wholesale and retail trade; repair of motor vehicles and motorcycles	2.29%
H - Transporting and storage	6.41%
I - Accommodation and food service activities	0.88%
J - Information and communication	12.01%
K - Financial and insurance activities	30.08%
L - Real estate activities	3.83%
M - Professional, scientific and technical activities	0.74%
N - Administrative and support service activities	6.51%
O - Public administration and defense; compulsory social security	2.75%

P - Education	0.00%
Q - Human health and social work activities	1.91%
R - Arts, entertainment and recreation	1.05%
S - Other services activities	0.00%
U - Activities of extraterritorial organizations and bodies	0.08%
None	7.94%

## To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The analysis and disclosure requirements introduced by the EU Taxonomy are very detailed and compliance with them requires the availability of multiple, specific data points in respect of each investment which the Portfolio made. The the Sub-Investment Manager cannot confirm that the Portfolio invested in any investments that qualified as environmentally sustainable for the purposes of the EU Taxonomy. Disclosures and reporting on Taxonomy alignment will develop as the EU framework evolves and data is made available by issuers. The Sub-Investment Manager will keep the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy under active review as data availability and quality improves.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

- **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

### ● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?

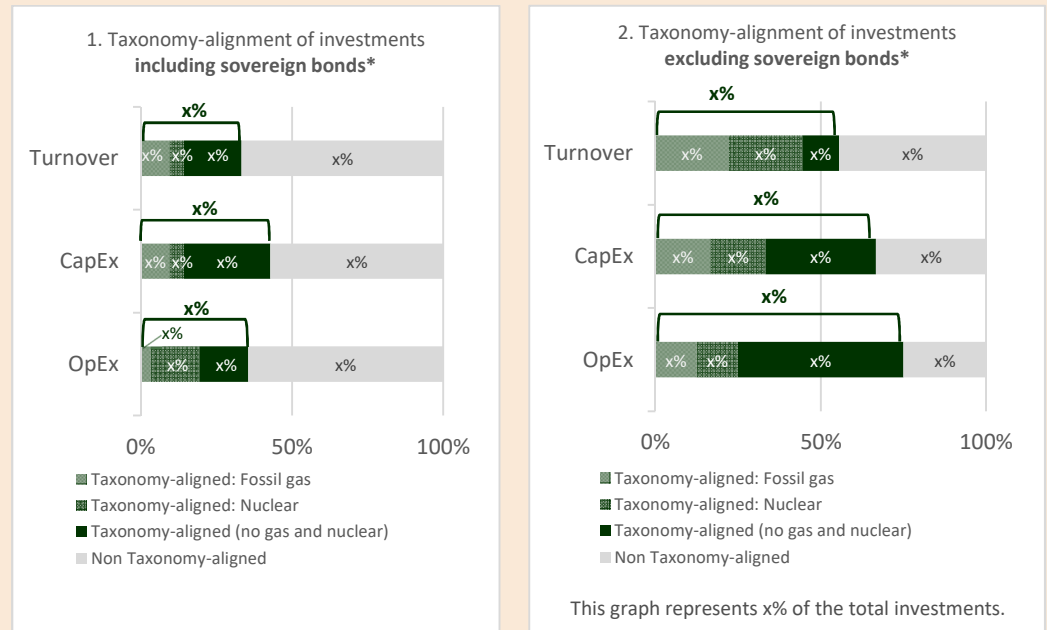

- Yes:
- In fossil gas  In nuclear energy
- No

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

- **What was the share of investments made in transitional and enabling activities?**

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments.

- **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments.

### **What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?**

N/A – the Portfolio did not commit to holding sustainable investments.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

### **What was the share of socially sustainable investments?**

N/A – the Portfolio did not commit to holding sustainable investments.

### **What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?**

“Other” included the remaining investments of the Portfolio (including but not limited to any derivatives or any security collateralized by a pool of similar assets or receivables listed in the Supplement for the Portfolio) which were neither aligned with the environmental or social characteristics, nor qualified as sustainable investments.

The “Other” section in the Portfolio was held for a number of reasons that the Sub-Investment Manager felt was beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover.

As noted above, the Portfolio was invested in compliance with ESG exclusion policies, on a continuous basis. This ensured that investments made by the Portfolio sought to align with international environmental and social safeguards such as the UNGC Principles, UNGPs, OECD Guidelines and the ILO Standards.

The Sub-Investment Manager believes that these policies prevented investment in issuers that most egregiously violated environmental and/or social minimum standards and ensured that the Portfolio could successfully promote its environmental and social characteristics.

The above steps ensured that robust environmental and social safeguards were in place.

## What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Portfolio was managed in-line with the investment objective and the following actions were taken:

### I. Integrating proprietary ESG analysis:

The NB ESG Quotient ratings were generated for issuers in the Portfolio. The NB ESG Quotient rating for issuers was utilised to help to better identify risks and opportunities in the overall credit and value assessment.

The NB ESG Quotient was a key component of the internal credit ratings and helped to identify business risks (including ESG risks), which would cause deterioration in an issuer's credit profile. Internal credit ratings can be notched up or down based on the NB ESG Quotient rating, and this was monitored by the Sub-Investment Manager as an important component of the investment process for the Portfolio.

By integrating the investment team's proprietary ESG analysis (the NB ESG Quotient) into their internal credit ratings, there was a direct link between their analysis of material ESG characteristics and portfolio construction activities across their strategy.

Pursuant to this, the Sub-Investment Manager engaged with issuers with a poor NB ESG Quotient rating with the aim to seek improvement in the underlying environmental and social characteristics (which make up the NB ESG Quotient) over time.

### II. Engagement:

The Sub-Investment Manager engaged with issuers through a robust ESG engagement program. They sought to prioritise constructive engagements and sought to engage on topics (including ESG topics) they determined to be financially material for the relevant issuer. The Sub-Investment Manager viewed this engagement with issuers, as an important part of its investment process. Progress on engagement was tracked centrally in the Sub-Investment Manager's engagement tracker.

### III. ESG sectoral exclusion policies:

To ensure that the environmental and social characteristics promoted by the Portfolio were attained, the Portfolio applied the ESG exclusion policies referenced above, which reduced the investable universe.

## How did this financial product perform compared to the reference benchmark?

N/A – the Portfolio does not use a benchmark.

- ***How does the reference benchmark differ from a broad market index?***  
N/A
- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***  
N/A
- ***How did this financial product perform compared with the reference benchmark?***  
N/A
- ***How did this financial product perform compared with the broad market index?***  
N/A

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

---

**Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852**

**Product name:** Neuberger Berman Global Investment Grade Credit Fund (the “Portfolio”)

**Legal entity identifier:** 549300TIVE0UW3FSBE51

## Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?	
<input checked="" type="radio"/> <input checked="" type="radio"/> <input type="checkbox"/> <b>Yes</b>	<input checked="" type="radio"/> <input type="radio"/> <input checked="" type="checkbox"/> <b>No</b>
<input type="checkbox"/> It made <b>sustainable investments with an environmental objective</b> : ____% <ul style="list-style-type: none"> <li><input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy</li> <li><input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</li> </ul>	<input type="checkbox"/> It promoted <b>Environmental/Social (E/S) characteristics</b> and while it did not have as its objective a sustainable investment, it had a proportion of ____% of sustainable investments <ul style="list-style-type: none"> <li><input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy</li> <li><input type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</li> <li><input type="checkbox"/> with a social objective</li> </ul>
<input type="checkbox"/> It made <b>sustainable investments with a social objective</b> : ____%	<input checked="" type="checkbox"/> It promoted E/S characteristics, but <b>did not make any sustainable investments</b>

## To what extent were the environmental and/or social characteristics promoted by this financial product met?

The following environmental and social characteristics were promoted by the Portfolio:

- **Environmental Characteristics:** biodiversity & responsible land usage; carbon footprint reduction; environmental management; greenhouse gas (“**GHG**”) emissions; opportunities in clean technologies; opportunities in green building; opportunities in renewable energy; responsible raw material sourcing; responsible & transparent underwriting; toxic emissions & waste; waste management; and water management.
- **Social Characteristics:** access to finance; access to medicines; affordability & fair pricing; business ethics & transparency of government relations; chemical safety; community relations; controversial sourcing; corporate behaviour; drug safety & side effects management; ethical marketing & practices; health & nutrition; health & safety; human capital development; labour management; data privacy & security; product safety & quality; and litigation & related controversy.

Performance in relation to these environmental and social characteristics was measured through the NB ESG Quotient, and is reported, in aggregate, below.

### ● **How did the sustainability indicators perform?**

As part of the investment process, the Sub-Investment Manager considered a variety of sustainability indicators to measure the environmental and/or social characteristics promoted by the Portfolio. These sustainability indicators are listed below:

#### 1. The NB ESG Quotient:

The proprietary Neuberger Berman ESG rating system (the “**NB ESG Quotient**”), is built around the concept of sector specific ESG risk and opportunity, and produced an overall ESG rating for issuers by assessing them against certain ESG metrics.

Foundational to the NB ESG Quotient is the proprietary Neuberger Berman (“**NB**”) materiality matrix, which focuses on the ESG characteristics that were considered to be the most likely to be the material drivers of ESG risk and opportunity for each sector. Each sector criteria is constructed using third-party and internally derived ESG data and supplemented with internal qualitative analysis, leveraging the Portfolio’s analyst team’s significant sector expertise. The NB materiality matrix enabled the Sub-Investment Manager to derive the NB ESG Quotient rating, to compare sectors and issuers relative to their environmental and social characteristics.

The NB ESG Quotient assigned weightings to environmental, social and governance characteristics for each sector to derive the NB ESG Quotient rating. Pursuant to this, the Sub-Investment Manager engaged with issuers with a poor NB ESG Quotient with the aim to seek improvement in the underlying environmental and social characteristics (which make up the NB ESG Quotient) over time.

31 December 2022	Rating	Combined coverage
NB ESG Quotient	62	100%
Third-party Data	6.7	

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

With regards to the NB ESG Quotient rating, a rating between 1 – 100 is used where 1 is the lowest rating and 100 is the highest rating. This Portfolio does not have a minimum NB ESG Quotient rating. The average NB ESG Quotient rating is a weighted average and is not a rating of the Portfolio strategy itself.

Third-party data was also used to measure the environmental and social characteristics promoted by the Portfolio. The third-party data ratings range from 0-10, with 0 being the lowest rating and 10 being the highest rating.

## 2. Climate Value-at-Risk:

Over the reference period, Climate Value-at-Risk (“**CVaR**”) measured the exposure to transition and physical climate risks. CVaR is a scenario analysis tool evaluating economic risks under various degree scenarios (i.e., the amount of warming targeted) and potential regulatory environments in varying countries.

CVaR is a type of scenario analysis which is defined as the present value of aggregated future policy risk costs, technology opportunity profits, and extreme weather event costs and profits, expressed as a percentage of a security or portfolio's market value according to the warming scenario targeted.

By calculating the financial risks from climate change per security and per scenario, CVaR provides a framework that helps quantify and understand these risks. The CVaR metric provides insight into the climate-stressed valuation of assets based on specific degree scenarios, providing an assessment on how much a security may stand to lose or gain from the impact of climate change.

As of 31 December 2022, CVaR projected that a warming climate scenario could result in a depreciation of 3.41% in the valuation of assets under assessment.

This analysis is intended as a broad overview of the investment team's style and investment process.

On a holistic basis, the results were evaluated by the Sub-Investment Manager's portfolio managers and analysts. The scenario analysis served as a starting point for further bottom-up analysis and identifying potential climate-related risks to address through issuer engagement.

Due to data limitations, CVaR was not applied across all issuers held by the Portfolio and was instead limited to the issuers for which the Sub-Investment Manager had sufficient and reliable data. The Portfolio had a CVaR coverage of 71%.

The analysis from CVaR is reviewed at least once a year.

## 3. ESG exclusion policies:

To ensure that the environmental or social characteristics promoted by the Portfolio were attained, the Portfolio did not invest in securities issued by issuers whose activities breached, or were not consistent with, the Neuberger Berman Controversial Weapons Policy and the Neuberger Berman Thermal Coal Involvement Policy. In addition to the application of the Neuberger Berman Thermal Coal Involvement Policy, the Sub-Investment Manager prohibited the initiation of new investment positions in securities issued by issuers that (i) derived more than 25% of their revenue from thermal coal mining; or (ii) were expanding new thermal coal power generation. Furthermore, from 6 April 2022 onwards, investments held by the Portfolio did not invest in securities issued by issuers whose activities had been identified as breaching the Neuberger Berman Global Standards Policy which excluded identified violators of (i) the United Nations Global Compact Principles (“**UNGC Principles**”), (ii) the OECD Guidelines for Multinational Enterprises (“**OECD Guidelines**”), (iii) the United Nations Guiding Principles on Business and Human Rights (“**UNGPs**”) and (iv) the International Labour Standards (“**ILO Standards**”).

When applying ESG exclusions to the Portfolio, the Sub-Investment Manager used third-party data to identify issuers in breach of the ESG exclusions listed above. Where possible, the Sub-Investment Manager sought to overlay this third-party data with qualitative expertise from their research analysts to establish a current and holistic picture of the issuer. The Sub-Investment Manager discussed and debated the differences between the violators identified by the third-party data and those identified as a result of their research, which drew upon data from the NB ESG Quotient and direct engagements with the issuer.

● ***...and compared to previous periods?***

N/A - this is the first reference period.

● ***What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?***

N/A – the Portfolio did not commit to holding sustainable investments.

● ***How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?***

N/A – the Portfolio did not commit to holding sustainable investments.

— ***How were the indicators for adverse impacts on sustainability factors taken into account?***

N/A – the Portfolio did not commit to holding sustainable investments.

— ***Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

The Portfolio did not commit to holding sustainable investments, however from 6 April 2022 onwards, the Sub-Investment Manager did not invest in issuers whose activities had been identified as breaching the OECD Guidelines, UNGC Principles, ILO Standards and UNGPs, captured through the Neuberger Berman Global Standards Policy.

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

*The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.*

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

N/A - The Portfolio did not commit to holding Taxonomy-aligned investments.

### **How did this financial product consider principal adverse impacts on sustainability factors?**

A selection of the principal adverse impact indicators were considered directly (e.g. through the ESG exclusion policies listed above) and/or indirectly (e.g. as part of the Sub-Investment Manager’s assessment of issuers) throughout the 2022 reference period.

From 28 November 2022 onwards, the Sub-Investment Manager considered the following principal adverse impacts with respect to the Portfolio, namely: GHG emissions, carbon footprint, GHG intensity, fossil fuel exposure, board gender diversity, UNGC Principles & OECD Guidelines violations and controversial weapons (the “**Product Level PAIs**”).

Consideration of the Product Level PAIs was limited by the availability (in the Sub-Investment Manager’s subjective view) of adequate, reliable and verifiable data coverage. The Sub-Investment Manager utilised third party data and proxy data along with internal research to consider the Product Level PAIs.

Consideration of the Product Level PAIs by the Sub-Investment Manager was through a combination of:

- Monitoring the Portfolio, in particular where it fell below the quantitative and qualitative tolerance thresholds set for each Product Level PAI by the Sub-Investment Manager;
- Stewardship and/or setting engagement objectives where the Portfolio fell below the quantitative and qualitative tolerance thresholds set for a Product Level PAI; and
- Application of the ESG exclusion policies referenced above, which included consideration of several of the Product Level PAIs.

## What were the top investments of this financial product?

The Sub-Investment Manager has used the EU statistical classification of economic activities (“NACE”) economic sector breakdown to identify the economic sectors of the Portfolio's top 15 investments. The following data is as at 31 December 2022.

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 1 January 2022 - 31 December 2022

Largest investments	Sector	% Assets	Country
TREASURY NOTE	O - Public administration and defence; compulsory social security	3.2%	United States
UNITED AIR 2020-1 A PTT	H - Transporting and storage	1.7%	United States
HSBC HOLDINGS PLC	K - Financial and insurance activities	1.5%	United Kingdom
AERCAP IRELAND CAPITAL DAC / AERCA	C - Manufacturing	1.2%	Ireland
BANK OF AMERICA CORP MTN RegS	K - Financial and insurance activities	1.2%	United States

LLOYDS BANKING GROUP PLC	K - Financial and insurance activities	1.0%	United Kingdom
ANGLO AMERICAN CAPITAL PLC 144A	K - Financial and insurance activities	1.0%	South Africa
CAPITAL ONE FINANCIAL CORPORATION	K - Financial and insurance activities	1.0%	United States
ATHENE GLOBAL FUNDING 144A	K - Financial and insurance activities	1.0%	United States

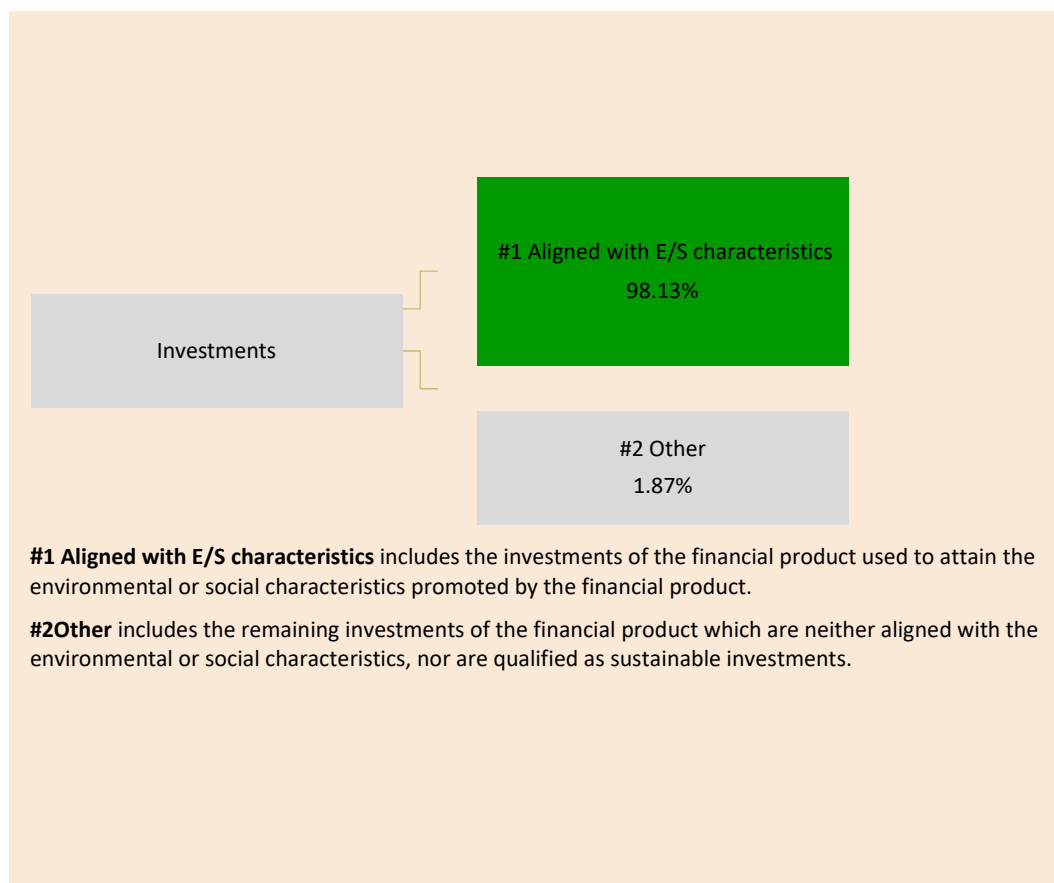

## What was the proportion of sustainability-related investments?

**Asset allocation** describes the share of investments in specific assets.

### What was the asset allocation?

The Sub-Investment Manager calculated the proportion of investments aligned with the environmental and/or social characteristics promoted by the Portfolio by reference to the proportion of issuers in the Portfolio: i) that held either an NB ESG Quotient rating or a third party equivalent ESG rating that was used as part of the portfolio construction and investment management process of the Portfolio; and/or ii) with whom the Sub-Investment Manager had engaged directly. This calculation was based on a mark-to-market assessment of the Portfolio and may rely on incomplete or inaccurate issuer or third party data. For the 2022 reference period only, this calculation is based on the Portfolio's holdings as at 31 December 2022, being the only quarter end in the reference period that followed the publication of the Portfolio's SFDR Annex detailing its planned asset allocation. For all subsequent reference periods, this calculation will be based on the average of the four quarter ends.

● ***In which economic sectors were the investments made?***

Data as at 31 December 2022	
Economic Sector – NACE	% Assets
B - Mining and quarrying	2.08%
C - Manufacturing	14.03%
D - Electricity, gas, steam and air conditioning supply	7.55%
E - Water supply; sewerage; waste management and remediation activities	0.61%
F - Construction	0.12%
G - Wholesale and retail trade; repair of motor vehicles and motorcycles	2.88%
H - Transporting and storage	4.66%
I - Accommodation and food service activities	0.67%
J - Information and communication	11.54%
K - Financial and insurance activities	48.31%
L - Real estate activities	1.95%
M - Professional, scientific and technical activities	0.69%
N - Administrative and support service activities	1.15%
O - Public administration and defense; compulsory social security	3.29%
Q - Human health and social work activities	0.26%
U - Activities of extraterritorial organizations and bodies	0.21%

## To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The analysis and disclosure requirements introduced by the EU Taxonomy are very detailed and compliance with them requires the availability of multiple, specific data points in respect of each investment which the Portfolio made. The the Sub-Investment Manager cannot confirm that the Portfolio invested in any investments that qualified as environmentally sustainable for the purposes of the EU Taxonomy. Disclosures and reporting on Taxonomy alignment will develop as the EU framework evolves and data is made available by issuers. The Sub-Investment Manager will keep the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy under active review as data availability and quality improves.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

- **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

### ● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?

Yes:

In fossil gas  In nuclear energy

No

---

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

● **What was the share of investments made in transitional and enabling activities?**

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments.

### **What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?**

N/A – the Portfolio did not commit to holding sustainable investments.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

### **What was the share of socially sustainable investments?**

N/A – the Portfolio did not commit to holding sustainable investments.

### **What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?**

“Other” included the remaining investments of the Portfolio (including but not limited to any derivatives or any security collateralized by a pool of similar assets or receivables listed in the Supplement for the Portfolio) which were neither aligned with the environmental or social characteristics, nor qualified as sustainable investments.

The “Other” section in the Portfolio was held for a number of reasons that the Sub-Investment Manager felt was beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover.

As noted above, the Portfolio was invested in compliance with ESG exclusion policies, on a continuous basis. This ensured that investments made by the Portfolio sought to align with international environmental and social safeguards such as the UNGC Principles, UNGPs, OECD Guidelines and ILO Standards.

The Sub-Investment Manager believes that these policies prevented investment in issuers that most egregiously violated environmental and/or social minimum standards and ensured that the Portfolio could successfully promote its environmental and social characteristics.

The above steps ensured that robust environmental and social safeguards were in place.

## **What actions have been taken to meet the environmental and/or social characteristics during the reference period?**

The Portfolio was managed in-line with the investment objective and the following actions were taken:

### **I. Integrating proprietary ESG analysis:**

The NB ESG Quotient ratings were generated for issuers in the Portfolio. The NB ESG Quotient rating for issuers was utilised to help to better identify risks and opportunities in the overall credit and value assessment.

The NB ESG Quotient was a key component of the internal credit ratings and helped to identify business risks (including ESG risks), which would cause deterioration in an issuer's credit profile. Internal credit ratings can be notched up or down based on the NB ESG Quotient rating, and this was monitored by the Sub-Investment Manager as an important component of the investment process for the Portfolio.

By integrating the investment team's proprietary ESG analysis (the NB ESG Quotient) into their internal credit ratings, there was a direct link between their analysis of material ESG characteristics and portfolio construction activities across their strategy.

Pursuant to this, the Sub-Investment Manager engaged with issuers with a poor NB ESG Quotient rating with the aim to seek improvement in the underlying environmental and social characteristics (which make up the NB ESG Quotient) over time.

### **II. Engagement:**

The Sub-Investment Manager engaged with issuers through a robust ESG engagement program. They sought to prioritise constructive engagements and sought to engage on topics (including ESG topics) they determined to be financially material for the relevant issuer. The Sub-Investment Manager viewed this engagement with issuers, as an important part of its investment process. Progress on engagement was tracked centrally in the Sub-Investment Manager's engagement tracker.

### **III. ESG sectoral exclusion policies:**

To ensure that the environmental and social characteristics promoted by the Portfolio were attained, the Portfolio applied the ESG exclusion policies referenced above, which placed limitations on the investable universe.

## **How did this financial product perform compared to the reference benchmark?**

N/A – The Portfolio's benchmark has not been designated as a reference benchmark. Therefore, it is not consistent with the environmental or social characteristics promoted by the Portfolio.

- ***How does the reference benchmark differ from a broad market index?***  
N/A
- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***  
N/A
- ***How did this financial product perform compared with the reference benchmark?***  
N/A
- ***How did this financial product perform compared with the broad market index?***  
N/A

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

**Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852**

**Product name:** Neuberger Berman Global Diversified Income FMP – 2024 (the “Portfolio”)

**Legal entity identifier:** 549300577U1V3H24JG33

## Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?	
<input checked="" type="radio"/> <input checked="" type="radio"/> <input type="checkbox"/> <b>Yes</b>	<input checked="" type="radio"/> <input type="radio"/> <input checked="" type="checkbox"/> <b>No</b>
<input type="checkbox"/> It made <b>sustainable investments with an environmental objective</b> : ____% <ul style="list-style-type: none"> <li><input type="checkbox"/> _____ in economic activities that qualify as environmentally sustainable under the EU Taxonomy</li> <li><input type="checkbox"/> _____ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</li> </ul>	<input type="checkbox"/> It promoted <b>Environmental/Social (E/S) characteristics</b> and while it did not have as its objective a sustainable investment, it had a proportion of ____% of sustainable investments <ul style="list-style-type: none"> <li><input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy</li> <li><input type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</li> <li><input type="checkbox"/> with a social objective</li> </ul>
<input type="checkbox"/> It made <b>sustainable investments with a social objective</b> : ____%	<input checked="" type="checkbox"/> It promoted E/S characteristics, but <b>did not make any sustainable investments</b>

## To what extent were the environmental and/or social characteristics promoted by this financial product met?

Given the Portfolio's investment objective, investment term and Maturity Date (30 June 2024), the Portfolio's turnover was limited. Therefore the promotion of environmental and social characteristics was focused on the portfolio construction phase.

The following environmental and social characteristics were promoted by the Portfolio:

- **Environmental Characteristics:** biodiversity & responsible land usage; carbon footprint reduction; environmental management; greenhouse gas (“**GHG**”) emissions; opportunities in clean technologies; opportunities in green building; opportunities in renewable energy; responsible raw material sourcing; responsible & transparent underwriting; toxic emissions & waste; waste management; and water management.
- **Social Characteristics:** access to finance; access to medicines; affordability & fair pricing; business ethics & transparency of government relations; chemical safety; community relations; controversial sourcing; corporate behaviour; drug safety & side effects management; ethical marketing & practices; health & nutrition; health & safety; human capital development; labour management; data privacy & security; product safety & quality; and litigation & related controversy.

Performance in relation to these environmental and social characteristics was measured through the NB ESG Quotient, and is reported, in aggregate, below.

### ● **How did the sustainability indicators perform?**

As part of the investment process, the Sub-Investment Manager considered a variety of sustainability indicators to measure the environmental and/or social characteristics promoted by the Portfolio. These sustainability indicators are listed below:

#### 1. The NB ESG Quotient:

The proprietary Neuberger Berman ESG rating system (the “**NB ESG Quotient**”), is built around the concept of sector specific ESG risk and opportunity, and produced an overall ESG rating for issuers by assessing them against certain ESG metrics.

Foundational to the NB ESG Quotient is the proprietary Neuberger Berman (“**NB**”) materiality matrix, which focuses on the ESG characteristics that were considered to be the most likely to be the material drivers of ESG risk and opportunity for each sector. Each sector criteria is constructed using third-party and internally derived ESG data and supplemented with internal qualitative analysis, leveraging the Portfolio's analyst team's significant sector expertise. The NB materiality matrix enabled the Sub-Investment Manager to derive the NB ESG Quotient rating, to compare sectors and issuers relative to their environmental and social characteristics.

The NB ESG Quotient assigned weightings to environmental, social and governance characteristics for each sector to derive the NB ESG Quotient rating for issuers. Issuers with a favourable and/or an improving NB ESG Quotient rating had a higher chance of being included in the Portfolio. Issuers with a poor NB ESG Quotient rating, especially where a poor NB ESG Quotient rating is not being addressed by an issuer, were more likely to be removed from the investment universe or were divested from the Portfolio. In addition, the Sub-Investment Manager sought to prioritise constructive engagements with issuers that had a poor NB ESG Quotient rating, in order to assess whether concerns were being addressed adequately.

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

<b>31 December 2022</b>	<b>Rating</b>	<b>Combined coverage</b>
NB ESG Quotient	57	98%
Third-party Data	4.9	

With regards to the NB ESG Quotient rating, a rating between 1 – 100 is used where 1 is the lowest rating and 100 is the highest rating. This Portfolio does not have a minimum NB ESG Quotient rating. The average NB ESG Quotient rating is a weighted average and is not a rating of the Portfolio strategy itself.

Third-party data was also used to measure the environmental and social characteristics promoted by the Portfolio. The third-party data ratings range from 0-10, with 0 being the lowest rating and 10 being the highest rating.

## 2. Climate Value-at-Risk:

Over the reference period, Climate Value-at-Risk (“**CVaR**”) measured the exposure to transition and physical climate risks. CVaR is a scenario analysis tool evaluating economic risks under various degree scenarios (i.e., the amount of warming targeted) and potential regulatory environments in varying countries.

CVaR is a type of scenario analysis which is defined as the present value of aggregated future policy risk costs, technology opportunity profits, and extreme weather event costs and profits, expressed as a percentage of a security or portfolio’s market value according to the warming scenario targeted.

By calculating the financial risks from climate change per security and per scenario, CVaR provides a framework that helps quantify and understand these risks. The CVaR metric provides insight into the climate-stressed valuation of assets based on specific degree scenarios, providing an assessment on how much a security may stand to lose or gain from the impact of climate change.

As at 31 December 2022, CVaR projected that a warming climate scenario could result in a depreciation of 3.64% in the valuation of assets under assessment.

This analysis is intended as a broad overview of the investment team’s style and investment process.

On a holistic basis, the results were evaluated by the Sub-Investment Manager’s portfolio managers and analysts. The scenario analysis served as a starting point for further bottom-up analysis and identifying potential climate-related risks to address through issuer engagement.

Due to data limitations, CVaR was not applied across all issuers held by the Portfolio and was instead limited to the issuers for which the Sub-Investment Manager had sufficient and reliable data. The Portfolio had a CVaR coverage of 72%.

The analysis from CVaR is reviewed at least once a year.

## 3. ESG exclusion policies:

To ensure that the environmental or social characteristics promoted by the Portfolio were attained, the Portfolio did not invest in securities issued by issuers whose activities breached, or were not consistent with, the Neuberger Berman Controversial Weapons Policy and the Neuberger Berman Thermal Coal Involvement Policy. In addition to the application of the Neuberger Berman Thermal Coal Involvement Policy, the Sub-Investment Manager prohibited the initiation of new investment positions in securities issued by issuers that (i) derived more than 25% of their revenue from thermal coal mining; or (ii) were expanding new thermal coal power generation. Furthermore, from 6 April 2022 onwards, investments held by the Portfolio did not invest in securities issued by issuers whose activities had been identified as breaching the Neuberger Berman Global Standards Policy which

excluded identified violators of (i) the United Nations Global Compact Principles (“**UNGC Principles**”), (ii) the OECD Guidelines for Multinational Enterprises (“**OECD Guidelines**”), (iii) the United Nations Guiding Principles on Business and Human Rights (“**UNGPs**”) and (iv) the International Labour Standards (“**ILO Standards**”). The Portfolio also excluded emerging market corporate debt issuers that were involved in the tobacco industry and child labour.

When applying ESG exclusions to the Portfolio, the Sub-Investment Manager used third-party data to identify issuers in breach of the ESG exclusions listed above. Where possible, the Sub-Investment Manager sought to overlay this third-party data with qualitative expertise from their research analysts to establish a current and holistic picture of the issuer. The Sub-Investment Manager discussed and debated the differences between the violators identified by the third-party data and those identified as a result of their research, which drew upon data from the NB ESG Quotient and direct engagements with the issuer.

Given the Portfolio sought to provide a yield over a specific term, which ends on the Maturity Date, the Portfolio’s turnover was limited.

● **...and compared to previous periods?**

N/A – this is the first reference period.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

N/A – the Portfolio did not commit to holding sustainable investments.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

N/A – the Portfolio did not commit to holding sustainable investments.

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

— **How were the indicators for adverse impacts on sustainability factors taken into account?**

N/A – the Portfolio did not commit to holding sustainable investments.

— **Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:**

The Portfolio did not commit to holding sustainable investments, however from 6 April 2022 onwards, the Sub-Investment Manager did not invest in issuers whose activities had been identified as breaching the OECD Guidelines, UNGC Principles, ILO Standards and UNGPs, captured through the Neuberger Berman Global Standards Policy.

*The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.*

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

N/A - The Portfolio did not commit to holding Taxonomy-aligned investments.

### **How did this financial product consider principal adverse impacts on sustainability factors?**

A selection of the principal adverse impact indicators were considered directly (e.g. through the ESG exclusion policies listed above) and/or indirectly (e.g. as part of the Sub-Investment Manager’s assessment of issuers) throughout the 2022 reference period.

From 28 November 2022 onwards, the Sub-Investment Manager considered the following principal adverse impacts with respect to the Portfolio, namely: GHG emissions, carbon footprint, GHG intensity, fossil fuel exposure, board gender diversity, UNGC Principles & OECD Guidelines violations and controversial weapons (the “**Product Level PAIs**”).

Consideration of the Product Level PAIs was limited by the availability (in the Sub-Investment Manager’s subjective view) of adequate, reliable and verifiable data coverage. The Sub-Investment Manager utilised third-party data and proxy data along with internal research to consider the Product Level PAIs.

Consideration of the Product Level PAIs by the Sub-Investment Manager was through a combination of:

- Monitoring the Portfolio, in particular where it fell below the quantitative and qualitative tolerance thresholds set for each Product Level PAI by the Sub-Investment Manager;
- Stewardship and/or setting engagement objectives where the Portfolio fell below the quantitative and qualitative tolerance thresholds set for a Product Level PAI by the Sub-Investment Manager; and
- Application of the ESG exclusion policies referenced above, which included consideration of several of the Product Level PAIs.

## What were the top investments of this financial product?

The Sub-Investment Manager has used the EU statistical classification of economic activities (“NACE”) economic sector breakdown to identify the economic sectors of the Portfolio's top 15 investments. The following data is as at 31 December 2022.

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: 1 January 2022 - 31 December 2022

Largest investments	Sector	% Assets	Country
NATWEST GROUP PLC	K - Financial and insurance activities	2.9%	United Kingdom
GENERAL MOTORS FINANCIAL CO INC	K - Financial and insurance activities	2.8%	United States
DIB SUKUK LTD RegS	K - Financial and insurance activities	2.6%	United Arab Emirates
BARCLAYS PLC	K - Financial and insurance activities	2.5%	United Kingdom
MAGALLANES INC 144A	J - Information and communication	2.5%	United States
ATHENE GLOBAL FUNDING 144A	K - Financial and insurance activities	2.4%	United States
NRG ENERGY INC 144A	D - Electricity, gas, steam and air conditioning supply	2.4%	United States
SYNCHRONY FINANCIAL	K - Financial and insurance activities	2.4%	United States
MASHREQBANK PSC RegS	K - Financial and insurance activities	2.4%	United Arab Emirates
EQT MIDSTREAM PARTNERS LP	H - Transporting and storage	2.3%	United States
PRIME SECURITY SERVICES BORROWER L 144A	N - Administrative and support service activities	2.2%	United States
ONEMAIN FINANCE CORP	K - Financial and insurance activities	2.2%	United States
BANK MANDIRI (PERSERO) TBK PT MTN RegS	K - Financial and insurance activities	2.1%	Indonesia
BANK RAKYAT INDONESIA (PERSERO) TB RegS	K - Financial and insurance activities	2.0%	Indonesia
AVOLON HOLDINGS FUNDING LTD 144A	K - Financial and insurance activities	1.9%	Ireland

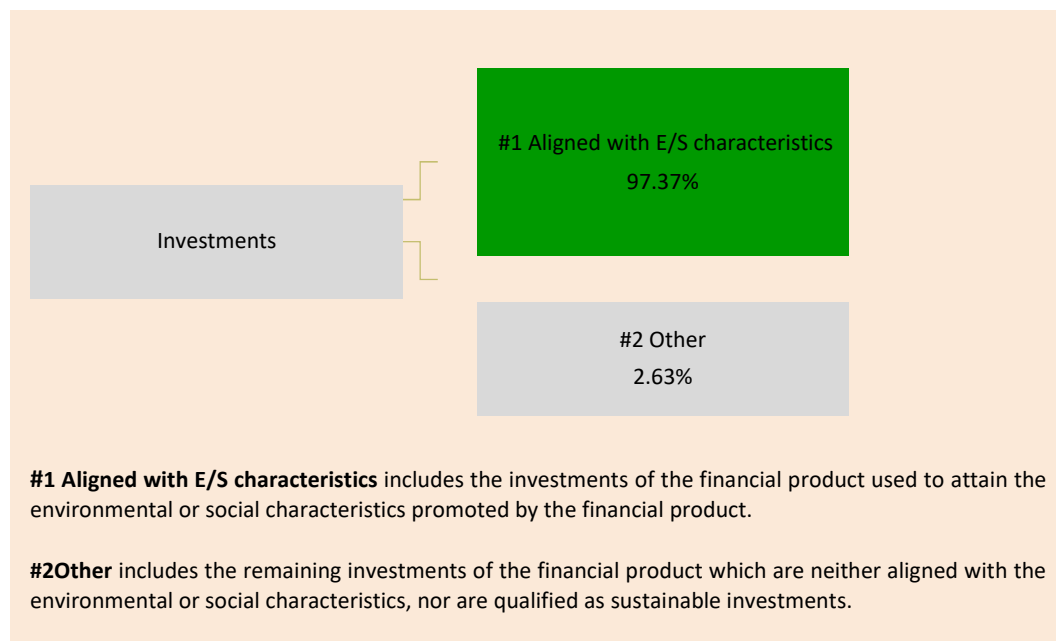

## What was the proportion of sustainability-related investments?

### What was the asset allocation?

The Sub-Investment Manager calculated the proportion of investments aligned with the environmental and/or social characteristics promoted by the Portfolio by reference to the proportion of issuers in the Portfolio: i) that held either an NB ESG Quotient rating or a third-party equivalent ESG rating that was used as part of the portfolio construction and investment management process of the Portfolio; and/or ii) with whom the Sub-Investment Manager had engaged directly. This calculation was based on a mark-to-market assessment of the Portfolio and may rely on incomplete or inaccurate issuer or third-party data. For the 2022 reference period only, this calculation is based on the Portfolio's holdings as at 31 December 2022, being the only quarter end in the reference period that followed the publication of the Portfolio's SFDR Annex detailing its planned asset allocation. For all subsequent reference periods, this calculation will be based on the average of the four quarter ends.

Asset allocation describes the share of investments in specific assets.

● ***In which economic sectors were the investments made?***

Data as at 31 December 2022	
Economic Sector – NACE	% Assets
B - Mining and quarrying	0.98%
C - Manufacturing	5.70%
D - Electricity, gas, steam and air conditioning supply	3.71%
F - Construction	1.39%
H - Transporting and storage	7.11%
I - Accommodation and food service activities	1.50%
J - Information and communication	4.34%
K - Financial and insurance activities	59.69%
L - Real estate activities	0.73%
M - Professional, scientific and technical activities	0.63%
N - Administrative and support service activities	4.88%
O - Public administration and defence; compulsory social security	2.56%
R - Arts, entertainment and recreation	2.44%
U - Activities of extraterritorial organisations and bodies	0.83%
None	3.53%

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

- **Transitional activities are** activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

## To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The analysis and disclosure requirements introduced by the EU Taxonomy are very detailed and compliance with them requires the availability of multiple, specific data points in respect of each investment which the Portfolio made. The Sub-Investment Manager cannot confirm that the Portfolio invested in any investments that qualified as environmentally sustainable for the purposes of the EU Taxonomy. Disclosures and reporting on Taxonomy alignment will develop as the EU framework evolves and data is made available by issuers. The Sub-Investment Manager will keep the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy under active review as data availability and quality improves.

### ● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?

Yes:

In fossil gas

In nuclear energy

No

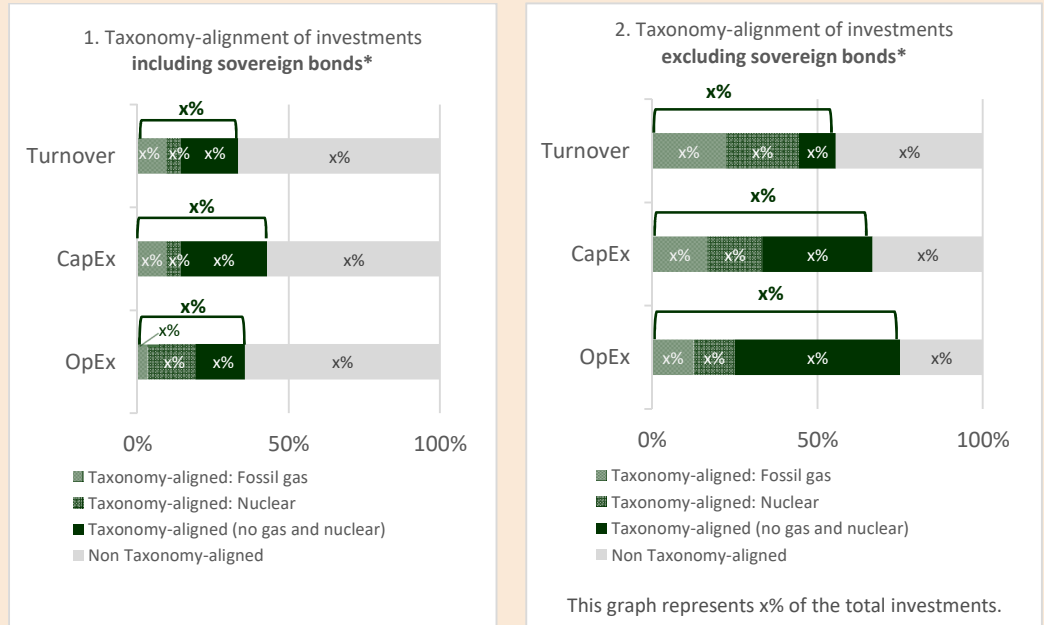

---

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

- **What was the share of investments made in transitional and enabling activities?**

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments.

- **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments.

### **What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?**

N/A – the Portfolio did not commit to holding sustainable investments.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

### **What was the share of socially sustainable investments?**

N/A – the Portfolio did not commit to holding sustainable investments.

### **What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?**

“Other” included the remaining investments of the Portfolio (including but not limited to any derivatives or any security collateralized by a pool of similar assets or receivables listed in the Supplement for the Portfolio) which were neither aligned with the environmental or social characteristics, nor qualified as sustainable investments.

The “Other” section in the Portfolio was held for a number of reasons that the Sub-Investment Manager felt was beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover.

As noted above, the Portfolio was invested in compliance with ESG exclusion policies, on a continuous basis. This ensured that investments made by the Portfolio sought to align with international environmental and social safeguards such as the UNGC Principles, UNGPs, OECD Guidelines and the ILO Standards.

The Sub-Investment Manager believes that these policies prevented investment in issuers that most egregiously violated environmental and/or social minimum standards and ensured that the Portfolio could successfully promote its environmental and social characteristics.

The above steps ensured that robust environmental and social safeguards were in place.

## What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Portfolio was managed in-line with the investment objective and the following actions were taken:

### I. Integrating proprietary ESG analysis:

The NB ESG Quotient ratings were generated for issuers in the Portfolio. The NB ESG Quotient rating for issuers was utilised to help to better identify risks and opportunities in the overall credit and value assessment.

The NB ESG Quotient was a key component of the internal credit ratings and helped to identify business risks (including ESG risks), which would cause deterioration in an issuer's credit profile. Internal credit ratings can be notched up or down based on the NB ESG Quotient rating, and this was monitored by the Sub-Investment Manager as an important component of the investment process for the Portfolio.

By integrating the investment team's proprietary ESG analysis (the NB ESG Quotient) into their internal credit ratings, there was a direct link between their analysis of material ESG characteristics and portfolio construction activities across their strategy.

Issuers with a favourable and/or an improving NB ESG Quotient rating had a higher chance of ending up in the Portfolio, at the point of inception. Issuers with a poor NB ESG Quotient rating especially where these were not being addressed by that issuer, were more likely to not be included as part of the Portfolio construction.

### II. Engagement:

The Sub-Investment Manager engaged with issuers through a robust ESG engagement program. They sought to prioritise constructive engagements and sought to engage on topics (including ESG topics) they determined to be financially material for the relevant issuer. The Sub-Investment Manager viewed this engagement with issuers, as an important part of its investment process as it allowed the Sub-Investment Manager to ensure that its initial assessment of the issuer (at the point of inception) remained accurate and informed the issuer's ongoing NB ESG Quotient rating. Progress on engagement was tracked centrally in the Sub-Investment Manager's engagement tracker.

### III. ESG sectoral exclusion policies:

To ensure that the environmental and social characteristics promoted by the Portfolio were attained, the Portfolio applied the ESG exclusion policies referenced above, which placed limitations on the investable universe.

## How did this financial product perform compared to the reference benchmark?

N/A – The Portfolio does not use a benchmark.

- ***How does the reference benchmark differ from a broad market index?***  
N/A
- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***  
N/A
- ***How did this financial product perform compared with the reference benchmark?***  
N/A
- ***How did this financial product perform compared with the broad market index?***  
N/A

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

## To what extent were the environmental and/or social characteristics promoted by this financial product met?

The following environmental and social characteristics were promoted by the Portfolio:

- **Environmental Characteristics:** biodiversity & responsible land usage; carbon footprint reduction; environmental management; greenhouse gas (“GHG”) emissions; opportunities in clean technologies; opportunities in green building; opportunities in renewable energy; responsible raw material sourcing; responsible & transparent underwriting; toxic emissions & waste; waste management and water management.
- **Social Characteristics:** access to finance; access to medicines; affordability & fair pricing; business ethics & transparency of government relations; chemical safety; community relations; controversial sourcing; corporate behaviour; drug safety & side effects management; ethical marketing & practices; health & nutrition; health & safety; human capital development; labour management; data privacy & security; product safety & quality; and litigation & related controversy.

Performance in relation to these environmental and social characteristics was measured through the NB ESG Quotient, and is reported, in aggregate, below.

### How did the sustainability indicators perform?

As part of the investment process, the Manager considered a variety of sustainability indicators to measure the environmental and/or social characteristics promoted by the Portfolio. These sustainability indicators are listed below:

#### 1. The NB ESG Quotient:

The proprietary Neuberger Berman ESG rating system (the “NB ESG Quotient”), is built around the concept of sector specific ESG risk and opportunity, and produced an overall ESG rating for issuers by assessing them against certain ESG metrics.

Foundational to the NB ESG Quotient is the proprietary Neuberger Berman (“NB”) materiality matrix, which focuses on the ESG characteristics that were considered to be the most likely to be the material drivers of ESG risk and opportunity for each sector. Each sector criteria is constructed using third-party and internally derived ESG data and supplemented with internal qualitative analysis, leveraging the Portfolio’s analyst team’s significant sector expertise. The NB materiality matrix enabled the Manager to derive the NB ESG Quotient rating, to compare sectors and issuers relative to their environmental and social characteristics.

The NB ESG Quotient assigned weightings to environmental, social and governance characteristics for each sector to derive the NB ESG Quotient rating for issuers. Issuers with a favourable and/or an improving NB ESG Quotient rating had a higher chance of being included in the Portfolio. Issuers with a poor NB ESG Quotient rating, especially where a poor NB ESG Quotient rating was not being addressed by an issuer, were more likely to be removed from the investment universe or divested from the Portfolio. In addition, the Manager sought to prioritise constructive engagements with issuers that had a poor NB ESG Quotient rating, in order to assess whether concerns were being addressed adequately.

31 December 2022	Rating	Combined coverage
NB ESG Quotient	66	94%
Third-party Data	6.5	

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

With regards to the NB ESG Quotient rating, a rating between 1 – 100 is used where 1 is the lowest rating and 100 is the highest rating. This Portfolio does not have a minimum NB ESG Quotient rating. The average NB ESG Quotient rating is a weighted average and is not a rating of the Portfolio strategy itself.

Third-party data was also used to measure the environmental and social characteristics promoted by the Portfolio. The third-party data ratings range from 0-10, with 0 being the lowest rating and 10 being the highest rating.

## 2. Climate Value-at-Risk:

Over the reference period, Climate Value-at-Risk (“**CVaR**”) measured the exposure to transition and physical climate risks. CVaR is a scenario analysis tool evaluating economic risks under various degree scenarios (i.e., the amount of warming targeted) and potential regulatory environments in varying countries.

CVaR is a type of scenario analysis which is defined as the present value of aggregated future policy risk costs, technology opportunity profits, and extreme weather event costs and profits, expressed as a percentage of a security or portfolio's market value according to the warming scenario targeted.

By calculating the financial risks from climate change per security and per scenario, CVaR provides a framework that helps quantify and understand these risks. The CVaR metric provides insight into the climate-stressed valuation of assets based on specific degree scenarios, providing an assessment on how much a security may stand to lose or gain from the impact of climate change.

As at 31 December 2022, CVaR projected that a warming climate scenario could result in a depreciation of 4.96% in the valuation of assets under assessment.

This analysis is intended as a broad overview of the investment team's style and investment process.

On a holistic basis, the results were evaluated by the Manager's portfolio managers and analysts. The scenario analysis served as a starting point for further bottom-up analysis and identifying potential climate-related risks to address through issuer engagement.

Due to data limitations, CVaR was not applied across all issuers held by the Portfolio and was instead limited to the issuers for which the Manager had sufficient and reliable data. The Portfolio had a CVaR coverage of 17%.

The analysis from CVaR is reviewed at least once a year.

## 3. ESG exclusion policies:

To ensure that the environmental or social characteristics promoted by the Portfolio were attained, the Portfolio did not invest in securities issued by issuers whose activities breached, or were not consistent with, the Neuberger Berman Controversial Weapons Policy and the Neuberger Berman Thermal Coal Involvement Policy. In addition to the application of the Neuberger Berman Thermal Coal Involvement Policy, the Manager prohibited the initiation of new investment positions in securities issued by issuers that (i) derived more than 25% of their revenue from thermal coal mining; or (ii) were expanding new thermal coal power generation. Furthermore, from 6 April 2022 onwards, investments held by the Portfolio did not invest in securities issued by issuers whose activities had been identified as breaching the Neuberger Berman Global Standards Policy which excluded identified violators of (i) the United Nations Global Compact Principles (“**UNGC Principles**”), (ii) the OECD Guidelines for Multinational Enterprises (“**OECD Guidelines**”), (iii) the United Nations Guiding Principles on Business and Human Rights (“**UNGPs**”) and (iv) the International Labour Standards (“**ILO Standards**”). Additionally, the Portfolio was prohibited from purchasing the securities of issuers that were involved in tobacco production such as cigars, cigarettes, e-cigarettes,

smokeless tobacco, dissolvable and chewing tobacco. This also included issuers that grow or process raw tobacco leaves.

When applying ESG exclusions to the Portfolio, the Manager used third-party data to identify issuers in breach of the ESG exclusions listed above. Where possible, the Manager sought to overlay this third-party data with qualitative expertise from their research analysts to establish a current and holistic picture of the issuer. The Manager discussed and debated the differences between the violators identified by the third-party data and those identified as a result of their research, which drew upon data from the NB ESG Quotient and direct engagements with the issuer.

● ***...and compared to previous periods?***

N/A – this is the first reference period.

● ***What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?***

N/A – the Portfolio did not commit to holding sustainable investments.

● ***How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?***

N/A – the Portfolio did not commit to holding sustainable investments.

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

— ***How were the indicators for adverse impacts on sustainability factors taken into account?***

N/A – the Portfolio did not commit to holding sustainable investments.

— ***Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

The Portfolio did not commit to holding sustainable investments, however, from 6 April 2022 onwards, the Manager did not invest in issuers whose activities had been identified as breaching the OECD Guidelines, UNGC Principles, ILO Standards and UNGPs, captured through the Neuberger Berman Global Standards Policy.

*The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.*

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

N/A - The Portfolio did not commit to holding Taxonomy-aligned investments.

### **How did this financial product consider principal adverse impacts on sustainability factors?**

A selection of the principal adverse impact indicators were considered directly (e.g. through the ESG exclusion policies listed above) and/or indirectly (e.g. as part of the Manager’s assessment of issuers) throughout the 2022 reference period.

From 28 November 2022 onwards, the Manager considered the following principal adverse impacts with respect to the Portfolio, namely: GHG intensity and investee countries subject to social violations (the “**Sovereign PAIs**”) for the sovereign issuers; and GHG emissions, carbon footprint, GHG intensity, fossil fuel exposure, board gender diversity, UNGC Principles & OECD Guidelines violations and controversial weapons for the corporate issuers (together the “**Product Level PAIs**”).

Consideration of the Product Level PAIs was limited by the availability (in the Manager’s subjective view) of adequate, reliable and verifiable data coverage. The Manager utilised third party data and proxy data along with internal research to consider the Product Level PAIs.

Consideration of the Product Level PAIs by the Manager was through a combination of:

- Monitoring the Portfolio, in particular where it fell below the quantitative and qualitative tolerance thresholds set for each Product Level PAI by the Manager;
- Stewardship and/or setting engagement objectives where the Portfolio fell below the quantitative and qualitative tolerance thresholds set for a Product Level PAI by the Manager; and
- Application of the ESG exclusion policies referenced above, which included consideration of several of the Product Level PAIs.

## What were the top investments of this financial product?

The Manager has used the EU statistical classification of economic activities (“NACE”) economic sector breakdown to identify the economic sectors of the Portfolio’s top 15 investments. The following data is as at 31 December 2022.

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: 1 January 2022 - 31 December 2022

Largest investments	Sector	% Assets	Country
PORTUGAL (REPUBLIC OF)	O - Public administration and defence; compulsory social security	2.8%	Portugal
ITALY (REPUBLIC OF)	O - Public administration and defence; compulsory social security	2.8%	Italy
SLOVAKIA GOVERNMENT BOND RegS	O - Public administration and defence; compulsory social security	2.6%	Slovak Republic
BANK OF MONTREAL RegS	K - Financial and insurance activities	2.0%	Canada
ITALY (REPUBLIC OF) RegS	O - Public administration and defence; compulsory social security	1.9%	Italy
GTR 20-1 A RegS	K - Financial and insurance activities	1.9%	Ireland
BANK GOSPODARSTWA KRAJOWEGO MTN RegS	K - Financial and insurance activities	1.8%	Poland
FRANCE (REPUBLIC OF) RegS	O - Public administration and defence; compulsory social security	1.7%	France
FRANCE (REPUBLIC OF) RegS	O - Public administration and defence; compulsory social security	1.6%	France
PORTUGAL GOVERNMENT BOND	O - Public administration and defence; compulsory social security	1.5%	Portugal
KFW	K - Financial and insurance activities	1.5%	Germany
CROATIA (REPUBLIC OF) RegS	O - Public administration and defence; compulsory social security	1.5%	Croatia
NETHERLANDS (KINGDOM OF)	O - Public administration and defence; compulsory social security	1.3%	Netherlands
ESTONIA (REPUBLIC OF) RegS	O - Public administration and defence; compulsory social security	1.3%	Estonia
ITALY (REPUBLIC OF) RegS	O - Public administration and defence; compulsory social security	1.2%	Italy

## What was the proportion of sustainability-related investments?

### ● What was the asset allocation?

The Manager calculated the proportion of investments aligned with the environmental and/or social characteristics promoted by the Portfolio by reference to the proportion of issuers in the Portfolio: i) that held either an NB ESG Quotient rating or a third party equivalent ESG rating that was used as part of the portfolio construction and investment management process of the Portfolio; and/or ii) with whom the Manager had engaged directly. This calculation was based on a mark-to-market assessment of the Portfolio and may rely on incomplete or inaccurate issuer or third party data. For the 2022 reference period only, this calculation is based on the Portfolio’s holdings as at 31 December 2022, being the only quarter end in the reference period that followed the publication of the Portfolio’s SFDR Annex detailing its planned asset allocation. For all subsequent reference periods, this calculation will be based on the average of the four quarter ends.

**Asset allocation** describes the share of investments in specific assets.

● ***In which economic sectors were the investments made?***

<b>Data as at 31 December 2022</b>	
<b>Economic Sector – NACE</b>	<b>% Assets</b>
C - Manufacturing	4.46%
D - Electricity, gas, steam and air conditioning supply	4.23%
E - Water supply; sewerage; waste management and remediation activities	0.88%
G - Wholesale and retail trade; repair of motor vehicles and motorcycles	0.31%
H - Transporting and storage	2.18%
J - Information and communication	2.68%
K - Financial and insurance activities	35.72%
L - Real estate activities	4.30%
N - Administrative and support service activities	0.18%
O - Public administration and defense; compulsory social security	33.28%
R - Arts, entertainment and recreation	0.40%
U - Activities of extraterritorial organisations and bodies	2.65%
None	8.73%

## To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The analysis and disclosure requirements introduced by the EU Taxonomy are very detailed and compliance with them requires the availability of multiple, specific data points in respect of each investment which the Portfolio made. The Manager cannot confirm that the Portfolio invested in any investments that qualified as environmentally sustainable for the purposes of the EU Taxonomy. Disclosures and reporting on Taxonomy alignment will develop as the EU framework evolves and data is made available by issuers. The Manager will keep the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy under active review as data availability and quality improves.

● **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?**

Yes:

In fossil gas  In nuclear energy

No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

- **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

---

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

- **What was the share of investments made in transitional and enabling activities?**

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments.

- **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments.

- **What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?**

N/A – the Portfolio did not commit to holding sustainable investments.

### What was the share of socially sustainable investments?

N/A – the Portfolio did not commit to holding sustainable investments.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

### What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

“Other” included the remaining investments of the Portfolio (including but not limited to any derivatives or any security collateralized by a pool of similar assets or receivables listed in the Supplement for the Portfolio) which were neither aligned with the environmental or social characteristics, nor qualified as sustainable investments.

The “Other” section in the Portfolio was held for a number of reasons that the Manager felt was beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover.

As noted above, the Portfolio was invested in compliance with ESG exclusion policies, on a continuous basis. This ensured that investments made by the Portfolio sought to align with international environmental and social safeguards such as the UNGC Principles, UNGPs, OECD Guidelines and the ILO Standards.

The Manager believes that these policies prevented investment in issuers that most egregiously violated environmental and/or social minimum standards and ensured that the Portfolio could successfully promote its environmental and social characteristics.

The above steps ensured that robust environmental and social safeguards were in place.

## What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Portfolio was managed in-line with the investment objective and the following actions were taken:

### I. Integrating proprietary ESG analysis:

The NB ESG Quotient ratings were generated for issuers in the Portfolio. The NB ESG Quotient rating for issuers was utilised to help to better identify risks and opportunities in the overall credit and value assessment.

The NB ESG Quotient was a key component of the internal credit ratings and helped to identify business risks (including ESG risks), which would cause deterioration in an issuer's credit profile. Internal credit ratings can be notched up or down based on the NB ESG Quotient rating, and this was monitored by the Manager as an important component of the investment process for the Portfolio.

By integrating the investment team's proprietary ESG analysis (the NB ESG Quotient) into their internal credit ratings, there was a direct link between their analysis of material ESG characteristics and portfolio construction activities across their strategy.

Issuers with a favourable and/or an improving NB ESG Quotient rating had a higher chance of ending up in the Portfolio. Issuers with a poor NB ESG Quotient rating especially where these were not being addressed by that issuer, were more likely to be removed from the investment universe or divested from the Portfolio.

### II. Engagement:

The Manager engaged with issuers through a robust ESG engagement program. They sought to prioritise constructive engagements and sought to engage on topics (including ESG topics) they determined to be financially material for the relevant issuer. The Manager viewed this engagement with issuers, as an important part of its investment process. Progress on engagement was tracked centrally in the Manager's engagement tracker.

### III. ESG sectoral exclusion policies:

To ensure that the environmental and social characteristics promoted by the Portfolio were attained, the Portfolio applied the ESG exclusion policies referenced above, which placed limitations on the investable universe.

## How did this financial product perform compared to the reference benchmark?

N/A – The Portfolio's benchmark has not been designated as a reference benchmark. Therefore, it is not consistent with the environmental or social characteristics promoted by the Portfolio.

- ***How does the reference benchmark differ from a broad market index?***  
N/A
- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***  
N/A
- ***How did this financial product perform compared with the reference benchmark?***  
N/A
- ***How did this financial product perform compared with the broad market index?***  
N/A

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

**Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852**

**Product name:** Neuberger Berman Euro Opportunistic Bond Fund (the “Portfolio”)

**Legal entity identifier:** 549300TQ5M6FBE2H8T74

## Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?	
<input checked="" type="radio"/> <input checked="" type="radio"/> <input type="checkbox"/> <b>Yes</b>	<input checked="" type="radio"/> <input type="radio"/> <input checked="" type="checkbox"/> <b>No</b>
<input type="checkbox"/> It made <b>sustainable investments with an environmental objective:</b> ____% <ul style="list-style-type: none"> <li><input type="checkbox"/> _____ in economic activities that qualify as environmentally sustainable under the EU Taxonomy</li> <li><input type="checkbox"/> _____ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</li> </ul>	<input type="checkbox"/> It promoted <b>Environmental/Social (E/S) characteristics</b> and while it did not have as its objective a sustainable investment, it had a proportion of ____% of sustainable investments <ul style="list-style-type: none"> <li><input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy</li> <li><input type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</li> <li><input type="checkbox"/> with a social objective</li> </ul>
<input type="checkbox"/> It made <b>sustainable investments with a social objective:</b> ____%	<input checked="" type="checkbox"/> It promoted E/S characteristics, but <b>did not make any sustainable investments</b>

## To what extent were the environmental and/or social characteristics promoted by this financial product met?

The following environmental and social characteristics were promoted by the Portfolio:

- **Environmental Characteristics:** biodiversity & responsible land usage; carbon footprint reduction; environmental management; greenhouse gas (“GHG”) emissions; opportunities in clean technologies; opportunities in green building; opportunities in renewable energy; responsible raw material sourcing; responsible & transparent underwriting; toxic emissions & waste; waste management and water management.
- **Social Characteristics:** access to finance; access to medicines; affordability & fair pricing; business ethics & transparency of government relations; chemical safety; community relations; controversial sourcing; corporate behaviour; drug safety & side effects management; ethical marketing & practices; health & nutrition; health & safety; human capital development; labour management; data privacy & security; product safety & quality; and litigation & related controversy.

Performance in relation to these environmental and social characteristics was measured through the NB ESG Quotient, and is reported, in aggregate, below.

### ● How did the sustainability indicators perform?

As part of the investment process, the Manager considered a variety of sustainability indicators to measure the environmental and/or social characteristics promoted by the Portfolio. These sustainability indicators are listed below:

#### 1. The NB ESG Quotient:

The proprietary Neuberger Berman ESG rating system (the “NB ESG Quotient”), is built around the concept of sector specific ESG risk and opportunity, and produced an overall ESG rating for issuers by assessing them against certain ESG metrics.

Foundational to the NB ESG Quotient is the proprietary Neuberger Berman (“NB”) materiality matrix, which focuses on the ESG characteristics that were considered to be the most likely to be the material drivers of ESG risk and opportunity for each sector. Each sector criteria is constructed using third-party and internally derived ESG data and supplemented with internal qualitative analysis, leveraging the Portfolio’s analyst team’s significant sector expertise. The NB materiality matrix enabled the Manager to derive the NB ESG Quotient rating, to compare sectors and issuers relative to their environmental and social characteristics.

The NB ESG Quotient assigned weightings to environmental, social and governance characteristics for each sector to derive the NB ESG Quotient rating for issuers. Issuers with a favourable and/or an improving NB ESG Quotient rating had a higher chance of being included in the Portfolio. Issuers with a poor NB ESG Quotient rating, especially where a poor NB ESG Quotient rating was not being addressed by an issuer, were more likely to be removed from the investment universe or divested from the Portfolio. In addition, the Manager sought to prioritise constructive engagements with issuers that had a poor NB ESG Quotient rating, in order to assess whether concerns were being addressed adequately.

31 December 2022	Rating	Combined coverage
NB ESG Quotient	66	90%
Third-party Data	6.0	

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

With regards to the NB ESG Quotient rating, a rating between 1 – 100 is used where 1 is the lowest rating and 100 is the highest rating. This Portfolio does not have a minimum NB ESG Quotient rating. The average NB ESG Quotient rating is a weighted average and is not a rating of the Portfolio strategy itself.

Third-party data was also used to measure the environmental and social characteristics promoted by the Portfolio. The third-party data ratings range from 0-10, with 0 being the lowest rating and 10 being the highest rating.

## 2. Climate Value-at-Risk:

Over the reference period, Climate Value-at-Risk (“**CVaR**”) measured the exposure to transition and physical climate risks. CVaR is a scenario analysis tool evaluating economic risks under various degree scenarios (i.e., the amount of warming targeted) and potential regulatory environments in varying countries.

CVaR is a type of scenario analysis which is defined as the present value of aggregated future policy risk costs, technology opportunity profits, and extreme weather event costs and profits, expressed as a percentage of a security or portfolio's market value according to the warming scenario targeted.

By calculating the financial risks from climate change per security and per scenario, CVaR provides a framework that helps quantify and understand these risks. The CVaR metric provides insight into the climate-stressed valuation of assets based on specific degree scenarios, providing an assessment on how much a security may stand to lose or gain from the impact of climate change.

As at 31 December 2022, CVaR projected that a warming climate scenario could result in a depreciation of 5.36% in the valuation of assets under assessment.

This analysis is intended as a broad overview of the investment team's style and investment process.

On a holistic basis, the results were evaluated by the Manager's portfolio managers and analysts. The scenario analysis served as a starting point for further bottom-up analysis and identifying potential climate-related risks to address through issuer engagement.

Due to data limitations, CVaR was not applied across all issuers held by the Portfolio and was instead limited to the issuers for which the Manager had sufficient and reliable data. The Portfolio had a CVaR coverage of 12%.

The analysis from CVaR is reviewed at least once a year.

## 3. ESG exclusion policies:

To ensure that the environmental or social characteristics promoted by the Portfolio were attained, the Portfolio did not invest in securities issued by issuers whose activities breached, or were not consistent with, the Neuberger Berman Controversial Weapons Policy and the Neuberger Berman Thermal Coal Involvement Policy. In addition to the application of the Neuberger Berman Thermal Coal Involvement Policy, the Manager prohibited the initiation of new investment positions in securities issued by issuers that (i) derived more than 25% of their revenue from thermal coal mining; or (ii) were expanding new thermal coal power generation. Furthermore, from 6 April 2022 onwards, investments held by the Portfolio did not invest in securities issued by issuers whose activities had been identified as breaching the Neuberger Berman Global Standards Policy which excluded identified violators of (i) the United Nations Global Compact Principles (“**UNGC Principles**”), (ii) the OECD Guidelines for Multinational Enterprises (“**OECD Guidelines**”), (iii) the United Nations Guiding Principles on Business and Human Rights (“**UNGPs**”) and (iv) the International Labour Standards (“**ILO Standards**”). Additionally, the Portfolio was prohibited from purchasing the securities of issuers that were involved in tobacco production such as cigars, cigarettes, e-cigarettes,

smokeless tobacco, dissolvable and chewing tobacco. This also included issuers that grow or process raw tobacco leaves.

When applying ESG exclusions to the Portfolio, the Manager used third-party data to identify issuers in breach of the ESG exclusions listed above. Where possible, the Manager sought to overlay this third-party data with qualitative expertise from their research analysts to establish a current and holistic picture of the issuer. The Manager discussed and debated the differences between the violators identified by the third-party data and those identified as a result of their research, which drew upon data from the NB ESG Quotient and direct engagements with the issuer.

● ***...and compared to previous periods?***

N/A – this is the first reference period.

● ***What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?***

N/A – the Portfolio did not commit to holding sustainable investments.

● ***How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?***

N/A – the Portfolio did not commit to holding sustainable investments.

— ***How were the indicators for adverse impacts on sustainability factors taken into account?***

N/A – the Portfolio did not commit to holding sustainable investments.

— ***Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

The Portfolio did not commit to holding sustainable investments, however, from 6 April 2022 onwards, the Manager did not invest in issuers whose activities had been identified as breaching the OECD Guidelines, UNGC Principles, ILO Standards and UNGPs, captured through the Neuberger Berman Global Standards Policy.

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

*The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.*

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

N/A - The Portfolio did not commit to holding Taxonomy-aligned investments.

### **How did this financial product consider principal adverse impacts on sustainability factors?**

A selection of the principal adverse impact indicators were considered directly (e.g. through the ESG exclusion policies listed above) and/or indirectly (e.g. as part of the Manager’s assessment of issuers) throughout the 2022 reference period.

From 28 November 2022 onwards, the Manager considered the following principal adverse impacts with respect to the Portfolio, namely: GHG intensity and investee countries subject to social violations (the “**Sovereign PAIs**”) for the sovereign issuers; and GHG emissions, carbon footprint, GHG intensity, fossil fuel exposure, board gender diversity, UNGC Principles & OECD Guidelines violations and controversial weapons for the corporate issuers (together the “**Product Level PAIs**”).

Consideration of the Product Level PAIs was limited by the availability (in the Manager’s subjective view) of adequate, reliable and verifiable data coverage. The Manager utilised third-party data and proxy data along with internal research to consider the Product Level PAIs.

Consideration of the Product Level PAIs by the Manager was through a combination of:

- Monitoring the Portfolio, in particular where it fell below the quantitative and qualitative tolerance thresholds set for each Product Level PAI by the Manager;
- Stewardship and/or setting engagement objectives where the Portfolio fell below the quantitative and qualitative tolerance thresholds set for a Product Level PAI by the Manager; and
- Application of the ESG exclusion policies referenced above, which included consideration of several of the Product Level PAIs.

## What were the top investments of this financial product?

The Manager has used the EU statistical classification of economic activities (“NACE”) economic sector breakdown to identify the economic sectors of the Portfolio’s top 15 investments. The following data is as at 31 December 2022.

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: 1 January 2022 - 31 December 2022

Largest investments		Sector	% Assets	Country
PORTUGAL (REPUBLIC OF)		O - Public administration and defence; compulsory social security	3.1%	Portugal
ITALY (REPUBLIC OF)		O - Public administration and defence; compulsory social security	2.0%	Italy
NETHERLANDS (KINGDOM OF)		O - Public administration and defence; compulsory social security	2.0%	Netherlands
ITALY (REPUBLIC OF)	RegS	O - Public administration and defence; compulsory social security	1.8%	Italy
GTR 20-1	A RegS	K - Financial and insurance activities	1.7%	Ireland
ITALY GOVERNMENT BOND		O - Public administration and defence; compulsory social security	1.5%	Italy
BANCO SANTANDER SA	RegS	K - Financial and insurance activities	1.5%	Spain
FRANCE (REPUBLIC OF)	RegS	O - Public administration and defence; compulsory social security	1.5%	France
ESTONIA (REPUBLIC OF)	RegS	O - Public administration and defence; compulsory social security	1.4%	Estonia
ITALY (REPUBLIC OF)	RegS	O - Public administration and defence; compulsory social security	1.4%	Italy
ITALY (REPUBLIC OF)	RegS	O - Public administration and defence; compulsory social security	1.3%	Italy
EUROPEAN UNION	RegS	U - Activities of extraterritorial organisations and bodies	1.1%	Supranational
ING GROEP NV	RegS	K - Financial and insurance activities	1.1%	Netherlands
SOUTHERN ELECTRIC GENERATING CO		D - Electricity, gas, steam and air conditioning supply	1.1%	United States
GERMANY (FEDERAL REPUBLIC OF)	RegS	O - Public administration and defence; compulsory social security	1.1%	Germany

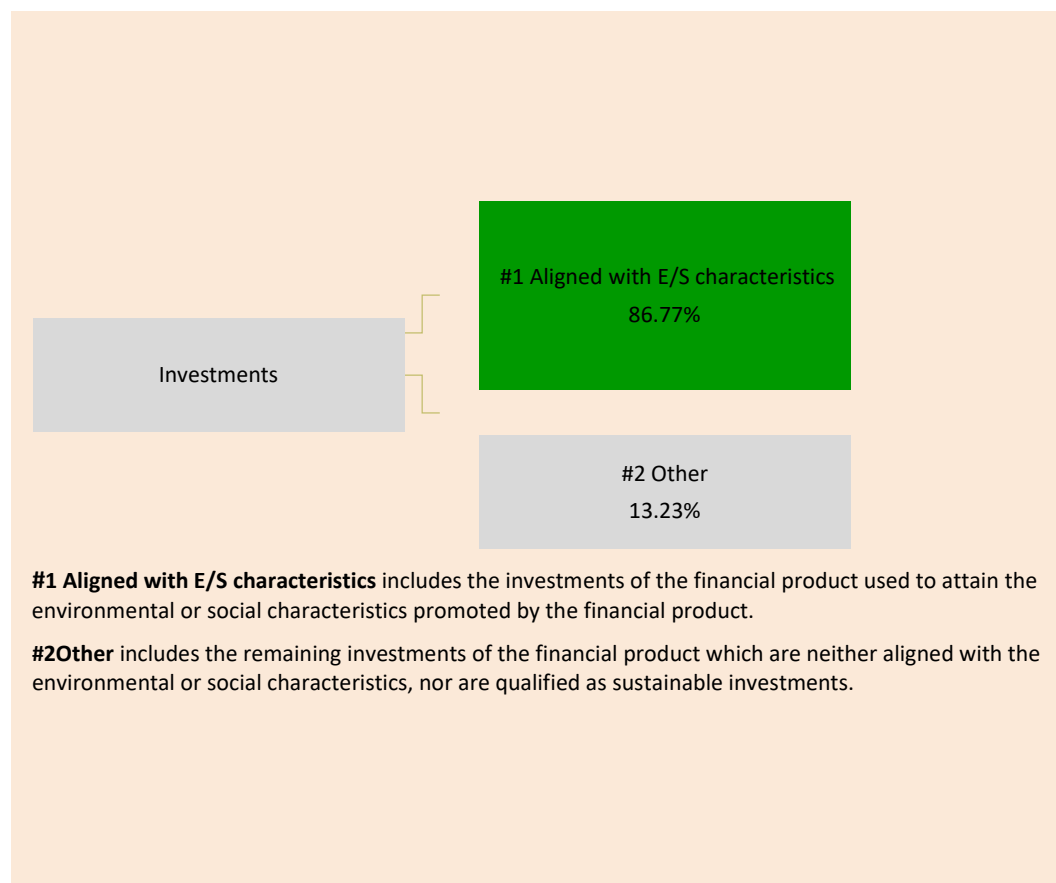

## What was the proportion of sustainability-related investments?

### ● What was the asset allocation?

The Manager calculated the proportion of investments aligned with the environmental and/or social characteristics promoted by the Portfolio by reference to the proportion of issuers in the Portfolio: i) that held either an NB ESG Quotient rating or a third-party equivalent ESG rating that was used as part of the portfolio construction and investment management process of the Portfolio; and/or ii) with whom the Manager had engaged directly. This calculation was based on a mark-to-market assessment of the Portfolio and may rely on incomplete or inaccurate issuer or third-party data. For the 2022 reference period only, this calculation is based on the Portfolio’s holdings as at 31 December 2022, being the only quarter end in the reference period that followed the publication of the Portfolio’s SFDR Annex detailing its planned asset allocation. For all subsequent reference periods, this calculation will be based on the average of the four quarter ends.

**Asset allocation** describes the share of investments in specific assets.

● ***In which economic sectors were the investments made?***

Data as at 31 December 2022	
Economic Sector – NACE	% Assets
C - Manufacturing	2.70%
D - Electricity, gas, steam and air conditioning supply	4.18%
G - Wholesale and retail trade; repair of motor vehicles and motorcycles	0.83%
H - Transporting and storage	1.75%
J - Information and communication	3.03%
K - Financial and insurance activities	29.61%
L - Real estate activities	4.80%
O - Public administration and defense; compulsory social security	41.67%
R - Arts, entertainment and recreation	1.07%
U - Activities of extraterritorial organizations and bodies	4.08%
None	6.28%

## To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The analysis and disclosure requirements introduced by the EU Taxonomy are very detailed and compliance with them requires the availability of multiple, specific data points in respect of each investment which the Portfolio made. The Manager cannot confirm that the Portfolio invested in any investments that qualified as environmentally sustainable for the purposes of the EU Taxonomy. Disclosures and reporting on Taxonomy alignment will develop as the EU framework evolves and data is made available by issuers. The Manager will keep the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy under active review as data availability and quality improves.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

- **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

### ● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?

Yes:

In fossil gas  In nuclear energy

No

---

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

● **What was the share of investments made in transitional and enabling activities?**

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments.

**What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?**

N/A – the Portfolio did not commit to holding sustainable investments.

### What was the share of socially sustainable investments?

N/A – the Portfolio did not commit to holding sustainable investments.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

### What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

“Other” included the remaining investments of the Portfolio (including but not limited to any derivatives or any security collateralized by a pool of similar assets or receivables listed in the Supplement for the Portfolio) which were neither aligned with the environmental or social characteristics, nor qualified as sustainable investments.

The “Other” section in the Portfolio was held for a number of reasons that the Manager felt was beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover.

As noted above, the Portfolio was invested in compliance with ESG exclusion policies, on a continuous basis. This ensured that investments made by the Portfolio sought to align with international environmental and social safeguards such as the UNGC Principles, UNGPs, OECD Guidelines and the ILO Standards.

The Manager believes that these policies prevented investment in issuers that most egregiously violated environmental and/or social minimum standards and ensured that the Portfolio could successfully promote its environmental and social characteristics.

The above steps ensured that robust environmental and social safeguards were in place.

## What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Portfolio was managed in-line with the investment objective and the following actions were taken:

### I. Integrating proprietary ESG analysis:

The NB ESG Quotient ratings were generated for issuers in the Portfolio. The NB ESG Quotient rating for issuers was utilised to help to better identify risks and opportunities in the overall credit and value assessment.

The NB ESG Quotient was a key component of the internal credit ratings and helped to identify business risks (including ESG risks), which would cause deterioration in an issuer's credit profile. Internal credit ratings can be notched up or down based on the NB ESG Quotient rating, and this was monitored by the Manager as an important component of the investment process for the Portfolio.

By integrating the investment team's proprietary ESG analysis (the NB ESG Quotient) into their internal credit ratings, there was a direct link between their analysis of material ESG characteristics and portfolio construction activities across their strategy.

Issuers with a favourable and/or an improving NB ESG Quotient rating had a higher chance of ending up in the Portfolio. Issuers with a poor NB ESG Quotient rating especially where these were not being addressed by that issuer, were more likely to be removed from the investment universe or divested from the Portfolio.

### II. Engagement:

The Manager engaged with issuers through a robust ESG engagement program. They sought to prioritise constructive engagements and sought to engage on topics (including ESG topics) they determined to be financially material for the relevant issuer. The Manager viewed this engagement with issuers, as an important part of its investment process. Progress on engagement was tracked centrally in the Manager's engagement tracker.

### III. ESG sectoral exclusion policies:

To ensure that the environmental and social characteristics promoted by the Portfolio were attained, the Portfolio applied the ESG exclusion policies referenced above, which placed limitations on the investable universe.

## **How did this financial product perform compared to the reference benchmark?**

N/A – The Portfolio's benchmark has not been designated as a reference benchmark. Therefore, it is not consistent with the environmental or social characteristics promoted by the Portfolio.

- ***How does the reference benchmark differ from a broad market index?***  
N/A
- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***  
N/A
- ***How did this financial product perform compared with the reference benchmark?***  
N/A
- ***How did this financial product perform compared with the broad market index?***  
N/A

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

**Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852**

**Product name:** Neuberger Berman Ultra Short Term Euro Bond Fund (the “Portfolio”)

**Legal entity identifier:** 5493005BLB45DI1FOM10

## Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?	
<input checked="" type="radio"/> <input checked="" type="radio"/> <input type="checkbox"/> <b>Yes</b>	<input checked="" type="radio"/> <input type="radio"/> <input checked="" type="checkbox"/> <b>No</b>
<input type="checkbox"/> It made <b>sustainable investments with an environmental objective: ___%</b> <input type="checkbox"/> _____ in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> _____ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	<input type="checkbox"/> It <b>promoted Environmental/Social (E/S) characteristics</b> and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments <input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> with a social objective
<input type="checkbox"/> It made <b>sustainable investments with a social objective: ___%</b>	<input checked="" type="checkbox"/> It promoted E/S characteristics, but <b>did not make any sustainable investments</b>

## To what extent were the environmental and/or social characteristics promoted by this financial product met?

The following environmental and social characteristics were promoted by the Portfolio:

- **Environmental Characteristics:** biodiversity & responsible land usage; carbon footprint reduction; environmental management; greenhouse gas (“GHG”) emissions; opportunities in clean technologies; opportunities in green building; opportunities in renewable energy; responsible raw material sourcing; responsible & transparent underwriting; toxic emissions & waste; waste management and water management.
- **Social Characteristics:** access to finance; access to medicines; affordability & fair pricing; business ethics & transparency of government relations; chemical safety; community relations; controversial sourcing; corporate behaviour; drug safety & side effects management; ethical marketing & practices; health & nutrition; health & safety; human capital development; labour management; data privacy & security; product safety & quality; and litigation & related controversy.

Performance in relation to these environmental and social characteristics was measured through the NB ESG Quotient, and is reported, in aggregate, below.

### How did the sustainability indicators perform?

As part of the investment process, the Manager considered a variety of sustainability indicators to measure the environmental and/or social characteristics promoted by the Portfolio. These sustainability indicators are listed below:

#### 1. The NB ESG Quotient:

The proprietary Neuberger Berman ESG rating system (the “NB ESG Quotient”), is built around the concept of sector specific ESG risk and opportunity, and produced an overall ESG rating for issuers by assessing them against certain ESG metrics.

Foundational to the NB ESG Quotient is the proprietary Neuberger Berman (“NB”) materiality matrix, which focuses on the ESG characteristics that were considered to be the most likely to be the material drivers of ESG risk and opportunity for each sector. Each sector criteria is constructed using third-party and internally derived ESG data and supplemented with internal qualitative analysis, leveraging the Portfolio’s analyst team’s significant sector expertise. The NB materiality matrix enabled the Manager to derive the NB ESG Quotient rating, to compare sectors and issuers relative to their environmental and social characteristics.

The NB ESG Quotient assigned weightings to environmental, social and governance characteristics for each sector to derive the NB ESG Quotient rating for issuers. Issuers with a favourable and/or an improving NB ESG Quotient rating had a higher chance of being included in the Portfolio. Issuers with a poor NB ESG Quotient rating, especially where a poor NB ESG Quotient rating was not being addressed by an issuer, were more likely to be removed from the investment universe or divested from the Portfolio. In addition, the Manager sought to prioritise constructive engagements with issuers that had a poor NB ESG Quotient rating, in order to assess whether concerns were being addressed adequately.

31 December 2022	Rating	Combined coverage
NB ESG Quotient	62	87%
Third-party Data	6.5	

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

With regards to the NB ESG Quotient rating, a rating between 1 – 100 is used where 1 is the lowest rating and 100 is the highest rating. This Portfolio does not have a minimum NB ESG Quotient rating. The average NB ESG Quotient rating is a weighted average and is not a rating of the Portfolio strategy itself.

Third-party data was also used to measure the environmental and social characteristics promoted by the Portfolio. The third-party data ratings range from 0-10, with 0 being the lowest rating and 10 being the highest rating.

## 2. Climate Value-at-Risk:

Over the reference period, Climate Value-at-Risk (“**CVaR**”) measured the exposure to transition and physical climate risks. CVaR is a scenario analysis tool evaluating economic risks under various degree scenarios (i.e., the amount of warming targeted) and potential regulatory environments in varying countries.

CVaR is a type of scenario analysis which is defined as the present value of aggregated future policy risk costs, technology opportunity profits, and extreme weather event costs and profits, expressed as a percentage of a security or portfolio's market value according to the warming scenario targeted.

By calculating the financial risks from climate change per security and per scenario, CVaR provides a framework that helps quantify and understand these risks. The CVaR metric provides insight into the climate-stressed valuation of assets based on specific degree scenarios, providing an assessment on how much a security may stand to lose or gain from the impact of climate change.

As at 31 December 2022, CVaR projected that a warming climate scenario could result in a depreciation of 5.34% in the valuation of assets under assessment.

This analysis is intended as a broad overview of the investment team's style and investment process.

On a holistic basis, the results were evaluated by the Manager's portfolio managers and analysts. The scenario analysis served as a starting point for further bottom-up analysis and identifying potential climate-related risks to address through issuer engagement.

Due to data limitations, CVaR was not applied across all issuers held by the Portfolio and was instead limited to the issuers for which the Manager had sufficient and reliable data. The Portfolio had a CVaR coverage of 52%.

The analysis from CVaR is reviewed at least once a year.

## 3. ESG exclusion policies:

To ensure that the environmental or social characteristics promoted by the Portfolio were attained, the Portfolio did not invest in securities issued by issuers whose activities breached, or were not consistent with, the Neuberger Berman Controversial Weapons Policy and the Neuberger Berman Thermal Coal Involvement Policy. In addition to the application of the Neuberger Berman Thermal Coal Involvement Policy, the Manager prohibited the initiation of new investment positions in securities issued by issuers that (i) derived more than 25% of their revenue from thermal coal mining; or (ii) were expanding new thermal coal power generation. Furthermore, from 6 April 2022 onwards, investments held by the Portfolio did not invest in securities issued by issuers whose activities had been identified as breaching the Neuberger Berman Global Standards Policy which excluded identified violators of (i) the United Nations Global Compact Principles (“**UNGC Principles**”), (ii) the OECD Guidelines for Multinational Enterprises (“**OECD Guidelines**”), (iii) the United Nations Guiding Principles on Business and Human Rights (“**UNGPs**”) and (iv) the International Labour Standards (“**ILO Standards**”). Additionally, the Portfolio was prohibited from purchasing the securities of issuers that were involved in tobacco production such as cigars, cigarettes, e-cigarettes,

smokeless tobacco, dissolvable and chewing tobacco. This also included issuers that grow or process raw tobacco leaves.

When applying ESG exclusions to the Portfolio, the Manager used third-party data to identify issuers in breach of the ESG exclusions listed above. Where possible, the Manager sought to overlay this third-party data with qualitative expertise from their research analysts to establish a current and holistic picture of the issuer. The Manager discussed and debated the differences between the violators identified by the third-party data and those identified as a result of their research, which drew upon data from the NB ESG Quotient and direct engagements with the issuer.

● ***...and compared to previous periods?***

N/A – this is the first reference period.

● ***What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?***

N/A – the Portfolio did not commit to holding sustainable investments.

● ***How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?***

N/A – the Portfolio did not commit to holding sustainable investments.

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

— ***How were the indicators for adverse impacts on sustainability factors taken into account?***

N/A – the Portfolio did not commit to holding sustainable investments.

— ***Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

The Portfolio did not commit to holding sustainable investments, however, from 6 April 2022 onwards, the Manager did not invest in issuers whose activities had been identified as breaching the OECD Guidelines, UNGC Principles, ILO Standards and UNGPs, captured through the Neuberger Berman Global Standards Policy.

*The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.*

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

N/A - The Portfolio did not commit to holding Taxonomy-aligned investments.

### **How did this financial product consider principal adverse impacts on sustainability factors?**

A selection of the principal adverse impact indicators were considered directly (e.g. through the ESG exclusion policies listed above) and/or indirectly (e.g. as part of the Manager’s assessment of issuers) throughout the 2022 reference period.

From 28 November 2022 onwards, the Manager considered the following principal adverse impacts with respect to the Portfolio, namely: GHG emissions, carbon footprint, GHG intensity, fossil fuel exposure, board gender diversity, UNGC Principles & OECD Guidelines violations and controversial weapons (the “**Product Level PAIs**”).

Consideration of the Product Level PAIs was limited by the availability (in the Manager’s subjective view) of adequate, reliable and verifiable data coverage. The Manager utilised third-party data and proxy data along with internal research to consider the Product Level PAIs.

Consideration of the Product Level PAIs by the Manager was through a combination of:

- Monitoring the Portfolio, in particular where it fell below the quantitative and qualitative tolerance thresholds set for each Product Level PAI by the Manager;
- Stewardship and/or setting engagement objectives where the Portfolio fell below the quantitative and qualitative tolerance thresholds set for a Product Level PAI by the Manager; and
- Application of the ESG exclusion policies referenced above, which included consideration of several of the Product Level PAIs.

## What were the top investments of this financial product?

The Manager has used the EU statistical classification of economic activities (“NACE”) economic sector breakdown to identify the economic sectors of the Portfolio’s top 15 investments. The following data is as at 31 December 2022.

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 1 January 2022 - 31 December 2022

Largest investments	Sector	% Assets	Country
MIRAV_19-1 A RegS	N/A	2.2%	Spain
GOLDMAN SACHS GROUP INC/THE MTN RegS	K - Financial and insurance activities	2.0%	United States

MORGAN STANLEY MTN	K - Financial and insurance activities	1.3%	United States
CK HUTCHISON FINANCE (16) LIMITED RegS	K - Financial and insurance activities	1.2%	United Kingdom
LANDSBANKINN HF RegS	K - Financial and insurance activities	1.2%	Iceland
DANSKE BANK A/S MTN RegS	K - Financial and insurance activities	1.2%	Denmark
ATHENE GLOBAL FUNDING RegS	K - Financial and insurance activities	1.1%	United States
BNP PARIBAS SA RegS	K - Financial and insurance activities	1.1%	France
BANQUE FEDERATIVE DU CREDIT MUTUEL MTN	K - Financial and insurance activities	1.1%	France
HOLCIM FINANCE LUX SA	C - Manufacturing	1.0%	Switzerland
BARCLAYS BANK PLC MTN RegS	K - Financial and insurance activities	1.0%	United Kingdom

## What was the proportion of sustainability-related investments?

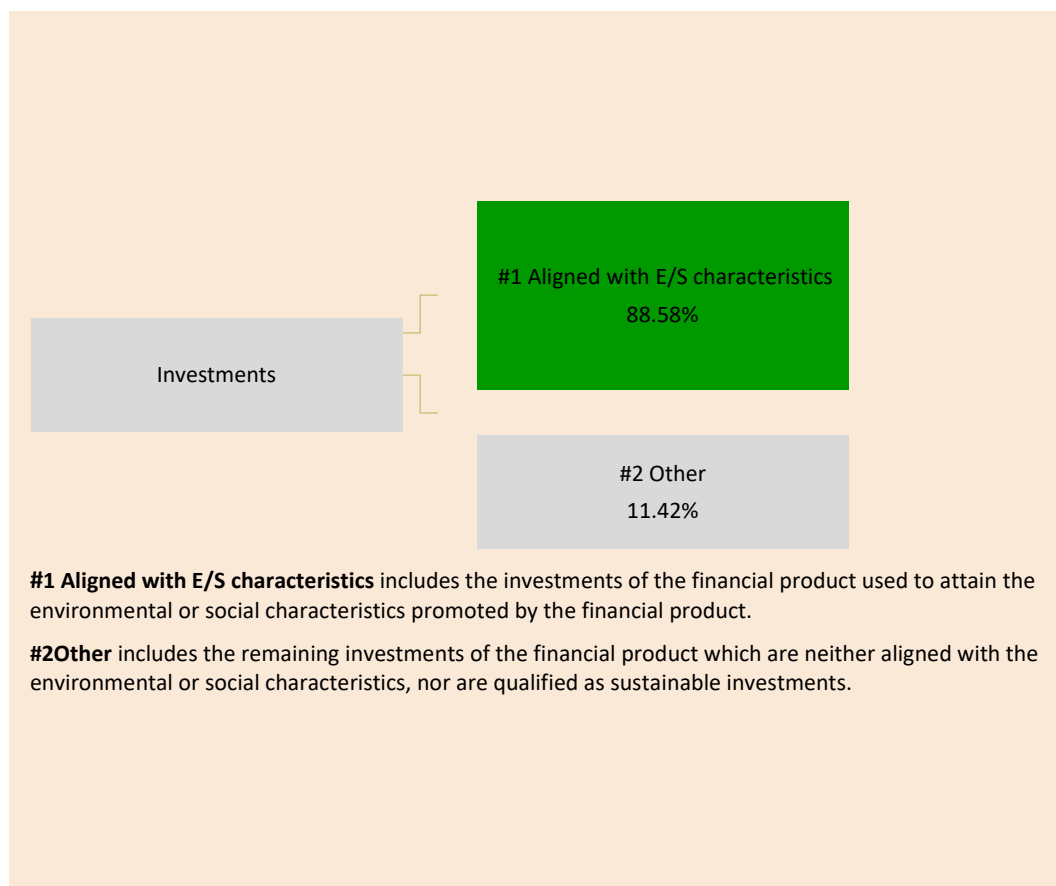

### ● *What was the asset allocation?*

The Manager calculated the proportion of investments aligned with the environmental and/or social characteristics promoted by the Portfolio by reference to the proportion of issuers in the Portfolio: i) that held either an NB ESG Quotient rating or a third-party equivalent ESG rating that was used as part of the portfolio construction and investment management process of the Portfolio; and/or ii) with whom the Manager had engaged directly. This calculation was based on a mark-to-market assessment of the Portfolio and may rely on incomplete or inaccurate issuer or third-party data. For the 2022 reference period only, this calculation is based on the Portfolio's holdings as at 31 December 2022, being the only quarter end in the reference period that followed the publication of the Portfolio's SFDR Annex detailing its planned asset allocation. For all subsequent reference periods, this calculation will be based on the average of the four quarter ends.

### Asset allocation

describes the share of investments in specific assets.

● ***In which economic sectors were the investments made?***

Data as at 31 December 2022	
Economic Sector – NACE	% Assets
C - Manufacturing	11.49%
D - Electricity, gas, steam and air conditioning supply	2.46%
E - Water supply; sewerage; waste management and remediation activities	0.29%
G - Wholesale and retail trade; repair of motor vehicles and motorcycles	1.11%
H - Transporting and storage	1.82%
I - Accommodation and food service activities	0.16%
J - Information and communication	2.23%
K - Financial and insurance activities	57.14%
L - Real estate activities	5.12%
N - Administrative and support service activities	2.48%
O - Public administration and defense; compulsory social security	6.04%
R - Arts, entertainment and recreation	0.55%
U - Activities of extraterritorial organizations and bodies	0.80%
None	8.31%

## To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The analysis and disclosure requirements introduced by the EU Taxonomy are very detailed and compliance with them requires the availability of multiple, specific data points in respect of each investment which the Portfolio made. The Manager cannot confirm that the Portfolio invested in any investments that qualified as environmentally sustainable for the purposes of the EU Taxonomy. Disclosures and reporting on Taxonomy alignment will develop as the EU framework evolves and data is made available by issuers. The Manager will keep the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy under active review as data availability and quality improves.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

- **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

### ● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?

Yes:

In fossil gas  In nuclear energy

No

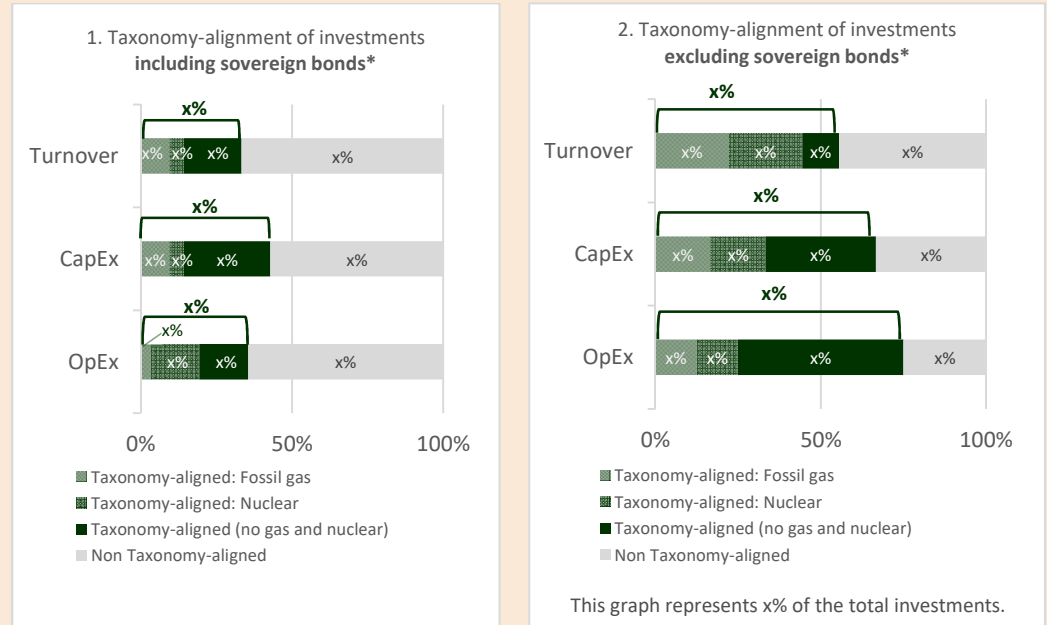

---

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

- **What was the share of investments made in transitional and enabling activities?**

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments.

- **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments.

### **What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?**

N/A – the Portfolio did not commit to holding sustainable investments.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

### **What was the share of socially sustainable investments?**

N/A – the Portfolio did not commit to holding sustainable investments.

### **What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?**

“Other” included the remaining investments of the Portfolio (including but not limited to any derivatives or any security collateralized by a pool of similar assets or receivables listed in the Supplement for the Portfolio) which were neither aligned with the environmental or social characteristics, nor qualified as sustainable investments.

The “Other” section in the Portfolio was held for a number of reasons that the Manager felt was beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover.

As noted above, the Portfolio was invested in compliance with ESG exclusion policies, on a continuous basis. This ensured that investments made by the Portfolio sought to align with international environmental and social safeguards such as the UNGC Principles, UNGPs, OECD Guidelines and the ILO Standards.

The Manager believes that these policies prevented investment in issuers that most egregiously violated environmental and/or social minimum standards and ensured that the Portfolio could successfully promote its environmental and social characteristics.

The above steps ensured that robust environmental and social safeguards were in place.

## **What actions have been taken to meet the environmental and/or social characteristics during the reference period?**

The Portfolio was managed in-line with the investment objective and the following actions were taken:

### **I. Integrating proprietary ESG analysis:**

The NB ESG Quotient ratings were generated for issuers in the Portfolio. The NB ESG Quotient rating for issuers was utilised to help to better identify risks and opportunities in the overall credit and value assessment.

The NB ESG Quotient was a key component of the internal credit ratings and helped to identify business risks (including ESG risks), which would cause deterioration in an issuer's credit profile. Internal credit ratings can be notched up or down based on the NB ESG Quotient rating, and this was monitored by the Manager as an important component of the investment process for the Portfolio.

By integrating the investment team's proprietary ESG analysis (the NB ESG Quotient) into their internal credit ratings, there was a direct link between their analysis of material ESG characteristics and portfolio construction activities across their strategy.

Issuers with a favourable and/or an improving NB ESG Quotient rating had a higher chance of ending up in the Portfolio. Issuers with a poor NB ESG Quotient rating especially where these were not being addressed by that issuer, were more likely to be removed from the investment universe or divested from the Portfolio.

### **II. Engagement:**

The Manager engaged with issuers through a robust ESG engagement program. They sought to prioritise constructive engagements and sought to engage on topics (including ESG topics) they determined to be financially material for the relevant issuer. The Manager viewed this engagement with issuers, as an important part of its investment process. Progress on engagement was tracked centrally in the Manager's engagement tracker.

### **III. ESG sectoral exclusion policies:**

To ensure that the environmental and social characteristics promoted by the Portfolio were attained, the Portfolio applied the ESG exclusion policies referenced above, which placed limitations on the investable universe.

## **How did this financial product perform compared to the reference benchmark?**

**Legal entity identifier:** 549300P7BLMM0H469F71

## Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?	
<input checked="" type="radio"/> <input checked="" type="radio"/> <input type="checkbox"/> <b>Yes</b>	<input checked="" type="radio"/> <input type="radio"/> <input checked="" type="checkbox"/> <b>No</b>
<input type="checkbox"/> It made <b>sustainable investments with an environmental objective</b> : ____% <ul style="list-style-type: none"> <li><input type="checkbox"/> _____ in economic activities that qualify as environmentally sustainable under the EU Taxonomy</li> <li><input type="checkbox"/> _____ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</li> </ul>	<input type="checkbox"/> It <b>promoted Environmental/Social (E/S) characteristics</b> and while it did not have as its objective a sustainable investment, it had a proportion of ____% of sustainable investments <ul style="list-style-type: none"> <li><input type="checkbox"/> _____ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy</li> <li><input type="checkbox"/> _____ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</li> <li><input type="checkbox"/> _____ with a social objective</li> </ul>
<input type="checkbox"/> It made <b>sustainable investments with a social objective</b> : ____%	<input checked="" type="checkbox"/> It promoted E/S characteristics, but <b>did not make any sustainable investments</b>

## To what extent were the environmental and/or social characteristics promoted by this financial product met?

For the investment grade fixed income portion of the Portfolio, the following environmental and social characteristics were promoted by the Portfolio:

- **Environmental Characteristics:** Biodiversity & Responsible Land Usage; Carbon Footprint Reduction; Environmental Management; Greenhouse Gas (“GHG”) Emissions; Opportunities in Clean Technologies; Opportunities in Green Building; Opportunities in Renewable Energy; Responsible Raw Material Sourcing; Responsible & Transparent Underwriting; Toxic Emissions & Waste; Waste Management; and Water Management.
- **Social Characteristics:** Access to Finance; Access to Medicines; Affordability & Fair Pricing; Business Ethics & Transparency of Government Relations; Chemical Safety; Community Relations; Controversial Sourcing; Corporate Behaviour; Drug Safety & Side Effects Management; Ethical Marketing & Practices; Health & Nutrition; Health & Safety; Human Capital Development; Labour Management; Data Privacy & Security; Product Safety & Quality; and Litigation & Related Controversy.

For the non-investment grade fixed income portion of the Portfolio, the following environmental and social characteristics were promoted by the Portfolio:

- **Environmental Characteristics:** Biodiversity & Responsible Land Usage; Carbon Footprint Reduction; GHG Emissions; Opportunities in Clean Technologies; Opportunities In Green Building; Responsible Raw Material Sourcing; Recycling Practices & Trends; Toxic Emissions & Waste; Waste Management; and Water Management.
- **Social Characteristics:** Access to Finance; Access to Healthcare; Access to Medicines; Business Ethics & Transparency of Government Relations; Chemical Safety; Community Relations; Controversial Sourcing; Corporate Behaviour; Drug Safety & Side Effects Management; Health & Nutrition; Health & Safety; Human Capital Development; Labour Management; Data Privacy & Security; Product Safety & Quality; and Quality of Care & Patient Satisfaction.

For the equity portion of the Portfolio, the following environmental and social characteristics were promoted by the Portfolio:

- **Environmental Characteristics:** air quality; biodiversity & land use; energy management; environmental risk exposure; fuel economy; GHG emissions; opportunities in clean technologies; toxic emissions & waste; water management; packaging lifecycle management; materials sourcing; and product lifecycle management.
- **Social Characteristics:** access to finance; access to healthcare; community relations; data privacy & security; employee incentives & risk taking; health & nutrition; health & safety; human capital development; labour management; product safety & integrity; supply chain labour standards; workforce diversity & inclusion; pricing transparency; and responsible marketing.

Performance in relation to these environmental and social characteristics was measured through the NB ESG Quotient or an equivalent rating, and is reported, in aggregate, below.

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

## How did the sustainability indicators perform?

As part of the investment process for the Portfolio, the Sub-Investment Managers invested in strategies as outlined in the "Investment Approach" section of the Supplement (the "**Sub-Strategies**"). The Sub-Strategies were managed by a separate Sub-Investment Manager (each Sub-Investment Manager acting in such capacity a "**Sub-Strategy Sub-Investment Manager**"). The sustainability indicators used to measure the environmental and/or social characteristics promoted by the relevant Sub-Strategies within the Portfolio are listed below:

### 1. The NB ESG Quotient:

The Neuberger Berman ESG rating system (the "**NB ESG Quotient**") or an equivalent ESG rating was used to measure the environmental and social characteristics promoted by certain sub-strategies within the Portfolio. The proprietary NB ESG Quotient, is built around the concept of sector specific ESG risk and opportunity, and produced an overall ESG rating for issuers by assessing them against certain ESG metrics.

Foundational to the NB ESG Quotient is the proprietary Neuberger Berman ("**NB**") materiality matrix, which focused on the ESG characteristics that were considered to be the most likely to be the material drivers of ESG risk and opportunity for each sector. Sector criteria was constructed using third-party and internally derived ESG data and supplemented with internal qualitative analysis, utilising the relevant Sub-Strategy Sub-Investment Manager's analyst team's significant sector expertise.

The NB ESG Quotient assigned weightings to environmental, social and governance characteristics for each sector to derive the NB ESG Quotient rating for issuers. The Sub-Strategy Sub-Investment Managers may have engaged with issuers with a poor NB ESG Quotient or an equivalent ESG rating with the aim to seek improvement in the underlying environmental and social characteristics (which made up the NB ESG Quotient) over time.

<b>31 December 2022</b>	<b>Rating</b>	<b>Combined coverage</b>
NB ESG Quotient	<i>Equity portion of the Portfolio:</i> ES: B G: 1.99 <i>Fixed income portion of the Portfolio:</i> 62.90	96%
Third-party Data	5.93	

With regards to the NB ESG Quotient ratings for equity issuers, for environmental and social (ES) ratings, A – D quartiles are used, where A is the highest rating (top quartile), and D is the lowest rating (bottom quartile). For governance (G) ratings, 1 – 4 quartiles are used where 1 is the highest rating, and 4 is the lowest rating.

With regards to the NB ESG Quotient for fixed income issuers, a rating between 1 – 100 is used where 1 is the lowest rating and 100 is the highest rating.

This Portfolio does not have a minimum NB ESG Quotient rating. The average NB ESG Quotient rating is a weighted average and is not a rating of the Portfolio strategy itself.

Third-party data was also used to measure the environmental and social characteristics promoted by the Portfolio. The third-party data ratings range from 0-10, with 0 being the lowest rating and 10 being the highest rating.

2. Climate Value-at-Risk:

Over the reference period, Climate Value-at-Risk (“**CVaR**”) measured the exposure to transition and physical climate risks. CVaR is a scenario analysis tool evaluating economic risks under various degree scenarios (i.e., the amount of warming targeted) and potential regulatory environments in varying countries.

CVaR is a type of scenario analysis which is defined as the present value of aggregated future policy risk costs, technology opportunity profits, and extreme weather event costs and profits, expressed as a percentage of a security or portfolio’s market value according to the warming scenario targeted.

By calculating the financial risks from climate change per security and per scenario, CVaR provides a framework that helps quantify and understand these risks. The CVaR metric provides insight into the climate-stressed valuation of assets based on specific degree scenarios, providing an assessment on how much a security may stand to lose or gain from the impact of climate change.

As at 31 December 2022, CVaR projected that a warming climate scenario could result in a depreciation of 4.29% in the valuation of assets under assessment.

This analysis is intended as a broad overview of the investment team’s style and investment process.

On a holistic basis, the results were evaluated by the relevant Sub-Strategy Sub-Investment Manager’s portfolio managers and analysts. The scenario analysis served as a starting point for further bottom-up analysis and identifying potential climate-related risks to address through issuer engagement.

Due to data limitations, CVaR was not applied across all issuers held by the Portfolio and was instead limited to the issuers for which the relevant Sub-Strategy Sub-Investment Manager had sufficient and reliable data. The Portfolio had a CVaR coverage of 15%.

The analysis from CVaR is reviewed at least once a year.

3. ESG exclusion policies:

To ensure that the promotion of the environmental or social characteristics promoted by the Portfolio were attained, the Portfolio did not invest in securities issued by issuers whose activities breached, or were not consistent with, the Neuberger Berman Controversial Weapons Policy and the Neuberger Berman Thermal Coal Involvement Policy. In addition to the application of the Neuberger Berman Thermal Coal Involvement Policy, the Sub-Investment Manager prohibited the initiation of new investment positions in securities issued by issuers that (i) derived more than 25% of their revenue from thermal coal mining; or (ii) were expanding new thermal coal power generation. Furthermore, from 6 April 2022 onwards, investments held by the Portfolio did not invest in securities issued by issuers whose activities had been identified as breaching the Neuberger Berman Global Standards Policy which excluded identified violators of (i) the United Nations Global Compact Principles (“**UNGC Principles**”), (ii) the OECD Guidelines for Multinational Enterprises (“**OECD Guidelines**”), (iii) the United Nations Guiding Principles on Business and Human Rights (“**UNGPs**”) and (iv) the International Labour Standards (“**ILO Standards**”).

When applying ESG exclusions to the Portfolio, the Sub-Investment Manager used third-party data to identify issuers in breach of the ESG exclusions listed above. Where possible, the Sub-Investment Manager sought to overlay this third-party data with qualitative expertise from their research analysts to establish a current and holistic picture of the issuer. The Sub-Investment Manager discussed and debated the differences between the violators identified by the third-party data and those identified as a result of their research, which drew upon data from the NB ESG Quotient and direct engagements with the issuer.

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

● **...and compared to previous periods?**

N/A – this is the first reference period.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

N/A – the Portfolio did not commit to holding sustainable investments.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

N/A – the Portfolio did not commit to holding sustainable investments.

— **How were the indicators for adverse impacts on sustainability factors taken into account?**

N/A – the Portfolio did not commit to holding sustainable investments.

— **Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:**

The Portfolio did not commit to holding sustainable investments, however, from 6 April 2022 onwards, the Sub-Investment Manager did not invest in issuers whose activities had been identified as breaching the OECD Guidelines, UNGC Principles, ILO Standards and UNGPs, captured through the Neuberger Berman Global Standards Policy.

*The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.*

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

N/A - The Portfolio did not commit to holding Taxonomy-aligned investments.

## How did this financial product consider principal adverse impacts on sustainability factors?

A selection of the principal adverse impact indicators were considered directly (e.g. through the ESG exclusion policies listed above) and/or indirectly (e.g. as part of the Sub-Strategy Sub-Investment Managers' assessment of issuers) throughout the 2022 reference period.

From 28 November 2022 onwards, certain Sub-Strategy Sub-Investment Managers considered the following principal adverse impacts with respect to the Portfolio, namely: GHG emissions, carbon footprint, GHG intensity, fossil fuel exposure, board gender diversity, UNGC Principles & OECD violations and controversial weapons (the "**Product Level PAIs**").

Consideration of the Product Level PAIs was limited by the availability (in the relevant Sub-Strategy Sub-Investment Manager's subjective view) of adequate, reliable and verifiable data coverage. The relevant Sub-Strategy Sub-Investment Manager utilised third-party data and proxy data along with research conducted by the relevant Sub-Strategy Sub-Investment Managers to consider the above Product Level PAIs.

Consideration of the Product Level PAIs by the Sub-Investment Manager and/ or the relevant Sub-Strategy Sub-Investment Managers was through a combination of:

- Monitoring the Portfolio, in particular where it fell below the quantitative and qualitative tolerance thresholds set for each Product Level PAI;
- Stewardship and/or setting engagement objectives may be set by the Sub-Strategy Sub-Investment Managers (or communicated by the Sub-Investment Manager to a Sub-Strategy Sub-Investment Manager) where the Portfolio fell below the quantitative and qualitative tolerance thresholds set for a Product Level PAI; and
- Application of the ESG exclusion policies referenced above, which included consideration of several of the Product Level PAIs.

## What were the top investments of this financial product?

The Sub-Strategy Sub-Investment Manager used the EU statistical classification of economic activities ("**NACE**") economic sector breakdown to identify the economic sectors of the Portfolio's top 15 investments. The following data is as at 31 December 2022.

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 1 January 2022 – 31 December 2022

Largest investments	Sector	% Assets	Country
NB CHINA BOND FD USD ZA HEDGED	N/A	3.4%	United States
NEUBERGER BERMAN COMMODITIES USD Z	N/A	1.6%	Ireland
NATWEST GROUP PLC	K – Financial and insurance activities	1.3%	United Kingdom
ING GROEP NV	K – Financial and insurance activities	1.3%	Netherlands
CREDIT SUISSE GROUP AG RegS	K – Financial and insurance activities	1.1%	Switzerland
NGG FINANCE PLC RegS	K – Financial and insurance activities	1.0%	United Kingdom
TARGA RESOURCES CORP	H – Transporting and storage	1.0%	United States
PETROLEOS MEXICANOS RegS	B – Mining and quarrying	0.9%	Mexico
ASSEMBLIN FINANCING AB (PUBL) RegS	F – Construction	0.9%	Sweden
ADIANT GLOBAL HOLDINGS LTD RegS	K – Financial and insurance activities	0.9%	Jersey, Channel Islands

ELECTRICITE DE FRANCE SA MTN RegS	D – Electricity, gas, steam and air conditioning supply	0.9%	France
ELECTRICITE DE FRANCE SA MTN RegS	D – Electricity, gas, steam and air conditioning supply	0.9%	France
EG GLOBAL FINANCE PLC RegS	K – Financial and insurance activities	0.9%	United Kingdom
AVANTOR FUNDING INC RegS	K – Financial and insurance activities	0.9%	United States
TECHEM VERWALTUNGSGESELLSCHAFT 675 RegS	K – Financial and insurance activities	0.9%	Germany

## What was the proportion of sustainability-related investments?

**Asset allocation** describes the share of investments in specific assets.

### What was the asset allocation?

The Sub-Strategy Sub-Investment Manager calculated the proportion of investments aligned with the environmental and/or social characteristics promoted by the Portfolio by reference to the proportion of issuers in the Portfolio: i) that held either an NB ESG Quotient rating or a third-party equivalent ESG rating that was used as part of the portfolio construction and investment management process of the Portfolio; and/or ii) with whom the relevant Sub-Strategy Sub-Investment Manager had engaged directly and was based on a mark-to-market assessment of the Portfolio and may rely on incomplete or inaccurate issuer or third-party data. For the 2022 reference period only, this calculation is based on the Portfolio's holdings as at 31 December 2022, being the only quarter end in the reference period that followed the publication of the Portfolio's SFDR Annex detailing its planned asset allocation. For all subsequent reference periods, this calculation will be based on the average of the four quarter ends.

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

● ***In which economic sectors were the investments made?***

<b>Data as at 31 December 2022</b>	
<b>Economic Sector – NACE</b>	<b>% Assets</b>
A – Agriculture, forestry and fishing	0.00%
B – Mining and quarrying	1.63%
C – Manufacturing	17.06%
D – Electricity, gas, steam and air conditioning supply	11.29%
E – Water supply; sewerage; waste management and remediation activities	1.09%
F – Construction	1.64%
G – Wholesale and retail trade; repair of motor vehicles and motorcycles	2.30%
H – Transporting and storage	6.96%
I – Accommodation and food service activities	0.30%
J – Information and communication	6.57%
K – Financial and insurance activities	33.21%
L – Real estate activities	7.87%
M – Professional, scientific and technical activities	0.16%
N – Administrative and support service activities	1.44%
O – Public administration and defence; compulsory social security	4.10%
P – Education	0.00%
Q – Human health and social work activities	0.18%
R – Arts, entertainment and recreation	0.01%
S – Other services activities	0.00%
None	4.18%

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

- **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

## To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The analysis and disclosure requirements introduced by the EU Taxonomy are very detailed and compliance with them requires the availability of multiple, specific data points in respect of each investment which the Portfolio made. The Sub-Investment Manager cannot confirm that the Portfolio invested in any investments that qualified as environmentally sustainable for the purposes of the EU Taxonomy. Disclosures and reporting on Taxonomy alignment will develop as the EU framework evolves and data is made available by issuers. The Sub-Investment Manager and the relevant Sub-Strategy Sub-Investment Managers will keep the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy under active review as data availability and quality improves.

### ● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?

Yes:

In fossil gas  In nuclear energy

No

---

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

- **What was the share of investments made in transitional and enabling activities?**

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments.

- **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments.

### **What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?**

N/A – the Portfolio did not commit to holding sustainable investments.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

### **What was the share of socially sustainable investments?**

N/A – the Portfolio did not commit to holding sustainable investments.

### **What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?**

“Other” included the remaining investments of the Portfolio (including but not limited to any derivatives or any security collateralized by a pool of similar assets or receivables listed in the Supplement for the Portfolio) which were neither aligned with the environmental or social characteristics, nor qualified as sustainable investments. The Sub-Strategies that do not integrate ESG into their investment processes fell within this category of investments.

In addition to such Sub-Strategies (which were used for investment purposes), the “Other” section in the Portfolio was held for a number of reasons that the Sub-Investment Manager or the relevant Sub-Strategy Sub-Investment Manager felt was beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover.

As noted above, the Portfolio was invested in compliance with the ESG exclusion policies, on a continuous basis. This ensured that investments made by the Portfolio sought to align with international environmental and social safeguards such as the UNGC Principles, UNGPs, OECD Guidelines and ILO Standards.

The Sub-Investment Manager believes that these policies prevented investment in issuers that most egregiously violated environmental and/or social minimum standards and ensured that the Portfolio could successfully promote its environmental and social characteristics.

The above steps ensured that robust environmental and social safeguards were in place.

## **What actions have been taken to meet the environmental and/or social characteristics during the reference period?**

The Portfolio was managed in-line with the investment objective and the following actions were taken:

### **I. Integrating proprietary ESG analysis:**

The NB ESG Quotient or equivalent ratings were generated for issuers in the Portfolio by certain Sub-Strategy Sub-Investment Managers. The NB ESG Quotient rating for issuers was utilised to help to better identify risks and opportunities in the overall credit and value assessment.

For the fixed income portion of the Portfolio, the rating was a key component of the internal credit ratings and helped to identify business risks (including ESG risks), which would cause deterioration in an issuer's credit profile. Internal credit ratings can be notched up or down based on the NB ESG Quotient rating, and, where applied, this was monitored by the relevant Sub-Strategies' Sub-Investment Managers as an important component of the investment process for the Portfolio.

By integrating the investment team's proprietary ESG analysis (the NB ESG Quotient) into their internal credit ratings/overall issuer view, there was a direct link between their analysis of material ESG characteristics and portfolio construction activities across their strategy. The relevant Sub-Strategy Sub-Investment Managers may engage with issuers with a poor NB ESG Quotient or an equivalent ESG rating with the aim to seek improvement in the underlying environmental and social characteristics (which make up the NB ESG Quotient) over time.

### **II. Engagement:**

Certain Sub-Strategy Sub-Investment Managers engaged with issuers through a robust ESG engagement program. They sought to prioritise constructive engagements and sought to engage on topics (including ESG topics) they determined to be financially material for the relevant issuer. The Sub-Strategy Sub-Investment Manager viewed this engagement with issuers, as an important part of its investment process. Progress on engagement was tracked centrally in the NB engagement tracker.

### **III. ESG sectoral exclusion policies:**

To ensure that the environmental and social characteristics promoted by the Portfolio were attained, the Portfolio applied the ESG exclusion policies referenced above, which placed limitations on the investable universe.

## How did this financial product perform compared to the reference benchmark?

N/A – the Portfolio does not use a benchmark.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- ***How does the reference benchmark differ from a broad market index?***  
N/A
- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***  
N/A
- ***How did this financial product perform compared with the reference benchmark?***  
N/A
- ***How did this financial product perform compared with the broad market index?***  
N/A

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Neuberger Berman Systematic Global Sustainable Value Fund (the "Portfolio")

Legal entity identifier: 549300VLTCS1K4EA7H66

## Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?	
<input checked="" type="radio"/> <input checked="" type="radio"/> <input type="checkbox"/> <b>Yes</b>	<input checked="" type="radio"/> <input type="radio"/> <input checked="" type="checkbox"/> <b>No</b>
<input type="checkbox"/> It made <b>sustainable investments with an environmental objective: ___%</b> <ul style="list-style-type: none"> <li><input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy</li> <li><input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</li> </ul> <input type="checkbox"/> It made <b>sustainable investments with a social objective: ___%</b>	<input checked="" type="checkbox"/> It <b>promoted Environmental/Social (E/S) characteristics</b> and while it did not have as its objective a sustainable investment, it had a proportion of 64.80%* of sustainable investments <ul style="list-style-type: none"> <li><input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy</li> <li><input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</li> <li><input checked="" type="checkbox"/> with a social objective</li> </ul> <input type="checkbox"/> It promoted E/S characteristics, but <b>did not make any sustainable investments</b>

\*Please refer to the "What was the proportion of sustainability-related investments?" question below for further detail in respect of the minimum proportion of sustainable investments which promoted the environmental or social characteristics.

Following guidance from the European Commission on Article 8 Portfolio and Article 9 Portfolio categorisations under Regulation (EU) 2019/2088 ("SFDR"), the Portfolio re-categorised as an Article 8 Portfolio from an Article 9 Portfolio on 19 August 2022. This periodic disclosure has therefore been prepared on the basis of the requirements applicable to an Article 8 Portfolio under SFDR.

## To what extent were the environmental and/or social characteristics promoted by this financial product met?

The following environmental and social characteristics were promoted by the Portfolio:

- **Environmental Characteristics:** air quality; biodiversity & land use; energy management; environmental risk exposure; fuel economy; greenhouse gas (“GHG”) emissions; opportunities in clean technologies; toxic emissions & waste; water management; packaging lifecycle management; materials sourcing; and product lifecycle management.

In aiming to align the Portfolio with a net zero goal, the Sub-Investment Manager promoted and will continue to promote the reduction of the Portfolio’s carbon footprint across scope 1, 2, and material scope 3 GHG emissions.<sup>1</sup> There is no annual reduction target, instead the reduction target focuses on the 2030 interim target and the 2050 net zero goal.

- **Social Characteristics:** access to finance; access to healthcare; community relations; data privacy & security; employee incentives & risk taking; health & nutrition; health & safety; human capital development; labour management; product safety & integrity; supply chain labour standards; workforce diversity & inclusion; pricing transparency; and responsible marketing.

Performance in relation to these environmental and social characteristics was measured through the Composite ESG Rating, and is reported, in aggregate, below.

While the sustainable investments held by the Portfolio had either a social or an environmental objective, such sustainable investments do not qualify as environmentally sustainable investments (or Taxonomy aligned investments) as defined under the EU Taxonomy.

## How did the sustainability indicators perform?

As part of the investment process, the Sub-Investment Manager considered a variety of sustainability indicators to measure the environmental and/or social characteristics promoted by the Portfolio. These sustainability indicators are listed below:

### I. The Composite ESG Rating:

The above environmental and social characteristics were derived and considered using a blend of environmental and social characteristics derived from a proprietary Neuberger Berman ESG rating system (the “**NB ESG Quotient**”) and a themes based ESG rating system (“**NB ESG Themes**”), (together the “**Composite ESG Rating**”).

The NB ESG Quotient is built around the concept of sector specific ESG risk and opportunity, and produced an overall ESG rating for companies by assessing them against certain ESG metrics. Foundational to the NB ESG Quotient is the proprietary Neuberger Berman (“**NB**”) materiality matrix, which focused on the ESG characteristics that were considered to be the most likely to be the material drivers of ESG risk and opportunity for each sector. The NB materiality matrix enabled the Sub-Investment Manager to derive the NB ESG Quotient rating, to compare sectors and companies relative to their environmental and social characteristics.

The NB ESG Themes rating system is built around the concept of sector specific ESG themes (provided by third-party data vendors), which were custom weighted and produced an overall NB ESG Themes rating for companies. Sector specific NB ESG Themes included individual key ESG

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

<sup>1</sup> Scope 1 emissions are direct emissions from a company's owned or controlled sources (such as emissions created directly by the company's business processes or from vehicles owned by the company). Scope 2 emissions are indirect emissions from the generation of electricity, steam, heating and cooling consumed by the company. Scope 3 emissions are all other indirect emissions that occur in a company's value chain (such as emissions from products or services consumed by the company, disposal of its waste, employee commuting, distribution and transport of its products or its investments).

issues/characteristics or aggregated key ESG issues/characteristics which in turn form an ESG theme. The relevant environmental and social characteristics are listed above and sit within overarching ESG themes.

Companies with a favourable and/or an improving Composite ESG Rating had a higher chance of being included in the Portfolio. Companies with a poor Composite ESG Rating, especially where a poor Composite ESG Rating was not being addressed by a company, were more likely to be removed from the investment universe or divested from the Portfolio.

<b>31 December 2022</b>	<b>Rating</b>	<b>Combined coverage</b>
Composite ESG Rating	0.60	100%
Third-party Data	7.3	

With regards to the Composite ESG Rating, a rating between -1 and +1 is used where -1 is the lowest rating and +1 is the highest rating. This Portfolio does not have a minimum Composite ESG Rating. The average Composite ESG Rating is a weighted average and is not a rating of the Portfolio strategy itself.

Third-party data was also used to measure the environmental and social characteristics promoted by the Portfolio. The third-party data ratings range from 0-10, with 0 being the lowest rating and 10 being the highest rating.

## II. ESG exclusion policies:

To ensure that the environmental or social characteristics promoted by the Portfolio were attained, the Portfolio did not invest in companies whose activities breached, or were not consistent with, the Neuberger Berman Controversial Weapons Policy; the Neuberger Berman Thermal Coal Involvement Policy; the Neuberger Berman Sustainable Exclusion Policy; and the Neuberger Berman Enhanced Sustainable Exclusions Policy. In addition to the application of the Neuberger Berman Thermal Coal Involvement Policy, the Sub-Investment Manager prohibited the initiation of new investment positions in companies that (i) derived more than 25% of their revenue from thermal coal mining; or (ii) were expanding new thermal coal power generation. Furthermore, from 6 April 2022 onwards, investments held by the Portfolio did not invest in companies whose activities had been identified as breaching the Neuberger Berman Global Standards Policy which excluded identified violators of (i) the United Nations Global Compact Principles ("**UNGC Principles**"), (ii) the OECD Guidelines for Multinational Enterprises ("**OECD Guidelines**"), (iii) the United Nations Guiding Principles on Business and Human Rights ("**UNGPs**") and (iv) the International Labour Standards ("**ILO Standards**").

When applying ESG exclusions to the Portfolio, the Sub-Investment Manager used third-party data to identify companies in breach of the ESG exclusions listed above. Where possible, the Sub-Investment Manager sought to overlay this third-party data with qualitative expertise from their research analysts to establish a current and holistic picture of the company. The Sub-Investment Manager discussed and debated the differences between the violators identified by the third-party data and those identified as a result of their research, which drew upon data from the Composite ESG Rating and direct engagements with the company.

### ● **...and compared to previous periods?**

N/A - this is the first reference period.

### ● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives**

While the Portfolio promoted environmental and social characteristics, this Portfolio did not have a sustainable investment objective. However, the Portfolio held sustainable investments which promoted the environmental & social characteristics listed above.

The consideration of investments made by the Portfolio as sustainable investments was determined by reference to NB's sustainable investment framework. This framework included an assessment as to (i) whether the investment contributes to an environmental and/or social objective; (ii) whether the investment causes significant harm to those objectives as described below; and (iii) an assessment of a company's overall governance rating to determine whether the company passes a good governance assessment.

Under this sustainable investment framework, the Sub-Investment Manager utilised multiple datapoints that measured the alignment of a company's economic activity with environmental or social characteristics.

The Sub-Investment Manager screened companies for controversies, significant harm and violations of minimum safeguards. If the companies passed this screen, the Sub-Investment Manager then proceeded to measure the companies' environmental or social economic contribution.

The Sub-Investment Manager measured this in two ways:

- Revenue alignment to the EU taxonomy (if any); and
- Revenue alignment to the Sustainable Development Goals ("SDGs").

Consideration of revenue alignment with the SDGs was limited by the availability of adequate, reliable and verifiable data coverage. To mitigate instances of poor data coverage, the Sub-Investment Manager utilised third-party data and proxy data along with internal research and qualitative analysis as part of NB's sustainable investment framework.

### ***How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?***

As part of the Sub-Investment Manager's sustainable investment framework, investments that cause significant harm to environmental or social objectives were excluded. To determine whether an investment caused significant harm, the Sub-Investment Manager considered significant harm with reference to certain principal adverse impact indicators and violations of minimum safeguards.

The Sub-Investment Manager considered the following principal adverse impacts indicators when determining whether the sustainable investments that the Portfolio made, did not cause significant harm to any environmental or social sustainable investment objective: GHG emissions; carbon footprint; GHG intensity of investee companies; exposure to companies active in the fossil fuel sector; share of non-renewable energy consumption and production; energy consumption intensity per high impact climate sector; activities negatively affecting biodiversity-sensitive areas; emissions to water; hazardous waste and radioactive waste ratio; violations of UNGC Principles and OECD Guidelines; lack of processes and compliance mechanisms to monitor compliance with UNGC Principles and OECD Guidelines; unadjusted gender pay gap, board gender diversity; and exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons) (the "PAIs").

Consideration of the PAIs was limited by the availability (in the Sub-Investment Manager's subjective view) of adequate, reliable and verifiable data coverage. The Sub-Investment Manager utilised third-party data and proxy data along with internal research to consider the PAIs.

The Sub-Investment Manager also considered violations of minimum safeguards. From 6 April 2022 onwards, the Sub-Investment Manager did not invest in companies whose activities had been identified as breaching the OECD Guidelines, UNGC Principles, ILO Standards and UNGPs, captured through the Neuberger Berman Global Standards Policy.

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The combination of all of these factors generated a quantitative validation for “sustainability” which was used to ensure the sustainable investments that the Portfolio made, did not cause significant harm to any environmental or social sustainable objective.

*How were the indicators for adverse impacts on sustainability factors taken into account?*

Consideration of the PAIs by the Sub-Investment Manager, when determining whether the sustainable investments that the Portfolio intended to make did not cause significant harm to any environmental or social sustainable investment objective of the Portfolio’s sustainable investments, was through a combination of:

- Monitoring companies which fell below the quantitative and qualitative tolerance thresholds set for each PAI by the Sub-Investment Manager;
- Stewardship and/or setting engagement objectives with companies which fell below the quantitative and qualitative tolerance thresholds set for a PAI by the Sub-Investment Manager; and
- Application of the ESG exclusion policies referenced above, which included consideration of several of the PAIs.

*Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:*

From 6 April 2022 onwards, the Sub-Investment Manager did not invest in companies whose activities had been identified as breaching the OECD Guidelines, ILO Standards, UNGC Principles and UNGPs, captured through the Neuberger Berman Global Standards Policy.

*The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.*

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

N/A - The Portfolio did not commit to holding Taxonomy-aligned investments.

## How did this financial product consider principal adverse impacts on sustainability factors?

A selection of the principal adverse impact indicators were considered directly (e.g. through the ESG exclusion policies listed above) and/or indirectly (e.g. as part of the Sub-Investment Manager's assessment of issuers) throughout the 2022 reference period.

The Sub-Investment Manager considered PAIs with respect to the Portfolio in two ways:

1. All PAIs were considered when determining whether sustainable investments that the Portfolio made did not cause significant harm to any environmental or social sustainable investment objective as explained above.

2. From 28 November 2022 onwards, the Sub-Investment Manager considered the following principal adverse impacts on sustainability factors with respect to those investments within the Portfolio which promoted environmental or social characteristics, namely: GHG emissions, carbon footprint, GHG intensity, fossil fuel exposure, board gender diversity, UNGC Principles & OECD violations and controversial weapons (the "**Product Level PAIs**").

Consideration of the Product Level PAIs was limited by the availability (in the Sub-Investment Manager's subjective view) of adequate, reliable and verifiable data coverage. The Sub-Investment Manager utilised third-party data and proxy data along with internal research to consider the Product Level PAIs.

Consideration of the Product Level PAIs by the Sub-Investment Manager was through a combination of:

- Monitoring the Portfolio, in particular where it fell below the quantitative and qualitative tolerance thresholds set for each Product Level PAI by the Sub-Investment Manager;
- Stewardship and/or setting engagement objectives where the Portfolio fell below the quantitative and qualitative tolerance thresholds set for a Product Level PAI by the Sub-Investment Manager; and
- Application of the ESG exclusion policies referenced above, which included consideration of several of the Product Level PAIs.

## What were the top investments of this financial product?

The Sub-Investment Manager has used the EU statistical classification of economic activities (“NACE”) economic sector breakdown to identify the economic sectors of the Portfolio’s top 15 investments. The following data is as at 31 December 2022.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 1 January 2022 – 31 December 2022

Largest investments	Sector	% Assets	Country
APPLE INC	C - Manufacturing	1.9%	United States
MICROSOFT CORP	J - Information and communication	1.5%	United States
GILEAD SCIENCES INC	C - Manufacturing	1.4%	United States
ALPHABET INC CLASS A	J - Information and communication	1.3%	United States
GOLDMAN SACHS GROUP INC	K - Financial and insurance activities	1.3%	United States
VALERO ENERGY CORP	C - Manufacturing	1.3%	United States
MARATHON PETROLEUM CORP	C - Manufacturing	1.2%	United States
ABBVIE INC	C - Manufacturing	1.2%	United States
TOTALENERGIES	C - Manufacturing	1.2%	France
MERCK & CO INC	C - Manufacturing	1.2%	United States
AT&T INC	J - Information and communication	1.2%	United States
UNITEDHEALTH GROUP INC	K - Financial and insurance activities	1.2%	United States
ANGLO AMERICAN PLC	B - Mining and quarrying	1.2%	South Africa
PHILLIPS	C - Manufacturing	1.1%	United States
CIGNA CORP	Q - Human health and social work activities	1.1%	United States

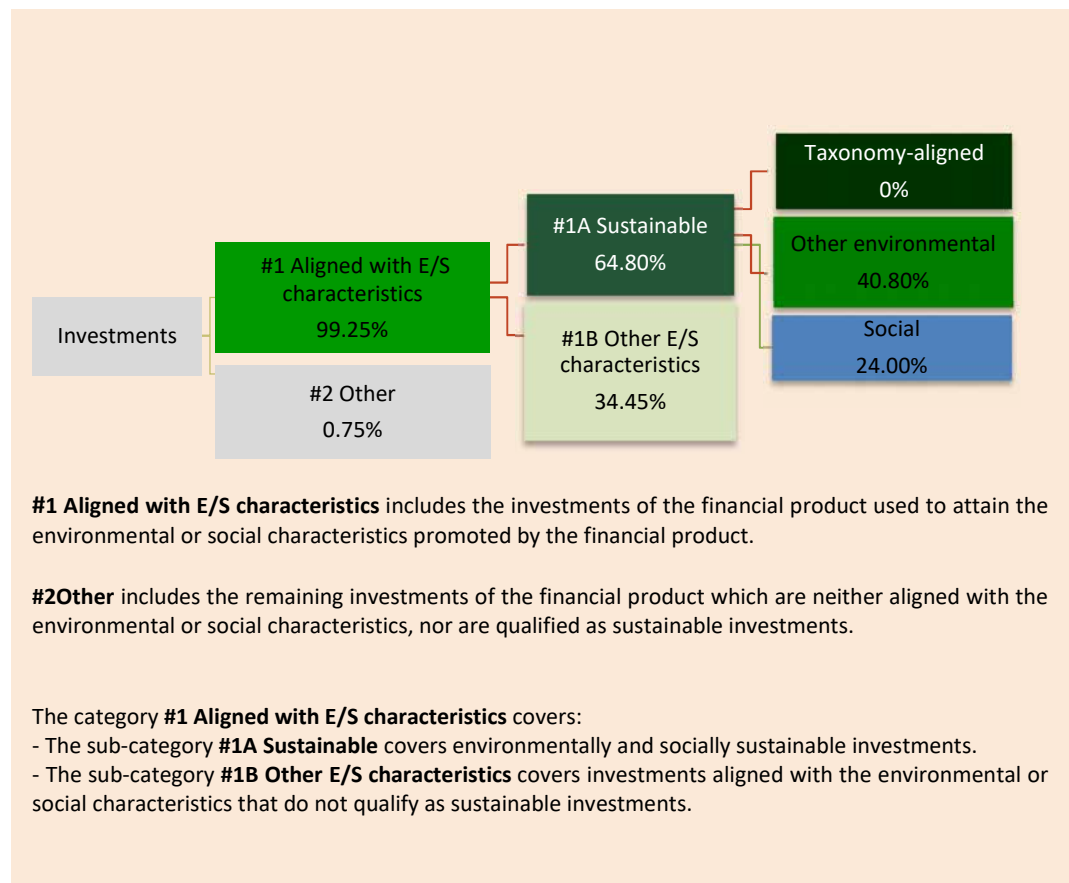

## What was the proportion of sustainability-related investments?

### Asset allocation

describes the share of investments in specific assets.

### ● What was the asset allocation?

The Sub-Investment Manager calculated the proportion of investments aligned with the environmental and/or social characteristics promoted by the Portfolio by reference to the proportion of companies in the Portfolio: i) that held either an Composite ESG Rating or a third-party equivalent ESG rating that was used as part of the portfolio construction and investment management process of the Portfolio; and/or ii) with whom the Sub-Investment Manager had engaged directly and may rely on incomplete or inaccurate company or third-party data. The calculation was based on a mark-to-market assessment of the Portfolio. For the 2022 reference period only, this calculation is based on the Portfolio's holdings as at 31 December 2022, being the only quarter end in the reference period that followed the publication of the Portfolio's SFDR Annex detailing its planned asset allocation. For all subsequent reference periods, this calculation will be based on the average of the four quarter ends.

● ***In which economic sectors were the investments made?***

<b>Data as at 31 December 2022</b>	
<b>Economic Sector – NACE</b>	<b>% Assets</b>
B - Mining and quarrying	3.83%
C - Manufacturing	42.34%
D - Electricity, gas, steam and air conditioning supply	1.23%
F - Construction	1.34%
G - Wholesale and retail trade; repair of motor vehicles and motorcycles	6.24%
H - Transporting and storage	4.58%
I - Accommodation and food service activities	1.41%
J - Information and communication	10.55%
K - Financial and insurance activities	21.56%
L - Real estate activities	1.52%
M - Professional, scientific and technical activities	1.95%
N - Administrative and support service activities	1.51%
Q - Human health and social work activities	1.44%
R - Arts, entertainment and recreation	0.11%
S - Other services activities	0.32%
None	0.07%

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

- **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

## To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The analysis and disclosure requirements introduced by the EU Taxonomy are very detailed and compliance with them requires the availability of multiple, specific data points in respect of each investment which the Portfolio made. The Sub-Investment Manager cannot confirm whether the Portfolio invested in any investments that qualified as environmentally sustainable for the purposes of the EU Taxonomy. Disclosures and reporting on Taxonomy alignment will develop as the EU framework evolves and data is made available by companies. The Sub-Investment Manager will keep the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy under active review as data availability and quality improves.

### ● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>2</sup>?

Yes:

In fossil gas  In nuclear energy

No

<sup>2</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

● **What was the share of investments made in transitional and enabling activities?**

N/A - The Portfolio did not commit to holding Taxonomy-aligned investments.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

N/A - The Portfolio did not commit to holding Taxonomy-aligned investments.

### What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

40.80%

While the Portfolio invested in sustainable investments with an environmental objective, such sustainable investments did not commit to being Taxonomy-aligned investments.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

### What was the share of socially sustainable investments?

24.00%

### What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

“Other” included the remaining investments of the Portfolio (including but not limited to any derivatives or any security collateralized by a pool of similar assets or receivables listed in the Supplement for the Portfolio) which were neither aligned with the environmental or social characteristics, nor qualified as sustainable investments.

The “Other” section in the Portfolio was held for a number of reasons that the Sub-Investment Manager felt was beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover.

As noted above, the Portfolio was invested in compliance with ESG exclusion policies, on a continuous basis. This ensured that investments made by the Portfolio sought to align with international environmental and social safeguards such as the UNGC Principles, UNGPs, OECD Guidelines and the ILO Standards.

The Sub-Investment Manager believes that these policies prevented investment in companies that most egregiously violated environmental and/or social minimum standards and ensured that the Portfolio could successfully promote its environmental and social characteristics.

The above steps ensured that robust environmental and social safeguards were in place.

## What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Portfolio was managed in-line with the investment objective and the following actions were taken:

### I. Integrating proprietary ESG analysis:

The Composite ESG Rating was generated for company holdings in the Portfolio. The NB ESG Quotient (as explained above) was used to measure the environmental and social characteristics promoted by the Portfolio. Foundational to the NB ESG Quotient is the proprietary NB materiality matrix (as explained above), which focused on the ESG characteristics that were considered to be the most likely to be the material drivers of ESG risk for each sector. Each sector criteria was constructed using third-party and internally derived ESG data and supplemented with internal qualitative analysis, leveraging the Sub-Investment Manager's analyst team's significant sector expertise.

The NB ESG Themes were built around the concept of sector specific ESG themes which were custom weighted, and produced an overall ESG themes rating for companies by assessing them against thematic metrics derived using third-party data.

Companies with a favourable and/or an improving Composite ESG Rating had a higher chance of being included in the Portfolio. Companies with a poor Composite ESG Rating, especially where a poor Composite ESG Rating was not being addressed by a company, were more likely to be removed from the investment universe or divested from the Portfolio.

### II. Engagement:

The Sub-Investment Manager leveraged NB internally led engagement with management teams of companies, this was achieved through a robust ESG engagement program which took place at an NB entity level rather than at a Portfolio level. The Sub-Investment Manager viewed this internally led engagement with companies, as an important part of its investment process. Progress on engagement was tracked centrally in the Sub-Investment Manager's engagement tracker.

### III. ESG sectoral exclusion policies:

To ensure that the environmental and social characteristics promoted by the Portfolio were attained, the Portfolio applied the ESG exclusion policies referenced above, which placed limitations on the investable universe.

## How did this financial product perform compared to the reference benchmark?

N/A - The Portfolio's benchmark has not been designated as a reference benchmark. Therefore, it is not consistent with the environmental or social characteristics promoted by the Portfolio.

- ***How does the reference benchmark differ from a broad market index?***  
N/A
- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***  
N/A
- ***How did this financial product perform compared with the reference benchmark?***  
N/A
- ***How did this financial product perform compared with the broad market index?***  
N/A

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

**Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852**

**Product name:** Neuberger Berman US Long Short Equity Fund (the“Portfolio”)  
**Legal entity identifier:** 54930034RCIO16VO2Z23

## Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

### Did this financial product have a sustainable investment objective?

<input checked="" type="radio"/> <input type="radio"/> <input type="checkbox"/> <b>Yes</b>	<input type="radio"/> <input type="radio"/> <input checked="" type="checkbox"/> <b>No</b>
<input type="checkbox"/> It made <b>sustainable investments with an environmental objective:</b> ___% <ul style="list-style-type: none"> <li><input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy</li> <li><input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</li> </ul> <input type="checkbox"/> It made <b>sustainable investments with a social objective:</b> ___%	<input type="checkbox"/> It <b>promoted Environmental/Social (E/S) characteristics</b> and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments <ul style="list-style-type: none"> <li><input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy</li> <li><input type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</li> <li><input type="checkbox"/> with a social objective</li> </ul> <input checked="" type="checkbox"/> It promoted E/S characteristics, but <b>did not make any sustainable investments</b>

### To what extent were the environmental and/or social characteristics promoted by this financial product met?

The following environmental and social characteristics were promoted by the Portfolio:

- **Environmental Characteristics:** air quality; biodiversity & land use; energy management; environmental risk exposure; fuel economy; greenhouse gas (“GHG”) emissions; opportunities in clean technologies; toxic emissions & waste; water management; packaging lifecycle management; materials sourcing; and product lifecycle management.
- **Social Characteristics:** access to finance; access to healthcare; community relations; data privacy & security; employee incentives & risk taking; health & nutrition; health & safety; human capital development; labour management; product safety & integrity; supply chain labour standards; workforce diversity & inclusion; pricing transparency; and responsible marketing.

Performance in relation to these environmental and social characteristics was measured through the NB ESG Quotient, and is reported, in aggregate, below.

● **How did the sustainability indicators perform?**

As part of the investment process, the Sub-Investment Manager considered a variety of sustainability indicators to measure the environmental and/or social characteristics promoted by the Portfolio. These sustainability indicators are listed below:

1. The NB ESG Quotient:

The proprietary Neuberger Berman ESG rating system (the “**NB ESG Quotient**”), is built around the concept of sector specific ESG risk and opportunity, and produced an overall ESG rating for companies by assessing them against certain ESG metrics.

This ESG framework was applied to the long side of the Portfolio which takes a multi-year time horizon. The Sub-Investment Manager’s short positions are expressed through derivatives and therefore did not commit to taking ESG factors into consideration. The anticipated long / short allocation of the Portfolio is detailed in the section of the Supplement entitled “*Investment Approach*”.

Foundational to the NB ESG Quotient is the proprietary Neuberger Berman (“**NB**”) materiality matrix, which focused on the ESG characteristics that were considered to be the most likely to be the material drivers of ESG risk and opportunity for each sector. Each sector criteria is constructed using third party and internally derived ESG data and supplemented with internal qualitative analysis, leveraging the Sub-Investment Manager’s analyst team’s significant sector expertise. The NB materiality matrix enabled the Sub-Investment Manager to derive the NB ESG Quotient rating, to compare sectors and companies relative to their environmental and social characteristics.

The NB ESG Quotient assigned weightings to environmental, social and governance factors for each sector to derive the NB ESG Quotient rating. Companies with a favourable and/or an improving NB ESG Quotient or third-party rating had a higher chance of being included in the long side of the Portfolio. Companies with a poor NB ESG Quotient or third-party rating, especially where a poor NB ESG Quotient or third-party rating was not being addressed by a company, were more likely to be removed from the long investment universe or divested from long side of the Portfolio. In addition, the Sub-Investment Manager sought to prioritise constructive engagements with companies that had a poor NB ESG Quotient or third-party rating, in order to assess whether concerns were being addressed adequately.

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

31 December 2022	Rating	Combined coverage
NB ESG Quotient	ES: B	98%
	G: 2.2	
Third-party Data	6.5	

With regards to the NB ESG Quotient rating, for environmental and social (ES) rating, A – D quartiles are used, where A is the highest rating (top quartile), and D is the lowest rating (bottom quartile). For governance (G) rating, 1 – 4 quartiles are used where 1 is the highest rating, and 4 is the lowest rating. This Portfolio does not have a minimum NB ESG Quotient rating. The average NB ESG Quotient rating is a weighted average and is not a rating of the Portfolio strategy itself.

Third-party data was also used to measure the environmental and social characteristics promoted by the Portfolio. The third-party data ratings range from 0-10, with 0 being the lowest and 10 being the highest rating.

2. Climate Value-at-Risk:

Over the reference period, Climate Value-at-Risk (“**CVaR**”) measured the exposure to transition and physical climate risks. CVaR is a scenario analysis tool evaluating economic risks under various degree scenarios (i.e., the amount of warming targeted) and potential regulatory environments in varying countries.

CVaR is a type of scenario analysis which is defined as the present value of aggregated future policy risk costs, technology opportunity profits, and extreme weather event costs and profits, expressed as a percentage of a security or portfolio’s market value according to the warming scenario targeted.

By calculating the financial risks from climate change per security and per scenario, CVaR provides a framework that helps quantify and understand these risks. The CVaR metric provides insight into the climate-stressed valuation of assets based on specific degree scenarios, providing an assessment on how much a security may stand to lose or gain from the impact of climate change.

As at 31 December 2022, CVaR projected that a warming climate scenario could result in a depreciation of 16.60% in the valuation of assets under assessment.

This analysis is intended as a broad overview of the investment team’s style and investment process.

On a holistic basis, the results were evaluated by the Sub-Investment Manager’s portfolio managers and analysts. The scenario analysis served as a starting point for further bottom-up analysis and identifying potential climate-related risks to address through company engagement.

Due to data limitations, CVaR was not applied across all companies held by the Portfolio and was instead limited to the companies for which the Sub-Investment Manager had sufficient and reliable data. The Portfolio had a CVaR coverage of 59%.

The analysis from CVaR is reviewed at least once a year.

3. ESG exclusion policies:

To ensure that the environmental or social characteristics promoted by the Portfolio were attained, the Portfolio did not invest in companies whose activities breached, or were not consistent with, the Neuberger Berman Controversial Weapons Policy and the Neuberger Berman Thermal Coal Involvement Policy. In addition to the application of the Neuberger Berman Thermal Coal Involvement Policy, the Sub-Investment Manager prohibited the initiation of new investment positions in companies that (i) derived more than 25% of their revenue from thermal coal mining; or (ii) were expanding new thermal coal power generation. Furthermore, from 6 April 2022 onwards, investments held by the Portfolio did not invest in companies whose activities had been identified as breaching the Neuberger Berman Global Standards Policy which excluded identified violators of (i) the United Nations Global Compact Principles (“**UNGC Principles**”), (ii) the OECD Guidelines for Multinational Enterprises (“**OECD Guidelines**”), (iii) the United Nations Guiding Principles on Business and Human Rights (“**UNGPs**”) and (iv) the International Labour Standards (“**ILO Standards**”).

Only long positions were covered by the above listed NB ESG exclusion policies.

When applying ESG exclusions to the Portfolio, the Sub-Investment Manager used third-party data to identify companies in breach of the ESG exclusions listed above. Where possible, the Sub-Investment Manager sought to overlay this third-party data

with qualitative expertise from their research analysts to establish a current and holistic picture of the company. The Sub-Investment Manager discussed and debated the differences between the violators identified by the third-party data and those identified as a result of their research, which drew upon data from the NB ESG Quotient and direct engagements with the company.

● ***...and compared to previous periods?***

N/A – this is the first reference period.

● ***What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?***

KEURIG DR PEPPER INC	C - Manufacturing	1.3%	United States

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: 1 January 2022 - 31 December 2022

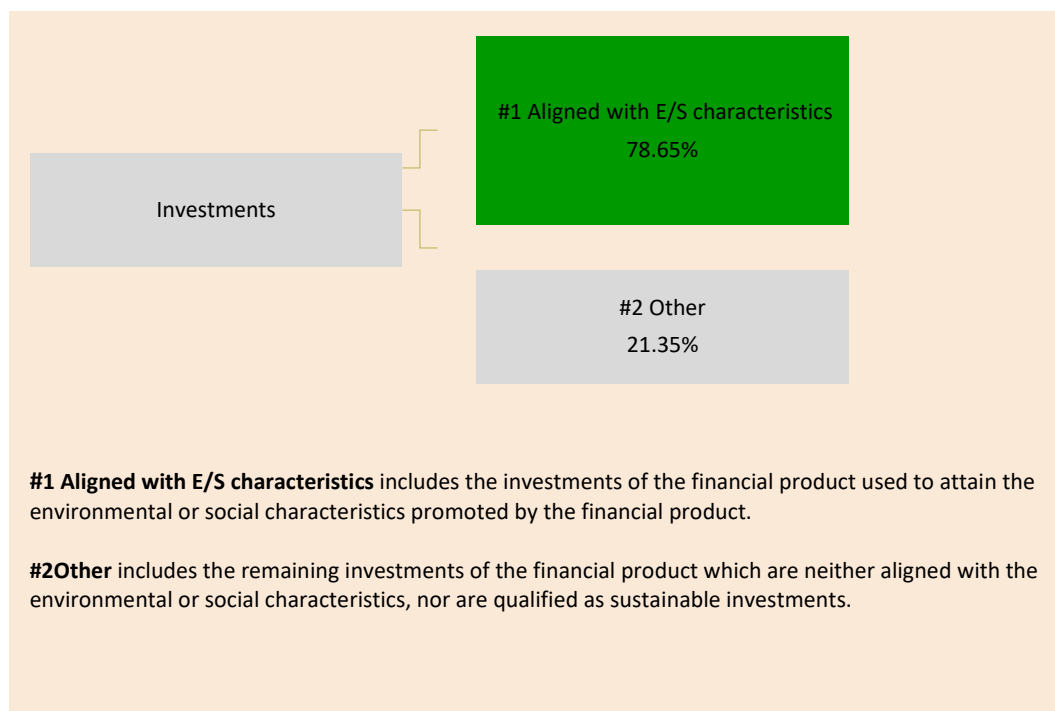

### What was the proportion of sustainability-related investments?

#### ● What was the asset allocation?

The Sub-Investment Manager calculated the proportion of investments aligned with the environmental and/or social characteristics promoted by the Portfolio by reference to the proportion of companies in the Portfolio: i) that held either an NB ESG Quotient rating or a third-party equivalent ESG rating that was used as part of the portfolio construction and investment management process of the Portfolio; and/or ii) with whom the Sub-Investment Manager had

Asset allocation describes the share of investments in specific assets.

engaged directly. This calculation was based on a mark-to-market assessment of the Portfolio and may rely on incomplete or inaccurate company or third-party data. For the 2022 reference period only, this calculation is based on the Portfolio's holdings as at 31 December 2022, being the only quarter end in the reference period that followed the publication of the Portfolio's SFDR Annex detailing its planned asset allocation. For all subsequent reference periods, this calculation will be based on the average of the four quarter ends.

● ***In which economic sectors were the investments made?***

Data as at 31 December 2022	
Economic Sector – NACE	% Assets
C - Manufacturing	26.57%
D - Electricity, gas, steam and air conditioning supply	5.61%
E - Water supply; sewerage; waste management and remediation activities	1.43%
G - Wholesale and retail trade; repair of motor vehicles and motorcycles	11.68%
H - Transporting and storage	3.93%
I - Accommodation and food service activities	3.10%
J - Information and communication	27.14%
K - Financial and insurance activities	13.64%
L - Real estate activities	2.03%
N - Administrative and support service activities	2.05%
Q - Human health and social work activities	1.05%
R - Arts, entertainment, and recreation	0.00%
S - Other services activities	0.19%
None	1.58%

## To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The analysis and disclosure requirements introduced by the EU Taxonomy are very detailed and compliance with them requires the availability of multiple, specific data points in respect of each investment which the Portfolio made. The Sub-Investment Manager cannot confirm that the Portfolio invested in any investments that qualified as environmentally sustainable for the purposes of the EU Taxonomy. Disclosures and reporting on Taxonomy alignment will develop as the EU framework evolves and data is made available by companies. The Sub-Investment Manager will keep the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy under active review as data availability and quality improves.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

### ● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?

Yes:

In fossil gas

In nuclear energy

No

---

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

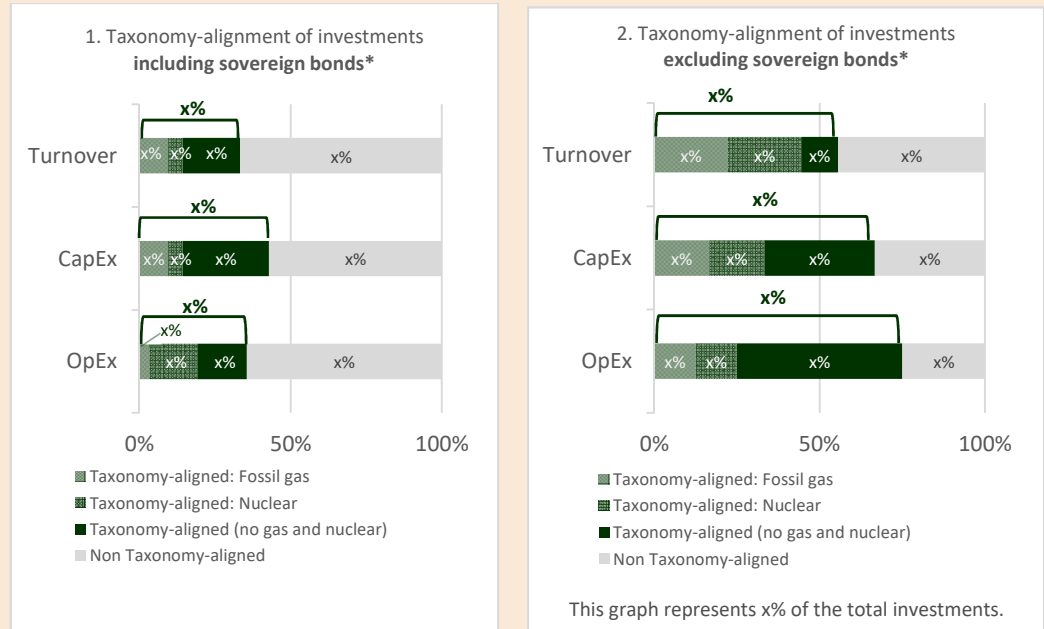

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

● **What was the share of investments made in transitional and enabling activities?**

N/A – The Portfolio did not commit to holding Taxonomy-aligned investments.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

N/A – The Portfolio did not commit to holding Taxonomy-aligned investments.

**What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?**

N/A – The Portfolio did not commit to holding sustainable investments.

**What was the share of socially sustainable investments?**

N/A – The Portfolio did not commit to holding sustainable investments.

**What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?**

"Other" included the remaining investments of the Portfolio (including but not limited to any derivatives or any security collateralized by a pool of similar assets or receivables listed in the Supplement for the Portfolio) which were neither aligned with the environmental or social characteristics, nor qualified as sustainable investments.

The “Other” section in the Portfolio was held for a number of reasons that the Sub-Investment Manager felt was beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover.

As noted above, the Portfolio was invested in compliance with ESG exclusion policies, on a continuous basis. This ensured that investments made by the Portfolio sought to align with international environmental and social safeguards such as the UNGC Principles, UNGPs, OECD Guidelines and the ILO Standards.

The Sub-Investment Manager believes that these policies prevented investment in companies that most egregiously violated environmental and/or social minimum standards and ensured that the Portfolio could successfully promote its environmental and social characteristics.

### **What actions have been taken to meet the environmental and/or social characteristics during the reference period?**

The Portfolio was managed in-line with the investment objective and the following actions were taken:

I. Integrating proprietary ESG analysis:

The NB ESG Quotient ratings were generated for company holdings in the Portfolio. The NB ESG Quotient or third-party rating for companies was utilised to help to better identify risks and opportunities in the overall assessment.

By integrating the investment team’s proprietary ESG analysis (the NB ESG Quotient and third-party rating) into the overall company view, there was a link between their analysis of material ESG characteristics and portfolio construction activities across their strategy.

Companies with a favourable or an improving NB ESG Quotient or third-party rating had a higher chance of ending up in the long side of the Portfolio. Companies with a poor NB ESG Quotient or third-party rating especially where these were not being addressed by that company, were more likely to be removed from the long investment universe or divested from the long side of the Portfolio.

II. Engagement:

The Sub-Investment Manager engaged with companies. They sought to prioritise constructive engagements and sought to engage on topics (including ESG topics) they determined to be financially material for the relevant company. The Sub-Investment Manager viewed this engagement with companies, as an important part of its long side investment process. Progress on engagement was tracked centrally in the Sub-Investment Manager’s engagement tracker.

III. ESG sectoral exclusion policies:

To ensure that the environmental and social characteristics promoted by the long side of the Portfolio were attained, the long side of the Portfolio applied the ESG exclusion policies referenced above, which placed limitations on the investable universe.

As mentioned above, only long positions are covered by the above listed NB ESG exclusion policies.

### **How did this financial product perform compared to the reference benchmark?**

N/A – The Portfolio’s benchmark has not been designated as a reference benchmark. Therefore, it is not consistent with the environmental or social characteristics promoted by the Portfolio.

- *How does the reference benchmark differ from a broad market index?*

N/A

- *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?*

N/A

- *How did this financial product perform compared with the reference benchmark?*

N/A

- *How did this financial product perform compared with the broad market index?*

N/A

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

**Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852**

**Product name:** Neuberger Berman US Small Cap Fund (the “Portfolio”)

**Legal entity identifier:** 549300CG2QDECVFZQ378

## Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?	
<input checked="" type="radio"/> <input checked="" type="radio"/> <input type="checkbox"/> <b>Yes</b>	<input checked="" type="radio"/> <input type="radio"/> <input checked="" type="checkbox"/> <b>No</b>
<input type="checkbox"/> It made <b>sustainable investments with an environmental objective</b> : ____% <ul style="list-style-type: none"> <li><input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy</li> <li><input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</li> </ul>	<input type="checkbox"/> It <b>promoted Environmental/Social (E/S) characteristics</b> and while it did not have as its objective a sustainable investment, it had a proportion of ____% of sustainable investments <ul style="list-style-type: none"> <li><input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy</li> <li><input type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</li> <li><input type="checkbox"/> with a social objective</li> </ul>
<input type="checkbox"/> It made <b>sustainable investments with a social objective</b> : ____%	<input checked="" type="checkbox"/> It promoted E/S characteristics, but <b>did not make any sustainable investments</b>

## To what extent were the environmental and/or social characteristics promoted by this financial product met?

The following environmental and social characteristics were promoted by the Portfolio:

- **Environmental Characteristics:** air quality; biodiversity & land use; energy management; environmental risk exposure; fuel economy; greenhouse gas (“GHG”) emissions; opportunities in clean technologies; toxic emissions & waste; water management; packaging lifecycle management; materials sourcing; and product lifecycle management.
- **Social Characteristics:** access to finance; access to healthcare; community relations; data privacy & security; employee incentives & risk taking; health & nutrition; health & safety; human capital development; labour management; product safety & integrity; supply chain labour standards; workforce diversity & inclusion; pricing transparency; and responsible marketing.

Performance in relation to these environmental and social characteristics was measured through the NB ESG Quotient, and is reported, in aggregate, below.

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

### How did the sustainability indicators perform?

As part of the investment process, the Sub-Investment Manager considered a variety of sustainability indicators to measure the environmental and/or social characteristics promoted by the Portfolio. These sustainability indicators are listed below:

1. The NB ESG Quotient:

The proprietary Neuberger Berman ESG rating system (the “**NB ESG Quotient**”), is built around the concept of sector specific ESG risk and opportunity, and produced an overall ESG rating for companies by assessing them against certain ESG metrics.

Foundational to the NB ESG Quotient is the proprietary Neuberger Berman (“**NB**”) materiality matrix, which focuses on the ESG characteristics that were considered to be the most likely to be the material drivers of ESG risk and opportunity for each sector. Each sector criteria is constructed using third-party and internally derived ESG data and supplemented with internal qualitative analysis, leveraging the Portfolio’s analyst team’s significant sector expertise. The NB materiality matrix enabled the Sub-Investment Manager to derive the NB ESG Quotient rating, to compare sectors and companies relative to their environmental and social characteristics.

The NB ESG Quotient assigned weightings to environmental, social and governance factors for each sector to derive the NB ESG Quotient rating for companies. Pursuant to this, the Sub-Investment Manager engaged with companies with a poor NB ESG Quotient rating with the aim to seek improvement in the underlying environmental and social characteristics (which made up the NB ESG Quotient).

<b>31 December 2022</b>	<b>Rating</b>	<b>Combined coverage</b>
NB ESG Quotient	ES: C G: 2.3	100%
Third-party Data	5.4	

With regards to the NB ESG Quotient rating, for environmental and social (ES) ratings, A – D quartiles are used, where A is the highest rating (top quartile) and D is the lowest rating (bottom quartile). For governance (G) rating, 1 – 4 quartiles are used where 1 is the highest rating and 4 is the lowest rating. This Portfolio does not have a minimum NB ESG Quotient rating. The average NB ESG Quotient rating is a weighted average and is not a rating of the Portfolio strategy itself.

Third-party data was also used to measure the environmental and social characteristics promoted by the Portfolio. The third-party data ratings range from 0-10, with 0 being the lowest rating and 10 being the highest rating.

## 2. ESG exclusion policies:

To ensure that the environmental or social characteristics promoted by the Portfolio were attained, the Portfolio did not invest in companies whose activities breached, or were not consistent with, the Neuberger Berman Controversial Weapons Policy and the Neuberger Berman Thermal Coal Involvement Policy. In addition to the application of the Neuberger Berman Thermal Coal Involvement Policy, the Sub-Investment Manager prohibited the initiation of new investment positions in companies that (i) derived more than 25% of their revenue from thermal coal mining; or (ii) were expanding new thermal coal power generation. Furthermore, from 6 April 2022 onwards, investments held by the Portfolio did not invest in companies whose activities had been identified as breaching the Neuberger Berman Global Standards Policy which excluded identified violators of (i) the United Nations Global Compact Principles (“**UNGC Principles**”), (ii) the OECD Guidelines for Multinational Enterprises (“**OECD Guidelines**”), (iii) the United Nations Guiding Principles on Business and Human Rights (“**UNGPs**”) and (iv) the International Labour Standards (“**ILO Standards**”). From 19 August 2022 onwards, the Portfolio did not purchase securities of companies that derived meaningful revenues from firearms, tobacco, gambling, or adult entertainment. From 28 November 2022 onwards, the Portfolio did not purchase securities of companies that manufactured firearms or companies that derived 5% or more of their revenue from tobacco, gambling or adult entertainment.

When applying ESG exclusions to the Portfolio, the Sub-Investment Manager used third-party data to identify companies in breach of the ESG exclusions listed above. Where possible, the Sub-Investment Manager sought to overlay this third-party data with qualitative expertise from their research analysts to establish a current and holistic picture of the company. The Sub-Investment Manager discussed and debated the differences between the violators identified by the third-party data and those identified as a result of their research, which drew upon data from the NB ESG Quotient and direct engagements with the company.

### ● ***...and compared to previous periods?***

N/A - this is the first reference period.

### ● ***What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?***

N/A – the Portfolio did not commit to holding sustainable investments.

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

*How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?*

N/A – the Portfolio did not commit to holding sustainable investments.

*How were the indicators for adverse impacts on sustainability factors taken into account?*

N/A – the Portfolio did not commit to holding sustainable investments.

*Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:*

The Portfolio did not commit to holding sustainable investments, however, from 6 April 2022 onwards, the Sub-Investment Manager did not invest in companies whose activities had been identified as breaching the OECD Guidelines, ILO Standards, UNGC Principles and UNGPs, captured through the Neuberger Berman Global Standards Policy.

*The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.*

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

N/A – The Portfolio did not hold Taxonomy-aligned investments

**How did this financial product consider principal adverse impacts on sustainability factors?**

A selection of the principal adverse impact indicators were considered directly (e.g. through the ESG exclusion policies listed above) and/or indirectly (e.g. as part of the Sub-Investment Manager’s assessment of issuers) throughout the 2022 reference period.

From 28 November 2022 onwards, the Sub-Investment Manager considered the following principal adverse impacts, namely: GHG emissions, carbon footprint, GHG intensity, fossil fuel exposure, board

gender diversity, UNGC Principles & OECD Guidelines violations and controversial weapons (the “**Product Level PAIs**”).

Consideration of the Product Level PAIs was limited by the availability (in the Sub-Investment Manager’s subjective view) of adequate, reliable and verifiable data coverage,. The Sub-Investment Manager utilised third-party data and proxy data along with internal research to consider the Product Level PAIs.

Consideration of the Product Level PAIs by the Sub-Investment Manager was through a combination of:

- Monitoring the Portfolio, in particular where it fell below the quantitative and qualitative tolerance thresholds set for each Product Level PAI by the Sub-Investment Manager;
- Stewardship and/or setting engagement objectives where the Portfolio fell below the quantitative and qualitative tolerance thresholds set for a Product Level PAI by the Sub-Investment Manager; and
- Application of the ESG exclusion policies referenced above, which included consideration of several of the Product Level PAIs.

## What were the top investments of this financial product?

The Sub-Investment Manager has used the EU statistical classification of economic activities (“**NACE**”) economic sector breakdown to identify the economic sectors of the Portfolio’s top 15 investments. The following data is as at 31 December 2022.

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 1 January 2022 - 31 December 2022

Largest investments	Sector	% Assets	Country
POOL CORP	G - Wholesale and retail trade; repair of motor vehicles and motorcycles	2.3%	United States
LATTICE SEMICONDUCTOR CORP	C - Manufacturing	2.2%	United States
VALMONT INDS INC	C - Manufacturing	2.1%	United States
BIO TECHNE CORP	C - Manufacturing	2.0%	United States
CHEMED CORP	Q - Human health and social work activities	2.0%	United States
NEXSTAR MEDIA GROUP INC	J - Information and communication	1.9%	United States
FAIR ISAAC CORP	J - Information and communication	1.9%	United States
MANHATTAN ASSOCIATES INC	J - Information and communication	1.9%	United States
EXPONENT INC	M - Professional, scientific and technical activities	1.8%	United States
HAEMONETICS CORP	C - Manufacturing	1.8%	United States
RBC BEARINGS INC	C - Manufacturing	1.8%	United States
SPS COMMERCE INC	J - Information and communication	1.7%	United States

TORO	C - Manufacturing	1.7%	United States
POWER INTEGRATIONS INC	C - Manufacturing	1.7%	United States
FOX FACTORY HOLDING CORP	C - Manufacturing	1.6%	United States

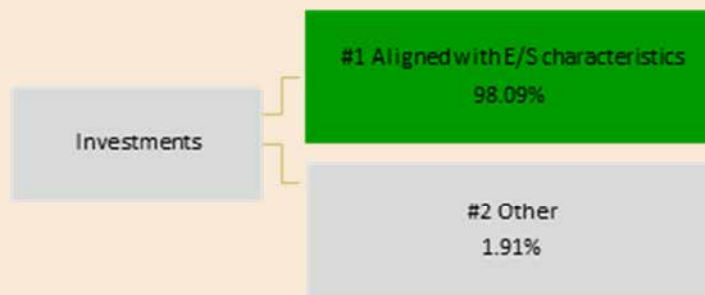

## What was the proportion of sustainability-related investments?

**Asset allocation** describes the share of investments in specific assets.

### What was the asset allocation?

The Sub-Investment Manager calculated the proportion of investments aligned with the environmental and/or social characteristics promoted by the Portfolio by reference to the proportion of companies in the Portfolio: i) that held either an NB ESG Quotient rating or a third-party equivalent ESG rating that was used as part of the portfolio construction and investment management process of the Portfolio; and/or ii) with whom the Sub-Investment Manager had engaged directly. This calculation was based on a mark-to-market assessment of the Portfolio and may rely on incomplete or inaccurate company or third-party data. For the 2022 reference period only, this calculation is based on the Portfolio's holdings as at 31 December 2022, being the only quarter end in the reference period that followed the publication of the Portfolio's SFDR Annex detailing its planned asset allocation. For all subsequent reference periods, this calculation will be based on the average of the four quarter ends.

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

● ***In which economic sectors were the investments made?***

<b>Data as at 31 December 2022</b>	
<b>Economic Sector – NACE</b>	<b>% Assets</b>
B - Mining and quarrying	2.24%
C - Manufacturing	40.36%
G - Wholesale and retail trade; repair of motor vehicles and motorcycles	8.58%
H - Transporting and storage	2.62%
I - Accommodation and food service activities	1.06%
J - Information and communication	17.21%
K - Financial and insurance activities	15.50%
L - Real estate activities	1.47%
M - Professional, scientific and technical activities	6.85%
N - Administrative and support service activities	1.64%
Q - Human health and social work activities	2.48%

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

- **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

## To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The analysis and disclosure requirements introduced by the EU Taxonomy are very detailed and compliance with them requires the availability of multiple, specific data points in respect of each investment which the Portfolio made. The Sub-Investment Manager cannot confirm that the Portfolio invested in any investments that qualified as environmentally sustainable for the purposes of the EU Taxonomy. Disclosures and reporting on Taxonomy alignment will develop as the EU framework evolves and data is made available by companies. The Sub-Investment Manager will keep the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy under active review as data availability and quality improves.

### ● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?

- Yes:  
 In fossil gas  In nuclear energy
- No

---

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

- **What was the share of investments made in transitional and enabling activities?**

N/A - The Portfolio did not commit to holding Taxonomy-aligned investments.

- **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

N/A - The Portfolio did not commit to holding Taxonomy-aligned investments.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

### **What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?**

N/A - The Portfolio did not commit to holding sustainable investments.

### **What was the share of socially sustainable investments?**

N/A - The Portfolio did not commit to holding sustainable investments.

### **What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?**

“Other” included the remaining investments of the Portfolio (including but not limited to any derivatives or any security collateralized by a pool of similar assets or receivables listed in the Supplement for the Portfolio) which were neither aligned with the environmental or social characteristics, nor qualified as sustainable investments.

The “Other” section in the Portfolio was held for a number of reasons that the Sub-Investment Manager felt was beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover.

As noted above, the Portfolio was invested in compliance with ESG exclusion policies, on a continuous basis. This ensured that investments made by the Portfolio sought to align with international environmental and social safeguards such as the UNGC Principles, UNGPs, OECD Guidelines and the ILO Standards.

The Sub-Investment Manager believes that these policies prevented investment in companies that most egregiously violated environmental and/or social minimum standards and ensured that the Portfolio could successfully promote its environmental and social characteristics.

The above steps ensured that robust environmental and social safeguards were in place.

## **What actions have been taken to meet the environmental and/or social characteristics during the reference period?**

The Portfolio was managed in-line with the investment objective and the following actions were taken:

### **I. Integrating proprietary ESG analysis:**

The NB ESG Quotient ratings were generated for company holdings in the Portfolio. The NB ESG Quotient rating for companies was utilised to help to better identify risks and opportunities in the overall assessment.

By integrating the investment team's proprietary ESG analysis (the NB ESG Quotient) into the overall company view, there was a direct link between their analysis of material ESG characteristics and portfolio construction activities across their strategy.

Pursuant to this, the Sub-Investment Manager engaged with companies with a poor NB ESG Quotient rating with the aim to seek improvement in the underlying environmental and social characteristics (which made up the NB ESG Quotient).

### **II. Engagement:**

The Sub-Investment Manager engaged with companies through a robust ESG engagement program. They sought to prioritise constructive engagements and sought to engage on topics (including ESG topics) they determined to be financially material for the relevant company. The Sub-Investment Manager viewed this engagement with companies, as an important part of its investment process. Progress on engagement was tracked centrally in the Sub-Investment Manager's engagement tracker.

### **III. ESG sectoral exclusion policies:**

To ensure that the environmental and social characteristics promoted by the Portfolio were attained, the Portfolio applied the ESG exclusion policies referenced above, which placed limitations on the investable universe.

## **How did this financial product perform compared to the reference benchmark?**

N/A – The Portfolio's benchmark has not been designated as a reference benchmark. Therefore, it is not consistent with the environmental or social characteristics promoted by the Portfolio.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

---

- ***How does the reference benchmark differ from a broad market index?***  
N/A
- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***  
N/A
- ***How did this financial product perform compared with the reference benchmark?***  
N/A
- ***How did this financial product perform compared with the broad market index?***  
N/A

**Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852**

**Product name:** Neuberger Berman US Multi Cap Opportunities Fund (the “Portfolio”)

**Legal entity identifier:** 549300K77TBAIVA0NY51

## Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?	
<input checked="" type="radio"/> <input type="radio"/> <b>Yes</b>	<input type="radio"/> <input checked="" type="radio"/> <input checked="" type="checkbox"/> <b>No</b>
<input type="checkbox"/> It made <b>sustainable investments with an environmental objective:</b> ___% <ul style="list-style-type: none"> <li><input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy</li> <li><input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</li> </ul>	<input type="checkbox"/> It <b>promoted Environmental/Social (E/S) characteristics</b> and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments <ul style="list-style-type: none"> <li><input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy</li> <li><input type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</li> <li><input type="checkbox"/> with a social objective</li> </ul>
<input type="checkbox"/> It made <b>sustainable investments with a social objective:</b> ___%	<input checked="" type="checkbox"/> It promoted E/S characteristics, but <b>did not make any sustainable investments</b>

## To what extent were the environmental and/or social characteristics promoted by this financial product met?

The following environmental and social characteristics were promoted by the Portfolio:

- **Environmental Characteristics:** air quality; biodiversity & land use; energy management; environmental risk exposure; fuel economy; greenhouse gas (“GHG”) emissions; opportunities in clean technologies; toxic emissions & waste; water management; packaging lifecycle management; materials sourcing; and product lifecycle management.
- **Social Characteristics:** access to finance; access to healthcare; community relations; data privacy & security; employee incentives & risk taking; health & nutrition; health & safety; human capital development; labour management; product safety & integrity; supply chain labour standards; workforce diversity & inclusion; pricing transparency; and responsible marketing.

Performance in relation to these environmental and social characteristics was measured through the NB ESG Quotient, and is reported, in aggregate, below

### ● How did the sustainability indicators perform?

As part of the investment process, the Sub-Investment Manager considered a variety of sustainability indicators to measure the environmental and/or social characteristics promoted by the Portfolio. These sustainability indicators are listed below:

#### 1. The NB ESG Quotient:

The proprietary Neuberger Berman ESG rating system (the “NB ESG Quotient”), is built around the concept of sector specific ESG risk and opportunity, and produced an overall ESG rating for companies by assessing them against certain ESG metrics.

Foundational to the NB ESG Quotient is the proprietary Neuberger Berman (“NB”) materiality matrix, which focuses on the ESG characteristics that were considered to be the most likely to be the material drivers of ESG risk and opportunity for each sector. Each sector criteria is constructed using third-party and internally derived ESG data and supplemented with internal qualitative analysis, leveraging the Portfolio’s analyst team’s significant sector expertise. The NB materiality matrix enabled the Sub-Investment Manager to derive the NB ESG Quotient rating, to compare sectors and companies relative to their environmental and social characteristics.

The NB ESG Quotient assigned weightings to environmental, social and governance factors for each sector to derive the NB ESG Quotient rating for companies. Pursuant to this, the Sub-Investment Manager engaged with companies with a poor NB ESG Quotient rating with the aim to seek improvement in the underlying environmental and social characteristics (which made up the NB ESG Quotient).

<b>31 December 2022</b>	<b>Rating</b>	<b>Combined coverage</b>
NB ESG Quotient	ES: C G: 2.3	99%
Third-party Data	6.2	

With regards to the NB ESG Quotient rating, for environmental and social (ES) ratings, A – D quartiles are used, where A is the highest rating (top quartile) and D is the lowest rating (bottom quartile). For governance (G) rating, 1 – 4 quartiles are used where 1 is the highest rating and 4 is the lowest rating. This Portfolio does not

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

have a minimum NB ESG Quotient rating. The average NB ESG Quotient rating is a weighted average and is not a rating of the Portfolio strategy itself.

Third-party data was also used to measure the environmental and social characteristics promoted by the Portfolio. The third-party data ratings range from 0-10, with 0 being the lowest rating and 10 being the highest rating.

## 2. Climate Value-at-Risk:

Over the reference period, Climate Value-at-Risk (“**CVaR**”) measured the exposure to transition and physical climate risks. CVaR is a scenario analysis tool evaluating economic risks under various degree scenarios (i.e., the amount of warming targeted) and potential regulatory environments in varying countries.

CVaR is a type of scenario analysis which is defined as the present value of aggregated future policy risk costs, technology opportunity profits, and extreme weather event costs and profits, expressed as a percentage of a security or portfolio’s market value according to the warming scenario targeted.

By calculating the financial risks from climate change per security and per scenario, CVaR provides a framework that helps quantify and understand these risks. The CVaR metric provides insight into the climate-stressed valuation of assets based on specific degree scenarios, providing an assessment on how much a security may stand to lose or gain from the impact of climate change.

As at 31 December 2022, CVaR projected that a warming climate scenario could result in a depreciation of 12.59% in the valuation of assets under assessment.

This analysis is intended as a broad overview of the investment team’s style and investment process.

On a holistic basis, the results were evaluated by the Sub-Investment Manager’s portfolio managers and analysts. The scenario analysis served as a starting point for further bottom-up analysis and identifying potential climate-related risks to address through company engagement.

Due to data limitations, CVaR was not applied across all companies held by the Portfolio and was instead limited to the companies for which the Sub-Investment Manager had sufficient and reliable data. The Portfolio had a CVaR coverage of 99%.

The analysis from CVaR is reviewed at least once a year.

## 3. ESG exclusion policies:

To ensure that the environmental or social characteristics promoted by the Portfolio were attained, the Portfolio did not invest in companies whose activities breached, or were not consistent with, the Neuberger Berman Controversial Weapons Policy and the Neuberger Berman Thermal Coal Involvement Policy. In addition to the application of the Neuberger Berman Thermal Coal Involvement Policy, the Sub-Investment Manager prohibited the initiation of new investment positions in companies that (i) derived more than 25% of their revenue from thermal coal mining; or (ii) were expanding new thermal coal power generation. Furthermore, from 6 April 2022 onwards, investments held by the Portfolio did not invest in companies whose activities had been identified as breaching the Neuberger Berman Global Standards Policy which excluded identified violators of (i) the United Nations Global Compact Principles (“**UNGC Principles**”), (ii) the OECD Guidelines for Multinational Enterprises (“**OECD Guidelines**”), (iii) the United Nations Guiding Principles on Business and Human Rights (“**UNGPs**”) and (iv) the International Labour Standards (“**ILO Standards**”).

When applying ESG exclusions to the Portfolio, the Sub-Investment Manager used third-party data to identify companies in breach of the ESG exclusions listed above. Where possible, the Sub-Investment Manager sought to overlay this third-party data

with qualitative expertise from their research analysts to establish a current and holistic picture of the company. The Sub-Investment Manager discussed and debated the differences between the violators identified by the third-party data and those identified as a result of their research, which drew upon data from the NB ESG Quotient and direct engagements with the company.

● ***...and compared to previous periods?***

N/A - this is the first reference period.

● ***What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?***

N/A – the Portfolio did not commit to holding sustainable investments.

● ***How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?***

N/A – the Portfolio did not commit to holding sustainable investments.

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How were the indicators for adverse impacts on sustainability factors taken into account?

N/A – the Portfolio did not commit to holding sustainable investments.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Portfolio did not commit to holding sustainable investments, however, from 6 April 2022 onwards, the Sub-Investment Manager did not invest in companies whose activities had been identified as breaching the OECD Guidelines, ILO Standards, UNGC Principles and UNGPs, captured through the Neuberger Berman Global Standards Policy.

*The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.*

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

N/A – The Portfolio did not commit to holding Taxonomy-aligned investments

### **How did this financial product consider principal adverse impacts on sustainability factors?**

A selection of the principal adverse impact indicators were considered directly (e.g. through the ESG exclusion policies listed above) and/or indirectly (e.g. as part of the Sub-Investment Manager’s assessment of issuers) throughout the 2022 reference period.

From 28 November 2022 onwards, the Sub-Investment Manager considered the following principal adverse impacts, namely: GHG emissions, carbon footprint, GHG intensity, fossil fuel exposure, board gender diversity, UNGC Principles & OECD Guidelines violations and controversial weapons (the “**Product Level PAIs**”).

Consideration of the Product Level PAIs was limited by the availability (in the Sub-Investment Manager’s subjective view) of adequate, reliable and verifiable data coverage. The Sub-Investment Manager utilised third-party data and proxy data along with internal research to consider the Product Level PAIs.

Consideration of the Product Level PAIs by the Sub-Investment Manager was through a combination of:

- Monitoring the Portfolio, in particular where it fell below the quantitative and qualitative tolerance thresholds set for each Product Level PAI by the Sub-Investment Manager;
- Stewardship and/or setting engagement objectives where the Portfolio fell below the quantitative and qualitative tolerance thresholds set for a Product Level PAI by the Sub-Investment Manager; and
- Application of the ESG exclusion policies referenced above, which included consideration of several of the Product Level PAIs.

## What were the top investments of this financial product?

The Sub-Investment Manager has used the EU statistical classification of economic activities (“NACE”) economic sector breakdown to identify the economic sectors of the Portfolio's top 15 investments. The following data is as at 31 December 2022.

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: 1 January 2022 - 31 December 2022

Largest investments	Sector	% Assets	Country
BERKSHIRE HATHAWAY INC CLASS B	K - Financial and insurance activities	5.3%	United States
HCA HEALTHCARE INC	O - Human health and social work activities	3.9%	United States
ALPHABET INC CLASS C	J - Information and communication	3.8%	United States
GRAPHIC PACKAGING HOLDING	C - Manufacturing	3.8%	United States
ARAMARK	I - Accommodation and food service activities	3.7%	United States
MICROSOFT CORP	J - Information and communication	3.6%	United States
MOTOROLA SOLUTIONS INC	C - Manufacturing	3.6%	United States
RAYTHEON TECHNOLOGIES CORP	C - Manufacturing	3.5%	United States
APPLE INC	C - Manufacturing	3.5%	United States
CSX CORP	H - Transporting and storage	3.3%	United States
JPMORGAN CHASE	K - Financial and insurance activities	3.1%	United States
BROOKFIELD CORP	L - Real estate activities	3.0%	Canada
T MOBILE US INC	J - Information and communication	2.9%	United States
US FOODS HOLDING CORP	G - Wholesale and retail trade; repair of motor vehicles and motorcycles	2.6%	United States
CHUBB LTD	K - Financial and insurance activities	2.6%	United States

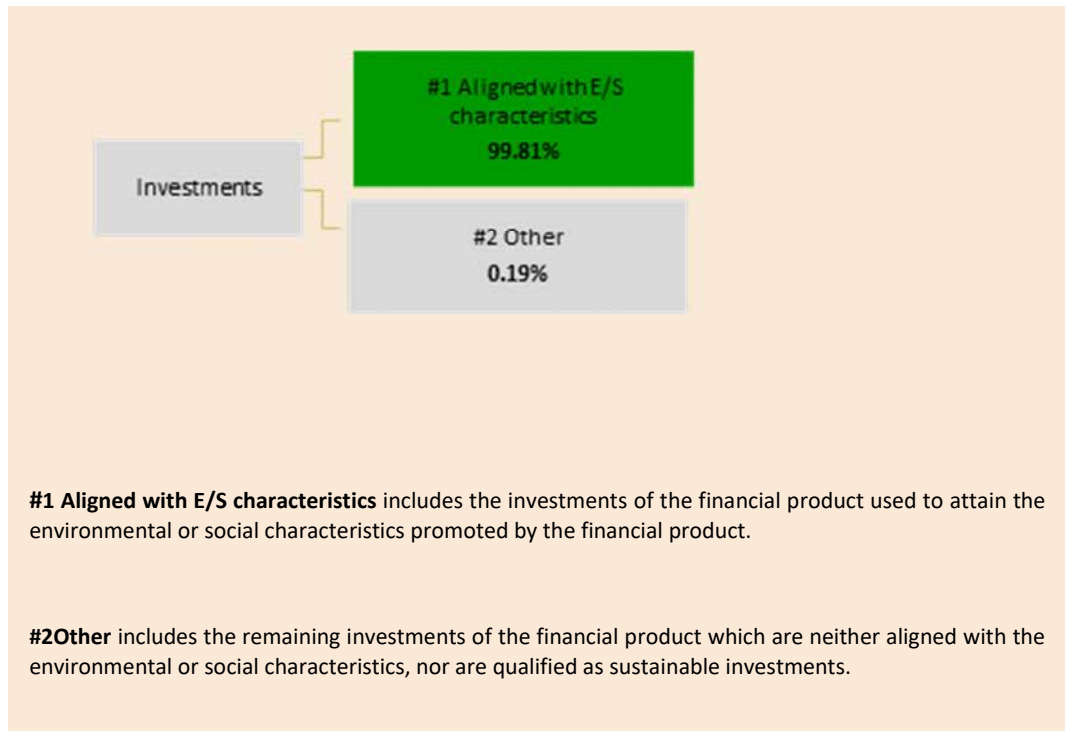

## What was the proportion of sustainability-related investments?

### ● What was the asset allocation?

The Sub-Investment Manager calculated the proportion of investments aligned with the environmental and/or social characteristics promoted by the Portfolio by reference to the proportion of companies in the Portfolio: i) that held either an NB ESG Quotient rating or a third-party equivalent ESG rating that was used as part of the portfolio construction and investment management process of the Portfolio; and/or ii) with whom the Sub-Investment Manager had engaged directly This calculation was based on a mark-to-market assessment of the Portfolio and may rely on incomplete or inaccurate company or third-party data. For the 2022 reference period only, this calculation is based on the Portfolio's holdings as at 31 December 2022, being the only

**Asset allocation** describes the share of investments in specific assets.

quarter end in the reference period that followed the publication of the Portfolio's SFDR Annex detailing its planned asset allocation. For all subsequent reference periods, this calculation will be based on the average of the four quarter ends.

● ***In which economic sectors were the investments made?***

<b>Data as at 31 December 2022</b>	
<b>Economic Sector – NACE</b>	<b>% Assets</b>
C - Manufacturing	38.89%
D - Electricity, gas, steam and air conditioning supply	1.23%
G - Wholesale and retail trade; repair of motor vehicles and motorcycles	12.16%
H - Transporting and storage	3.34%
I - Accommodation and food service activities	6.09%
J - Information and communication	11.36%
K - Financial and insurance activities	18.46%
L - Real estate activities	2.98%
N - Administrative and support service activities	0.87%
Q - Human health and social work activities	3.94%
None	0.68%

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

- **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

## To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The analysis and disclosure requirements introduced by the EU Taxonomy are very detailed and compliance with them requires the availability of multiple, specific data points in respect of each investment which the Portfolio made. The Sub-Investment Manager cannot confirm that the Portfolio invested in any investments that qualified as environmentally sustainable for the purposes of the EU Taxonomy. Disclosures and reporting on Taxonomy alignment will develop as the EU framework evolves and data is made available by companies. The Sub-Investment Manager will keep the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy under active review as data availability and quality improves.

### ● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?

- Yes:  
 In fossil gas  In nuclear energy
- No

---

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

- **What was the share of investments made in transitional and enabling activities?**

N/A - The Portfolio did not commit to holding Taxonomy-aligned investments.

- **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

N/A - The Portfolio did not commit to holding Taxonomy-aligned investments.

### What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

N/A - The Portfolio did not commit to holding sustainable investments.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

### What was the share of socially sustainable investments?

N/A - The Portfolio did not commit to holding sustainable investments.

### What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

“Other” included the remaining investments of the Portfolio (including but not limited to any derivatives or any security collateralized by a pool of similar assets or receivables listed in the Supplement for the Portfolio) which were neither aligned with the environmental or social characteristics, nor qualified as sustainable investments.

The “Other” section in the Portfolio was held for a number of reasons that the Sub-Investment Manager felt was beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover.

As noted above, the Portfolio was invested in compliance with ESG exclusion policies, on a continuous basis. This ensured that investments made by the Portfolio sought to align with international environmental and social safeguards such as the UNGC Principles, UNGPs, OECD Guidelines and the ILO Standards.

The Sub-Investment Manager believes that these policies prevented investment in companies that most egregiously violated environmental and/or social minimum standards and ensured that the Portfolio could successfully promote its environmental and social characteristics.

The above steps ensured that robust environmental and social safeguards were in place.

## **What actions have been taken to meet the environmental and/or social characteristics during the reference period?**

The Portfolio was managed in-line with the investment objective and the following actions were taken:

### **I. Integrating proprietary ESG analysis:**

The NB ESG Quotient ratings were generated for company holdings in the Portfolio. The NB ESG Quotient rating for companies was utilised to help to better identify risks and opportunities in the overall assessment.

By integrating the investment team's proprietary ESG analysis (the NB ESG Quotient) into the overall company view, there was a direct link between their analysis of material ESG characteristics and portfolio construction activities across their strategy.

Pursuant to this, the Sub-Investment Manager engaged with companies with a poor NB ESG Quotient rating with the aim to seek improvement in the underlying environmental and social characteristics (which made up the NB ESG Quotient).

### **II. Engagement:**

The Sub-Investment Manager engaged with companies through a robust ESG engagement program. They sought to prioritise constructive engagements and sought to engage on topics (including ESG topics) they determined to be financially material for the relevant company. The Sub-Investment Manager viewed this engagement with companies, as an important part of its investment process. Progress on engagement was tracked centrally in the Sub-Investment Manager's engagement tracker.

### **III. ESG sectoral exclusion policies:**

To ensure that the environmental and social characteristics promoted by the Portfolio were attained, the Portfolio applied the ESG exclusion policies referenced above, which placed limitations on the investable universe.

## **How did this financial product perform compared to the reference benchmark?**

N/A – The Portfolio's benchmark has not been designated as a reference benchmark. Therefore, it is not consistent with the environmental or social characteristics promoted by the Portfolio.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

---

- ***How does the reference benchmark differ from a broad market index?***  
N/A
- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***  
N/A
- ***How did this financial product perform compared with the reference benchmark?***  
N/A
- ***How did this financial product perform compared with the broad market index?***  
N/A

**Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852**

**Product name:** Neuberger Berman US Equity Fund (the “Portfolio”)

**Legal entity identifier:** 549300GF328Y6TQJI517

## Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?	
<input checked="" type="radio"/> <input checked="" type="radio"/> <input type="checkbox"/> <b>Yes</b>	<input checked="" type="radio"/> <input type="radio"/> <input checked="" type="checkbox"/> <b>No</b>
<input type="checkbox"/> It made <b>sustainable investments with an environmental objective</b> : ___% <ul style="list-style-type: none"> <li><input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy</li> <li><input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</li> </ul>	<input type="checkbox"/> It <b>promoted Environmental/Social (E/S) characteristics</b> and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments <ul style="list-style-type: none"> <li><input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy</li> <li><input type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</li> <li><input type="checkbox"/> with a social objective</li> </ul>
<input type="checkbox"/> It made <b>sustainable investments with a social objective</b> : ___%	<input checked="" type="checkbox"/> It promoted E/S characteristics, but <b>did not make any sustainable investments</b>

## To what extent were the environmental and/or social characteristics promoted by this financial product met?

The following environmental and social characteristics were promoted by the Portfolio:

- **Environmental Characteristics:** air quality; biodiversity & land use; energy management; environmental risk exposure; fuel economy; greenhouse gas (“GHG”) emissions; opportunities in clean technologies; toxic emissions & waste; water management; packaging lifecycle management; materials sourcing; and product lifecycle management.
- **Social Characteristics:** access to finance; access to healthcare; community relations; data privacy & security; employee incentives & risk taking; health & nutrition; health & safety; human capital development; labour management; product safety & integrity; supply chain labour standards; workforce diversity & inclusion; pricing transparency; and responsible marketing.

Performance in relation to these environmental and social characteristics was measured through the NB ESG Quotient, and is reported, in aggregate, below.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

### How did the sustainability indicators perform?

As part of the investment process, the Sub-Investment Manager considered a variety of sustainability indicators to measure the environmental and/or social characteristics promoted by the Portfolio. These sustainability indicators are listed below:

1. The NB ESG Quotient:

The proprietary Neuberger Berman ESG rating system (the “NB ESG Quotient”), is built around the concept of sector specific ESG risk and opportunity, and produced an overall ESG rating for companies by assessing them against certain ESG metrics.

Foundational to the NB ESG Quotient is the proprietary Neuberger Berman (“NB”) materiality matrix, which focuses on the ESG characteristics that were considered to be the most likely to be the material drivers of ESG risk and opportunity for each sector. Each sector criteria is constructed using third-party and internally derived ESG data and supplemented with internal qualitative analysis, leveraging the Portfolio’s analyst team’s significant sector expertise. The NB materiality matrix enabled the Sub-Investment Manager to derive the NB ESG Quotient rating, to compare sectors and companies relative to their environmental and social characteristics. The NB ESG Quotient assigned weightings to environmental, social and governance factors for each sector to derive the NB ESG Quotient rating for companies.

Companies with a favourable and/or an improving NB ESG Quotient or third-party rating had a higher chance of being included in the Portfolio. Companies with a poor NB ESG Quotient or third-party rating, especially where a poor NB ESG Quotient or third-party rating was not being addressed by a company, were more likely to be removed from the investment universe or divested from the Portfolio. In addition, the Sub-Investment Manager continues to monitor companies with a sub-par or poor NB ESG Quotient or third party rating to understand how they are mitigating/improving upon said ESG concerns.

31 December 2022	Rating	Combined coverage
NB ESG Quotient	ES: B G: 2.2	100%
Third-party Data	6.6	

With regards to the NB ESG Quotient rating, for environmental and social (ES) ratings, A – D quartiles are used, where A is the highest rating (top quartile) and D is the lowest rating (bottom quartile). For governance (G) rating, 1 – 4 quartiles are used where 1 is the highest rating and 4 is the lowest rating. This Portfolio does not have a minimum NB ESG Quotient rating. The average NB ESG Quotient rating is a weighted average and is not a rating of the Portfolio strategy itself.

Third-party data was also used to measure the environmental and social characteristics promoted by the Portfolio. The third-party data ratings range from 0-10, with 0 being the lowest rating and 10 being the highest rating.

## 2. Climate Value-at-Risk:

Over the reference period, Climate Value-at-Risk (“**CVaR**”) measured the exposure to transition and physical climate risks. CVaR is a scenario analysis tool evaluating economic risks under various degree scenarios (i.e., the amount of warming targeted) and potential regulatory environments in varying countries.

CVaR is a type of scenario analysis which is defined as the present value of aggregated future policy risk costs, technology opportunity profits, and extreme weather event costs and profits, expressed as a percentage of a security or portfolio's market value according to the warming scenario targeted.

By calculating the financial risks from climate change per security and per scenario, CVaR provides a framework that helps quantify and understand these risks. The CVaR metric provides insight into the climate-stressed valuation of assets based on specific degree scenarios, providing an assessment on how much a security may stand to lose or gain from the impact of climate change.

As at 31 December 2022, CVaR projected that a warming climate scenario could result in a depreciation of 5.73% in the valuation of assets under assessment.

This analysis is intended as a broad overview of the investment team's style and investment process.

On a holistic basis, the results were evaluated by the Sub-Investment Manager's portfolio managers and analysts. The scenario analysis served as a starting point for further bottom-up analysis and identifying potential climate-related risks to address through company engagement.

Due to data limitations, CVaR was not applied across all companies held by the Portfolio and was instead limited to the companies for which the Sub-Investment Manager had sufficient and reliable data. The Portfolio had a CVaR coverage of 91%.

The analysis from CVaR is reviewed at least once a year.

## 3. ESG exclusion policies:

To ensure that the environmental or social characteristics promoted by the Portfolio were attained, the Portfolio did not invest in companies whose activities breached, or were not consistent with, the Neuberger Berman Controversial Weapons Policy and the Neuberger Berman Thermal Coal Involvement Policy. In addition to the application of the Neuberger Berman Thermal Coal Involvement Policy, the Sub-Investment Manager prohibited the initiation of new investment positions in companies that (i) derived more than 25% of their revenue from thermal coal mining; or (ii) were expanding new thermal coal power generation. Furthermore, from 6 April 2022 onwards, investments held by the Portfolio did not invest in companies whose activities had been identified as breaching the Neuberger Berman Global Standards Policy which excluded identified violators of (i) the United Nations Global Compact Principles (“**UNGC Principles**”), (ii) the OECD Guidelines for Multinational Enterprises (“**OECD Guidelines**”), (iii) the United Nations Guiding Principles on

Business and Human Rights (“**UNGPs**”) and (iv) the International Labour Standards (“**ILO Standards**”).

When applying ESG exclusions to the Portfolio, the Sub-Investment Manager used third-party data to identify companies in breach of the ESG exclusions listed above. Where possible, the Sub-Investment Manager sought to overlay this third-party data with qualitative expertise from their research analysts to establish a current and holistic picture of the company. The Sub-Investment Manager discussed and debated the differences between the violators identified by the third-party data and those identified as a result of their research, which drew upon data from the NB ESG Quotient and direct engagements with the company.

● **...and compared to previous periods?**

N/A - this is the first reference period.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

N/A – the Portfolio did not commit to holding sustainable investments.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

— — N/A – the Portfolio did not commit to holding sustainable investments.

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

— — **How were the indicators for adverse impacts on sustainability factors taken into account?**

N/A – the Portfolio did not commit to holding sustainable investments.

— — **Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:**

The Portfolio did not commit to holding sustainable investments, however, from 6 April 2022 onwards, the Sub-Investment Manager did not invest in companies whose activities had been identified as breaching the OECD Guidelines, ILO Standards, UNGC Principles and UNGPs, captured through the Neuberger Berman Global Standards Policy.

*The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.*

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

N/A - The Portfolio did not commit to holding Taxonomy-aligned investments.

### **How did this financial product consider principal adverse impacts on sustainability factors?**

A selection of the principal adverse impact indicators were considered directly (e.g. through the ESG exclusion policies listed above) and/or indirectly (e.g. as part of the Sub-Investment Manager’s assessment of issuers) throughout the 2022 reference period.

From 28 November 2022 onwards, the Sub-Investment Manager considered the following principal adverse impacts, namely: GHG emissions, carbon footprint, GHG intensity, fossil fuel exposure, board gender diversity, UNGC Principles & OECD Guidelines violations and controversial weapons (the “**Product Level PAIs**”).

Consideration of the Product Level PAIs was limited by the availability (in the Sub-Investment Manager’s subjective view) of adequate, reliable and verifiable data coverage,. The Sub-Investment Manager utilised third-party data and proxy data along with internal research to consider the Product Level PAIs.

Consideration of the Product Level PAIs by the Sub-Investment Manager was through a combination of:

- Monitoring the Portfolio, in particular where it fell below the quantitative and qualitative tolerance thresholds set for each Product Level PAI by the Sub-Investment Manager;
- Stewardship and/or setting engagement objectives where the Portfolio fell below the quantitative and qualitative tolerance thresholds set for a Product Level PAI by the Sub-Investment Manager; and
- Application of the ESG exclusion policies referenced above, which included consideration of several of the Product Level PAIs.

## What were the top investments of this financial product?

The Sub-Investment Manager has used the EU statistical classification of economic activities (“**NACE**”) economic sector breakdown to identify the economic sectors of the Portfolio’s top 15 investments. The following data is as at 31 December 2022.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 1 January 2022 - 31 December 2022

Largest investments	Sector	% Assets	Country
MICROSOFT CORP	J - Information and communication	8.1%	United States
APPLE INC	C - Manufacturing	6.6%	United States
ALPHABET INC CLASS A	J - Information and communication	5.4%	United States
AMAZON COM INC	G - Wholesale and retail trade; repair of motor vehicles and motorcycles	4.2%	United States
UNITEDHEALTH GROUP INC	K - Financial and insurance activities	3.8%	United States
S&P GLOBAL INC	J - Information and communication	3.1%	United States
TJX INC	G - Wholesale and retail trade; repair of motor vehicles and motorcycles	2.5%	United States
MASTERCARD INC	K - Financial and insurance activities	2.5%	United States
CME GROUP INC CLASS A	K - Financial and insurance activities	2.4%	United States
VISA INC	K - Financial and insurance activities	2.4%	United States
SALESFORCE INC	J - Information and communication	2.3%	United States
CDW CORP	J - Information and communication	2.3%	United States
SERVICENOW INC	J - Information and communication	2.3%	United States
COSTCO WHOLESALE CORP	G - Wholesale and retail trade; repair of motor vehicles and motorcycles	2.2%	United States
THERMO FISHER SCIENTIFIC	C - Manufacturing	2.2%	United States

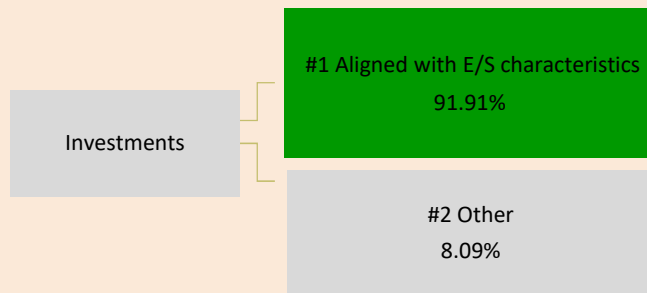

## What was the proportion of sustainability-related investments?

**Asset allocation** describes the share of investments in specific assets.

### What was the asset allocation?

The Sub-Investment Manager calculated the proportion of investments aligned with the environmental and/or social characteristics promoted by the Portfolio by reference to the proportion of companies in the Portfolio: i) that held either an NB ESG Quotient rating or a third-party equivalent ESG rating that was used as part of the portfolio construction and investment management process of the Portfolio; and/or ii) with whom the Sub-Investment Manager had engaged directly. This calculation was based on a mark-to-market assessment of the Portfolio and may rely on incomplete or inaccurate company or third-party data. For the 2022 reference period only, this calculation is based on the Portfolio's holdings as at 31 December 2022, being the only quarter end in the reference period that followed the publication of the Portfolio's SFDR Annex detailing its planned asset allocation. For all subsequent reference periods, this calculation will be based on the average of the four quarter ends.

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

### In which economic sectors were the investments made?

Data as at 31 December 2022	
Economic Sector – NACE	% Assets
C - Manufacturing	22.87%
D - Electricity, gas, steam and air conditioning supply	2.29%
E - Water supply; sewerage; waste management and remediation activities	1.89%
G - Wholesale and retail trade; repair of motor vehicles and motorcycles	13.30%
H - Transporting and storage	2.15%

I - Accommodation and food service activities	2.09%
J - Information and communication	37.68%
K - Financial and insurance activities	13.17%
L - Real estate activities	2.40%
N - Administrative and support service activities	2.16%

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

- **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

### To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The analysis and disclosure requirements introduced by the EU Taxonomy are very detailed and compliance with them requires the availability of multiple, specific data points in respect of each investment which the Portfolio made. The Sub-Investment Manager cannot confirm that the Portfolio invested in any investments that qualified as environmentally sustainable for the purposes of the EU Taxonomy. Disclosures and reporting on Taxonomy alignment will develop as the EU framework evolves and data is made available by companies. The Sub-Investment Manager will keep the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy under active review as data availability and quality improves.

#### ● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?

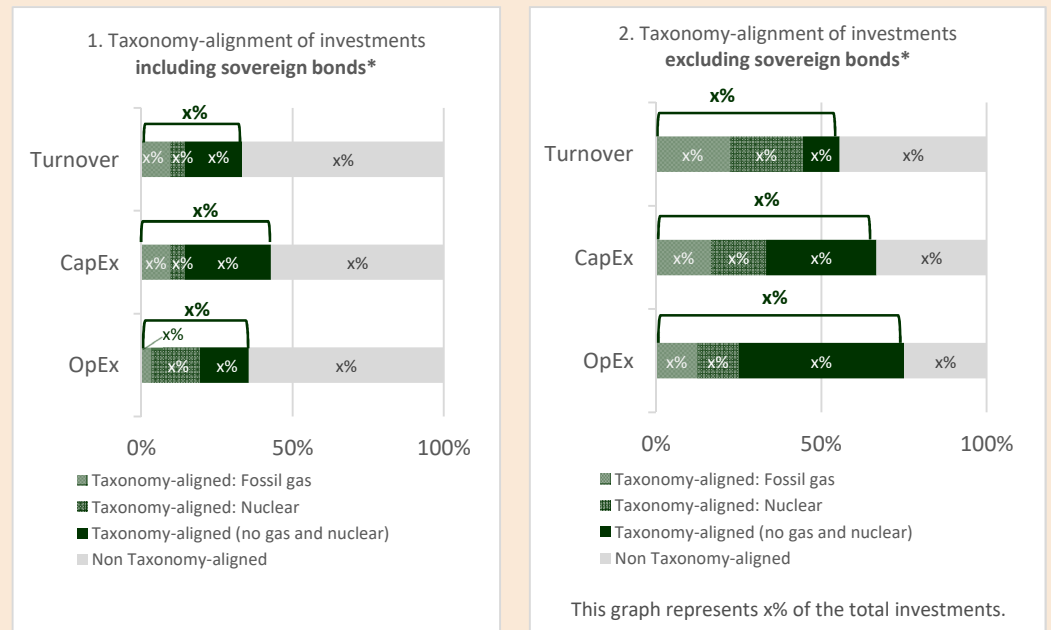

- Yes:
- In fossil gas     In nuclear energy
- No

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

● **What was the share of investments made in transitional and enabling activities?**

N/A - The Portfolio did not commit to holding Taxonomy-aligned investments.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

N/A - The Portfolio did not commit to holding Taxonomy-aligned investments.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

### **What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?**

N/A - The Portfolio did not commit to holding sustainable investments.

### **What was the share of socially sustainable investments?**

N/A - The Portfolio did not commit to holding sustainable investments.

### **What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?**

“Other” included the remaining investments of the Portfolio (including but not limited to any derivatives or any security collateralized by a pool of similar assets or receivables listed in the Supplement for the Portfolio) which were neither aligned with the environmental or social characteristics, nor qualified as sustainable investments.

The “Other” section in the Portfolio was held for a number of reasons that the Sub-Investment Manager felt was beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover.

As noted above, the Portfolio was invested in compliance with ESG exclusion policies, on a continuous basis. This ensured that investments made by the Portfolio sought to align with international environmental and social safeguards such as the UNGC Principles, UNGPs, OECD Guidelines and the ILO Standards.

The Sub-Investment Manager believes that these policies prevented investment in companies that most egregiously violated environmental and/or social minimum standards and ensured that the Portfolio could successfully promote its environmental and social characteristics.

## What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Portfolio was managed in-line with the investment objective and the following actions were taken:

### I. Integrating proprietary ESG analysis:

The NB ESG Quotient ratings were generated for company holdings in the Portfolio. The NB ESG Quotient rating for companies was utilised to help to better identify risks and opportunities in the overall assessment.

By integrating the investment team's proprietary ESG analysis (the NB ESG Quotient and third-party rating) into the overall company view, there was a link between their analysis of material ESG characteristics and portfolio construction activities across their strategy.

Companies with a favourable or an improving NB ESG Quotient or third-party rating had a higher chance of ending up in the Portfolio. Companies with a poor NB ESG Quotient or third-party rating especially where these were not being addressed by that company, were more likely to be removed from the investment universe or divested from the Portfolio.

### II. Engagement:

The Sub-Investment Manager engaged with companies. They sought to prioritise constructive engagements and sought to engage on topics (including ESG topics) they determined to be financially material for the relevant company. The Sub-Investment Manager viewed this engagement with companies, as an important part of its long side investment process. Progress on engagement was tracked centrally in the Sub-Investment Manager's engagement tracker.

### III. ESG sectoral exclusion policies:

To ensure that the environmental and social characteristics promoted by the Portfolio were attained, the Portfolio applied the ESG exclusion policies referenced above, which placed limitations on the investable universe.

## How did this financial product perform compared to the reference benchmark?

N/A – The Portfolio's benchmark has not been designated as a reference benchmark. Therefore, it is not consistent with the environmental or social characteristics promoted by the Portfolio.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

---

N/A

- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***

N/A

- ***How did this financial product perform compared with the reference benchmark?***

N/A

- ***How did this financial product perform compared with the broad market index?***

N/A

**Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852**

**Product name:** Neuberger Berman US Large Cap Value Fund (the “Portfolio”)

**Legal entity identifier:** 549300J88053TDGDP52

## Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?	
<input checked="" type="radio"/> <input checked="" type="radio"/> <input type="checkbox"/> <b>Yes</b>	<input checked="" type="radio"/> <input type="radio"/> <input checked="" type="checkbox"/> <b>No</b>
<input type="checkbox"/> It made <b>sustainable investments with an environmental objective</b> : ____% <ul style="list-style-type: none"> <li><input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy</li> <li><input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</li> </ul> <input type="checkbox"/> It made <b>sustainable investments with a social objective</b> : ____%	<input type="checkbox"/> It <b>promoted Environmental/Social (E/S) characteristics</b> and while it did not have as its objective a sustainable investment, it had a proportion of ____% of sustainable investments <ul style="list-style-type: none"> <li><input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy</li> <li><input type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</li> <li><input type="checkbox"/> with a social objective</li> </ul> <input checked="" type="checkbox"/> It promoted E/S characteristics, but <b>did not make any sustainable investments</b>

## To what extent were the environmental and/or social characteristics promoted by this financial product met?

The following environmental and social characteristics were promoted by the Portfolio:

- **Environmental Characteristics:** air quality; biodiversity & land use; energy management; environmental risk exposure; fuel economy; greenhouse gas ("**GHG**") emissions; opportunities in clean technologies; toxic emissions & waste; water management; packaging lifecycle management; materials sourcing; and product lifecycle management.
- **Social Characteristics:** access to finance; access to healthcare; community relations; data privacy & security; employee incentives & risk taking; health & nutrition; health & safety; human capital development; labour management; product safety & integrity; supply chain labour standards; workforce diversity & inclusion; pricing transparency; and responsible marketing.

Performance in relation to these environmental and social characteristics was measured through the NB ESG Quotient, and is reported, in aggregate, below.

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

### How did the sustainability indicators perform?

As part of the investment process, the Sub-Investment Manager considered a variety of sustainability indicators to measure the environmental and/or social characteristics promoted by the Portfolio. These sustainability indicators are listed below:

#### 1. The NB ESG Quotient:

The proprietary Neuberger Berman ESG rating system (the "**NB ESG Quotient**"), is built around the concept of sector specific ESG risk and opportunity, and produced an overall ESG rating for companies by assessing them against certain ESG metrics.

Foundational to the NB ESG Quotient is the proprietary Neuberger Berman ("**NB**") materiality matrix, which focuses on the ESG characteristics that were considered to be the most likely to be the material drivers of ESG risk and opportunity for each sector. The NB materiality matrix enabled the Sub-Investment Manager to derive the NB ESG Quotient rating, to compare sectors and companies relative to their environmental and social characteristics.

The NB ESG Quotient assigned weightings to environmental, social and governance characteristics for each sector to derive the NB ESG Quotient rating for companies. Pursuant to this, the Sub-Investment Manager engaged with companies with a poor NB ESG Quotient rating with the aim to seek improvement in the underlying environmental and social characteristics (which made up the NB ESG Quotient).

31 December 2022	Rating	Combined coverage
NB ESG Quotient	ES: B G: 2.0	100%
Third-party Data	6.76	

With regards to the NB ESG Quotient rating, for environmental and social (ES) ratings, A – D quartiles are used, where A is the highest rating (top quartile), and D is the lowest rating (bottom quartile). For governance (G) ratings, 1 – 4 quartiles are used where 1 is the highest rating, and 4 is the lowest rating. This Portfolio does not have a minimum NB ESG Quotient rating. The average NB ESG Quotient rating is a weighted average and is not a rating of the Portfolio strategy itself.

Third-party data was also used to measure the environmental and social characteristics promoted by the Portfolio. The third-party data ratings range from 0-10, with 0 being the lowest rating and 10 being the highest rating.

2. Climate Value-at-Risk:

Over the reference period, Climate Value-at-Risk (“**CVaR**”) measured the exposure to transition and physical climate risks. CVaR is a scenario analysis tool evaluating economic risks under various degree scenarios (i.e., the amount of warming targeted) and potential regulatory environments in varying countries.

CVaR is a type of scenario analysis which is defined as the present value of aggregated future policy risk costs, technology opportunity profits, and extreme weather event costs and profits, expressed as a percentage of a security or portfolio’s market value according to the warming scenario targeted.

By calculating the financial risks from climate change per security and per scenario, CVaR provides a framework that helps quantify and understand these risks. The CVaR metric provides insight into the climate-stressed valuation of assets based on specific degree scenarios, providing an assessment on how much a security may stand to lose or gain from the impact of climate change.

As at 31 December 2022, CVaR projected that a warming climate scenario could result in a depreciation of 18.51% in the valuation of assets under assessment.

This analysis is intended as a broad overview of the investment team’s style and investment process.

On a holistic basis, the results were evaluated by the Sub-Investment Manager’s portfolio managers and analysts. The scenario analysis served as a starting point for further bottom-up analysis and identifying potential climate-related risks to address through company engagement.

Due to data limitations, CVaR was not applied across all companies held by the Portfolio and was instead limited to the companies for which the Sub-Investment Manager had sufficient and reliable data. The Portfolio had a CVaR coverage of 96%.

The analysis from CVaR is reviewed at least once a year.

3. ESG exclusion policies:

To ensure that the environmental or social characteristics promoted by the Portfolio were attained, the Portfolio did not invest in companies whose activities breached, or were not consistent with, the Neuberger Berman Controversial Weapons Policy and the Neuberger Berman Thermal Coal Involvement Policy. In addition to the application of the Neuberger Berman Thermal Coal Involvement Policy, the Sub-Investment Manager prohibited the initiation of new investment positions in companies that (i) derived more than 25% of their revenue from thermal coal mining; or (ii) were expanding new thermal coal power generation. Furthermore, from 6 April 2022 onwards, investments held by the Portfolio did not invest in companies whose activities had been identified as breaching the Neuberger Berman Global Standards Policy which excluded identified violators of (i) the United Nations Global Compact Principles (“**UNGC Principles**”), (ii) the OECD Guidelines for Multinational Enterprises (“**OECD Guidelines**”), (iii) the United Nations Guiding Principles on Business and Human Rights (“**UNGPs**”) and (iv) the International Labour Standards (“**ILO Standards**”).

When applying ESG exclusions to the Portfolio, the Sub-Investment Manager used third-party data to identify companies in breach of the ESG exclusions listed above. Where possible, the Sub-Investment Manager sought to overlay this third-party data with qualitative expertise from their research analysts to establish a current and holistic picture of the company. The Sub-Investment Manager discussed and debated the differences between the violators identified by the third-party data and

those identified as a result of their research, which drew upon data from the NB ESG Quotient and direct engagements with the company.

● ***...and compared to previous periods?***

N/A - this is the first reference period.

● ***What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?***

N/A – the Portfolio did not commit to holding sustainable investments.

● ***How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?***

N/A – the Portfolio did not commit to holding sustainable investments.

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

— ***How were the indicators for adverse impacts on sustainability factors taken into account?***

N/A – the Portfolio did not commit to holding sustainable investments.

— ***Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

The Portfolio did not commit to holding sustainable investments, however, from 6 April 2022 onwards, the Sub-Investment Manager did not invest in companies whose activities had been identified as breaching the OECD Guidelines, ILO Standards, UNGC Principles and UNGPs, captured through the Neuberger Berman Global Standards Policy.

*The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.*

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

N/A - The Portfolio did not commit to holding Taxonomy-aligned investments

### How did this financial product consider principal adverse impacts on sustainability factors?

N/A – the Portfolio did not commit to considering principal adverse impacts on sustainability factors.

### What were the top investments of this financial product?

The Sub-Investment Manager has used the EU statistical classification of economic activities (“NACE”) economic sector breakdown to identify the economic sectors of the Portfolio’s top 15 investments. The following data is as at 31 December 2022.

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 1 January 2022 – 31 December 2022

Largest investments	Sector	% Assets	Country
EXXON MOBIL CORP	C - Manufacturing	4.3%	United States
JPMORGAN CHASE	K - Financial and insurance activities	3.4%	United States
CHEVRON CORP	C - Manufacturing	3.0%	United States
MERCK & CO INC	C - Manufacturing	3.0%	United States
PROCTER & GAMBLE	C - Manufacturing	2.7%	United States
BANK OF AMERICA CORP	K - Financial and insurance activities	2.6%	United States
NEWMONT	B - Mining and quarrying	2.6%	United States
JOHNSON & JOHNSON	C - Manufacturing	2.5%	United States
PFIZER INC	C - Manufacturing	2.4%	United States
RIO TINTO ADR REPTG ONE PLC	B - Mining and quarrying	2.3%	Australia
CUMMINS INC	C - Manufacturing	2.3%	United States
CONSTELLATION BRANDS INC	C - Manufacturing	2.3%	United States

PNC FINANCIAL SERVICES GROUP INC	K - Financial and insurance activities	2.2%	United States
NEXTERA ENERGY INC	D - Electricity, gas, steam and air conditioning supply	2.2%	United States
BERKSHIRE HATHAWAY INC CLASS B	K - Financial and insurance activities	2.1%	United States

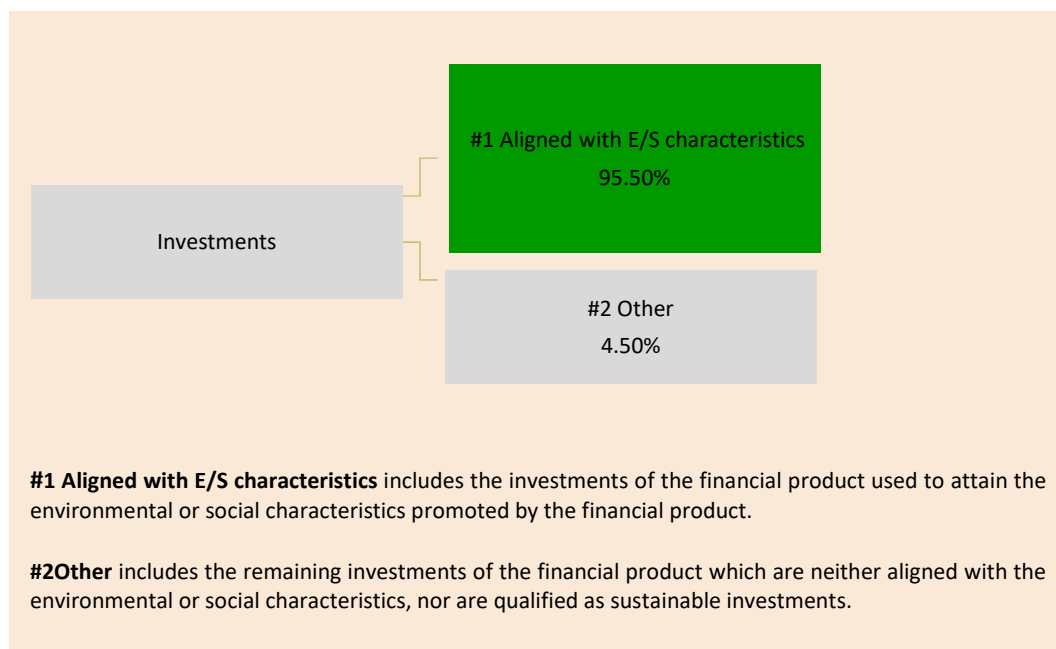

## What was the proportion of sustainability-related investments?

**Asset allocation** describes the share of investments in specific assets.

### What was the asset allocation?

The Sub-Investment Manager calculated the proportion of investments aligned with the environmental and/or social characteristics promoted by the Portfolio by reference to the proportion of companies in the Portfolio: i) that held either an NB ESG Quotient rating or a third-party equivalent ESG rating that was used as part of the portfolio construction and investment management process of the Portfolio; and/or ii) with whom the Sub-Investment Manager had engaged directly. This calculation was based on a mark-to-market assessment of the Portfolio and may rely on incomplete or inaccurate company or third-party data. For the 2022 reference period only, this calculation is based on the Portfolio's holdings as at 31 December 2022, being the only quarter end in the reference period that followed the publication of the Portfolio's SFDR Annex detailing its planned asset allocation. For all subsequent reference periods, this calculation will be based on the average of the four quarter ends.

***In which economic sectors were the investments made?***

<b>Data as at 31 December 2022</b>	
<b>Economic Sector – NACE</b>	<b>% Assets</b>
B - Mining and quarrying	9.02%
C - Manufacturing	51.53%
D - Electricity, gas, steam, and air conditioning supply	10.26%
G - Wholesale and retail trade; repair of motor vehicles and motorcycles	1.07%
H - Transporting and storage	0.76%
J - Information and communication	2.72%
K - Financial and insurance activities	22.16%
M - Professional, scientific, and technical activities	0.80%
Q - Human health and social work activities	1.68%

## To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

- **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The analysis and disclosure requirements introduced by the EU Taxonomy are very detailed and compliance with them requires the availability of multiple, specific data points in respect of each investment which the Portfolio made. The Sub-Investment Manager cannot confirm that the Portfolio invested in any investments that qualified as environmentally sustainable for the purposes of the EU Taxonomy. Disclosures and reporting on Taxonomy alignment will develop as the EU framework evolves and data is made available by companies. The Sub-Investment Manager will keep the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy under active review as data availability and quality improves.

### ● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?

Yes:

In fossil gas  In nuclear energy

No

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

- **What was the share of investments made in transitional and enabling activities?**

N/A - The Portfolio did not commit to holding Taxonomy-aligned investments.

- **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

N/A - The Portfolio did not commit to holding Taxonomy-aligned investments.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

### **What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?**

N/A - The Portfolio did not commit to holding sustainable investments.

### **What was the share of socially sustainable investments?**

N/A - The Portfolio did not commit to holding sustainable investments.

### **What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?**

“Other” included the remaining investments of the Portfolio (including but not limited to any derivatives or any security collateralized by a pool of similar assets or receivables listed in the Supplement for the Portfolio) which were neither aligned with the environmental or social characteristics, nor qualified as sustainable investments.

The “Other” section in the Portfolio was held for a number of reasons that the Sub-Investment Manager felt was beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover.

As noted above, the Portfolio was invested in compliance with ESG exclusion policies, on a continuous basis. This ensured that investments made by the Portfolio sought to align with international environmental and social safeguards such as the UNGC Principles, UNGPs, OECD Guidelines and the ILO Standards.

The Sub-Investment Manager believes that these policies prevented investment in companies that most egregiously violated environmental and/or social minimum standards and ensured that the Portfolio could successfully promote its environmental and social characteristics.

The above steps ensured that robust environmental and social safeguards were in place.

## **What actions have been taken to meet the environmental and/or social characteristics during the reference period?**

The Portfolio was managed in-line with the investment objective and the following actions were taken:

### **I. Integrating proprietary ESG analysis:**

The NB ESG Quotient ratings were generated for company holdings in the Portfolio. The NB ESG Quotient rating for companies was utilised to help to better identify risks and opportunities in the overall assessment.

By integrating the investment team's proprietary ESG analysis (the NB ESG Quotient) into the overall company view, there was a direct link between their analysis of material ESG characteristics and portfolio construction activities across their strategy.

Pursuant to this, the Sub-Investment Manager engaged with companies with a poor NB ESG Quotient rating with the aim to seek improvement in the underlying environmental and social characteristics (which made up the NB ESG Quotient).

### **II. Engagement:**

The Sub-Investment Manager engaged with companies through a robust ESG engagement program. They sought to prioritise constructive engagements and sought to engage on topics (including ESG topics) they determined to be financially material for the relevant company. The Sub-Investment Manager viewed this engagement with companies, as an important part of its investment process. Progress on engagement was tracked centrally in the Sub-Investment Manager's engagement tracker.

### **III. ESG sectoral exclusion policies:**

To ensure that the environmental and social characteristics promoted by the Portfolio were attained, the Portfolio applied the ESG exclusion policies referenced above, which placed limitations on the investable universe.

## **How did this financial product perform compared to the reference benchmark?**

N/A - The Portfolio's benchmark has not been designated as a reference benchmark. Therefore, it is not consistent with the environmental or social characteristics promoted by the Portfolio.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

---

- ***How does the reference benchmark differ from a broad market index?***  
N/A
- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***  
N/A
- ***How did this financial product perform compared with the reference benchmark?***  
N/A
- ***How did this financial product perform compared with the broad market index?***  
N/A

**Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852**

**Product name:** Neuberger Berman Emerging Markets Equity Fund (the “Portfolio”)

**Legal entity identifier:** 549300XPW2SIPQYGFT52

## Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?	
<input checked="" type="radio"/> <input checked="" type="radio"/> <input type="checkbox"/> <b>Yes</b>	<input checked="" type="radio"/> <input type="radio"/> <input checked="" type="checkbox"/> <b>No</b>
<input type="checkbox"/> It made <b>sustainable investments with an environmental objective</b> : ____% <ul style="list-style-type: none"> <li><input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy</li> <li><input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</li> </ul>	<input type="checkbox"/> It <b>promoted Environmental/Social (E/S) characteristics</b> and while it did not have as its objective a sustainable investment, it had a proportion of ____% of sustainable investments <ul style="list-style-type: none"> <li><input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy</li> <li><input type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</li> <li><input type="checkbox"/> with a social objective</li> </ul>
<input type="checkbox"/> It made <b>sustainable investments with a social objective</b> : ____%	<input checked="" type="checkbox"/> It promoted E/S characteristics, but <b>did not make any sustainable investments</b>

## To what extent were the environmental and/or social characteristics promoted by this financial product met?

The following environmental and social characteristics were promoted by the Portfolio:

- **Environmental Characteristics:** air quality; energy management; environmental risk exposure; fuel economy; greenhouse gas (“GHG”) emissions; opportunities in clean technologies; toxic emissions & waste; water management; packaging lifecycle management; materials sourcing; and product lifecycle management.
- **Social Characteristics:** access to finance; access to healthcare; data privacy & security; health & safety; human capital development; labour management; product safety & integrity; supply chain labour standards.

Performance in relation to these environmental and social characteristics was measured through the NB ESG Quotient, and is reported, in aggregate, below.

### ● **How did the sustainability indicators perform?**

As part of the investment process, the Sub-Investment Manager considered a variety of sustainability indicators to measure the environmental and/or social characteristics promoted by the Portfolio. These sustainability indicators are listed below:

#### 1. The NB ESG Quotient:

The proprietary Neuberger Berman ESG rating system (the “**NB ESG Quotient**”), is built around the concept of sector specific ESG risk and opportunity, and produced an overall ESG rating for companies by assessing them against certain ESG metrics.

Foundational to the NB ESG Quotient is the proprietary Neuberger Berman (“**NB**”) materiality matrix, which focuses on the ESG characteristics that were considered to be the most likely to be the material drivers of ESG risk and opportunity for each sector in Emerging Markets. Each sector criteria is constructed using third-party and internally derived ESG data and supplemented with internal qualitative analysis, leveraging the Portfolio’s analyst team’s significant sector expertise. The NB materiality matrix enabled the Sub-Investment Manager to derive the NB ESG Quotient rating, to compare sectors and companies in Emerging Markets relative to their environmental and social characteristics.

By embedding local insight into the global NB materiality matrix, the Sub-Investment Manager leveraged the global NB materiality matrix and customized material ESG characteristics to ensure that they were bespoke for Emerging Markets. The NB materiality matrix fully considered the long-term ESG characteristics that affected the development of Emerging Markets’ industries and companies, and sought out companies that were value drivers in the Emerging Markets.

The NB ESG Quotient assigned weightings to environmental, social and governance characteristics for each sector to derive the NB ESG Quotient rating for companies. Companies with a favourable and/or an improving NB ESG Quotient rating had a higher chance of being included in the Portfolio. Companies with a poor NB ESG Quotient rating, especially where a poor NB ESG Quotient rating was not being addressed by a company, were more likely to be removed from the investment universe or were divested from the Portfolio.

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

<b>31 December 2022</b>	<b>Rating</b>	<b>Combined coverage</b>
NB ESG Quotient	ES: B G: 2.0	95%
Third-party data	5.6	

With regards to the NB ESG Quotient rating, for environmental and social (ES) ratings, A – D quartiles are used, where A is the highest rating (top quartile), and D is the lowest rating (bottom quartile). For governance (G) ratings, 1 – 4 quartiles are used where 1 is the highest rating, and 4 is the lowest rating. This Portfolio does not have a minimum NB ESG Quotient rating. The average NB ESG Quotient rating is a weighted average and is not a rating of the Portfolio strategy itself.

Third-party data was also used to measure the environmental and social characteristics promoted by the Portfolio. The third-party data ratings range from 0-10, with 0 being the lowest rating and 10 being the highest rating.

2. Climate Value-at-Risk:

Over the reference period, Climate Value-at-Risk (“**CVaR**”) measured the exposure to transition and physical climate risks. CVaR is a scenario analysis tool evaluating economic risks under various degree scenarios (i.e., the amount of warming targeted) and potential regulatory environments in varying countries.

CVaR is a type of scenario analysis which is defined as the present value of aggregated future policy risk costs, technology opportunity profits, and extreme weather event costs and profits, expressed as a percentage of a security or portfolio’s market value according to the warming scenario targeted.

By calculating the financial risks from climate change per security and per scenario, CVaR provides a framework that helps quantify and understand these risks. The CVaR metric provides insight into the climate-stressed valuation of assets based on specific degree scenarios, providing an assessment on how much a security may stand to lose or gain from the impact of climate change.

As of 31 December 2022, CVaR projected that a warming climate scenario could result in a depreciation of 28.80% in the valuation of assets under assessment.

This analysis is intended as a broad overview of the investment team’s style and investment process.

On a holistic basis, the results were evaluated by the Sub-Investment Manager’s portfolio managers and analysts. The scenario analysis served as a starting point for further bottom-up analysis and identifying potential climate-related risks to address through company engagement.

Due to data limitations, CVaR was not applied across all companies held by the Portfolio and was instead limited to the companies for which the Sub-Investment Manager had sufficient and reliable data. The Portfolio had a CVaR coverage of 91%.

The analysis from CVaR is reviewed at least once a year.

3. ESG exclusion policies:

To ensure that the environmental or social characteristics promoted by the Portfolio were attained, the Portfolio did not invest in companies whose activities breached, or were not consistent with, the Neuberger Berman Controversial Weapons Policy and the Neuberger Berman Thermal Coal Involvement Policy. In addition to the application of the Neuberger Berman Thermal Coal Involvement Policy, the Sub-Investment Manager prohibited the initiation of new investment positions in companies that (i) derived more than 25% of their revenue from thermal coal mining; or (ii) were expanding new thermal coal power generation. Furthermore, from 6

April 2022 onwards, investments held by the Portfolio did not invest in companies whose activities had been identified as breaching the Neuberger Berman Global Standards Policy which excluded identified violators of (i) the United Nations Global Compact Principles (“**UNGC Principles**”), (ii) the OECD Guidelines for Multinational Enterprises (“**OECD Guidelines**”), (iii) the United Nations Guiding Principles on Business and Human Rights (“**UNGPs**”) and (iv) the International Labour Standards (“**ILO Standards**”).

When applying ESG exclusions to the Portfolio, the Sub-Investment Manager used third-party data to identify companies in breach of the ESG exclusions listed above. Where possible, the Sub-Investment Manager sought to overlay this third-party data with qualitative expertise from their research analysts to establish a current and holistic picture of the company. The Sub-Investment Manager discussed and debated the differences between the violators identified by the third-party data and those identified as a result of their research, which drew upon data from the NB ESG Quotient and direct engagements with the company.

● ***...and compared to previous periods?***

N/A – this is the first reference period.

● ***What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?***

N/A – the Portfolio did not commit to holding sustainable investments.

● ***How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?***

N/A – the Portfolio did not commit to holding sustainable investments.

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

*How were the indicators for adverse impacts on sustainability factors taken into account?*

N/A

*Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:*

The Portfolio did not commit to holding sustainable investments, however, from 6 April 2022 onwards, the Sub-Investment Manager did not invest in companies whose activities had been identified as breaching the OECD Guidelines, UNGC Principles, ILO Standards and UNGPs, captured through the Neuberger Berman Global Standards Policy.

*The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.*

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

N/A – The Portfolio did not commit to holding Taxonomy-aligned investments.

### **How did this financial product consider principal adverse impacts on sustainability factors?**

A selection of the principal adverse impact indicators were considered directly (e.g. through the ESG exclusion policies listed above) and/or indirectly (e.g. as part of the Sub-Investment Manager’s assessment of issuers) throughout the 2022 reference period.

From 28 November 2022 onwards, the Sub-Investment Manager considered the following principal adverse impacts, namely: GHG emissions, carbon footprint, GHG intensity, fossil fuel exposure, board gender diversity, UNGC Principles & OECD Guidelines violations and controversial weapons (the “**Product Level PAIs**”).

Consideration of the Product Level PAIs was limited by the availability (in the Sub-Investment Manager’s subjective view) of adequate, reliable and verifiable data coverage. The Sub-Investment Manager utilised third-party data and proxy data along with internal research to consider the Product Level PAIs.

Consideration of the Product Level PAIs by the Sub-Investment Manager was through a combination of:

- Monitoring the Portfolio, in particular where it fell below the quantitative and qualitative tolerance thresholds set for each Product Level PAI by the Sub-Investment Manager;
- Stewardship and/or setting engagement objectives where the Portfolio fell below the quantitative and qualitative tolerance thresholds set for a Product Level PAI; and
- Application of the ESG exclusion policies referenced above, which included consideration of several of the Product Level PAIs.

## What were the top investments of this financial product?

The Sub-Investment Manager has used the EU statistical classification of economic activities (“NACE”) economic sector breakdown to identify the economic sectors of the Portfolio's top 15 investments. The following data is as at 31 December 2022.

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 1 January 2022 - 31 December 2022

Largest investments	Sector	% Assets	Country
TAIWAN SEMICONDUCTOR MANUFACTURING	C - Manufacturing	6.9%	Taiwan (Republic of China)
TENCENT HOLDINGS LTD	J - Information and communication	5.9%	China
SAMSUNG ELECTRONICS LTD	C - Manufacturing	3.8%	Korea (South), Republic of
ALIBABA GROUP HOLDING LTD	G - Wholesale and retail trade; repair of motor vehicles and motorcycles	3.4%	China
ICICI BANK LTD	K - Financial and insurance activities	2.9%	India
JD.COM CLASS A INC	G - Wholesale and retail trade; repair of motor vehicles and motorcycles	2.4%	China
RELIANCE INDUSTRIES LTD	C - Manufacturing	2.0%	India
HDFC BANK LTD	K - Financial and insurance activities	1.7%	India
STATE BANK OF INDIA	K - Financial and insurance activities	1.7%	India
LG CHEM LTD	C - Manufacturing	1.6%	Korea (South), Republic of
SAUDI ARABIAN OIL	B - Mining and quarrying	1.5%	Saudi Arabia
UNI-PRESIDENT ENTERPRISES CORP	G - Wholesale and retail trade; repair of motor vehicles and motorcycles	1.5%	Taiwan (Republic of China)
WALMART DE MEXICO V	G - Wholesale and retail trade; repair of motor vehicles and motorcycles	1.5%	Mexico
KWEICHOW MOUTAI LTD A	C - Manufacturing	1.4%	China
ANGLO AMERICAN PLC	B - Mining and quarrying	1.4%	South Africa

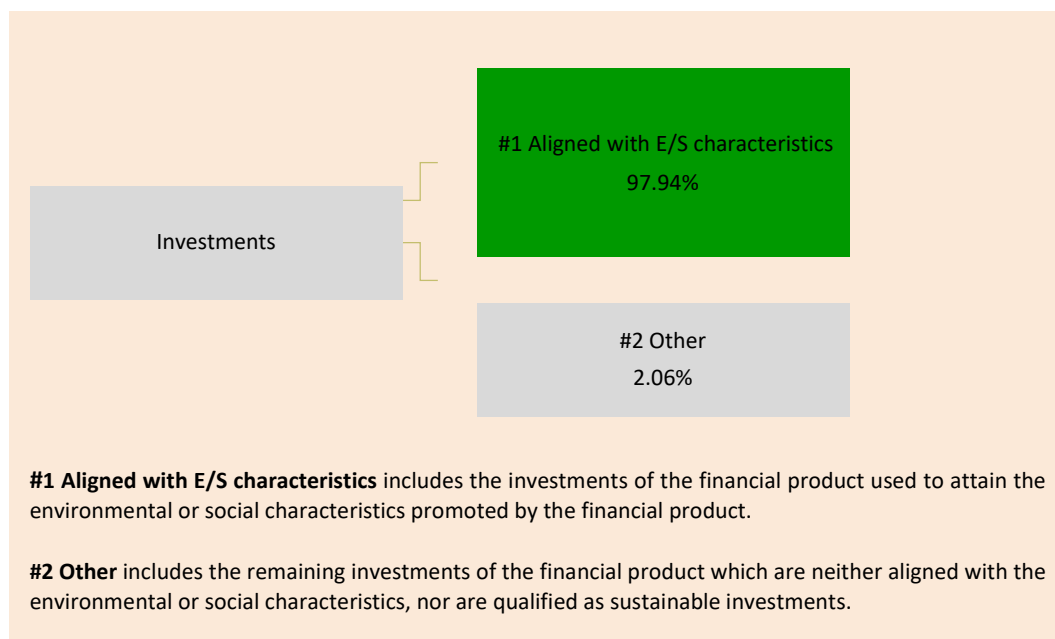

## What was the proportion of sustainability-related investments?

### ● What was the asset allocation?

The Sub-Investment Manager calculated the proportion of investments aligned with the environmental and/or social characteristics promoted by the Portfolio by reference to the proportion of companies in the Portfolio: i) that held either an NB ESG Quotient rating or a third-party equivalent ESG rating that was used as part of the portfolio construction and investment management process of the Portfolio; and/or ii) with whom the Sub-Investment Manager had engaged directly. This calculation was based on a mark-to-market assessment of the Portfolio and may rely on incomplete or inaccurate company or third-party data. For the 2022 reference period only, this calculation is based on the Portfolio's holdings as at 31 December 2022, being the only quarter end in the reference period that followed the publication of the Portfolio's SFDR Annex detailing its planned asset allocation. For all subsequent reference periods, this calculation will be based on the average of the four quarter ends.

**Asset allocation** describes the share of investments in specific assets.

● ***In which economic sectors were the investments made?***

Data as at 31 December 2022	
Economic Sector – NACE	% Assets
B - Mining and quarrying	4.76%
C - Manufacturing	40.40%
F - Construction	0.30%
G - Wholesale and retail trade; repair of motor vehicles and motorcycles	13.54%
I - Accommodation and food service activities	1.31%
J - Information and communication	10.91%
K - Financial and insurance activities	24.15%
N - Administrative and support service activities	1.34%
Q - Human health and social work activities	1.74%
R - Arts, entertainment and recreation	0.86%
None	0.69%

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

- **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

## To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The analysis and disclosure requirements introduced by the EU Taxonomy are very detailed and compliance with them requires the availability of multiple, specific data points in respect of each investment which the Portfolio makes. The Sub-Investment Manager cannot confirm that the Portfolio invested in any investments that qualified as environmentally sustainable for the purposes of the EU Taxonomy. Disclosures and reporting on Taxonomy alignment will develop as the EU framework evolves and data is made available by companies. The Sub-Investment Manager will keep the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy under active review as data availability and quality improves.

### ● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?

Yes:

In fossil gas  In nuclear energy

No

---

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

- **What was the share of investments made in transitional and enabling activities?**

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments.

- **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments.

### What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

N/A – the Portfolio did not commit to holding sustainable investments.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

### What was the share of socially sustainable investments?

N/A – the Portfolio did not commit to holding sustainable investments.

### What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

“Other” included the remaining investments of the Portfolio (including but not limited to any derivatives or any security collateralized by a pool of similar assets or receivables listed in the Supplement for the Portfolio) which were neither aligned with the environmental or social characteristics, nor qualified as sustainable investments.

The “Other” section in the Portfolio was held for a number of reasons that the Sub-Investment Manager felt was beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover.

As noted above, the Portfolio was invested in compliance with ESG exclusion policies, on a continuous basis. This ensured that investments made by the Portfolio sought to align with international environmental and social safeguards such as the UNGC Principles, UNGPs, OECD Guidelines and ILO Standards.

The Sub-Investment Manager believes that these policies prevented investment in companies that most egregiously violated environmental and/or social minimum standards and ensured that the Portfolio could successfully promote its environmental and social characteristics.

The above steps ensured that robust environmental and social safeguards were in place.

## **What actions have been taken to meet the environmental and/or social characteristics during the reference period?**

The Portfolio was managed in-line with the investment objective and the following actions were taken:

### **I. Integrating proprietary ESG analysis:**

The NB ESG Quotient ratings were generated for company holdings in the Portfolio. The NB ESG Quotient rating for companies is utilised to help to better identify risks and opportunities in the overall assessment.

By integrating the investment team's proprietary ESG analysis (the NB ESG Quotient) into the overall company view, there was a direct link between their analysis of material ESG characteristics and portfolio construction activities across their strategy.

Companies with a favourable and/or an improving NB ESG Quotient rating had a higher chance of ending up in the Portfolio. Companies with a poor NB ESG Quotient rating especially where these were not being addressed by that company, were more likely to be removed from the investment universe or were divested from the Portfolio.

### **II. Engagement:**

The Sub-Investment Manager engaged with companies through a robust ESG engagement program. They sought to prioritise constructive engagements and sought to engage on topics (including ESG topics) they determined to be financially material for the relevant company. The Sub-Investment Manager viewed this engagement with companies, as an important part of its investment process.

In order to maintain and enhance company relationships, and to ensure companies followed their ESG trajectory, the Sub-Investment Manager kept an active dialogue with companies, regardless of whether or not they had high impact controversies or a poor NB ESG Quotient rating. Progress on engagement was tracked centrally in the Sub-Investment Manager's engagement tracker.

### **III. ESG sectoral exclusion policies:**

To ensure that the environmental and social characteristics promoted by the Portfolio were attained, the Portfolio applied the ESG exclusion policies referenced above, which placed limitations on the investable universe.

## **How did this financial product perform compared to the reference benchmark?**

N/A – The Portfolio's benchmark has not been designated as a reference benchmark. Therefore, it is not consistent with the environmental or social characteristics promoted by the Portfolio.

- ***How does the reference benchmark differ from a broad market index?***  
N/A
- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***  
N/A
- ***How did this financial product perform compared with the reference benchmark?***  
N/A
- ***How did this financial product perform compared with the broad market index?***  
N/A

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

**Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852**

**Product name:** Neuberger Berman Emerging Markets Select Equity Fund (the “Portfolio”)

**Legal entity identifier:** 549300KP5UMDNHRQH875

## Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?	
<input checked="" type="radio"/> <input checked="" type="radio"/> <input type="checkbox"/> <b>Yes</b>	<input checked="" type="radio"/> <input type="radio"/> <input checked="" type="checkbox"/> <b>No</b>
<input type="checkbox"/> It made <b>sustainable investments with an environmental objective: ___%</b> <ul style="list-style-type: none"> <li><input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy</li> <li><input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</li> </ul>	<input type="checkbox"/> It <b>promoted Environmental/Social (E/S) characteristics</b> and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments <ul style="list-style-type: none"> <li><input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy</li> <li><input type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</li> <li><input type="checkbox"/> with a social objective</li> </ul>
<input type="checkbox"/> It made <b>sustainable investments with a social objective: ___%</b>	<input checked="" type="checkbox"/> It promoted E/S characteristics, but <b>did not make any sustainable investments</b>

## To what extent were the environmental and/or social characteristics promoted by this financial product met?

The following environmental and social characteristics were promoted by the Portfolio:

- **Environmental Characteristics:** air quality; energy management; environmental risk exposure; fuel economy; greenhouse gas (“GHG”) emissions; opportunities in clean technologies; toxic emissions & waste; water management; packaging lifecycle management; materials sourcing; and product lifecycle management.

In aiming to align the Portfolio with a net zero goal, the Sub-Investment Manager reduced and will continue to reduce the Portfolio’s carbon footprint across scope 1, 2, and material scope 3 GHG emissions, equating to a 50% reduction by 2030 relative to a 2019 baseline and a subsequent decline to net zero by 2050. The 2019 baseline may be subject to re-calculation as data quality and disclosure expands over time, particularly with respect to scope 3 emissions.

- **Social Characteristics:** access to finance; access to healthcare; data privacy & security; health & safety; human capital development; labour management; product safety & integrity; supply chain labour standards.

Performance in relation to these environmental and social characteristics was measured through the NB ESG Quotient, and is reported, in aggregate, below.

### ● **How did the sustainability indicators perform?**

As part of the investment process, the Sub-Investment Manager considered a variety of sustainability indicators to measure the environmental and/or social characteristics promoted by the Portfolio. These sustainability indicators are listed below:

1. The NB ESG Quotient:

The proprietary Neuberger Berman ESG rating system (the “**NB ESG Quotient**”), is built around the concept of sector specific ESG risk and opportunity, and produced an overall ESG rating for companies by assessing them against certain ESG metrics.

Foundational to the NB ESG Quotient is the proprietary Neuberger Berman (“**NB**”) materiality matrix, which focuses on the ESG characteristics that are considered to be the most likely to be the material drivers of ESG risk and opportunity for each sector in Emerging Markets. Each sector criteria is constructed using third-party and internally derived ESG data and supplemented with internal qualitative analysis, leveraging the Portfolio’s analyst team’s significant sector expertise. The NB materiality matrix enabled the Sub-Investment Manager to derive the NB ESG Quotient rating, to compare sectors and companies in Emerging Markets relative to their environmental and social characteristics.

By embedding local insight into the global NB materiality matrix, the Sub-Investment Manager leveraged the global NB materiality matrix and customized material ESG characteristics to ensure that they were bespoke for Emerging Markets. The NB materiality matrix fully considered the long-term ESG characteristics that affected the development of Emerging Markets’ industries and companies and sought out companies that were value drivers in the Emerging Markets.

The NB ESG Quotient assigned weightings to environmental, social and governance characteristics for each sector to derive the NB ESG Quotient rating for companies. Companies with a favourable and/or an improving NB ESG Quotient rating had a higher chance of being included in the Portfolio. Companies with a poor NB ESG Quotient rating, especially where a poor NB ESG Quotient rating is not being

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

addressed by a company, were more likely to be removed from the investment universe or were divested from the Portfolio.

<b>31 December 2022</b>	<b>Rating</b>	<b>Combined coverage</b>
NB ESG Quotient	ES: A G: 2.0	95%
Third-party data	5.8	

With regards to the NB ESG Quotient ratings, for environmental and social (ES) ratings, A – D quartiles are used, where A is the highest rating (top quartile), and D is the lowest rating (bottom quartile). For governance (G) ratings, 1 – 4 quartiles are used where 1 is the highest rating, and 4 is the lowest rating. This Portfolio does not have a minimum NB ESG Quotient rating. The average NB ESG Quotient rating is a weighted average and is not a rating of the Portfolio strategy itself.

Third-party data was also used to measure the environmental and social characteristics promoted by the Portfolio. The third-party data ratings range from 0-10, with 0 being the lowest and 10 being the highest rating.

2. Climate Value-at-Risk:

Over the reference period, Climate Value-at-Risk (“**CVaR**”) measured the exposure to transition and physical climate risks. CVaR is a scenario analysis tool evaluating economic risks under various degree scenarios (i.e., the amount of warming targeted) and potential regulatory environments in varying countries.

CVaR is a type of scenario analysis which is defined as the present value of aggregated future policy risk costs, technology opportunity profits, and extreme weather event costs and profits, expressed as a percentage of a security or portfolio’s market value according to the warming scenario targeted.

By calculating the financial risks from climate change per security and per scenario, CVaR provides a framework that helps quantify and understand these risks. The CVaR metric provides insight into the climate-stressed valuation of assets based on specific degree scenarios, providing an assessment on how much a security may stand to lose or gain from the impact of climate change.

As of 31 December 2022, CVaR projected that a warming climate scenario could result in a depreciation of 28.58% in the valuation of assets under assessment.

This analysis is intended as a broad overview of the investment team’s style and investment process.

On a holistic basis, the results were evaluated by the Sub-Investment Manager’s portfolio managers and analysts. The scenario analysis served as a starting point for further bottom-up analysis and identifying potential climate-related risks to address through company engagement.

Due to data limitations, CVaR was not applied across all companies held by the Portfolio and was instead limited to the companies for which the Sub-Investment Manager had sufficient and reliable data. The Portfolio had a CVaR coverage of 92%.

The analysis from CVaR is reviewed at least once a year.

3. ESG exclusion policies:

To ensure that the environmental or social characteristics promoted by the Portfolio were attained, the Portfolio did not invest in companies whose activities breached, or were not consistent with, the Neuberger Berman Controversial Weapons Policy;

the Neuberger Berman Thermal Coal Involvement Policy; and the Neuberger Berman Sustainable Exclusion Policy. In addition to the application of the Neuberger Berman Thermal Coal Involvement Policy, the Sub-Investment Manager prohibited the initiation of new investment positions in companies that (i) derived more than 25% of their revenue from thermal coal mining; or (ii) were expanding new thermal coal power generation. Furthermore, from 6 April 2022 onwards, investments held by the Portfolio did not invest in companies whose activities had been identified as breaching the Neuberger Berman Global Standards Policy which excluded identified violators of (i) the United Nations Global Compact Principles (“**UNGC Principles**”), (ii) the OECD Guidelines for Multinational Enterprises (“**OECD Guidelines**”), (iii) the United Nations Guiding Principles on Business and Human Rights (“**UNGPs**”) and (iv) the International Labour Standards (“**ILO Standards**”).

When applying ESG exclusions to the Portfolio, the Sub-Investment Manager used third-party data to identify companies in breach of the ESG exclusions listed above. Where possible, the Sub-Investment Manager sought to overlay this third-party data with qualitative expertise from their research analysts to establish a current and holistic picture of the company. The Sub-Investment Manager discussed and debated the differences between the violators identified by the third-party data and those identified as a result of their research, which drew upon data from the NB ESG Quotient and direct engagements with the company.

● ***...and compared to previous periods?***

N/A – this is the first reference period.

● ***What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?***

N/A – the Portfolio did not commit to holding sustainable investments.

● ***How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?***

N/A – the Portfolio did not commit to holding sustainable investments.

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

— ***How were the indicators for adverse impacts on sustainability factors taken into account?***

N/A

— ***Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

The Portfolio did not commit to holding sustainable investments, however, from 6 April 2022 onwards, the Sub-Investment Manager did not invest in companies whose activities had been identified as breaching the OECD Guidelines, UNGC Principles, ILO Standards and UNGPs, captured through the Neuberger Berman Global Standards Policy.

*The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.*

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments.

### **How did this financial product consider principal adverse impacts on sustainability factors?**

A selection of the principal adverse impact indicators were considered directly (e.g. through the ESG exclusion policies listed above) and/or indirectly (e.g. as part of the Sub-Investment Manager’s assessment of issuers) throughout the 2022 reference period.

From 28 November 2022 onwards, the Sub-Investment Manager considered the following principal adverse impacts, namely: GHG emissions, carbon footprint, GHG intensity, fossil fuel exposure, board gender diversity, UNGC Principles & OECD violations and controversial weapons (the “**Product Level PAIs**”).

Consideration of the Product Level PAIs was limited by the availability (in the Sub-Investment Manager’s subjective view) of adequate, reliable and verifiable data coverage. The Sub-Investment Manager utilised third-party data and proxy data along with internal research to consider the Product Level PAIs.

Consideration of the Product Level PAIs by the Sub-Investment Manager was through a combination of:

- Monitoring the Portfolio, in particular where it fell below the quantitative and qualitative tolerance thresholds set for each Product Level PAI by the Sub-Investment Manager;
- Stewardship and/or setting engagement objectives where the Portfolio fell below the quantitative and qualitative tolerance thresholds set for a Product Level PAI; and
- Application of the ESG exclusion policies referenced above, which included consideration of several of the Product Level PAIs.

## What were the top investments of this financial product?

The Sub-Investment Manager has used the EU statistical classification of economic activities (“NACE”) economic sector breakdown to identify the economic sectors of the Portfolio's top 15 investments. The following data is as at 31 December 2022.

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 1 January 2022 - 31 December 2022

Largest investments	Sector	% Assets	Country
TAIWAN SEMICONDUCTOR MANUFACTURING	C – Manufacturing	8.0%	Taiwan (Republic of China)
TENCENT HOLDINGS LTD	J – Information and communication	6.1%	China
SAMSUNG ELECTRONICS LTD	C – Manufacturing	4.4%	Korea (South), Republic of
ALIBABA GROUP HOLDING LTD	G – Wholesale and retail trade; repair of motor vehicles and motorcycles	3.6%	China
ICICI BANK ADR REP LTD	K – Financial and insurance activities	3.5%	India
JD.COM CLASS A INC	G – Wholesale and retail trade; repair of motor vehicles and motorcycles	3.0%	China
RELIANCE INDUSTRIES LTD	C – Manufacturing	2.5%	India
HDFC BANK ADR REPRESENTING THREE L	K – Financial and insurance activities	1.8%	India
KWEICHOW MOUTAI LTD A	C – Manufacturing	1.7%	China
WALMART DE MEXICO V	G – Wholesale and retail trade; repair of motor vehicles and motorcycles	1.7%	Mexico
DINO POLSKA SA	G – Wholesale and retail trade; repair of motor vehicles and motorcycles	1.6%	Poland
UNI-PRESIDENT ENTERPRISES CORP	G – Wholesale and retail trade; repair of motor vehicles and motorcycles	1.6%	Taiwan (Republic of China)
LG CHEM LTD	C – Manufacturing	1.5%	Korea (South), Republic of
SK HYNIX INC	C – Manufacturing	1.5%	Korea (South), Republic of
ANGLO AMERICAN PLC	B – Mining and quarrying	1.5%	South Africa

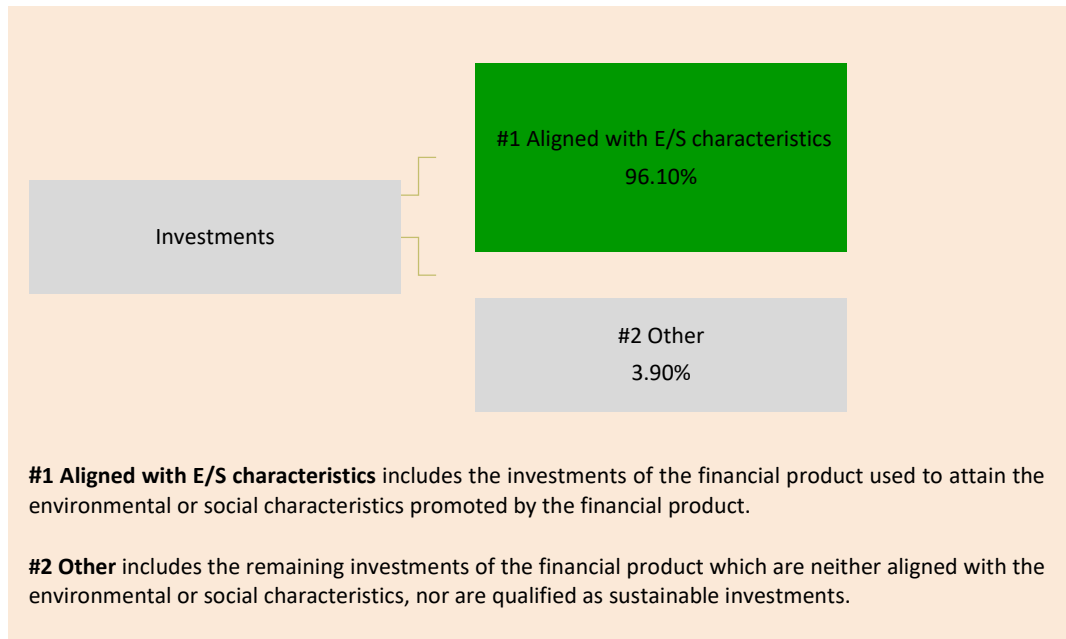

## What was the proportion of sustainability-related investments?

### ● What was the asset allocation?

The Sub-Investment Manager calculated the proportion of investments aligned with the environmental and/or social characteristics promoted by the Portfolio by reference to the proportion of companies in the Portfolio: i) that held either an NB ESG Quotient rating or a third-party equivalent ESG rating that was used as part of the portfolio construction and investment management process of the Portfolio; and/or ii) with whom the Sub-Investment Manager had engaged directly. This calculation was based on a mark-to-market assessment of the Portfolio and may rely on incomplete or inaccurate company or third-party data. For the 2022 reference period only, this calculation is based on the Portfolio's holdings as at 31 December 2022, being the only quarter end in the reference period that followed the publication of the Portfolio's SFDR Annex detailing its planned asset allocation. For all subsequent reference periods, this calculation will be based on the average of the four quarter ends.

**Asset allocation** describes the share of investments in specific assets.

● ***In which economic sectors were the investments made?***

Data as at 31 December 2022	
Economic Sector – NACE	% Assets
B - Mining and quarrying	1.54%
C - Manufacturing	40.58%
D - Electricity, gas, steam and air conditioning supply	0.88%
F - Construction	0.46%
G - Wholesale and retail trade; repair of motor vehicles and motorcycles	14.96%
I - Accommodation and food service activities	1.48%
J - Information and communication	10.88%
K - Financial and insurance activities	25.89%
N - Administrative and support service activities	1.44%
Q - Human health and social work activities	1.35%
None	0.53%

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

- **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

## To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The analysis and disclosure requirements introduced by the EU Taxonomy are very detailed and compliance with them requires the availability of multiple, specific data points in respect of each investment which the Portfolio makes. The Sub-Investment Manager cannot confirm that the Portfolio invested in any investments that qualified as environmentally sustainable for the purposes of the EU Taxonomy. Disclosures and reporting on Taxonomy alignment will develop as the EU framework evolves and data is made available by companies. The Sub-Investment Manager will keep the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy under active review as data availability and quality improves.

### ● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?

Yes:

In fossil gas  In nuclear energy

No

---

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

- **What was the share of investments made in transitional and enabling activities?**

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments.

- **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

### **What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?**

N/A – the Portfolio did not commit to holding sustainable investments.

### **What was the share of socially sustainable investments?**

N/A – the Portfolio did not commit to holding sustainable investments.

### **What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?**

“Other” included the remaining investments of the Portfolio (including but not limited to any derivatives or any security collateralized by a pool of similar assets or receivables listed in the Supplement for the Portfolio) which were neither aligned with the environmental or social characteristics, nor qualified as sustainable investments.

The “Other” section in the Portfolio was held for a number of reasons that the Sub-Investment Manager felt was beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover.

As noted above, the Portfolio was invested in compliance with ESG exclusion policies, on a continuous basis. This ensured that investments made by the Portfolio sought to align with international environmental and social safeguards such as the UNGC Principles, UNGPs, OECD Guidelines and ILO Standards.

The Sub-Investment Manager believes that these policies prevented investment in companies that most egregiously violated environmental and/or social minimum standards and ensured that the Portfolio could successfully promote its environmental and social characteristics.

The above steps ensured that robust environmental and social safeguards were in place.

## **What actions have been taken to meet the environmental and/or social characteristics during the reference period?**

The Portfolio was managed in-line with the investment objective and the following actions were taken:

### **I. Integrating proprietary ESG analysis:**

The NB ESG Quotient ratings were generated for company holdings in the Portfolio. The NB ESG Quotient rating for companies is utilised to help to better identify risks and opportunities in the overall assessment.

By integrating the investment team's proprietary ESG analysis (the NB ESG Quotient) into the overall company view, there was a direct link between their analysis of material ESG characteristics and portfolio construction activities across their strategy.

Companies with a favourable and/or an improving NB ESG Quotient rating had a higher chance of ending up in the Portfolio. Companies with a poor NB ESG Quotient rating especially where these were not being addressed by that company, were more likely to be removed from the investment universe or were divested from the Portfolio.

### **II. Engagement:**

The Sub-Investment Manager engaged with companies through a robust ESG engagement program. They sought to prioritise constructive engagements and sought to engage on topics (including ESG topics) they determined to be financially material for the relevant company. The Sub-Investment Manager viewed this engagement with companies, as an important part of its investment process.

In order to maintain and enhance company relationships, and to ensure companies followed their ESG trajectory, the Sub-Investment Manager kept an active dialogue with companies, regardless of whether or not they had high impact controversies or a poor NB ESG Quotient rating. Progress on engagement was tracked centrally in the Sub-Investment Manager's engagement tracker.

### **III. ESG sectoral exclusion policies:**

To ensure that the environmental and social characteristics promoted by the Portfolio were attained, the Portfolio applied the ESG exclusion policies referenced above, which placed limitations on the investable universe.

## How did this financial product perform compared to the reference benchmark?

N/A – The Portfolio's benchmark has not been designated as a reference benchmark. Therefore, it is not consistent with the environmental or social characteristics promoted by the Portfolio.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- ***How does the reference benchmark differ from a broad market index?***  
N/A
- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***  
N/A
- ***How did this financial product perform compared with the reference benchmark?***  
N/A
- ***How did this financial product perform compared with the broad market index?***  
N/A

**Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852**

**Product name:** Neuberger Berman Japan Equity Engagement Fund (the “Portfolio”)

**Legal entity identifier:** 549300ELGQMFUUPHG878

## Environmental and/or social characteristics

### Did this financial product have a sustainable investment objective?

**Yes**

**No**

It made **sustainable investments with an environmental objective:** \_\_\_%

\_\_\_\_\_ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

\_\_\_\_\_ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective:** \_\_\_%

It promoted **Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of \_\_\_% of sustainable investments

\_\_\_\_\_ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

\_\_\_\_\_ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

\_\_\_\_\_ with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

## To what extent were the environmental and/or social characteristics promoted by this financial product met?

The following environmental and social characteristics were promoted by the Portfolio:

- **Environmental Characteristics:** air quality; biodiversity & land use; energy management; environmental risk exposure; fuel economy; greenhouse gas (“**GHG**”) emissions; opportunities in clean technologies; toxic emissions & waste; water management; packaging lifecycle management; materials sourcing; and product lifecycle management.
- **Social Characteristics:** access to finance; access to healthcare; community relations; data privacy & security; employee incentives & risk taking; health & nutrition; health & safety; human capital development; labour management; product safety & integrity; supply chain labour standards; workforce diversity & inclusion; pricing transparency; and responsible marketing.

Performance in relation to these environmental and social characteristics was measured through the NB proprietary ESG score, and is reported, in aggregate, below.

### How did the sustainability indicators perform?

As part of the investment process, the Sub-Investment Manager considered a variety of sustainability indicators to measure the environmental and/or social characteristics promoted by the Portfolio. These sustainability indicators are listed below:

1. The NB proprietary ESG score:

As part of the investment process, the Sub-Investment Manager considered a variety of environmental and social characteristics as part of its scoring model. The Sub-Investment Manager applied a Neuberger Berman (“**NB**”) proprietary ESG score which was bespoke to the Japanese market. The NB proprietary ESG score also considered engagement potential as key components in its scoring model. The NB proprietary ESG score also considered the environmental and social characteristics identified in the NB materiality matrix, which is based on the Sustainability Accounting Standards Board (“**SASB**”) materiality framework. The NB materiality matrix focused on the ESG characteristics that were considered to be the most likely to be the material drivers of ESG risk and opportunity for each sector.

Foundational to the NB proprietary ESG score is the proprietary NB materiality matrix. The NB materiality matrix focused on the ESG characteristics that were considered to be the most likely to be the material drivers of ESG risk for each sector. Each sector criteria is constructed using third-party and internally derived ESG data and supplemented with internal qualitative analysis, leveraging the Sub-Investment Manager’s analyst team’s significant sector expertise.

The NB proprietary ESG score assigned weightings to environmental, social and governance factors for each sector to derive an NB proprietary ESG score for companies held by the Portfolio. Companies with a favourable and/or an improving NB proprietary ESG score receive higher scores, which was a key area of consideration in raising the companies’ weight in the Portfolio. Conversely, companies with a poor NB proprietary ESG score, especially where a poor NB proprietary ESG score was not being addressed by a company, were more likely to receive lower scores that could result in reducing the companies’ weight in the Portfolio. In addition, the Sub-Investment Manager sought to prioritise constructive engagements with holding companies to support their efforts in addressing key issues the Sub-Investment Manager deemed critical to the company’s business fundamentals and long-term growth including material environment and social issues.

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

<b>31 December 2022</b>	<b>Rating</b>	<b>Combined coverage</b>
NB proprietary ESG score	ES: 8.05 G: 8.48	100%
Third-party Data	5.1	

With regards to the NB proprietary ESG score, a separate rating between 1 and 15 is given for environmental and social (ES) ratings, and for Governance (G) ratings, where 15 is the highest rating, and 1 is the lowest rating. This Portfolio does not have a minimum NB proprietary ESG score. The average NB proprietary ESG score rating is a weighted average and is not a rating of the Portfolio strategy itself.

Third-party data was also used to measure the environmental and social characteristics promoted by the Portfolio. The third-party data ratings range from 0-10, with 0 being the lowest rating and 10 being the highest rating.

## 2. Climate Value-at-Risk:

Over the reference period, Climate Value-at-Risk (“**CVaR**”) measured the exposure to transition and physical climate risks. CVaR is a scenario analysis tool evaluating economic risks under various degree scenarios (i.e., the amount of warming targeted) and potential regulatory environments in varying countries.

CVaR is a type of scenario analysis which is defined as the present value of aggregated future policy risk costs, technology opportunity profits, and extreme weather event costs and profits, expressed as a percentage of a security or portfolio’s market value according to the warming scenario targeted.

By calculating the financial risks from climate change per security and per scenario, CVaR provides a framework that helps quantify and understand these risks. The CVaR metric provides insight into the climate-stressed valuation of assets based on specific degree scenarios, providing an assessment on how much a security may stand to lose or gain from the impact of climate change.

As at 31 December 2022, CVaR projected that a warming climate scenario could result in a depreciation of 20.70% in the valuation of assets under assessment.

This analysis is intended as a broad overview of the investment team’s style and investment process.

On a holistic basis, the results were evaluated by the Sub-Investment Manager’s portfolio managers and analysts. The scenario analysis served as a starting point for further bottom-up analysis and identifying potential climate-related risks to address through company engagement.

Due to data limitations, CVaR was not applied across all companies held by the Portfolio and was instead limited to the companies for which the Sub-Investment Manager had sufficient and reliable data. The Portfolio had a CVaR coverage of 90%.

The analysis from CVaR is reviewed at least once a year.

## 3. ESG exclusion policies:

To ensure that the environmental or social characteristics promoted by the Portfolio were attained, the Portfolio did not invest in companies whose activities breached, or were not consistent with, the Neuberger Berman Controversial Weapons Policy, the Neuberger Berman Thermal Coal Involvement Policy, and from the 28 November 2022 onwards, the Neuberger Berman Sustainable Exclusion Policy. In addition to the application of the Neuberger Berman Thermal Coal Involvement Policy, the Sub-Investment Manager prohibited the initiation of new investment positions in companies that (i) derived more than 25% of their revenue from thermal

coal mining; or (ii) were expanding new thermal coal power generation. Furthermore, from 6 April 2022 onwards, investments held by the Portfolio did not invest in companies whose activities had been identified as breaching the Neuberger Berman Global Standards Policy which excluded identified violators of (i) the United Nations Global Compact Principles (“**UNGC Principles**”), (ii) the OECD Guidelines for Multinational Enterprises (“**OECD Guidelines**”), (iii) the United Nations Guiding Principles on Business and Human Rights (“**UNGPs**”) and (iv) the International Labour Standards (“**ILO Standards**”).

When applying ESG exclusions to the Portfolio, the Sub-Investment Manager used third-party data to identify companies in breach of the ESG exclusions listed above. Where possible, the Sub-Investment Manager sought to overlay this third-party data with qualitative expertise from their research analysts to establish a current and holistic picture of the company. The Sub-Investment Manager discussed and debated the differences between the violators identified by the third-party data and those identified as a result of their research, which drew upon data from the NB proprietary ESG score and direct engagements with the company.

● ***...and compared to previous periods?***

N/A – this is the first reference period.

● ***What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?***

N/A – the Portfolio did not commit to holding sustainable investments.

● ***How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?***

N/A – the Portfolio did not commit to holding sustainable investments.

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

— ***How were the indicators for adverse impacts on sustainability factors taken into account?***

N/A

— ***Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

The Portfolio did not commit to holding sustainable investments, however, from 6 April 2022 onwards, the Sub-Investment Manager did not invest in companies whose activities had been identified as breaching the OECD Guidelines, UNGC Principles, ILO Standards and UNGPs, captured through the Neuberger Berman Global Standards Policy.

*The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.*

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments.

### **How did this financial product consider principal adverse impacts on sustainability factors?**

A selection of the principal adverse impact indicators were considered directly (e.g. through the ESG exclusion policies listed above) and/or indirectly (e.g. as part of the Sub-Investment Manager’s assessment of issuers) throughout the 2022 reference period.

From 28 November 2022 onwards, the Sub-Investment Manager considered the following principal adverse impacts, namely: GHG emissions, carbon footprint, GHG intensity, fossil fuel exposure, board gender diversity, UNGC Principles & OECD Guidelines violations and controversial weapons (the “**Product Level PAIs**”).

Consideration of the Product Level PAIs was limited by the availability (in the Sub-Investment Manager’s subjective view) of adequate, reliable and verifiable data coverage. The Sub-Investment Manager utilised third-party data and proxy data along with internal research to consider the Product Level PAIs.

Consideration of the Product Level PAIs by the Sub-Investment Manager was through a combination of:

- Monitoring the Portfolio, in particular where it fell below the quantitative and qualitative tolerance thresholds set for each Product Level PAI by the Sub-Investment Manager;
- Stewardship and/or setting engagement objectives where the Portfolio fell below the quantitative and qualitative tolerance thresholds set for a Product Level PAI; and
- Application of the ESG exclusion policies referenced above, which included consideration of several of the Product Level PAIs.

## What were the top investments of this financial product?

The Sub-Investment Manager has used the EU statistical classification of economic activities (“NACE”) economic sector breakdown to identify the economic sectors of the Portfolio's top 15 investments. The following data is as at 31 December 2022.

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 1 January 2022 – 31 December 2022

Largest investments	Sector	% Assets	Country
OKINAWA CELLULAR TELEPHONE	J - Information and communication	5.3%	Japan
RICOH LTD	C - Manufacturing	5.0%	Japan
SHOEI LTD	C - Manufacturing	5.0%	Japan
TOKYU FUDOSAN HOLDINGS CORP	F - Construction	4.3%	Japan
PILOT CORP	C - Manufacturing	4.0%	Japan
YAMAHA CORP	C - Manufacturing	3.5%	Japan
DAIWA INDUSTRIES LTD	C - Manufacturing	3.4%	Japan
MUSASHI SEIMITSU INDUSTRY LTD	C - Manufacturing	3.3%	Japan
OPEN UP GROUP INC	N - Administrative and support service activities	3.2%	Japan
AMADA LTD	C - Manufacturing	3.2%	Japan
USS LTD	G - Wholesale and retail trade; repair of motor vehicles and motorcycles	2.8%	Japan
HOKKOKU FINANCIAL HOLDINGS INC	K - Financial and insurance activities	2.5%	Japan
AS ONE CORP	G - Wholesale and retail trade; repair of motor vehicles and motorcycles	2.3%	Japan
NIFCO INC	C - Manufacturing	2.3%	Japan
RESORT TRUST INC	I - Accommodation and food service activities	2.3%	Japan

## What was the proportion of sustainability-related investments?

### ● *What was the asset allocation?*

The Sub-Investment Manager calculated the proportion of investments aligned with the environmental and/or social characteristics promoted by the Portfolio by reference to the proportion of companies in the Portfolio: i) that held either an NB proprietary ESG score or a third-party equivalent ESG rating that was used as part of the portfolio construction and investment management process of the Portfolio; and/or ii) with whom the Sub-Investment Manager had engaged directly. This calculation was based on a mark-to-market assessment of the Portfolio and may rely on incomplete or inaccurate company or third-party data. For the 2022 reference period only, this calculation is based on the Portfolio's holdings as at 31 December 2022, being the only quarter end in the reference period that followed the publication of the Portfolio's SFDR Annex detailing its planned asset allocation. For all subsequent reference periods, this calculation will be based on the average of the four quarter ends.

**Asset allocation** describes the share of investments in specific assets.

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

### ● *In which economic sectors were the investments made?*

Data as at 31 December 2022	
Economic Sector – NACE	% Assets
C - Manufacturing	44.18%
E - Water supply; sewerage; waste management and remediation activities	2.65%
F - Construction	5.86%
G - Wholesale and retail trade; repair of motor vehicles and motorcycles	7.31%
H - Transporting and storage	0.95%
I - Accommodation and food service activities	2.32%
J - Information and communication	15.59%
K - Financial and insurance activities	9.02%
L - Real estate activities	3.58%
M - Professional, scientific and technical activities	1.88%
N - Administrative and support service activities	4.28%
Q - Human health and social work activities	1.63%
None	0.74%

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

- **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

## To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The analysis and disclosure requirements introduced by the EU Taxonomy are very detailed and compliance with them requires the availability of multiple, specific data points in respect of each investment which the Portfolio made. The Sub-Investment Manager cannot confirm that the Portfolio invested in any investments that qualified as environmentally sustainable for the purposes of the EU Taxonomy. Disclosures and reporting on Taxonomy alignment will develop as the EU framework evolves and data is made available by companies. The Sub-Investment Manager will keep the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy under active review as data availability and quality improves.

### ● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?

Yes:

In fossil gas  In nuclear energy

No

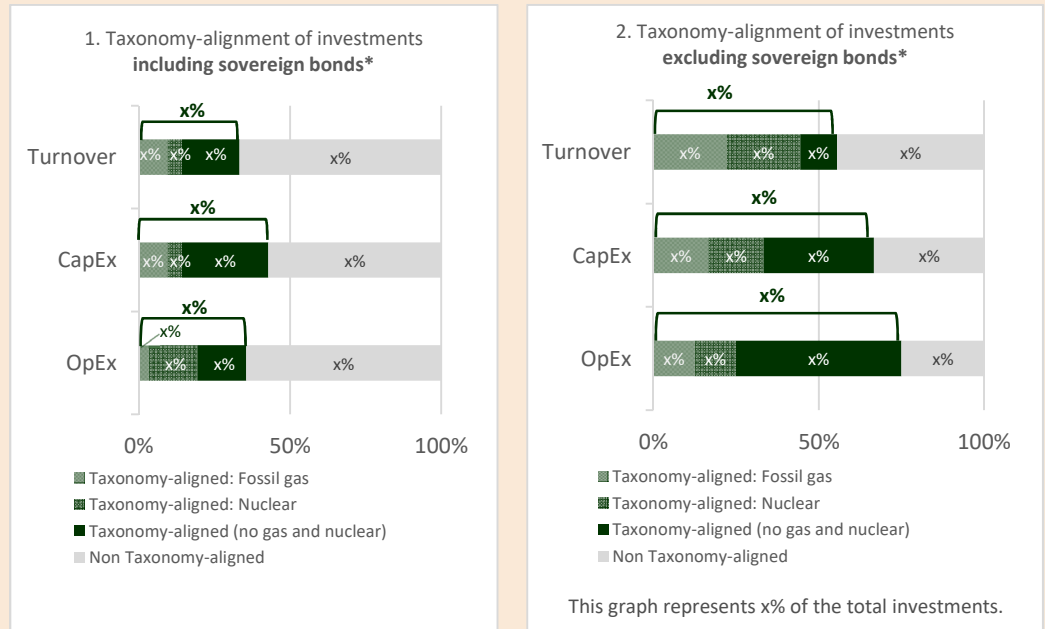

---

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

- **What was the share of investments made in transitional and enabling activities?**

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments.

- **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

### **What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?**

N/A – the Portfolio did not commit to holding sustainable investments.

### **What was the share of socially sustainable investments?**

N/A – the Portfolio did not commit to holding sustainable investments.

### **What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?**

“Other” included the remaining investments of the Portfolio (including but not limited to any derivatives or any security collateralized by a pool of similar assets or receivables listed in the Supplement for the Portfolio) which were neither aligned with the environmental or social characteristics, nor qualified as sustainable investments.

The “Other” section in the Portfolio was held for a number of reasons that the Sub-Investment Manager felt was beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover.

As noted above, the Portfolio was invested in compliance with ESG exclusion policies, on a continuous basis. This ensured that investments made by the Portfolio sought to align with international environmental and social safeguards such as the UNGC Principles, UNGPs, OECD Guidelines and ILO Standards.

The Sub-Investment Manager believes that these policies prevented investment in companies that most egregiously violated environmental and/or social minimum standards and ensured that the Portfolio could successfully promote its environmental and social characteristics.

The above steps ensured that robust environmental and social safeguards were in place.

## **What actions have been taken to meet the environmental and/or social characteristics during the reference period?**

The Portfolio was managed in-line with the investment objective and the following actions were taken:

### **I. Integrating proprietary ESG analysis:**

For environment and social responsibility issues, the Sub-Investment Manager took a top-down approach, through the NB proprietary ESG score. The NB proprietary ESG score leveraged the NB materiality matrix to identify the sustainability factors that could have had a material impact on the sustainability of the company. The Sub-Investment Manager then scrutinized these issues with respect to the business model, value chain, growth phase of the company and competitive position to highlight high-priority issues that needed to be addressed immediately. This was done through on-the-ground research combing through years of publicly available company disclosure and through meetings with the company, competitors, suppliers, clients, and external research providers, where available.

### **II. Engagement:**

The Sub-Investment Manager engaged with companies through a robust ESG engagement program. They sought to prioritise constructive engagements and sought to engage on topics (including ESG topics) they determined to be financially material for the relevant company. The Sub-Investment Manager viewed this engagement with companies, as an important part of its investment process.

Once the Portfolio has invested in a company, the Sub-Investment Manager set an engagement objective and a customized strategy to address the financially material issues identified in the scoring process. The Sub-Investment Manager's engagement with portfolio holdings was aimed at helping these companies achieve long-term growth. As long-term investors focused on bottom-up stock selection, the Sub-Investment Manager believed that through in-depth engagement on capital management, financially material environment and social issues, and corporate governance, they helped the company sustain a growth profile over the long-term that ultimately contributed to the Portfolio's performance. The Sub-Investment Manager's experience engaging with companies has shown that smaller companies require more time and resources to address these issues (average 2-3 years for environmental and social issues). Hence, given this relatively lengthy process, the Sub-Investment Manager adopted a milestone system to ensure engagement remains on track to achieve the objective.

### **III. ESG sectoral exclusion policies:**

To ensure that the environmental and social characteristics promoted by the Portfolio were attained, the Portfolio applied the ESG exclusion policies referenced above, which placed limitations on the investable universe.

## How did this financial product perform compared to the reference benchmark?

N/A – The Portfolio's benchmark has not been designated as a reference benchmark. Therefore, it is not consistent with the environmental or social characteristics promoted by the Portfolio.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- ***How does the reference benchmark differ from a broad market index?***  
N/A
- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***  
N/A
- ***How did this financial product perform compared with the reference benchmark?***  
N/A
- ***How did this financial product perform compared with the broad market index?***  
N/A

**Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852**

**Product name:** Neuberger Berman US Real Estate Securities Fund (the “Portfolio”)

**Legal entity identifier:** 549300T9PUOV1AK0OR82

## Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?	
<input checked="" type="radio"/> <input checked="" type="radio"/> <input type="checkbox"/> <b>Yes</b>	<input checked="" type="radio"/> <input type="radio"/> <input checked="" type="checkbox"/> <b>No</b>
<input type="checkbox"/> It made <b>sustainable investments with an environmental objective: ___%</b>  <input type="checkbox"/> _____ in economic activities that qualify as environmentally sustainable under the EU Taxonomy  <input type="checkbox"/> _____ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	<input type="checkbox"/> It promoted <b>Environmental/Social (E/S) characteristics</b> and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments  <input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy  <input type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy  <input type="checkbox"/> with a social objective
<input type="checkbox"/> It made <b>sustainable investments with a social objective: ___%</b>	<input checked="" type="checkbox"/> It promoted E/S characteristics, but <b>did not make any sustainable investments</b>

## To what extent were the environmental and/or social characteristics promoted by this financial product met?

The following environmental and social characteristics were promoted by the Portfolio

- **Environmental Characteristics:** air quality; biodiversity & land use; energy management; environmental risk exposure; fuel economy; greenhouse gas (“GHG”) emissions; opportunities in clean technologies; toxic emissions & waste; water management; packaging lifecycle management; materials sourcing; and product lifecycle management.
- **Social Characteristics:** access to finance; access to healthcare; community relations; data privacy & security; employee incentives & risk taking; health & nutrition; health & safety; human capital development; labour management; product safety & integrity; supply chain labour standards; workforce diversity & inclusion; pricing transparency; and responsible marketing.

Performance in relation to these environmental and social characteristics was measured through the NB ESG Quotient, and is reported, in aggregate, below.

### How did the sustainability indicators perform?

As part of the investment process, the Sub-Investment Manager considered a variety of sustainability indicators to measure the environmental and/or social characteristics promoted by the Portfolio. These sustainability indicators are listed below:

1. The NB ESG Quotient:

The proprietary Neuberger Berman ESG rating system (the “NB ESG Quotient”), is built around the concept of sector specific ESG risk and opportunity, and produced an overall ESG rating for issuers by assessing them against certain ESG metrics.

Foundational to the NB ESG Quotient is the proprietary Neuberger Berman (“NB”) materiality matrix, which focuses on the ESG characteristics that were considered to be the most likely to be the material drivers of ESG risk and opportunity for each sector. Each sector criteria is constructed using third-party and internally derived ESG data and supplemented with internal qualitative analysis, leveraging the Sub-Investment Manager’s analyst team’s significant sector expertise. The NB materiality matrix enabled the Sub-Investment Manager to derive the NB ESG Quotient rating, to compare sectors and issuers relative to their environmental and social characteristics.

The NB ESG Quotient assigned weightings to environmental, social and governance characteristics for each sector to derive the NB ESG Quotient rating for issuers. Issuers with a favourable and/or an improving NB ESG Quotient rating had a higher chance of being included in the Portfolio. Issuers with a poor NB ESG Quotient rating, especially where a poor NB ESG Quotient rating is not being addressed by an issuer, were more likely to be removed from the investment universe or were divested from the Portfolio. In addition, the Sub-Investment Manager sought to prioritise constructive engagements with issuers that had a poor NB ESG Quotient rating, in order to assess whether concerns were being addressed adequately.

	31 December 2022	Rating	Combined coverage
W i t h	NB ESG Quotient	ES: B G: 1	100%
	Third-party Data	6.2	

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

regards to the NB ESG Quotient ratings, for environmental and social (ES) ratings, A – D quartiles are used, where A is the highest rating (top quartile), and D is the lowest rating (bottom quartile). For governance (G) ratings, 1 – 4 quartiles are used where 1 is the highest rating, and 4 is the lowest rating. This Portfolio does not have a minimum NB ESG Quotient rating. The average NB ESG Quotient rating is a weighted average and is not a rating of the Portfolio strategy itself.

Third-party data was also used to measure the environmental and social characteristics promoted by the Portfolio. The third-party data ratings range from 0-10, with 0 being the lowest rating and 10 being the highest rating

## 2. Climate Value-at-Risk:

Over the reference period, Climate Value-at-Risk (“**CVaR**”) measured the exposure to transition and physical climate risks. CVaR is a scenario analysis tool evaluating economic risks under various degree scenarios (i.e., the amount of warming targeted) and potential regulatory environments in varying countries.

CVaR is a type of scenario analysis which is defined as the present value of aggregated future policy risk costs, technology opportunity profits, and extreme weather event costs and profits, expressed as a percentage of a security or portfolio’s market value according to the warming scenario targeted.

By calculating the financial risks from climate change per security and per scenario, CVaR provides a framework that helps quantify and understand these risks. The CVaR metric provides insight into the climate-stressed valuation of assets based on specific degree scenarios, providing an assessment on how much a security may stand to lose or gain from the impact of climate change.

As at 31 December 2022, CVaR projected that a warming climate scenario could result in a depreciation of 9.79% in the valuation of assets under assessment.

This analysis is intended as a broad overview of the investment team’s style and investment process.

On a holistic basis, the results were evaluated by the Sub-Investment Manager’s portfolio managers and analysts. The scenario analysis served as a starting point for further bottom-up analysis and identifying potential climate-related risks to address through issuer engagement.

Due to data limitations, CVaR was not applied across all issuers held by the Portfolio and was instead limited to the issuers for which the Sub-Investment Manager had sufficient and reliable data. The Portfolio had a CVaR coverage of 93%.

The analysis from CVaR is reviewed at least once a year.

## 3. ESG exclusion policies:

To ensure that the environmental or social characteristics promoted by the Portfolio were attained, the Portfolio did not invest in issuers whose activities breached, or were not consistent with, the Neuberger Berman Controversial Weapons Policy and the Neuberger Berman Thermal Coal Involvement Policy. In addition to the application of the Neuberger Berman Thermal Coal Involvement Policy, the Sub-Investment Manager prohibited the initiation of new investment positions in issuers that (i) derived more than 25% of their revenue from thermal coal mining; or (ii) were expanding new thermal coal power generation. Furthermore, from 6 April 2022 onwards, investments held by the Portfolio did not invest in issuers whose activities had been identified as breaching the Neuberger Berman Global Standards Policy which excluded identified violators of (i) the United Nations Global Compact Principles (“**UNGC Principles**”), (ii) the OECD Guidelines for Multinational Enterprises (“**OECD Guidelines**”), (iii) the United Nations Guiding Principles on Business and Human Rights (“**UNGPs**”) and (iv) the International Labour Standards (“**ILO Standards**”). From 28 November 2022, the Sub-Investment Manager

prohibited purchases of issuers that own, operate or primarily provided integral services to private prisons given the significant social controversy, reputational risks, dependency on Justice Department policies and facilities that were not easily reconfigurable for alternate uses.

When applying ESG exclusions to the Portfolio, the Sub-Investment Manager used third-party data to identify issuers in breach of the ESG exclusions listed above. Where possible, the Sub-Investment Manager sought to overlay this third-party data with qualitative expertise from their research analysts to establish a current and holistic picture of the issuer. The Sub-Investment Manager discussed and debated the differences between the violators identified by the third-party data and those identified as a result of their research, which drew upon data from the NB ESG Quotient and direct engagements with the issuer.

● ***...and compared to previous periods?***

N/A – this is the first reference period.

● ***What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?***

N/A – the Portfolio did not commit to holding sustainable investments.

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

— ***How were the indicators for adverse impacts on sustainability factors taken into account?***

N/A – the Portfolio did not commit to holding sustainable investments.

— ***Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

The Portfolio did not commit to holding sustainable investments, however, from 6 April 2022 onwards, the Sub-Investment Manager did not invest in issuers whose activities had been identified as breaching the OECD Guidelines, UNGC Principles, ILO Standards and UNGPs, captured through the Neuberger Berman Global Standards Policy.

*The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.*

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

N/A – The Portfolio did not commit to holding Taxonomy aligned investments.

### **How did this financial product consider principal adverse impacts on sustainability factors?**

A selection of the principal adverse impact indicators were considered directly (e.g. through the ESG exclusion policies listed above) and/or indirectly (e.g. as part of the Sub-Investment Manager’s assessment of issuers) throughout the 2022 reference period.

From 28 November 2022 onwards, the Sub-Investment Manager considered the following principal adverse impacts, namely: GHG emissions, carbon footprint, GHG intensity, fossil fuel exposure, board gender diversity, UNGC Principles & OECD Guidelines violations and controversial weapons (the “**Product Level PAIs**”).

Consideration of the Product Level PAIs was limited by the availability (in the Sub-Investment Manager’s subjective view) of adequate, reliable and verifiable data coverage. The Sub-Investment Manager utilised third-party data and proxy data along with internal research to consider the Product Level PAIs.

Consideration of the Product Level PAIs by the Sub-Investment Manager was through a combination of:

- Monitoring the Portfolio, in particular where it fell below the quantitative and qualitative tolerance thresholds set for each Product Level PAI by the Sub-Investment Manager;
- Stewardship and/or setting engagement objectives where the Portfolio fell below the quantitative and qualitative tolerance thresholds set for a Product Level PAI by the Sub-Investment Manager; and
- Application of the ESG exclusion policies referenced above, which included consideration of several of the Product Level PAIs.

## What were the top investments of this financial product?

The Sub-Investment Manager has used the EU statistical classification of economic activities (“NACE”) economic sector breakdown to identify the economic sectors of the Portfolio's top 15 investments. The following data is as at 31 December 2022.

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 1 January 2022 - 31 December 2022

Largest investments	Sector	% Assets	Country
AMERICAN TOWER REIT CORP	L - Real estate activities	8.8%	United States
PROLOGIS REIT INC	L - Real estate activities	8.0%	United States
PUBLIC STORAGE REIT	L - Real estate activities	6.3%	United States
CROWN CASTLE INC	N - Administrative and support service activities	6.1%	United States
REALTY INCOME REIT CORP	L - Real estate activities	4.2%	United States
WELLTOWER	L - Real estate activities	4.1%	United States
DIGITAL REALTY TRUST REIT INC	L - Real estate activities	3.5%	United States
EQUINIX REIT INC	J - Information and communication	3.3%	United States
KIMCO REALTY REIT CORP	L - Real estate activities	3.0%	United States
SIMON PROPERTY GROUP REIT INC	L - Real estate activities	3.0%	United States
IRON MOUNTAIN INC	L - Real estate activities	3.0%	United States
ESSEX PROPERTY TRUST REIT INC	L - Real estate activities	3.0%	United States
SUN COMMUNITIES REIT INC	L - Real estate activities	2.8%	United States
EQUITY RESIDENTIAL REIT	L - Real estate activities	2.8%	United States
SBA COMMUNICATIONS REIT CORP CLASS	L - Real estate activities	2.8%	United States

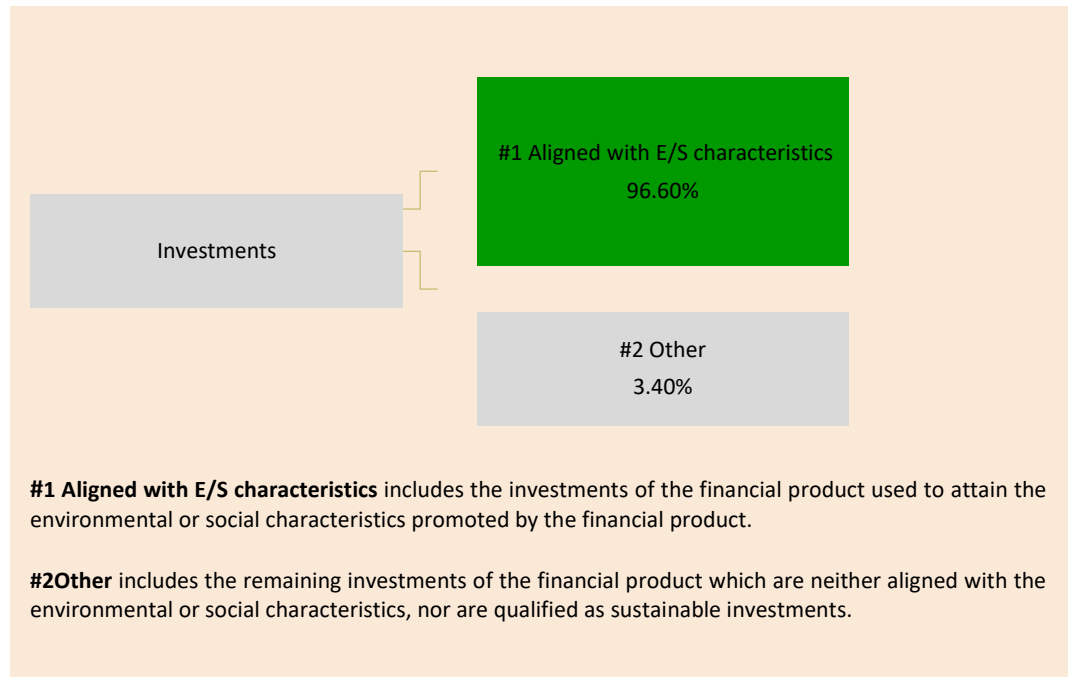

## What was the proportion of sustainability-related investments?

**Asset allocation** describes the share of investments in specific assets.

### ● **What was the asset allocation?**

The Sub-Investment Manager calculated the proportion of investments aligned with the environmental and/or social characteristics promoted by the Portfolio by reference to the proportion of issuers in the Portfolio: i) that held either an NB ESG Quotient rating or a third-party equivalent ESG rating that was used as part of the portfolio construction and investment management process of the Portfolio; and/or ii) with whom the Sub-Investment Manager had engaged directly. This calculation was based on a mark-to-market assessment of the Portfolio and may rely on incomplete or inaccurate issuer or third-party data. For the 2022 reference period only, this calculation is based on the Portfolio's holdings as at 31 December 2022, being the only quarter end in the reference period that followed the publication of the Portfolio's SFDR Annex detailing its planned asset allocation. For all subsequent reference periods, this calculation will be based on the average of the four quarter ends.

● ***In which economic sectors were the investments made?***

Data as at 31 December 2022	
Economic Sector – NACE	% Assets
C - Manufacturing	2.03%
J - Information and communication	3.37%
K - Financial and insurance activities	1.61%
L - Real estate activities	86.67%
N - Administrative and support service activities	6.31%

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

- **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

## To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The analysis and disclosure requirements introduced by the EU Taxonomy are very detailed and compliance with them requires the availability of multiple, specific data points in respect of each investment which the Portfolio made. The Sub-Investment Manager cannot confirm that the Portfolio invested in any investments that qualified as environmentally sustainable for the purposes of the EU Taxonomy. Disclosures and reporting on Taxonomy alignment will develop as the EU framework evolves and data is made available by issuers. The Sub-Investment Manager will keep the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy under active review as data availability and quality improves

### ● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?

Yes:

In fossil gas  In nuclear energy

No

---

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

● **What was the share of investments made in transitional and enabling activities?**

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

### **What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?**

N/A – the Portfolio did not commit to holding sustainable investments.

### **What was the share of socially sustainable investments?**

N/A – the Portfolio did not commit to holding sustainable investments.

### **What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?**

“Other” included the remaining investments of the Portfolio (including but not limited to any derivatives or any security collateralized by a pool of similar assets or receivables listed in the Supplement for the Portfolio) which were neither aligned with the environmental or social characteristics, nor qualified as sustainable investments.

The “Other” section in the Portfolio was held for a number of reasons that the Sub-Investment Manager felt was beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover.

As noted above, the Portfolio was invested in compliance with ESG exclusion policies, on a continuous basis. This ensured that investments made by the Portfolio sought to align with international environmental and social safeguards such as the UNGC Principles, UNGPs, OECD Guidelines and the ILO Standards.

The Sub-Investment Manager believes that these policies prevented investment in issuers that most egregiously violated environmental and/or social minimum standards and ensured that the Portfolio could successfully promote its environmental and social characteristics.

The above steps ensured that robust environmental and social safeguards were in place.

## What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Portfolio was managed in-line with the investment objective and the following actions were taken:

### I. Integrating proprietary ESG analysis:

The NB ESG Quotient ratings were generated for issuer holdings in the Portfolio. The NB ESG Quotient rating for issuers was utilised to help to better identify risks and opportunities in the overall assessment.

By integrating the investment team's proprietary ESG analysis (the NB ESG Quotient) into the overall issuer view, there was a direct link between their analysis of material ESG characteristics and portfolio construction activities across their strategy.

Issuers with a favourable and/or an improving NB ESG Quotient rating had a higher chance of ending up in the Portfolio. Issuers with a poor NB ESG Quotient rating especially where these were not being addressed by that issuer, were more likely to be removed from the investment universe or divested from the Portfolio.

### II. Engagement:

The Sub-Investment Manager engaged with issuers through a robust ESG engagement program. They sought to prioritise constructive engagements and sought to engage on topics (including ESG topics) they determined to be financially material for the relevant issuer. The Sub-Investment Manager viewed this engagement with issuers, as an important part of its investment process. Progress on engagement was tracked centrally in the Sub-Investment Manager's engagement tracker.

### III. ESG sectoral exclusion policies:

To ensure that the environmental and social characteristics promoted by the Portfolio were attained, the Portfolio applied the ESG exclusion policies referenced above, which placed limitations on the investable universe.

## How did this financial product perform compared to the reference benchmark?

N/A – The Portfolio's benchmark has not been designated as a reference benchmark. Therefore, it is not consistent with the environmental or social characteristics promoted by the Portfolio

- ***How does the reference benchmark differ from a broad market index?***  
N/A
- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***  
N/A
- ***How did this financial product perform compared with the reference benchmark?***  
N/A
- ***How did this financial product perform compared with the broad market index?***  
N/A

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

---

**Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852**

**Product name:** Neuberger Berman Global Real Estate Securities Fund (the “Portfolio”)

**Legal entity identifier:** 549300JYOIU4VRI67006

## Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?	
<input checked="" type="radio"/> <input checked="" type="radio"/> <input type="checkbox"/> <b>Yes</b>	<input checked="" type="radio"/> <input type="radio"/> <input checked="" type="checkbox"/> <b>No</b>
<input type="checkbox"/> It made <b>sustainable investments with an environmental objective</b> : ____% <ul style="list-style-type: none"> <li><input type="checkbox"/> _____ in economic activities that qualify as environmentally sustainable under the EU Taxonomy</li> <li><input type="checkbox"/> _____ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</li> </ul>	<input type="checkbox"/> It <b>promoted Environmental/Social (E/S) characteristics</b> and while it did not have as its objective a sustainable investment, it had a proportion of ____% of sustainable investments <ul style="list-style-type: none"> <li><input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy</li> <li><input type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</li> <li><input type="checkbox"/> with a social objective</li> </ul>
<input type="checkbox"/> It made <b>sustainable investments with a social objective</b> : ____%	<input checked="" type="checkbox"/> It promoted E/S characteristics, but <b>did not make any sustainable investments</b>

## To what extent were the environmental and/or social characteristics promoted by this financial product met?

The following environmental and social characteristics were promoted by the Portfolio:

- **Environmental Characteristics:** air quality; biodiversity & land use; energy management; environmental risk exposure; fuel economy; greenhouse gas (“GHG”) emissions; opportunities in clean technologies; toxic emissions & waste; water management; packaging lifecycle management; materials sourcing; and product lifecycle management.
- **Social Characteristics:** access to finance; access to healthcare; community relations; data privacy & security; employee incentives & risk taking; health & nutrition; health & safety; human capital development; labour management; product safety & integrity; supply chain labour standards; workforce diversity & inclusion; pricing transparency; and responsible marketing.

Performance in relation to these environmental and social characteristics was measured through the NB ESG Quotient, and is reported, in aggregate, below.

### ● How did the sustainability indicators perform?

As part of the investment process, the Sub-Investment Manager considered a variety of sustainability indicators to measure the environmental and/or social characteristics promoted by the Portfolio. These sustainability indicators are listed below:

#### 1. The NB ESG Quotient:

The proprietary Neuberger Berman ESG rating system (the “NB ESG Quotient”), is built around the concept of sector specific ESG risk and opportunity, and produced an overall ESG rating for issuers by assessing them against certain ESG metrics. Foundational to the NB ESG Quotient is the proprietary Neuberger Berman (“NB”) materiality matrix, which focuses on the ESG characteristics that were considered to be the most likely to be the material drivers of ESG risk and opportunity for each sector. Each sector criteria is constructed using third-party and internally derived ESG data and supplemented with internal qualitative analysis, leveraging the Sub-Investment Manager’s analyst team’s significant sector expertise. The NB materiality matrix enabled the Sub-Investment Manager to derive the NB ESG Quotient rating, to compare sectors and issuers relative to their environmental and social characteristics.

The NB ESG Quotient assigned weightings to environmental, social and governance factors for each sector to derive the NB ESG Quotient rating for issuers. Issuers with a favourable and/or an improving NB ESG Quotient rating had a higher chance of being included in the Portfolio. Issuers with a poor NB ESG Quotient rating, especially where a poor NB ESG Quotient rating is not being addressed by an issuer, were more likely to be removed from the investment universe or were divested from the Portfolio. In addition, the Sub-Investment Manager sought to prioritise constructive engagements with issuers that had a poor NB ESG Quotient rating, in order to assess whether concerns were being addressed adequately.

	Rating	Combined coverage
<b>31 December 2022</b>		
NB ESG Quotient	ES: B G: 2	100%
Third-party Data	6.4	

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

With regards to the NB ESG Quotient ratings, for environmental and social (ES) ratings, A – D quartiles are used, where A is the highest rating (top quartile), and D is the lowest rating (bottom quartile). For governance (G) ratings, 1 – 4 quartiles are used where 1 is the highest rating, and 4 is the lowest rating. This Portfolio does not have a minimum NB ESG Quotient rating. The average NB ESG Quotient rating is a weighted average and is not a rating of the Portfolio strategy itself.

Third-party data was also used to measure the environmental and social characteristics promoted by the Portfolio. The third-party data ratings range from 0-10, with 0 being the lowest rating and 10 being the highest rating

## 2. Climate Value-at-Risk:

Over the reference period, Climate Value-at-Risk (“**CVaR**”) measured the exposure to transition and physical climate risks. CVaR is a scenario analysis tool evaluating economic risks under various degree scenarios (i.e., the amount of warming targeted) and potential regulatory environments in varying countries.

CVaR is a type of scenario analysis which is defined as the present value of aggregated future policy risk costs, technology opportunity profits, and extreme weather event costs and profits, expressed as a percentage of a security or portfolio’s market value according to the warming scenario targeted.

By calculating the financial risks from climate change per security and per scenario, CVaR provides a framework that helps quantify and understand these risks. The CVaR metric provides insight into the climate-stressed valuation of assets based on specific degree scenarios, providing an assessment on how much a security may stand to lose or gain from the impact of climate change.

As at 31 December 2022, CVaR projected that a warming climate scenario could result in a depreciation of 15.90% in the valuation of assets under assessment.

This analysis is intended as a broad overview of the investment team’s style and investment process.

On a holistic basis, the results were evaluated by the Sub-Investment Manager’s portfolio managers and analysts. The scenario analysis served as a starting point for further bottom-up analysis and identifying potential climate-related risks to address through issuer engagement.

Due to data limitations, CVaR was not applied across all issuers held by the Portfolio and was instead limited to the issuers for which the Sub-Investment Manager had sufficient and reliable data. The Portfolio had a CVaR coverage of 94%.

The analysis from CVaR is reviewed at least once a year.

## 3. ESG exclusion policies:

To ensure that the environmental or social characteristics promoted by the Portfolio can be attained, the Portfolio did not invest in issuers whose activities breached, or were not consistent with, the Neuberger Berman Controversial Weapons Policy and the Neuberger Berman Thermal Coal Involvement Policy. In addition to the application of the Neuberger Berman Thermal Coal Involvement Policy, the Sub-Investment Manager prohibited the initiation of new investment positions in issuers that (i) derived more than 25% of their revenue from thermal coal mining; or (ii) were expanding new thermal coal power generation. Furthermore, from 6 April 2022 onwards, investments held by the Portfolio did not invest in issuers whose activities had been identified as breaching the Neuberger Berman Global Standards Policy which excludes identified violators of (i) the United Nations Global Compact Principles (“**UNGC Principles**”), (ii) the OECD Guidelines for Multinational Enterprises (“**OECD Guidelines**”), (iii) the United Nations Guiding Principles on

Business and Human Rights (“**UNGPs**”) and (iv) the International Labour Standards (“**ILO Standards**”). From 28 November 2022, the Sub-Investment Manager prohibited purchases of issuers that own, operate or primarily provided integral services to private prisons given the significant social controversy, reputational risks, dependency on Justice Department policies and facilities that were not easily reconfigurable for alternate uses.

When applying ESG exclusions to the Portfolio, the Sub-Investment Manager used third-party data to identify issuers in breach of the ESG exclusions listed above. Where possible, the Sub-Investment Manager sought to overlay this third-party data with qualitative expertise from their research analysts to establish a current and holistic picture of the issuer. The Sub-Investment Manager discussed and debated the differences between the violators identified by the third-party data and those identified as a result of their research, which drew upon data from the NB ESG Quotient and direct engagements with the company.

● ***...and compared to previous periods?***

N/A – this is the first reference period.

● ***What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?***

N/A – the Portfolio did not commit to holding sustainable investments.

● ***How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?***

N/A – the Portfolio did not commit to holding sustainable investments.

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

— ***How were the indicators for adverse impacts on sustainability factors taken into account?***

N/A – the Portfolio did not commit to holding sustainable investments.

— ***Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

The Portfolio did not commit to holding sustainable investments, however, from 6 April 2022 onwards, the Sub-Investment Manager did not invest in issuers whose activities had been identified as breaching the OECD Guidelines, UNGC Principles, ILO Standards and UNGPs, captured through the Neuberger Berman Global Standards Policy.

*The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.*

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

N/A – The Portfolio did not commit to holding Taxonomy aligned investments.

### **How did this financial product consider principal adverse impacts on sustainability factors?**

A selection of the principal adverse impact indicators were considered directly (e.g. through the ESG exclusion policies listed above) and/or indirectly (e.g. as part of the Sub-Investment Manager’s assessment of issuers) throughout the 2022 reference period.

From 28 November 2022 onwards, the Sub-Investment Manager considered the following principal adverse impacts, namely: GHG emissions, carbon footprint, GHG intensity, fossil fuel exposure, board gender diversity, UNGC Principles & OECD violations and controversial weapons (the “**Product Level PAIs**”).

Consideration of the Product Level PAIs was limited by the availability (in the Sub-Investment Manager’s subjective view) of adequate, reliable and verifiable data coverage. The Sub-Investment Manager utilised third-party data and proxy data along with internal research to consider the Product Level PAIs.

Consideration of the Product Level PAIs by the Sub-Investment Manager was through a combination of:

- Monitoring the Portfolio, in particular where it fell below the quantitative and qualitative tolerance thresholds set for each Product Level PAI by the Sub-Investment Manager;
- Stewardship and/or setting engagement objectives where the Portfolio fell below the quantitative and qualitative tolerance thresholds set for a Product Level PAI by the Sub-Investment Manager; and
- Application of the ESG exclusion policies referenced above, which included consideration of several of the Product Level PAIs.

## What were the top investments of this financial product?

The Sub-Investment Manager has used the EU statistical classification of economic activities (“NACE”) economic sector breakdown to identify the economic sectors of the Portfolio's top 15 investments. The following data is as at 31 December 2022.

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 1 January 2022 - 31 December 2022

Largest investments	Sector	% Assets	Country
PROLOGIS REIT INC	L - Real estate activities	5.3%	United States
AMERICAN TOWER REIT CORP	L - Real estate activities	5.1%	United States
PUBLIC STORAGE REIT	L - Real estate activities	3.6%	United States
CROWN CASTLE INC	N - Administrative and support service activities	3.2%	United States
UOL GROUP LTD	F - Construction	2.9%	Singapore
MITSUI FUDOSAN LTD	L - Real estate activities	2.8%	Japan
WELLTOWER	L - Real estate activities	2.7%	United States
CK ASSET HOLDINGS LTD	F - Construction	2.3%	Hong Kong
MITSUI FUDOSAN LOGISTICS PARK REIT	L - Real estate activities	2.3%	Japan
LASALLE LOGIPORT REIT	L - Real estate activities	2.2%	Japan
SUMMIT INDUSTRIAL INCOME REIT UNIT	L - Real estate activities	2.2%	Canada
REALTY INCOME REIT CORP	L - Real estate activities	2.2%	United States
SEGRO REIT PLC	L - Real estate activities	2.1%	United Kingdom
MITSUBISHI ESTATE LTD	L - Real estate activities	2.1%	Japan
KIMCO REALTY REIT CORP	L - Real estate activities	2.0%	United States

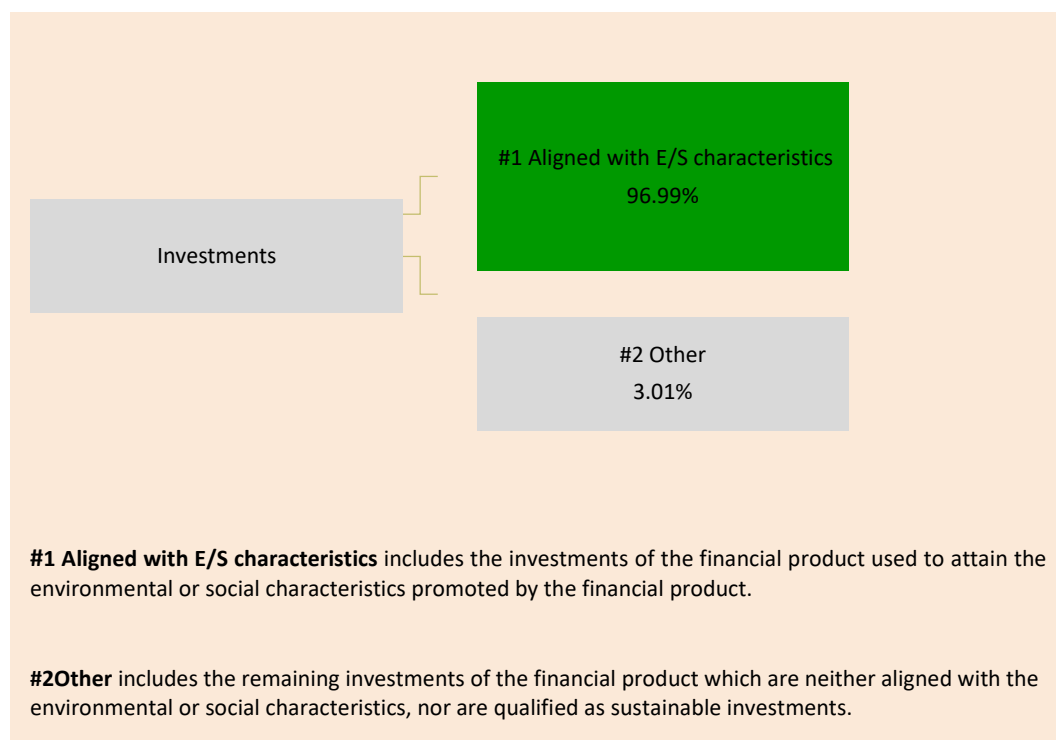

## What was the proportion of sustainability-related investments?

**Asset allocation** describes the share of investments in specific assets.

### What was the asset allocation?

The Sub-Investment Manager calculated the proportion of investments aligned with the environmental and/or social characteristics promoted by the Portfolio by reference to the proportion of issuers in the Portfolio: i) that held either an NB ESG Quotient rating or a third-party equivalent ESG rating that was used as part of the portfolio construction and investment management process of the Portfolio; and/or ii) with whom the Sub-Investment Manager had engaged directly. This calculation was based on a mark-to-market assessment of the Portfolio and may rely on incomplete or inaccurate issuer or third-party data. For the 2022 reference period only, this calculation is based on the Portfolio's holdings as at 31 December 2022, being the only quarter end in the reference period that followed the publication of the Portfolio's SFDR Annex detailing its planned asset allocation. For all subsequent reference periods, this calculation will be based on the average of the four quarter ends.

● ***In which economic sectors were the investments made?***

Data as at 31 December 2022	
Economic Sector – NACE	% Assets
C - Manufacturing	0.94%
F - Construction	9.46%
J - Information and communication	3.99%
K - Financial and insurance activities	0.85%
L - Real estate activities	81.46%
N - Administrative and support service activities	3.30%

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

- **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

## To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The analysis and disclosure requirements introduced by the EU Taxonomy are very detailed and compliance with them requires the availability of multiple, specific data points in respect of each investment which the Portfolio made. The Sub-Investment Manager cannot confirm that the Portfolio invested in any investments that qualified as environmentally sustainable for the purposes of the EU Taxonomy. Disclosures and reporting on Taxonomy alignment will develop as the EU framework evolves and data is made available by issuers. The Sub-Investment Manager will keep the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy under active review as data availability and quality improves.

### ● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?

Yes:

In fossil gas  In nuclear energy

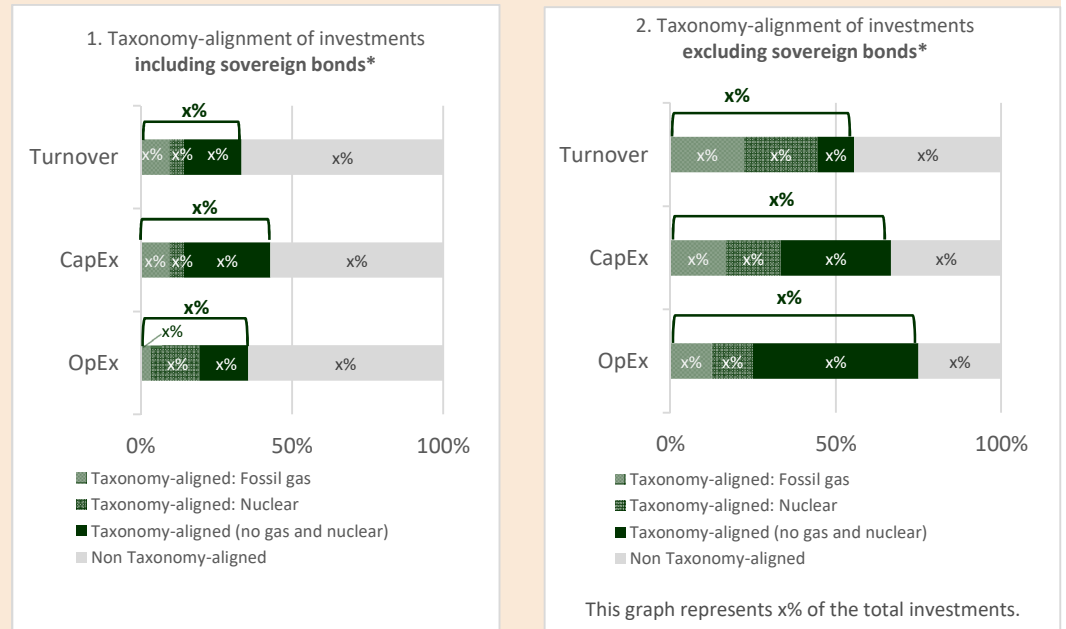

No

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

- **What was the share of investments made in transitional and enabling activities?**

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments.

- **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments.

### **What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?**

N/A – the Portfolio did not commit to holding sustainable investments.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

### **What was the share of socially sustainable investments?**

N/A – the Portfolio did not commit to holding sustainable investments.

### **What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?**

“Other” included the remaining investments of the Portfolio (including but not limited to any derivatives or any security collateralized by a pool of similar assets or receivables listed in the Supplement for the Portfolio) which were neither aligned with the environmental or social characteristics, nor qualified as sustainable investments.

The “Other” section in the Portfolio was held for a number of reasons that the Sub-Investment Manager felt was beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover.

As noted above, the Portfolio was invested in compliance with ESG exclusion policies, on a continuous basis. This ensured that investments made by the Portfolio sought to align with international environmental and social safeguards such as the UNGC Principles, UNGPs, OECD Guidelines and the ILO Standards.

The Sub-Investment Manager believes that these policies prevented investment in issuers that most egregiously violated environmental and/or social minimum standards and ensured that the Portfolio could successfully promote its environmental and social characteristics. The above steps ensured that robust environmental and social safeguards were in place.

## What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Portfolio was managed in-line with the investment objective and the following actions were taken:

### I. Integrating proprietary ESG analysis:

The NB ESG Quotient ratings were generated for issuer holdings in the Portfolio. The NB ESG Quotient rating for issuers was utilised to help to better identify risks and opportunities in the overall assessment.

By integrating the investment team's proprietary ESG analysis (the NB ESG Quotient) into the overall issuer view, there was a direct link between their analysis of material ESG characteristics and portfolio construction activities across their strategy.

Issuers with a favourable and/or an improving NB ESG Quotient rating had a higher chance of ending up in the Portfolio. Issuers with a poor NB ESG Quotient rating especially where these were not being addressed by that issuer, were more likely to be removed from the investment universe or divested from the Portfolio.

### II. Engagement:

The Sub-Investment Manager engaged with issuers through a robust ESG engagement program. They sought to prioritise constructive engagements and sought to engage on topics (including ESG topics) they determined to be financially material for the relevant issuer. The Sub-Investment Manager viewed this engagement with issuers, as an important part of its investment process. Progress on engagement was tracked centrally in the Sub-Investment Manager's engagement tracker.

### III. ESG sectoral exclusion policies:

To ensure that the environmental and social characteristics promoted by the Portfolio were attained, the Portfolio applied the ESG exclusion policies referenced above, which placed limitations on the investable universe.

## How did this financial product perform compared to the reference benchmark?

N/A – The Portfolio's benchmark has not been designated as a reference benchmark. Therefore, it is not consistent with the environmental or social characteristics promoted by the Portfolio.

- ***How does the reference benchmark differ from a broad market index?***  
N/A
- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***

N/A

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

---

**Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852**

**Product name:** Neuberger Berman China A-Share Equity Fund (the “Portfolio”)

**Legal entity identifier:** 54930037QMZTCH4D7291

## Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?	
<input checked="" type="radio"/> <input checked="" type="radio"/> <input type="checkbox"/> <b>Yes</b>	<input checked="" type="radio"/> <input type="radio"/> <input checked="" type="checkbox"/> <b>No</b>
<input type="checkbox"/> It made <b>sustainable investments with an environmental objective</b> : ____% <ul style="list-style-type: none"> <li><input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy</li> <li><input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</li> </ul>	<input type="checkbox"/> It <b>promoted Environmental/Social (E/S) characteristics</b> and while it did not have as its objective a sustainable investment, it had a proportion of ____% of sustainable investments <ul style="list-style-type: none"> <li><input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy</li> <li><input type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</li> <li><input type="checkbox"/> with a social objective</li> </ul>
<input type="checkbox"/> It made <b>sustainable investments with a social objective</b> : ____%	<input checked="" type="checkbox"/> It promoted E/S characteristics, but <b>did not make any sustainable investments</b>

## To what extent were the environmental and/or social characteristics promoted by this financial product met?

The following environmental and social characteristics were promoted by the Portfolio:

- **Environmental Characteristics:** air quality; energy management; environmental policies; greenhouse gas (“GHG”) emissions; opportunities in clean technologies; toxic emissions & waste; water management; packaging lifecycle management; materials sourcing; and product lifecycle management.
- **Social Characteristics:** access to finance; access to healthcare; cyber security system and training; quality management; health & working conditions & employee incidents; human capital development; labour management; and pricing transparency.

Performance in relation to these environmental and social characteristics was measured through the NB ESG Quotient, and is reported, in aggregate, below.

### How did the sustainability indicators perform?

As part of the investment process, the Sub-Investment Manager considered a variety of sustainability indicators to measure the environmental and/or social characteristics promoted by the Portfolio. These sustainability indicators are listed below:

1. The NB ESG Quotient:

The proprietary Neuberger Berman ESG rating system (the “NB ESG Quotient”), is built around the concept of sector specific ESG risk and opportunity, and produced an overall ESG rating for companies by assessing them against certain ESG metrics.

Foundational to the NB ESG Quotient is the proprietary Neuberger Berman (“NB”) materiality matrix, which focuses on the ESG characteristics that are considered to be the most likely to be the material drivers of ESG risk for each sector. The Sub-Investment Manager leveraged the NB materiality matrix and local insight of the China market to customize the material ESG characteristics for China A-shares. When considering China A-shares, the Sub-Investment Manager evaluated the long-term ESG characteristics and value drivers for China’s industries and the companies that operated in them.

The NB ESG Quotient assigned weightings to environmental, social and governance characteristics for each sector to derive the NB ESG Quotient rating for companies. Companies with a favourable and/or an improving NB ESG Quotient rating had a higher chance of being included in the Portfolio. Companies with a poor NB ESG Quotient rating, especially where a poor NB ESG Quotient rating is not being addressed by a company, were more likely to be removed from the investment universe or were divested from the Portfolio. In addition, the Sub-Investment Manager sought to prioritise constructive engagements with companies that had a poor NB ESG Quotient rating, in order to assess whether concerns were being addressed adequately.

	Rating	Combined coverage
<b>31 December 2022</b>		
NB ESG Quotient	BBB	92%
Third-party Data	4	

With regards to the NB ESG Quotient, a rating between CCC and AA is used where CCC is lowest rating and AA is the highest rating. This Portfolio does not have a minimum NB ESG Quotient rating. The average NB ESG Quotient rating is a

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

weighted average and is not a rating of the Portfolio strategy itself.

Third-party data was also used to measure the environmental and social characteristics promoted by the Portfolio. The third-party data ratings range from 0-10, with 0 being the lowest rating and 10 being the highest rating.

## 2. Climate Value-at-Risk:

Over the reference period, Climate Value-at-Risk (“**CVaR**”) measured the exposure to transition and physical climate risks. CVaR is a scenario analysis tool evaluating economic risks under various degree scenarios (i.e., the amount of warming targeted) and potential regulatory environments in varying countries.

CVaR is a type of scenario analysis which is defined as the present value of aggregated future policy risk costs, technology opportunity profits, and extreme weather event costs and profits, expressed as a percentage of a security or portfolio’s market value according to the warming scenario targeted.

By calculating the financial risks from climate change per security and per scenario, CVaR provides a framework that helps quantify and understand these risks. The CVaR metric provides insight into the climate-stressed valuation of assets based on specific degree scenarios, providing an assessment on how much a security may stand to lose or gain from the impact of climate change.

As at 31 December 2022, CVaR projected that a warming climate scenario could result in a depreciation of 23.70% in the valuation of assets under assessment.

This analysis is intended as a broad overview of the investment team’s style and investment process.

On a holistic basis, the results were evaluated by the Sub-Investment Manager’s portfolio managers and analysts. The scenario analysis served as a starting point for further bottom-up analysis and identifying potential climate-related risks to address through company engagement.

Due to data limitations, CVaR was not applied across all companies held by the Portfolio and was instead limited to the companies for which the Sub-Investment Manager has sufficient and reliable data. The Portfolio had a CVaR coverage of 94%.

The analysis from CVaR is reviewed at least once a year.

## 3. ESG exclusion policies:

To ensure that the environmental or social characteristics promoted by the Portfolio were attained, the Portfolio did not invest in companies whose activities breached, or were not consistent with, the Neuberger Berman Controversial Weapons Policy, the Neuberger Berman Thermal Coal Involvement Policy, and from 19 August 2022 onwards, the Neuberger Berman Sustainable Exclusion Policy. In addition to the application of the Neuberger Berman Thermal Coal Involvement Policy, the Sub-Investment Manager prohibited the initiation of new investment positions in companies that (i) derived more than 25% of their revenue from thermal coal mining; or (ii) were expanding new thermal coal power generation. Furthermore, from 6 April onwards, investments held by the Portfolio did not invest in companies whose activities had been identified as breaching the Neuberger Berman Global Standards Policy which excluded identified violators of (i) the United Nations Global Compact Principles (“**UNGC Principles**”), (ii) the OECD Guidelines for Multinational Enterprises (“**OECD Guidelines**”), (iii) the United Nations Guiding Principles on Business and Human Rights (“**UNGPs**”) and (iv) the International Labour Standards (“**ILO Standards**”).

When applying ESG exclusions to the Portfolio, the Sub-Investment Manager used third-party data to identify companies in breach of the ESG exclusions listed above. Where possible, the Sub-Investment Manager sought to overlay this third-party data with qualitative expertise from their research analysts to establish a current and holistic picture of the company. The Sub-Investment Manager discussed and debated the differences between the violators identified by the third-party data and those identified as a result of their research, which drew upon data from the NB ESG Quotient and direct engagements with the company.

● ***...and compared to previous periods?***

N/A – this is the first reference period.

● ***What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?***

N/A – the Portfolio did not commit to holding sustainable investments.

● ***How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?***

N/A – the Portfolio did not commit to holding sustainable investments.

— ***How were the indicators for adverse impacts on sustainability factors taken into account?***

N/A

— ***Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

The Portfolio did not commit to holding sustainable investments, however, from 6 April 2022 onwards, the Sub-Investment Manager did not invest in companies whose activities had been identified as breaching the OECD Guidelines, UNGC Principles, ILO Standards and UNGPs, captured through the Neuberger Berman Global Standards Policy.

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

*The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.*

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments.

### **How did this financial product consider principal adverse impacts on sustainability factors?**

A selection of the principal adverse impact indicators were considered directly (e.g. through the ESG exclusion policies listed above) and/or indirectly (e.g. as part of the Sub-Investment Manager’s assessment of issuers) throughout the 2022 reference period.

From 28 November 2022 onwards, the Sub-Investment Manager considered the following principal adverse impacts, namely: GHG emissions, carbon footprint, GHG intensity, fossil fuel exposure, board gender diversity, UNGC Principles & OECD Guidelines violations and controversial weapons (the “**Product Level PAIs**”).

Consideration of the Product Level PAIs was limited by the availability (in the Sub-Investment Manager’s subjective view) of adequate, reliable and verifiable data coverage. The Sub-Investment Manager utilised third-party data and proxy data along with internal research to consider the Product Level PAIs.

Consideration of the Product Level PAIs by the Sub-Investment Manager was through a combination of:

- Monitoring the Portfolio, in particular where it fell below the quantitative and qualitative tolerance thresholds set for each Product Level PAI by the Sub-Investment Manager;
- Stewardship and/or setting engagement objectives where the Portfolio fell below the quantitative and qualitative tolerance thresholds set for a Product Level PAI by the Sub-Investment Manager; and
- Application of the ESG exclusion policies referenced above, which included consideration of several of the Product Level PAIs.

## What were the top investments of this financial product?

The Sub-Investment Manager has used the EU statistical classification of economic activities (“NACE”) economic sector breakdown to identify the economic sectors of the Portfolio’s top 15 investments. The following data is as at 31 December 2022.

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 1 January 2022 – 31 December 2022

Largest investments	Sector	% Assets	Country
KWEICHOW MOUTAI LTD A	C - Manufacturing	7.4%	China
BANK OF NINGBO LTD A	K - Financial and insurance activities	6.1%	China
WULIANGYE YIBIN LTD A	C - Manufacturing	4.0%	China
PING AN INSURANCE (GROUP) OF CHINA	K - Financial and insurance activities	4.0%	China
SHENZHEN MINDRAY BIO-MEDICAL ELECT	C - Manufacturing	3.9%	China
LUXSHARE PRECISION INDUSTRY LTD A	C - Manufacturing	3.7%	China
MIDEA GROUP LTD A	C - Manufacturing	3.6%	China
CONTEMPORARY AMPEREX TECHNOLOGY LT	C - Manufacturing	2.9%	China
GUANGZHOU KINGMED DIAGNOSTICS GROU	Q - Human health and social work activities	2.9%	China
LONGI GREEN ENERGY TECHNOLOGY LTD	C - Manufacturing	2.9%	China
MEITUAN	G - Wholesale and retail trade; repair of motor vehicles and motorcycles	2.7%	China
POLY DEVELOPMENTS AND HOLDINGS GRO	F - Construction	2.6%	China
SANY HEAVY INDUSTRY LTD A	C - Manufacturing	2.5%	China
CHINA MERCHANTS BANK LTD A	K - Financial and insurance activities	2.4%	China
TENCENT HOLDINGS LTD	J - Information and communication	2.2%	China

## What was the proportion of sustainability-related investments?

**Asset allocation** describes the share of investments in specific assets.

### What was the asset allocation?

The Sub-Investment Manager calculated the proportion of investments aligned with the environmental and/or social characteristics promoted by the Portfolio by reference to the proportion of companies in the Portfolio: i) that held either an NB ESG Quotient rating or a third-party equivalent ESG rating that was used as part of the portfolio construction and investment management process of the Portfolio; and/or ii) with whom the Sub-Investment Manager had engaged directly. This calculation was based on a mark-to-market assessment of the Portfolio and may rely on incomplete or inaccurate company or third-party data. For the 2022 reference period only, this calculation is based on the Portfolio's holdings as at 31 December 2022, being the only quarter end in the reference period that followed the publication of the Portfolio's SFDR Annex detailing its planned asset allocation. For all subsequent reference periods, this calculation will be based on the average of the four quarter ends.

● ***In which economic sectors were the investments made?***

Data as at 31 December 2022	
Economic Sector – NACE	% Assets
C - Manufacturing	64.95%
D - Electricity, gas, steam and air conditioning supply	1.33%
F - Construction	2.79%
G - Wholesale and retail trade; repair of motor vehicles and motorcycles	6.28%
J - Information and communication	5.68%
K - Financial and insurance activities	14.38%
M - Professional, scientific and technical activities	1.53%
Q - Human health and social work activities	3.06%

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

- **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

## To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The analysis and disclosure requirements introduced by the EU Taxonomy are very detailed and compliance with them requires the availability of multiple, specific data points in respect of each investment which the Portfolio made. The Sub-Investment Manager cannot confirm that the Portfolio invested in any investments that qualified as environmentally sustainable for the purposes of the EU Taxonomy. Disclosures and reporting on Taxonomy alignment will develop as the EU framework evolves and data is made available by companies. The Sub-Investment Manager will keep the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy under active review as data availability and quality improves.

### ● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?

- Yes:
- In fossil gas  In nuclear energy
- No

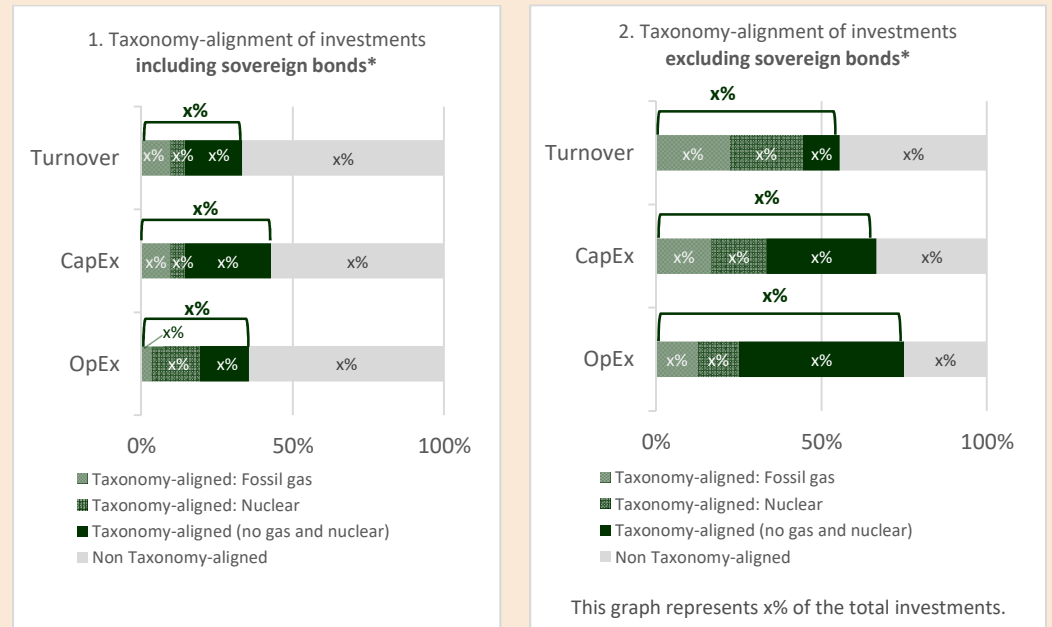

---

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

● **What was the share of investments made in transitional and enabling activities?**

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments.

### **What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?**

N/A – the Portfolio did not commit to holding sustainable investments.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

### **What was the share of socially sustainable investments?**

N/A – the Portfolio did not commit to holding sustainable investments.

### **What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?**

“Other” included the remaining investments of the Portfolio (including but not limited to any derivatives or any security collateralized by a pool of similar assets or receivables listed in the Supplement for the Portfolio) which were neither aligned with the environmental or social characteristics, nor qualified as sustainable investments.

The “Other” section in the Portfolio was held for a number of reasons that the Sub-Investment Manager felt was beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover.

As noted above, the Portfolio was invested in compliance with ESG exclusion policies, on a continuous basis. This ensured that investments made by the Portfolio sought to align with international environmental and social safeguards such as the UNGC Principles, UNGPs, OECD Guidelines and ILO Standards.

The Sub-Investment Manager believes that these policies prevented investment in companies that most egregiously violated environmental and/or social minimum standards and ensured that the Portfolio could successfully promote its environmental and social characteristics.

The above steps ensured that robust environmental and social safeguards were in place.

## What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Portfolio was managed in-line with the investment objective and the following actions were taken:

### I. Integrating proprietary ESG analysis:

The NB ESG Quotient ratings were generated for company holdings in the Portfolio. The NB ESG Quotient rating for companies was utilised to help to better identify risks and opportunities in the overall assessment.

By integrating the investment team's proprietary local insight of the China market and ESG analysis (the NB ESG Quotient) into the overall company view, there was a direct link between their analysis of material ESG characteristics and portfolio construction activities across their strategy.

Companies with a favourable and/or an improving NB ESG Quotient rating had a higher chance of ending up in the Portfolio. Companies with a poor NB ESG Quotient rating especially where these are not being addressed by that company, were more likely to be removed from the investment universe or divested from the Portfolio.

### II. Engagement:

The Sub-Investment Manager engaged with companies through a robust ESG engagement program. They sought to prioritise constructive engagements and sought to engage on topics (including ESG topics) they determined to be financially material for the relevant company. The Sub-Investment Manager viewed this engagement with companies, as an important part of its investment process.

In order to maintain and enhance company relationships, and to ensure companies followed their ESG trajectory, the Sub-Investment Manager kept an active dialogue with companies, regardless of whether or not they had high impact controversies or a poor NB ESG Quotient rating. Progress on engagement was tracked centrally in the Sub-Investment Manager's engagement tracker.

### III. ESG sectoral exclusion policies:

To ensure that the environmental and social characteristics promoted by the Portfolio were attained, the Portfolio applied the ESG exclusion policies referenced above, which placed limitations on the investable universe.

## How did this financial product perform compared to the reference benchmark?

N/A – The Portfolio's benchmark has not been designated as a reference benchmark. Therefore, it is not consistent with the environmental or social characteristics promoted by the Portfolio.

## How does the reference benchmark differ from a broad market index?

N/A

- 
- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***

N/A

- ***How did this financial product perform compared with the reference benchmark?***

- ***How did this financial product perform compared with the broad market index?***

N/A

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

**Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852**

**Product name:** Neuberger Berman 5G Connectivity Fund (the “Portfolio”)

**Legal entity identifier:** 549300H0HOXG52ES7840

## Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?	
<input checked="" type="radio"/> <input checked="" type="radio"/> <input type="checkbox"/> <b>Yes</b>	<input checked="" type="radio"/> <input type="radio"/> <input checked="" type="checkbox"/> <b>No</b>
<input type="checkbox"/> It made <b>sustainable investments with an environmental objective</b> : ____% <ul style="list-style-type: none"> <li><input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy</li> <li><input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</li> </ul>	<input checked="" type="checkbox"/> It <b>promoted Environmental/Social (E/S) characteristics</b> and while it did not have as its objective a sustainable investment, it had a proportion of 65.26%* of sustainable investments <ul style="list-style-type: none"> <li><input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy</li> <li><input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</li> <li><input checked="" type="checkbox"/> with a social objective</li> </ul>
<input type="checkbox"/> It made <b>sustainable investments with a social objective</b> : ____%	<input type="checkbox"/> It promoted E/S characteristics, but <b>did not make any sustainable investments</b>

\*Please refer to the "What was the proportion of sustainability-related investments?" question below for further detail in respect of the minimum proportion of sustainable investments which promoted the environmental or social characteristics.

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

## To what extent were the environmental and/or social characteristics promoted by this financial product met?

The following environmental and social characteristics were promoted by the Portfolio:

- **Environmental Characteristics:** air quality; biodiversity & land use; energy management; environmental risk exposure; fuel economy; greenhouse gas ("**GHG**") emissions; opportunities in clean technologies; toxic emissions & waste; water management; packaging lifecycle management; materials sourcing; and product lifecycle management.
- **Social Characteristics:** access to finance; access to healthcare; community relations; data privacy & security; employee incentives & risk taking; health & nutrition; health & safety; human capital development; labour management; product safety & integrity; supply chain labour standards; workforce diversity & inclusion; pricing transparency; and responsible marketing.

Performance in relation to these environmental and social characteristics was measured through the NB ESG Quotient, and is reported, in aggregate, below.

While the sustainable investments held by the Portfolio had either a social or an environmental objective, such sustainable investments do not qualify as environmentally sustainable investments (or Taxonomy aligned investments) as defined under the EU Taxonomy.

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

### How did the sustainability indicators perform?

As part of the investment process, the Sub-Investment Manager considered a variety of sustainability indicators to measure the environmental and/or social characteristics promoted by the Portfolio. These sustainability indicators are listed below:

1. The NB ESG Quotient:

Third-party data and the proprietary Neuberger Berman ESG rating system (the "**NB ESG Quotient**") were used to measure the environmental and social characteristics promoted by the Portfolio. The NB ESG Quotient is built around the concept of sector specific ESG risk and opportunity, and produced an overall ESG rating for companies by assessing them against certain ESG metrics.

Foundational to the NB ESG Quotient is the proprietary Neuberger Berman ("**NB**") materiality matrix, which focuses on the ESG characteristics that were considered to be the most likely to be the material drivers of ESG risk and opportunity for each sector. Each sector criteria is constructed using third-party and internally derived ESG data and supplemented with internal qualitative analysis, leveraging the Portfolio's analyst team's significant sector expertise. The NB materiality matrix enabled the Sub-Investment Manager to derive the NB ESG Quotient rating, to compare sectors and companies relative to their environmental and social characteristics.

The NB ESG Quotient assigned weightings to environmental, social and governance characteristics for each sector to derive the NB ESG Quotient rating for companies. Pursuant to this, the Sub-Investment Manager engaged with companies with a poor NB ESG Quotient or third-party rating with the aim to seek improvement in the underlying environmental and social characteristics (which made up the NB ESG Quotient) over time.

<b>31 December 2022</b>	<b>Rating</b>	<b>Combined coverage</b>
NB ESG Quotient	ES: B G: 2.7	100%
Third-party Data	6.5	

With regards to the NB ESG Quotient rating, for environmental and social (ES) ratings, A – D quartiles are used, where A is the highest rating (top quartile), and D is the lowest rating (bottom quartile). For governance (G) ratings, 1 – 4 quartiles are used where 1 is the highest rating, and 4 is the lowest rating. This Portfolio does not have a minimum NB ESG Quotient rating. The average NB ESG Quotient rating is a weighted average and is not a rating of the Portfolio strategy itself.

Third-party data was also used to measure the environmental and social characteristics promoted by the Portfolio. The third-party data ratings range from 0-10, with 0 being the lowest rating and 10 being the highest rating.

## 2. Climate Value-at-Risk:

Over the reference period, Climate Value-at-Risk (“**CVaR**”) measured the exposure to transition and physical climate risks. CVaR is a scenario analysis tool evaluating economic risks under various degree scenarios (i.e., the amount of warming targeted) and potential regulatory environments in varying countries.

CVaR is a type of scenario analysis which is defined as the present value of aggregated future policy risk costs, technology opportunity profits, and extreme weather event costs and profits, expressed as a percentage of a security or portfolio’s market value according to the warming scenario targeted.

By calculating the financial risks from climate change per security and per scenario, CVaR provides a framework that helps quantify and understand these risks. The CVaR metric provides insight into the climate-stressed valuation of assets based on specific degree scenarios, providing an assessment on how much a security may stand to lose or gain from the impact of climate change.

As at 31 December 2022, CVaR projected that a warming climate scenario could result in a depreciation of 2.63% in the valuation of assets under assessment.

This analysis is intended as a broad overview of the investment team’s style and investment process.

On a holistic basis, the results were evaluated by the Sub-Investment Manager’s portfolio managers and analysts. The scenario analysis served as a starting point for further bottom-up analysis and identifying potential climate-related risks to address through company engagement.

Due to data limitations, CVaR was not applied across all companies held by the Portfolio and was instead limited to the companies for which the Sub-Investment Manager had sufficient and reliable data. The Portfolio had a CVaR coverage of 97%.

The analysis from CVaR is reviewed at least once a year.

## 3. ESG exclusion policies:

To ensure that the environmental or social characteristics promoted by the Portfolio were attained, the Portfolio did not invest in companies whose activities breached, or were not consistent with, the Neuberger Berman Controversial Weapons Policy; the Neuberger Berman Thermal Coal Involvement Policy; the Neuberger Berman Sustainable Exclusion Policy; and the Neuberger Berman Enhanced Sustainable Exclusion Policy. In addition to the application of the Neuberger Berman Thermal Coal Involvement Policy, the Sub-Investment Manager prohibited the initiation of new investment positions in companies that (i) derived more than 25% of their

revenue from thermal coal mining; or (ii) were expanding new thermal coal power generation. Furthermore, from 6 April 2022 onwards, investments held by the Portfolio did not invest in companies whose activities had been identified as breaching the Neuberger Berman Global Standards Policy which excluded identified violators of (i) the United Nations Global Compact Principles ("**UNGC Principles**"), (ii) the OECD Guidelines for Multinational Enterprises ("**OECD Guidelines**"), (iii) the United Nations Guiding Principles on Business and Human Rights ("**UNGPs**") and (iv) the International Labour Standards ("**ILO Standards**").

When applying ESG exclusions to the Portfolio, the Sub-Investment Manager used third-party data to identify companies in breach of the ESG exclusions listed above. Where possible, the Sub-Investment Manager sought to overlay this third-party data with qualitative expertise from their research analysts to establish a current and holistic picture of the company. The Sub-Investment Manager discussed and debated the differences between the violators identified by the third-party data and those identified as a result of their research, which drew upon data from the NB ESG Quotient and direct engagements with the company.

● ***...and compared to previous periods?***

N/A – this is the first reference period.

● ***What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?***

While the Portfolio promoted environmental and social characteristics, this Portfolio did not have a sustainable investment objective. However, the Portfolio held sustainable investments which promoted the environmental & social characteristics listed above.

The consideration of investments made by the Portfolio as sustainable investments was determined by reference to NB's sustainable investment framework. This framework included an assessment as to (i) whether the investment contributes to an environmental and/or social objective; (ii) whether the investment causes significant harm to those objectives as described below; and (iii) an assessment of a company's overall good governance rating to determine whether the company passes a good governance assessment.

Under this sustainable investment framework, the Sub-Investment Manager utilised multiple datapoints that measured the alignment of a company's economic activity with environmental or social characteristics.

The Sub-Investment Manager screened companies for controversies, significant harm and violations of minimum safeguards. If the companies passed this screen, the Sub-Investment Manager then proceeded to measure the companies' environmental or social economic contribution.

The Sub-Investment Manager measured this in two ways:

- Revenue alignment to the EU taxonomy (if any); and
- Revenue alignment to the Sustainable Development Goals ("**SDGs**").

Consideration of revenue alignment with the SDGs was limited by the availability of adequate, reliable and verifiable data coverage. To mitigate instances of poor data coverage, the Sub-Investment Manager utilised third-party data and proxy data along with internal research and qualitative analysis as part of NB's sustainable investment framework.

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

***How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?***

As part of the Sub-Investment Manager's sustainable investment framework, investments that cause significant harm to environmental or social objectives were excluded. To determine whether an investment caused significant harm, the Sub-Investment Manager considered significant harm with reference to certain principal adverse impact indicators and violations of minimum safeguards.

The Sub-Investment Manager considered the following principal adverse impacts indicators when determining whether the sustainable investments that the Portfolio made did not cause significant harm to any environmental or social sustainable investment objective: GHG emissions; carbon footprint; GHG intensity of investee companies; exposure to companies active in the fossil fuel sector; share of non-renewable energy consumption and production; energy consumption intensity per high impact climate sector; activities negatively affecting biodiversity-sensitive areas; emissions to water; hazardous waste and radioactive waste ratio; violations of UN Global Compact principles and OECD Guidelines for Multinational Enterprises; lack of processes and compliance mechanisms to monitor compliance with UN Global Compact Principles and OECD Guidelines for Multinational Enterprises; unadjusted gender pay gap, board gender diversity; and exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons) (the "PAIs").

Consideration of the PAIs was limited by the availability (in the Sub-Investment Manager's subjective view) of adequate, reliable and verifiable data coverage. The Sub-Investment Manager utilised third-party data and proxy data along with internal research to consider the PAIs.

The Sub-Investment Manager also considered violations of minimum safeguards. From 6 April 2022 onwards, the Sub-Investment Manager did not invest in companies whose activities had been identified as breaching the OECD Guidelines, UNGC Principles, ILO Standards and UNGPs, captured through the Neuberger Berman Global Standards Policy.

The combination of all of these factors generated a quantitative validation for "sustainability" which was used to ensure the sustainable investments that the Portfolio made, did not cause significant harm to any environmental or social sustainable objective.

***How were the indicators for adverse impacts on sustainability factors taken into account?***

Consideration of the PAIs by the Sub-Investment Manager, when determining whether the sustainable investments that the Portfolio intended to make did not cause significant harm to any environmental or social sustainable investment objective of the Portfolio's sustainable investments, was through a combination of:

- Monitoring companies which fell below the quantitative and qualitative tolerance thresholds set for each PAI by the Sub-Investment Manager;
- Stewardship and/or setting engagement objectives with companies which fell below the quantitative and qualitative tolerance thresholds set for a PAI by the Sub-Investment Manager; and
- Application of the ESG exclusion policies referenced above, which included consideration of several of the PAIs.

***Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

From 6 April 2022 onwards, the Sub-Investment Manager did not invest in companies whose activities had been identified as breaching the OECD Guidelines,

UNGC Principles, ILO Standards and UNGPs, captured through the Neuberger Berman Global Standards Policy.

*The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.*

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

N/A - The Portfolio did not commit to holding Taxonomy-aligned investments.

### **How did this financial product consider principal adverse impacts on sustainability factors?**

A selection of the principal adverse impact indicators were considered directly (e.g. through the ESG exclusion policies listed above) and/or indirectly (e.g. as part of the Sub-Investment Manager's assessment of issuers) throughout the 2022 reference period.

The Sub-Investment Manager considered PAIs with respect to the Portfolio in two ways:

- i. All PAIs were considered when determining whether sustainable investments that the Portfolio made did not cause significant harm to any environmental or social sustainable investment objective as explained above.
- ii. From 28 November 2022 onwards, the Sub-Investment Manager considered the following principal adverse impacts on sustainability factors with respect to those investments within the Portfolio which promoted environmental or social characteristics, namely: GHG emissions, carbon footprint, GHG intensity, fossil fuel

exposure, board gender diversity, UNGC Principles & OECD Guidelines violations and controversial weapons (the “**Product Level PAIs**”).

Consideration of the Product Level PAIs was limited by the availability (in the Sub-Investment Manager’s subjective view) of adequate, reliable and verifiable data coverage. The Sub-Investment Manager utilised third-party data and proxy data along with internal research to consider the Product Level PAIs.

Consideration of the Product Level PAIs by the Sub-Investment Manager was through a combination of:

- Monitoring the Portfolio, in particular where it fell below the quantitative and qualitative tolerance thresholds set for each Product Level PAI by the Sub-Investment Manager;
- Stewardship and/or setting engagement objectives where the Portfolio fell below the quantitative and qualitative tolerance thresholds set for a Product Level PAI by the Sub-Investment Manager; and
- Application of the ESG exclusion policies referenced above, which included consideration of several of the Product Level PAIs.

## What were the top investments of this financial product?

The Sub-Investment Manager has used the EU statistical classification of economic activities (“**NACE**”) economic sector breakdown to identify the economic sectors of the Portfolio’s top 15 investments. The following data is as at 31 December 2022.

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 1 January 2022 - 31 December 2022

Largest investments	Sector	% Assets	Country
KEYSIGHT TECHNOLOGIES INC	C - Manufacturing	4.0%	United States
ADVANCED MICRO DEVICES INC	C - Manufacturing	3.8%	United States
ASM INTERNATIONAL NV	C - Manufacturing	3.7%	Netherlands
SERVICENOW INC	J - Information and communication	3.7%	United States
MARVELL TECHNOLOGY INC	C - Manufacturing	3.7%	United States
HUBSPOT INC	J - Information and communication	3.6%	United States
NOKIA ADR REPRESENTING ONE SERIES	C - Manufacturing	3.6%	Finland
STARPOWER SEMICONDUCTOR LTD A	C - Manufacturing	3.5%	China
T MOBILE US INC	J - Information and communication	3.3%	United States
TAIWAN SEMICONDUCTOR MANUFACTURING	C - Manufacturing	3.3%	Taiwan (Republic of China)
ADVANTEST CORP	C - Manufacturing	3.1%	Japan
MONOLITHIC POWER SYSTEMS INC	C - Manufacturing	3.0%	United States
SG MICRO CORP A	C - Manufacturing	2.7%	China
CADENCE DESIGN SYSTEMS INC	J - Information and communication	2.6%	United States
WOLFSPEED INC	C - Manufacturing	2.5%	United States

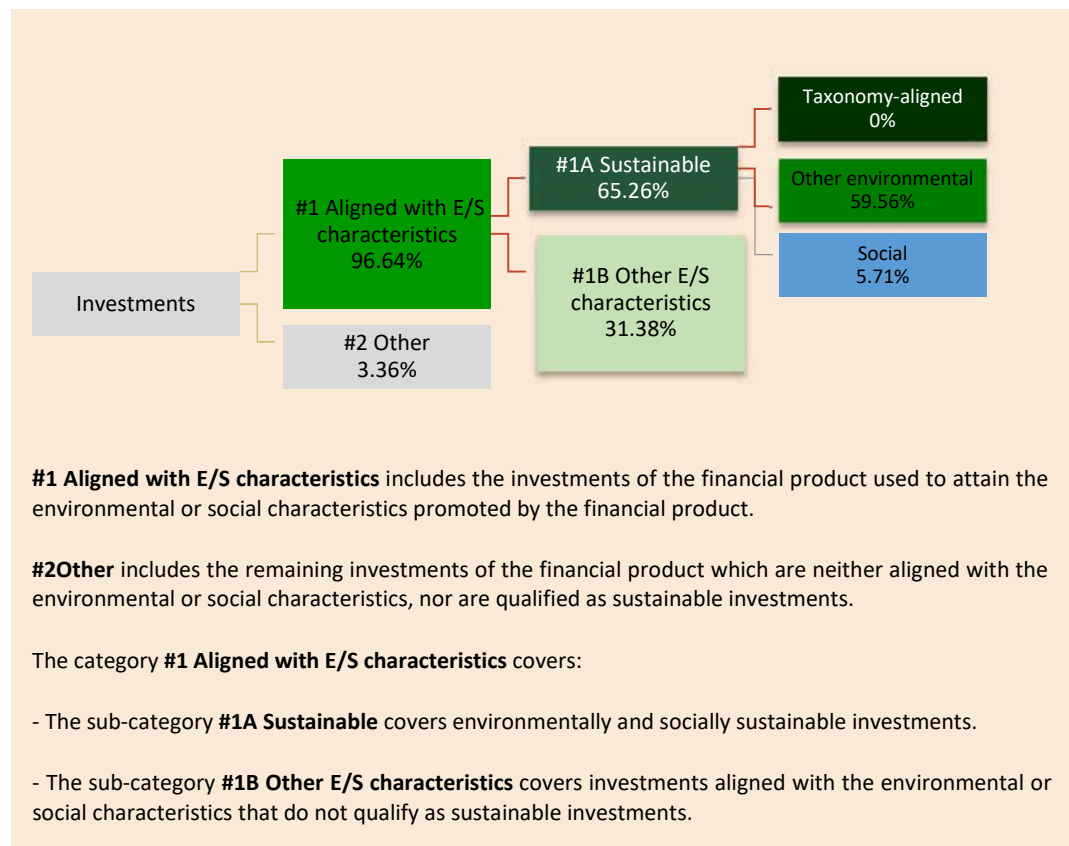

## What was the proportion of sustainability-related investments?

**Asset allocation** describes the share of investments in specific assets.

### What was the asset allocation?

The Sub-Investment Manager calculated the proportion of investments aligned with the environmental and/or social characteristics promoted by the Portfolio by reference to the proportion of companies in the Portfolio: i) that held either an NB ESG Quotient rating or a third-party equivalent ESG rating that was used as part of the portfolio construction and investment management process of the Portfolio; and/or ii) with whom the Sub-Investment Manager had engaged directly. This calculation was based on a mark-to-market assessment of the Portfolio and may rely on incomplete or inaccurate company or third-party data. For the 2022 reference period only, this calculation is based on the Portfolio's holdings as at 31 December 2022, being the only quarter end in the reference period that followed the publication of the Portfolio's SFDR Annex detailing its planned asset allocation. For all subsequent reference periods, this calculation will be based on the average of the four quarter ends.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

- **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

**In which economic sectors were the investments made?**

Data as at 31 December 2022	
Economic Sector – NACE	% Assets
C - Manufacturing	59.19%
G - Wholesale and retail trade; repair of motor vehicles and motorcycles	1.82%
J - Information and communication	35.28%
K - Financial and insurance activities	0.55%
N - Administrative and support service activities	1.09%
P - Education	2.07%

**To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?**

The analysis and disclosure requirements introduced by the EU Taxonomy are very detailed and compliance with them requires the availability of multiple, specific data points in respect of each investment which the Portfolio made. The Sub-Investment Manager cannot confirm that the Portfolio invested in any investments that qualified as environmentally sustainable for the purposes of the EU Taxonomy. Disclosures and reporting on Taxonomy alignment will develop as the EU framework evolves and data is made available by companies. The Sub-Investment Manager will keep the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy under active review as data availability and quality improves.

**Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?**

Yes:

In fossil gas     In nuclear energy

No

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

● **What was the share of investments made in transitional and enabling activities?**

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments.

**What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?**

59.56%

While the Portfolio invested in sustainable investments with an environmental objective, such sustainable investments did not commit to being Taxonomy-aligned investments.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

### **What was the share of socially sustainable investments?**

5.71%

### **What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?**

“Other” included the remaining investments of the Portfolio (including but not limited to any derivatives or any security collateralized by a pool of similar assets or receivables listed in the Supplement for the Portfolio) which were neither aligned with the environmental or social characteristics, nor qualified as sustainable investments.

The “Other” section in the Portfolio was held for a number of reasons that the Sub-Investment Manager felt was beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover.

As noted above, the Portfolio was invested in compliance with ESG exclusion policies, on a continuous basis. This ensured that investments made by the Portfolio sought to align with international environmental and social safeguards such as the UNGC Principles, UNGPs, OECD Guidelines and ILO Standards.

The Sub-Investment Manager believes that these policies prevented investment in companies that most egregiously violated environmental and/or social minimum standards and ensured that the Portfolio could successfully promote its environmental and social characteristics.

The above steps ensured that robust environmental and social safeguards were in place.

### **What actions have been taken to meet the environmental and/or social characteristics during the reference period?**

The Portfolio was managed in-line with the investment objective and the following actions were taken:

I. Integrating proprietary ESG analysis:

The NB ESG Quotient rating was generated for company holdings in the Portfolio. The third-party or NB ESG Quotient rating for companies was utilised to help to better identify risks and opportunities in the overall assessment of a company, noting that the Portfolio focused investment in companies that drive Next Generation Connectivity.

By integrating the investment team’s proprietary ESG analysis (the NB ESG Quotient) into the overall thematic and company view, there was a direct link between their analysis of material ESG characteristics and portfolio construction activities across their strategy.

Pursuant to this, the Sub-Investment Manager engaged with companies with a poor third-party or NB ESG Quotient rating with the aim to seek improvement in the underlying environmental and social characteristics (which made up the NB ESG Quotient).

II. Engagement:

The Sub-Investment Manager engaged with companies through a robust ESG engagement program. They sought to prioritise constructive engagements and sought to engage on topics (including ESG topics) they determined to be financially material for the relevant company. The Sub-Investment Manager viewed this engagement with companies, as an important part of its investment process. Progress on engagement was tracked centrally in the Sub-Investment Manager's engagement tracker.

III. ESG sectoral exclusion policies:

To ensure that the environmental and social characteristics promoted by the Portfolio were attained, the Portfolio applied the ESG exclusion policies referenced above, which placed limitations on the investable universe.

**How did this financial product perform compared to the reference benchmark?**

N/A – The Portfolio's benchmark has not been designated as a reference benchmark. Therefore, it is not consistent with the environmental or social characteristics promoted by the Portfolio.

● ***How does the reference benchmark differ from a broad market index?***

N/A

● ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***

N/A

● ***How did this financial product perform compared with the reference benchmark?***

N/A

---

- 
- ***How did this financial product perform compared with the broad market index?***

N/A

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Neuberger Berman InnovAsia 5G Fund (the "Portfolio")

Legal entity identifier: 549300VMISY5R7FEHX25

## Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?	
<input checked="" type="radio"/> <input checked="" type="radio"/> <input type="checkbox"/> <b>Yes</b>	<input checked="" type="radio"/> <input type="radio"/> <input checked="" type="checkbox"/> <b>No</b>
<input type="checkbox"/> It made <b>sustainable investments with an environmental objective: ___%</b> <ul style="list-style-type: none"> <li><input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy</li> <li><input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</li> </ul> <input type="checkbox"/> It made <b>sustainable investments with a social objective: ___%</b>	<input checked="" type="checkbox"/> It <b>promoted Environmental/Social (E/S) characteristics</b> and while it did not have as its objective a sustainable investment, it had a proportion of 27.98%* of sustainable investments <ul style="list-style-type: none"> <li><input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy</li> <li><input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</li> <li><input checked="" type="checkbox"/> with a social objective</li> </ul> <input type="checkbox"/> It promoted E/S characteristics, but <b>did not make any sustainable investments</b>

\*Please refer to the "What was the proportion of sustainability-related investments?" question below for further detail in respect of the minimum proportion of sustainable investments which promoted the environmental or social characteristics.

## To what extent were the environmental and/or social characteristics promoted by this financial product met?

The following environmental and social characteristics were promoted by the Portfolio:

- **Environmental Characteristics:** air quality; biodiversity & land use; energy management; environmental risk exposure; fuel economy; greenhouse gas (“**GHG**”) emissions; opportunities in clean technologies; toxic emissions & waste; water management; packaging lifecycle management; materials sourcing; and product lifecycle management.
- **Social Characteristics:** access to finance; access to healthcare; community relations; data privacy & security; employee incentives & risk taking; health & nutrition; health & safety; human capital development; labour management; product safety & integrity; supply chain labour standards; workforce diversity & inclusion; pricing transparency; and responsible marketing.

Performance in relation to these environmental and social characteristics was measured through the NB ESG Quotient, and is reported, in aggregate, below.

While the sustainable investments held by the Portfolio had either a social or an environmental objective, such sustainable investments do not qualify as environmentally sustainable investments (or Taxonomy aligned investments) as defined under the EU Taxonomy

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

### ● **How did the sustainability indicators perform?**

As part of the investment process, the Sub-Investment Manager considered a variety of sustainability indicators to measure the environmental and/or social characteristics promoted by the Portfolio. These sustainability indicators are listed below:

#### 1. The NB ESG Quotient:

Third-party data and the proprietary Neuberger Berman ESG rating system (the “**NB ESG Quotient**”) were used to measure the environmental and social characteristics promoted by the Portfolio. The NB ESG Quotient is built around the concept of sector specific ESG risk and opportunity, and produced an overall ESG rating for companies by assessing them against certain ESG metrics.

Foundational to the NB ESG Quotient is the proprietary Neuberger Berman (“**NB**”) materiality matrix, which focuses on the ESG characteristics that were considered to be the most likely to be the material drivers of ESG risk and opportunity for each sector. Each sector criteria is constructed using third-party and internally derived ESG data and supplemented with internal qualitative analysis, leveraging the Portfolio’s analyst team’s significant sector expertise. The NB materiality matrix enabled the Sub-Investment Manager to derive the NB ESG Quotient rating, to compare sectors and companies relative to their environmental and social characteristics.

The NB ESG Quotient assigned weightings to environmental, social and governance characteristics for each sector to derive the NB ESG Quotient rating for companies. Pursuant to this, the Sub-Investment Manager engaged with companies with a poor NB ESG Quotient or third-party rating with the aim to seek improvement in the underlying environmental and social characteristics (which made up the NB ESG Quotient) over time.

<b>31 December 2022</b>	<b>Rating</b>	<b>Combined coverage</b>
NB ESG Quotient	ES: C G: 2.2	86%
Third-party Data	4.3	

With regards to the NB ESG Quotient rating, for environmental and social (ES), A – D quartiles are used, where A is the highest rating (top quartile) and D is the lowest rating (bottom quartile). For governance (G) ratings, 1 – 4 quartiles are used where 1 is the highest rating, and 4 is the lowest rating. This Portfolio does not have a minimum NB ESG Quotient rating. The average NB ESG Quotient rating is a weighted average and is not a rating of the Portfolio strategy itself.

Third-party data was also used to measure the environmental and social characteristics promoted by the Portfolio. The third-party data ratings range from 0-10, with 0 being the lowest rating and 10 being the highest rating.

## 2. Climate Value-at-Risk:

Over the reference period, Climate Value-at-Risk (“**CVaR**”) measured the exposure to transition and physical climate risks. CVaR is a scenario analysis tool evaluating economic risks under various degree scenarios (i.e., the amount of warming targeted) and potential regulatory environments in varying countries.

CVaR is a type of scenario analysis which is defined as the present value of aggregated future policy risk costs, technology opportunity profits, and extreme weather event costs and profits, expressed as a percentage of a security or portfolio’s market value according to the warming scenario targeted.

By calculating the financial risks from climate change per security and per scenario, CVaR provides a framework that helps quantify and understand these risks. The CVaR metric provides insight into the climate-stressed valuation of assets based on specific degree scenarios, providing an assessment on how much a security may stand to lose or gain from the impact of climate change.

As at 31 December 2022, CVaR projected that a warming climate scenario could result in a depreciation of 5.27% in the valuation of assets under assessment.

This analysis is intended as a broad overview of the investment team’s style and investment process.

On a holistic basis, the results were evaluated by the Sub-Investment Manager’s portfolio managers and analysts. The scenario analysis served as a starting point for further bottom-up analysis and identifying potential climate-related risks to address through company engagement.

Due to data limitations, CVaR was not applied across all companies held by the Portfolio and was instead limited to the companies for which the Sub-Investment Manager had sufficient and reliable data. The Portfolio had a CVaR coverage of 87%.

The analysis from CVaR is reviewed at least once a year.

## 3. ESG exclusion policies:

To ensure that the environmental or social characteristics promoted by the Portfolio were attained, the Portfolio did not invest in companies whose activities breached, or were not consistent with, the Neuberger Berman Controversial Weapons Policy; the Neuberger Berman Thermal Coal Involvement Policy; the Neuberger Berman Sustainable Exclusion Policy; and the Neuberger Berman Enhanced Sustainable Exclusion Policy. In addition to the application of the Neuberger Berman Thermal Coal Involvement Policy, the Sub-Investment Manager prohibited the initiation of new investment positions in companies that (i) derived more than 25% of their revenue from thermal coal mining; or (ii) were expanding new thermal coal power generation. Furthermore, from 6 April 2022 onwards, investments held by the Portfolio did not invest in companies whose activities had been identified as breaching the Neuberger Berman Global Standards Policy which excluded identified violators of (i) the United Nations Global Compact Principles (“**UNGC Principles**”), (ii) the OECD Guidelines for Multinational Enterprises (“**OECD Guidelines**”), (iii) the

United Nations Guiding Principles on Business and Human Rights (“**UNGPs**”) and (iv) the International Labour Standards (“**ILO Standards**”).

When applying ESG exclusions to the Portfolio, the Sub-Investment Manager used third-party data to identify companies in breach of the ESG exclusions listed above. Where possible, the Sub-Investment Manager sought to overlay this third-party data with qualitative expertise from their research analysts to establish a current and holistic picture of the company. The Sub-Investment Manager discussed and debated the differences between the violators identified by the third-party data and those identified as a result of their research, which drew upon data from the NB ESG Quotient and direct engagements with the company.

● ***...and compared to previous periods?***

N/A – this is the first reference period.

● ***What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?***

While the Portfolio promoted environmental and social characteristics, this Portfolio did not have a sustainable investment objective. However, the Portfolio held sustainable investments which promoted the environmental & social characteristics listed above.

The consideration of investments made by the Portfolio as sustainable investments was determined by reference to NB’s sustainable investment framework. This framework included an assessment as to (i) whether the investment contributes to an environmental and/or social objective; (ii) whether the investment causes significant harm to those objectives as described below; and (iii) an assessment of a company’s overall good governance rating to determine whether the company passes a good governance assessment.

Under this sustainable investment framework, the Sub-Investment Manager utilised multiple datapoints that measured the alignment of a company’s economic activity with environmental or social characteristics.

The Sub-Investment Manager screened companies for controversies, significant harm and violations of minimum safeguards. If the companies passed this screen, the Sub-Investment Manager then proceeded to measure the companies’ environmental or social economic contribution.

The Sub-Investment Manager measured this in two ways:

- Revenue alignment to the EU taxonomy (if any); and
- Revenue alignment to the Sustainable Development Goals (“**SDGs**”).

Consideration of revenue alignment with the SDGs was limited by the availability of adequate, reliable and verifiable data coverage. To mitigate instances of poor data coverage, the Sub-Investment Manager utilised third-party data and proxy data along with internal research and qualitative analysis as part of NB’s sustainable investment framework.

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

### *How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?*

As part of the Sub-Investment Manager's sustainable investment framework, investments that cause significant harm to environmental or social objectives were excluded. To determine whether an investment caused significant harm, the Sub-Investment Manager considered significant harm with reference to certain principal adverse impact indicators and violations of minimum safeguards.

The Sub-Investment Manager considered the following principal adverse impacts indicators when determining whether the sustainable investments that the Portfolio made did not cause significant harm to any environmental or social sustainable investment objective: GHG emissions; carbon footprint; GHG intensity of investee companies; exposure to companies active in the fossil fuel sector; share of non-renewable energy consumption and production; energy consumption intensity per high impact climate sector; activities negatively affecting biodiversity-sensitive areas; emissions to water; hazardous waste and radioactive waste ratio; violations of UN Global Compact principles and OECD Guidelines for Multinational Enterprises; lack of processes and compliance mechanisms to monitor compliance with UN Global Compact Principles and OECD Guidelines for Multinational Enterprises; unadjusted gender pay gap, board gender diversity; and exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons) (the "PAIs").

Consideration of the PAIs was limited by the availability (in the Sub-Investment Manager's subjective view) of adequate, reliable and verifiable data coverage. The Sub-Investment Manager utilised third-party data and proxy data along with internal research to consider the PAIs.

From 6 April 2022 onwards, the Sub-Investment Manager also considered violations of minimum safeguards. The Sub-Investment Manager did not invest in companies whose activities had been identified as breaching the OECD Guidelines, UNGC Principles, ILO Standards and UNGPs, captured through the Neuberger Berman Global Standards Policy.

The combination of all of these factors generated a quantitative validation for "sustainability" which was used to ensure the sustainable investments that the Portfolio made, did not cause significant harm to any environmental or social sustainable objective.

### *How were the indicators for adverse impacts on sustainability factors taken into account?*

Consideration of the PAIs by the Sub-Investment Manager, when determining whether the sustainable investments that the Portfolio intended to make did not cause significant harm to any environmental or social sustainable investment objective of the Portfolio's sustainable investments, was through a combination of:

- Monitoring companies which fell below the quantitative and qualitative tolerance thresholds set for each PAI by the Sub-Investment Manager;
- Stewardship and/or setting engagement objectives with companies which fell below the quantitative and qualitative tolerance thresholds set for a PAI by the Sub-Investment Manager; and
- Application of the ESG exclusion policies referenced above, which included consideration of several of the PAIs.

— — —  
*Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:*

From 6 April 2022 onwards, the Sub-Investment Manager did not invest in companies whose activities had been identified as breaching the OECD Guidelines, UNGC Principles, ILO Standards and UNGPs, captured through the Neuberger Berman Global Standards Policy.

*The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.*

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

N/A - The Portfolio did not commit to holding Taxonomy-aligned investments.

### **How did this financial product consider principal adverse impacts on sustainability factors?**

A selection of the principal adverse impact indicators were considered directly (e.g. through the ESG exclusion policies listed above) and/or indirectly (e.g. as part of the Sub-Investment Manager's assessment of issuers) throughout the 2022 reference period.

The Sub-Investment Manager considered PAIs with respect to the Portfolio in two ways:

- i. All PAIs were considered when determining whether sustainable investments that the Portfolio made did not cause significant harm to any environmental or social sustainable investment objective as explained above.
- ii. From 28 November 2022 onwards, the Sub-Investment Manager considered the following principal adverse impacts on sustainability factors with respect to those investments within the Portfolio which promoted environmental or social characteristics, namely: GHG emissions, carbon footprint, GHG intensity, fossil fuel exposure, board gender diversity, UNGC Principles & OECD Guidelines violations and controversial weapons (the “**Product Level PAIs**”).

Consideration of the Product Level PAIs was limited by the availability (in the Sub-Investment Manager’s subjective view) of adequate, reliable and verifiable data coverage. The Sub-Investment Manager utilised third-party data and proxy data along with internal research to consider the Product Level PAIs.

Consideration of the Product Level PAIs by the Sub-Investment Manager was through a combination of:

- Monitoring the Portfolio, in particular where it fell below the quantitative and qualitative tolerance thresholds set for each Product Level PAI by the Sub-Investment Manager;
- Stewardship and/or setting engagement objectives where the Portfolio fell below the quantitative and qualitative tolerance thresholds set for a Product Level PAI; and
- Application of the ESG exclusion policies referenced above, which included consideration of several of the Product Level PAIs.

## What were the top investments of this financial product?

The Sub-Investment Manager has used the EU statistical classification of economic activities (“**NACE**”) economic sector breakdown to identify the economic sectors of the Portfolio’s top 15 investments. The following data is as at 31 December 2022.

Largest investments	Sector	% Assets	Country
SANSAN INC	J - Information and communication	3.8%	Japan
HARMONIC DRIVE SYSTEMS INC	C - Manufacturing	3.7%	Japan
E MEMORY TECHNOLOGY INC	C - Manufacturing	3.6%	Taiwan (Republic of China)
AEM HOLDINGS LTD	C - Manufacturing	3.5%	Singapore
FABRINET	C - Manufacturing	3.4%	Thailand
JMDC INC	J - Information and communication	3.2%	Japan
ACCTON TECHNOLOGY CORP	C - Manufacturing	3.0%	Taiwan (Republic of China)
E INK HOLDINGS INC	C - Manufacturing	3.0%	Taiwan (Republic of China)
ZHEJIANG JINGSHENG MECHANICAL & EL	C - Manufacturing	3.0%	China
YAGEO CORP	C - Manufacturing	3.0%	Taiwan (Republic of China)
HONGFA TECHNOLOGY LTD A	C - Manufacturing	2.9%	China
SQUARE ENIX HLDG LTD	J - Information and communication	2.9%	Japan
FPT CORP	J - Information and communication	2.7%	Vietnam
CYBER AGENT INC	M - Professional, scientific and technical activities	2.7%	Japan
TAIWAN SEMICONDUCTOR MANUFACTURING	C - Manufacturing	2.6%	Taiwan (Republic of China)

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: 1 January 2022 - 31

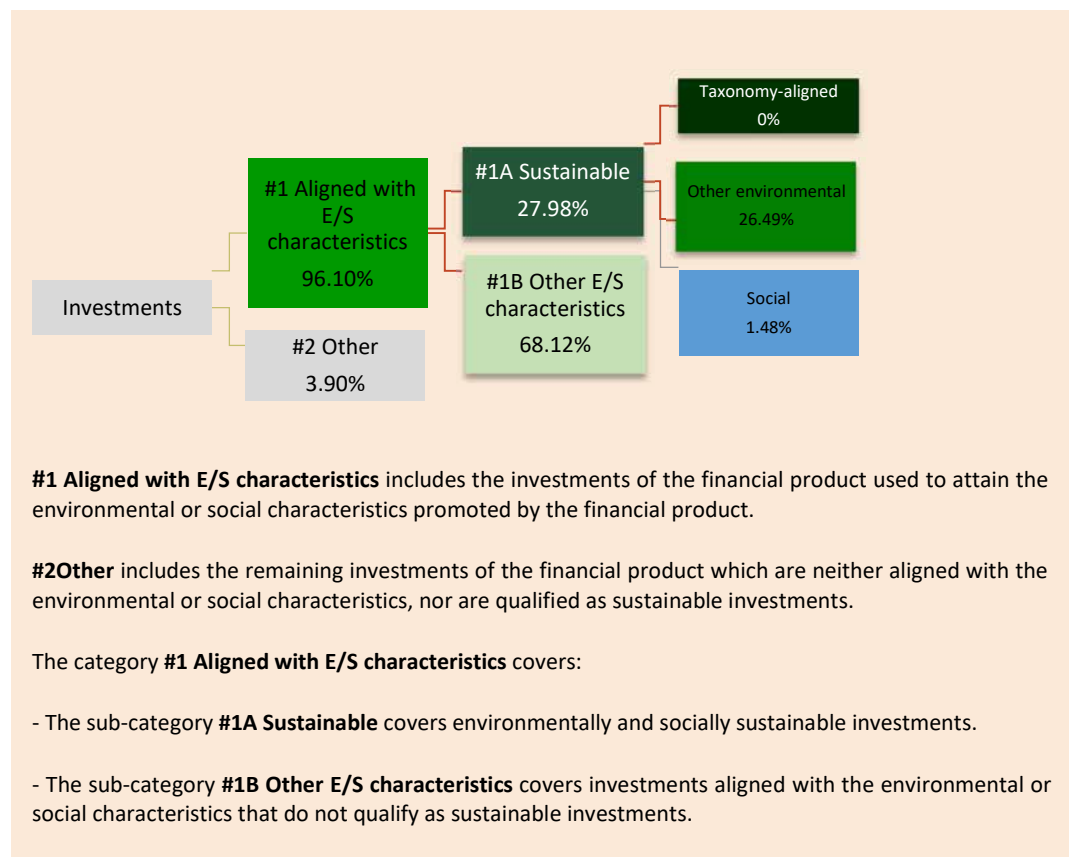

## What was the proportion of sustainability-related investments?

**Asset allocation** describes the share of investments in specific assets.

### What was the asset allocation?

The Sub-Investment Manager calculated the proportion of investments aligned with the environmental and/or social characteristics promoted by the Portfolio by reference to the proportion of companies in the Portfolio: i) that held either an NB ESG Quotient rating or a third-party equivalent ESG rating that was used as part of the portfolio construction and investment management process of the Portfolio; and/or ii) with whom the Sub-Investment Manager had engaged directly. This calculation was based on a mark-to-market assessment of the Portfolio and may rely on incomplete or inaccurate company or third-party data. For the 2022 reference period only, this calculation is based on the Portfolio's holdings as at 31 December 2022, being the only quarter end in the reference period that followed the publication of the Portfolio's SFDR Annex detailing its planned asset allocation. For all subsequent reference periods, this calculation will be based on the average of the four quarter ends.

***In which economic sectors were the investments made?***

Data as at 31 December 2022

<b>Economic Sector – NACE</b>	<b>% Assets</b>
C - Manufacturing	70.00%
G - Wholesale and retail trade; repair of motor vehicles and motorcycles	1.53%
J - Information and communication	20.28%
M - Professional, scientific and technical activities	4.18%
P - Education	2.21%
None	1.81%

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

- **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

## To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The analysis and disclosure requirements introduced by the EU Taxonomy are very detailed and compliance with them requires the availability of multiple, specific data points in respect of each investment which the Portfolio made. The Sub-Investment Manager cannot confirm that the Portfolio invested in any investments that qualified as environmentally sustainable for the purposes of the EU Taxonomy. Disclosures and reporting on Taxonomy alignment will develop as the EU framework evolves and data is made available by companies. The Sub-Investment Manager will keep the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy under active review as data availability and quality improves.

### ● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?

Yes:

In fossil gas  In nuclear energy

No

---

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

- **What was the share of investments made in transitional and enabling activities?**

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments.

- **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments.

### What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

26.49%

While the Portfolio invested in sustainable investments with an environmental objective, such sustainable investments did not commit to being Taxonomy-aligned investments.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

### What was the share of socially sustainable investments?

1.48%

### What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

“Other” included the remaining investments of the Portfolio (including but not limited to any derivatives or any security collateralized by a pool of similar assets or receivables listed in the Supplement for the Portfolio) which were neither aligned with the environmental or social characteristics, nor qualified as sustainable investments.

The “Other” section in the Portfolio was held for a number of reasons that the Sub-Investment Manager felt was beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover.

As noted above, the Portfolio was invested in compliance with ESG exclusion policies, on a continuous basis. This ensured that investments made by the Portfolio sought to align with international environmental and social safeguards such as the UNGC Principles, UNGPs, OECD Guidelines and ILO Standards.

The Sub-Investment Manager believes that these policies prevented investment in companies that most egregiously violated environmental and/or social minimum standards and ensured that the Portfolio could successfully promote its environmental and social characteristics.

The above steps ensured that robust environmental and social safeguards were in place.

## What actions have been taken to meet the environmental and/or social characteristics during the reference period?

ESG characteristics are considered at three different levels:

### I. Integrating proprietary ESG analysis:

The NB ESG Quotient rating was generated for company holdings in the Portfolio. The third-party or NB ESG Quotient rating for companies was utilised to help to better identify risks and opportunities in the overall assessment of a company, noting that the Portfolio focused investment in companies that drive Next Generation Connectivity.

By integrating the investment team's proprietary ESG analysis (the NB ESG Quotient) into the overall thematic and company view, there was a direct link between their analysis of material ESG characteristics and portfolio construction activities across their strategy.

Pursuant to this, the Sub-Investment Manager engaged with companies with a poor third-party or NB ESG Quotient rating with the aim to seek improvement in the underlying environmental and social characteristics (which made up the NB ESG Quotient).

### II. Engagement:

The Sub-Investment Manager engaged with companies through a robust ESG engagement program. They sought to prioritise constructive engagements and sought to engage on topics (including ESG topics) they determined to be financially material for the relevant company. The Sub-Investment Manager viewed this engagement with companies, as an important part of its investment process. Progress on engagement was tracked centrally in the Sub-Investment Manager's engagement tracker.

### III. ESG sectoral exclusion policies:

To ensure that the environmental and social characteristics promoted by the Portfolio were attained, the Portfolio applied the ESG exclusion policies referenced above, which placed limitations on the investable universe.

## How did this financial product perform compared to the reference benchmark?

N/A – The Portfolio's benchmark has not been designated as a reference benchmark. Therefore, it is not consistent with the environmental or social characteristics promoted by the Portfolio.

## How does the reference benchmark differ from a broad market index?

N/A

- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***

N/A

- ***How did this financial product perform compared with the reference benchmark?***

N/A

- ***How did this financial product perform compared with the broad market index?***

N/A

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

---

**Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852**

**Product name:** Neuberger Berman Next Generation Mobility Fund (the “Portfolio”)

**Legal entity identifier:** 5493000YD3J3W1CMMU74

## Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?	
<input checked="" type="radio"/> <input checked="" type="radio"/> <input type="radio"/> <b>Yes</b>	<input checked="" type="radio"/> <input type="radio"/> <input checked="" type="checkbox"/> <b>No</b>
<input type="checkbox"/> It made <b>sustainable investments with an environmental objective: ___%</b> <ul style="list-style-type: none"> <li><input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy</li> <li><input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</li> </ul> <input type="checkbox"/> It made <b>sustainable investments with a social objective: ___%</b>	<b>It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 48.02%* of sustainable investments</b> <ul style="list-style-type: none"> <li><input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy</li> <li><input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</li> <li><input checked="" type="checkbox"/> with a social objective</li> </ul> <input type="checkbox"/> It promoted E/S characteristics, but <b>did not make any sustainable investments</b>

\*Please refer to the "What was the proportion of sustainability-related investments?" question below for further detail in respect of the minimum proportion of sustainable investments which promoted the environmental or social characteristics.

## To what extent were the environmental and/or social characteristics promoted by this financial product met?

The following environmental and social characteristics were promoted by the Portfolio:

- **Environmental Characteristics:** air quality; biodiversity & land use; energy management; environmental risk exposure; fuel economy; greenhouse gas (“GHG”) emissions; opportunities in clean technologies; toxic emissions & waste; water management; packaging lifecycle management; materials sourcing; and product lifecycle management.
- **Social Characteristics:** access to finance; access to healthcare; community relations; data privacy & security; employee incentives & risk taking; health & nutrition; health & safety; human capital development; labour management; product safety & integrity; supply chain labour standards; workforce diversity & inclusion; pricing transparency; and responsible marketing.

Performance in relation to these environmental and social characteristics was measured through the NB ESG Quotient, and is reported, in aggregate, below.

While the sustainable investments held by the Portfolio had either a social or an environmental objective, such sustainable investments do not qualify as environmentally sustainable investments (or Taxonomy aligned investments) as defined under the EU Taxonomy

### How did the sustainability indicators perform?

As part of the investment process, the Sub-Investment Manager considered a variety of sustainability indicators to measure the environmental and/or social characteristics promoted by the Portfolio. These sustainability indicators are listed below:

1. The NB ESG Quotient:

Third-party data and the proprietary Neuberger Berman ESG rating system (the “**NB ESG Quotient**”) were used to measure the environmental and social characteristics promoted by the Portfolio. The NB ESG Quotient is built around the concept of sector specific ESG risk and opportunity, and produced an overall ESG rating for companies by assessing them against certain ESG metrics.

Foundational to the NB ESG Quotient is the proprietary Neuberger Berman (“**NB**”) materiality matrix, which focuses on the ESG characteristics that were considered to be the most likely to be the material drivers of ESG risk and opportunity for each sector.. Each sector criteria is constructed using third-party and internally derived ESG data and supplemented with internal qualitative analysis, leveraging the Portfolio’s analyst team’s significant sector expertise. The NB materiality matrix enabled the Sub-Investment Manager to derive the NB ESG Quotient rating, to compare sectors and companies relative to their environmental and social characteristics.

The NB ESG Quotient assigned weightings to environmental, social and governance characteristics for each sector to derive the NB ESG Quotient rating for companies. Pursuant to this, the Sub-Investment Manager engaged with companies with a poor NB ESG Quotient or third-party rating with the aim to seek improvement in the underlying environmental and social characteristics (which made up the NB ESG Quotient) over time.

31 December 2022	Rating	Combined coverage
NB ESG Quotient	ES: B G: 2.2	99%
Third-party Data	6.7	

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

With regards to the NB ESG Quotient rating, for environmental and social (ES) ratings, A – D quartiles are used, where A is the highest rating (top quartile) and D is the lowest rating (bottom quartile). For governance (G) ratings, 1 – 4 quartiles are used where 1 is the highest rating and 4 is the lowest rating. This Portfolio does not have a minimum NB ESG Quotient rating. The average NB ESG Quotient rating is a weighted average and is not a rating of the Portfolio strategy itself.

Third-party data was also used to measure the environmental and social characteristics promoted by the Portfolio. The third-party data ratings range from 0-10, with 0 being the lowest rating and 10 being the highest rating.

## 2. Climate Value-at-Risk:

Over the reference period, Climate Value-at-Risk (“**CVaR**”) measured the exposure to transition and physical climate risks. CVaR is a scenario analysis tool evaluating economic risks under various degree scenarios (i.e., the amount of warming targeted) and potential regulatory environments in varying countries.

CVaR is a type of scenario analysis which is defined as the present value of aggregated future policy risk costs, technology opportunity profits, and extreme weather event costs and profits, expressed as a percentage of a security or portfolio’s market value according to the warming scenario targeted.

By calculating the financial risks from climate change per security and per scenario, CVaR provides a framework that helps quantify and understand these risks. The CVaR metric provides insight into the climate-stressed valuation of assets based on specific degree scenarios, providing an assessment on how much a security may stand to lose or gain from the impact of climate change.

As at 31 December 2022, CVaR projected that a warming climate scenario could result in a depreciation of 3.56% in the valuation of assets under assessment.

This analysis is intended as a broad overview of the investment team’s style and investment process.

On a holistic basis, the results were evaluated by the Sub-Investment Manager’s portfolio managers and analysts. The scenario analysis served as a starting point for further bottom-up analysis and identifying potential climate-related risks to address through company engagement.

Due to data limitations, CVaR was not applied across all companies held by the Portfolio and was instead limited to the companies for which the Sub-Investment Manager had sufficient and reliable data. The Portfolio had a CVaR coverage of 93%.

The analysis from CVaR is reviewed at least once a year.

## 3. ESG exclusion policies:

To ensure that the environmental or social characteristics promoted by the Portfolio were attained, the Portfolio did not invest in companies whose activities breached, or were not consistent with, the Neuberger Berman Controversial Weapons Policy; the Neuberger Berman Thermal Coal Involvement Policy; the Neuberger Berman Sustainable Exclusion Policy; and the Neuberger Berman Enhanced Sustainable Exclusion Policy. In addition to the application of the Neuberger Berman Thermal Coal Involvement Policy, the Sub-Investment Manager prohibited the initiation of new investment positions in companies that (i) derived more than 25% of their revenue from thermal coal mining; or (ii) were expanding new thermal coal power generation. Furthermore, from 6 April 2022 onwards, investments held by the Portfolio did not invest in companies whose activities had been identified as breaching the Neuberger Berman Global Standards Policy which excluded identified violators of (i) the United Nations Global Compact Principles (“**UNGC Principles**”), (ii) the OECD Guidelines for Multinational Enterprises (“**OECD Guidelines**”), (iii) the United Nations Guiding Principles on Business and Human Rights (“**UNGPs**”) and

(iv) the International Labour Standards ("**ILO Standards**").

When applying ESG exclusions to the Portfolio, the Sub-Investment Manager used third-party data to identify companies in breach of the ESG exclusions listed above. Where possible, the Sub-Investment Manager sought to overlay this third-party data with qualitative expertise from their research analysts to establish a current and holistic picture of the company. The Sub-Investment Manager discussed and debated the differences between the violators identified by the third-party data and those identified as a result of their research, which drew upon data from the NB ESG Quotient and direct engagements with the company.

● ***...and compared to previous periods?***

N/A – this is the first reference period.

● ***What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?***

While the Portfolio promoted environmental and social characteristics, this Portfolio did not have a sustainable investment objective. However, the Portfolio held sustainable investments which promoted the environmental & social characteristics listed above.

The consideration of investments made by the Portfolio as sustainable investments was determined by reference to NB's sustainable investment framework. This framework included an assessment as to (i) whether the investment contributes to an environmental and/or social objective; (ii) whether the investment causes significant harm to those objectives as described below; and (iii) an assessment of a company's overall good governance rating to determine whether the company passes a good governance assessment.

Under this sustainable investment framework, the Sub-Investment Manager utilised multiple datapoints that measured the alignment of a company's economic activity with environmental or social characteristics.

The Sub-Investment Manager screened companies for controversies, significant harm and violations of minimum safeguards. If the companies passed this screen, the Sub-Investment Manager then proceeded to measure the companies' environmental or social economic contribution.

The Sub-Investment Manager measured this in two ways:

- Revenue alignment to the EU taxonomy (if any); and
- Revenue alignment to the Sustainable Development Goals ("**SDGs**").

Consideration of revenue alignment with the SDGs was limited by the availability of adequate, reliable and verifiable data coverage. To mitigate instances of poor data coverage, the Sub-Investment Manager utilised third-party data and proxy data along with internal research and qualitative analysis as part of NB's sustainable investment framework.

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

***How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?***

As part of the Sub-Investment Manager's sustainable investment framework, investments that cause significant harm to environmental or social objectives were excluded. To determine whether an investment caused significant harm, the Sub-Investment Manager considered significant harm with reference to certain principal adverse impact indicators and violations of minimum safeguards.

The Sub-Investment Manager considered the following principal adverse impacts indicators when determining whether the sustainable investments that the Portfolio made did not cause significant harm to any environmental or social sustainable investment objective: GHG emissions; carbon footprint; GHG intensity of investee companies; exposure to companies active in the fossil fuel sector; share of non-renewable energy consumption and production; energy consumption intensity per high impact climate sector; activities negatively affecting biodiversity-sensitive areas; emissions to water; hazardous waste and radioactive waste ratio; violations of UN Global Compact principles and OECD Guidelines for Multinational Enterprises; lack of processes and compliance mechanisms to monitor compliance with UN Global Compact Principles and OECD Guidelines for Multinational Enterprises; unadjusted gender pay gap, board gender diversity; and exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons) (the "PAIs").

Consideration of the PAIs was limited by the availability (in the Sub-Investment Manager's subjective view) of adequate, reliable and verifiable data coverage. The Sub-Investment Manager utilised third-party data and proxy data along with internal research to consider the PAIs.

From 6 April 2022 onwards, the Sub-Investment Manager also considered violations of minimum safeguards. The Sub-Investment Manager did not invest in companies whose activities had been identified as breaching the OECD Guidelines, UNGC Principles, ILO Standards and UNGPs, captured through the Neuberger Berman Global Standards Policy.

The combination of all of these factors generated a quantitative validation for "sustainability" which was used to ensure the sustainable investments that the Portfolio made, did not cause significant harm to any environmental or social sustainable objective.

***How were the indicators for adverse impacts on sustainability factors taken into account?***

Consideration of the PAIs by the Sub-Investment Manager, when determining whether the sustainable investments that the Portfolio intended to make did not cause significant harm to any environmental or social sustainable investment objective of the Portfolio's sustainable investments, was through a combination of:

- Monitoring companies which fell below the quantitative and qualitative tolerance thresholds set for each PAI by the Sub-Investment Manager;
- Stewardship and/or setting engagement objectives with companies which fell below the quantitative and qualitative tolerance thresholds set for a PAI; and
- Application of the ESG exclusion policies referenced above, which included consideration of several of the PAIs.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

From 6 April 2022 onwards, the Sub-Investment Manager did not invest in companies whose activities had been identified as breaching the OECD Guidelines, UNGC Principles, ILO Standards and UNGPs, captured through the Neuberger Berman Global Standards Policy.

*The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.*

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

N/A – The Portfolio did not commit to holding Taxonomy-aligned investments.

### How did this financial product consider principal adverse impacts on sustainability factors?

A selection of the principal adverse impact indicators were considered directly (e.g. through the ESG exclusion policies listed above) and/or indirectly (e.g. as part of the Sub-Investment Manager's assessment of issuers) throughout the 2022 reference period.

The Sub-Investment Manager considered PAIs with respect to the Portfolio in two ways:

- i. All PAIs were considered when determining whether sustainable investments that the Portfolio made did not cause significant harm to any environmental or social sustainable investment objective as explained above.
- ii. From 28 November 2022 onwards, the Sub-Investment Manager considered the following principal adverse impacts on sustainability factors with respect to those investments within the Portfolio which promoted environmental or social characteristics, namely: GHG emissions, carbon footprint, GHG intensity, fossil fuel exposure, board gender diversity, UNGC Principles & OECD violations and controversial weapons (the “**Product Level PAIs**”).

Consideration of the Product Level PAIs was limited by the availability (in the Sub-Investment Manager's subjective view) of adequate, reliable and verifiable data coverage. The Sub-Investment Manager utilised third-party data and proxy data along with internal research to consider the Product Level PAIs.

Consideration of the Product Level PAIs by the Sub-Investment Manager was through a combination of:

- Monitoring the Portfolio, in particular where it fell below the quantitative and qualitative tolerance thresholds set for each Product Level PAI by the Sub-Investment Manager;
- Stewardship and/or setting engagement objectives where the Portfolio fell below the quantitative and qualitative tolerance thresholds set for a Product Level PAI; and
- Application of the ESG exclusion policies referenced above, which included consideration of several of the Product Level PAIs.

## What were the top investments of this financial product?

The Sub-Investment Manager has used the EU statistical classification of economic activities (“NACE”) economic sector breakdown to identify the economic sectors of the Portfolio's top 15 investments. The following data is as at 31 December 2022.

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 1 January 2022 - 31 December 2022

Largest investments	Sector	% Assets	Country
ANALOG DEVICES INC	C - Manufacturing	4.1%	United States
AMPHENOL CORP CLASS A	C - Manufacturing	4.0%	United States
ANSYS INC	J - Information and communication	3.9%	United States
CATERPILLAR INC	C - Manufacturing	3.0%	United States
LINDE PLC	C - Manufacturing	3.0%	United Kingdom
DEERE & CO	C - Manufacturing	2.9%	United States
TRIMBLE INC	J - Information and communication	2.8%	United States
TE CONNECTIVITY LTD	C - Manufacturing	2.8%	United States
KEYSIGHT TECHNOLOGIES INC	C - Manufacturing	2.7%	United States
CADENCE DESIGN SYSTEMS INC	J - Information and communication	2.5%	United States
MP MATERIALS CORP CLASS A	B - Mining and quarrying	2.5%	United States
GENTEX CORP	C - Manufacturing	2.4%	United States
LATTICE SEMICONDUCTOR CORP	C - Manufacturing	2.4%	United States
RAMBUS INC	C - Manufacturing	2.4%	United States
SCHNEIDER ELECTRIC	C - Manufacturing	2.4%	France

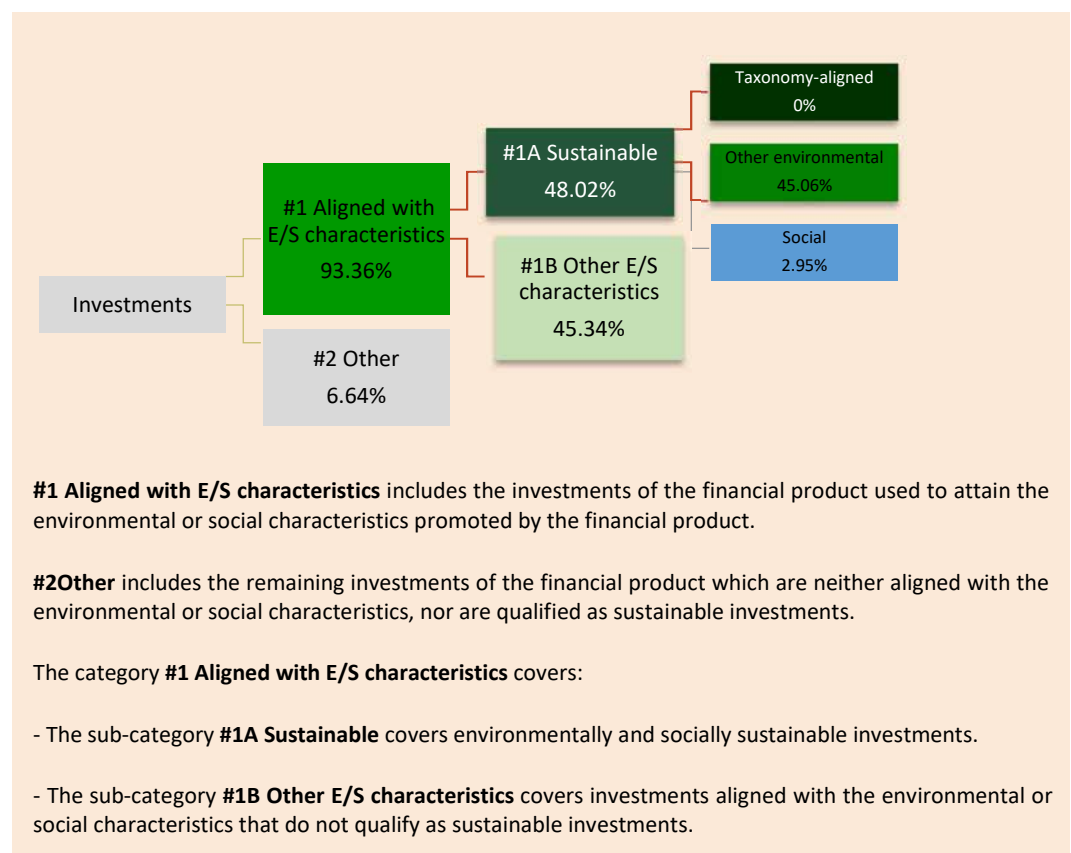

## What was the proportion of sustainability-related investments?

### Asset allocation

describes the share of investments in specific assets.

### What was the asset allocation?

The Sub-Investment Manager calculated the proportion of investments aligned with the environmental and/or social characteristics promoted by the Portfolio by reference to the proportion of companies in the Portfolio: i) that held either an NB ESG Quotient rating or a third-party equivalent ESG rating that was used as part of the portfolio construction and investment management process of the Portfolio; and/or ii) with whom the Sub-Investment Manager had engaged directly. This calculation was based on a mark-to-market assessment of the Portfolio and may rely on incomplete or inaccurate company or third-party data. For the 2022 reference period only, this calculation is based on the Portfolio's holdings as at 31 December 2022, being the only quarter end in the reference period that followed the publication of the Portfolio's SFDR Annex detailing its planned asset allocation. For all subsequent reference periods, this calculation will be based on the average of the four quarter ends.

***In which economic sectors were the investments made?***

<b>Data as at 31 December 2022</b>	
<b>Economic Sector – NACE</b>	<b>% Assets</b>
B - Mining and quarrying	3.07%
C - Manufacturing	72.40%
D - Electricity, gas, steam and air conditioning supply	0.42%
G - Wholesale and retail trade; repair of motor vehicles and motorcycles	2.88%
J - Information and communication	19.68%
K - Financial and insurance activities	0.11%
L - Real estate activities	1.10%
None	0.33%

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

- **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

## To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The analysis and disclosure requirements introduced by the EU Taxonomy are very detailed and compliance with them requires the availability of multiple, specific data points in respect of each investment which the Portfolio made. The Sub-Investment Manager cannot confirm that the Portfolio invested in any investments that qualified as environmentally sustainable for the purposes of the EU Taxonomy. Disclosures and reporting on Taxonomy alignment will develop as the EU framework evolves and data is made available by companies. The Sub-Investment Manager will keep the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy under active review as data availability and quality improves.

### ● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?

Yes:

In fossil gas  In nuclear energy

No

---

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

● **What was the share of investments made in transitional and enabling activities?**

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments.

### What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

45.06%

While the Portfolio invested in sustainable investments with an environmental objective, such sustainable investments did not commit to being Taxonomy-aligned investments.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

### What was the share of socially sustainable investments?

2.95%

### What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

“Other” included the remaining investments of the Portfolio (including but not limited to any derivatives or any security collateralized by a pool of similar assets or receivables listed in the Supplement for the Portfolio) which were neither aligned with the environmental or social characteristics, nor qualified as sustainable investments.

The “Other” section in the Portfolio was held for a number of reasons that the Sub-Investment Manager felt was beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover.

As noted above, the Portfolio was invested in compliance with ESG exclusion policies, on a continuous basis. This ensured that investments made by the Portfolio sought to align with international environmental and social safeguards such as the UNGC Principles, UNGPs, OECD Guidelines and ILO Standards.

The Sub-Investment Manager believes that these policies prevented investment in companies that most egregiously violate environmental and/or social minimum standards and ensured that the Portfolio could successfully promote its environmental and social characteristics.

The above steps ensured that robust environmental and social safeguards were in place

## What actions have been taken to meet the environmental and/or social characteristics during the reference period?

ESG characteristics are considered at three different levels:

### I. Integrating proprietary ESG analysis:

The NB ESG Quotient ratings were generated for company holdings in the Portfolio. The third-party or NB ESG Quotient rating for companies was utilised to help to better identify risks and opportunities in the overall assessment of a company, noting that the Portfolio focused investment in companies that drive Next Generation Connectivity.

By integrating the investment team's proprietary ESG analysis (the NB ESG Quotient) into the overall thematic and company view, there was a direct link between their analysis of material ESG characteristics and portfolio construction activities across their strategy.

Pursuant to this, the Sub-Investment Manager engaged with companies with a poor third party or NB ESG Quotient rating with the aim to seek improvement in the underlying environmental and social characteristics (which make up the NB ESG Quotient) over time.

### II. Engagement:

The Sub-Investment Manager engaged with companies through a robust ESG engagement program. They sought to prioritise constructive engagements and sought to engage on topics (including ESG topics) they determined to be financially material for the relevant company. The Sub-Investment Manager viewed this engagement with companies, as an important part of its investment process. Progress on engagement was tracked centrally in the Sub-Investment Manager's engagement tracker.

### III. ESG sectoral exclusion policies:

To ensure that the environmental and social characteristics promoted by the Portfolio were attained, the Portfolio applied the ESG exclusion policies referenced above, which placed limitations on the investable universe.

## How did this financial product perform compared to the reference benchmark?

N/A – The Portfolio's benchmark has not been designated as a reference benchmark. Therefore, it is not consistent with the environmental or social characteristics promoted by the Portfolio.

## How does the reference benchmark differ from a broad market index?

N/A

---

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***

## Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?	
<input checked="" type="radio"/> <input checked="" type="radio"/> <input type="checkbox"/> <b>Yes</b>	<input type="radio"/> <input type="radio"/> <input checked="" type="checkbox"/> <b>No</b>
<input type="checkbox"/> It made <b>sustainable investments with an environmental objective: ___%</b> <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	<input checked="" type="checkbox"/> It <b>promoted Environmental/Social (E/S) characteristics and</b> while it did not have as its objective a sustainable investment, it had a proportion of 27.92%* of sustainable investments <input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with a social objective
<input type="checkbox"/> It made <b>sustainable investments with a social objective: ___%</b>	<input type="checkbox"/> It <b>promoted E/S characteristics, but did not make any sustainable investments</b>

\*Please refer to the "What was the proportion of sustainability-related investments?" question below for further detail in respect of the minimum proportion of sustainable investments which promoted the environmental or social characteristics.

### To what extent were the environmental and/or social characteristics promoted by this financial product met?

The following environmental and social characteristics were promoted by the Portfolio:

- **Environmental Characteristics:** air quality; biodiversity & land use; energy management; environmental risk exposure; fuel economy; greenhouse gas ("GHG") emissions\*; opportunities in clean technologies; toxic emissions & waste; water management; packaging lifecycle management; materials sourcing; and product lifecycle management.

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

\*In aiming to align the Portfolio with a net-zero goal, the Sub-Investment Manager will promote the reduction of the Portfolio's carbon footprint across scope 1, 2, and material scope 3 GHG emissions<sup>1</sup>.

- **Social Characteristics:** access to finance; access to healthcare; community relations; data privacy & security; employee incentives & risk taking; health & nutrition; health & safety; human capital development; labour management; product safety & integrity; supply chain labour standards; workforce diversity & inclusion; pricing transparency; and responsible marketing.

Performance in relation to these environmental and social characteristics was measured through the NB ESG Quotient, and are reported, in aggregate, below.

While the sustainable investments held by the Portfolio had either a social or an environmental objective, such sustainable investments do not qualify as environmentally sustainable investments (or Taxonomy aligned investments) as defined under the EU Taxonomy.

### ● **How did the sustainability indicators perform?**

As part of the investment process, the Sub-Investment Manager considered a variety of sustainability indicators to measure the environmental and/or social characteristics promoted by the Portfolio. These sustainability indicators are listed below:

#### 1. The NB ESG Quotient:

Third-party data and the proprietary Neuberger Berman ESG rating system (the "**NB ESG Quotient**") were used to measure the environmental and social characteristics promoted by the Portfolio. The NB ESG Quotient is built around the concept of sector specific ESG risk and opportunity, and produced an overall ESG rating for companies by assessing them against certain ESG metrics.

Foundational to the NB ESG Quotient is the proprietary Neuberger Berman ("**NB**") materiality matrix, which focuses on the ESG characteristics that were considered to be the most likely to be the material drivers of ESG risk and opportunity for each sector. Each sector criteria is constructed using third-party and internally derived ESG data and supplemented with internal qualitative analysis, leveraging the Portfolio's analyst team's significant sector expertise. The NB materiality matrix enabled the Sub-Investment Manager to derive the NB ESG Quotient rating, to compare sectors and companies relative to their environmental and social characteristics.

The NB ESG Quotient assigned weightings to environmental, social and governance characteristics for each sector to derive the NB ESG Quotient rating for companies. Pursuant to this, the Sub-Investment Manager engaged with companies with a poor NB ESG Quotient or third-party rating with the aim to seek improvement in the underlying environmental and social characteristics (which made up the NB ESG Quotient) over time.

---

<sup>1</sup>Scope 1 emissions: are direct emissions from a company's owned or controlled sources (such as emissions created directly by the company's business processes or from vehicles owned by the company). Scope 2 emissions: are indirect emissions from the generation of electricity, steam, heating and cooling consumed by the company. Scope 3 emissions: are all other indirect emissions that occur in a company's value chain (such as emissions from products or services consumed by the company, disposal of its waste, employee commuting, distribution and transport of its products or its investments).

<b>31 December 2022</b>	<b>Rating</b>	<b>Combined coverage</b>
NB ESG Quotient	ES: B G: 2.7	97%
Third-party Data	6.2	

With regards to the NB ESG Quotient ratings, for environmental and social (ES) ratings, A – D quartiles are used, where A is the highest rating (top quartile) and D is the lowest rating (bottom quartile). For governance (G) ratings, 1 – 4 quartiles are used where 1 is the highest rating, and 4 is the lowest rating. This Portfolio does not have a minimum NB ESG Quotient rating. The average NB ESG Quotient rating is a weighted average and is not a rating of the Portfolio strategy itself.

Third-party data was also used to measure the environmental and social characteristics promoted by the Portfolio. The third-party data ratings range from 0-10, with 0 being the lowest rating and 10 being the highest rating.

## 2. Climate Value-at-Risk:

Over the reference period, Climate Value-at-Risk (“**CVaR**”) measured the exposure to transition and physical climate risks. CVaR is a scenario analysis tool evaluating economic risks under various degree scenarios (i.e., the amount of warming targeted) and potential regulatory environments in varying countries.

CVaR is a type of scenario analysis which is defined as the present value of aggregated future policy risk costs, technology opportunity profits, and extreme weather event costs and profits, expressed as a percentage of a security or portfolio’s market value according to the warming scenario targeted.

By calculating the financial risks from climate change per security and per scenario, CVaR provides a framework that helps quantify and understand these risks. The CVaR metric provides insight into the climate-stressed valuation of assets based on specific degree scenarios, providing an assessment on how much a security may stand to lose or gain from the impact of climate change.

As at 31 December 2022, CVaR projected that a warming climate scenario could result in a depreciation of 4.04% in the valuation of assets under assessment.

This analysis is intended as a broad overview of the investment team’s style and investment process.

On a holistic basis, the results were evaluated by the Sub-Investment Manager’s portfolio managers and analysts. The scenario analysis served as a starting point for further bottom-up analysis and identifying potential climate-related risks to address through company engagement.

Due to data limitations, CVaR was not applied across all companies held by the Portfolio and was instead limited to the companies for which the Sub-Investment Manager had sufficient and reliable data. The Portfolio had a CVaR coverage of 82%.

The analysis from CVaR is reviewed at least once a year.

## 3. ESG exclusion policies:

To ensure that the environmental or social characteristics promoted by the Portfolio were attained, the Portfolio did not invest in companies whose activities breached, or were not consistent with, the Neuberger Berman Controversial Weapons Policy; the Neuberger Berman Thermal Coal Involvement Policy; and the Neuberger Berman

Sustainable Exclusion Policy. In addition to the application of the Neuberger Berman Thermal Coal Involvement Policy, the Sub-Investment Manager prohibited the initiation of new investment positions in companies that (i) derived more than 25% of their revenue from thermal coal mining; or (ii) were expanding new thermal coal power generation. Furthermore, from 6 April 2022 onwards, investments held by the Portfolio did not invest in companies whose activities had been identified as breaching the Neuberger Berman Global Standards Policy which excluded identified violators of (i) the United Nations Global Compact Principles ("**UNGC Principles**"), (ii) the OECD Guidelines for Multinational Enterprises ("**OECD Guidelines**"), (iii) the United Nations Guiding Principles on Business and Human Rights ("**UNGPs**") and (iv) the International Labour Standards ("**ILO Standards**").

When applying ESG exclusions to the Portfolio, the Sub-Investment Manager used third-party data to identify companies in breach of the ESG exclusions listed above. Where possible, the Sub-Investment Manager sought to overlay this third-party data with qualitative expertise from their research analysts to establish a current and holistic picture of the company. The Sub-Investment Manager discussed and debated the differences between the violators identified by the third-party data and those identified as a result of their research, which drew upon data from the NB ESG Quotient and direct engagements with the company.

● ***...and compared to previous periods?***

N/A – this is the first reference period.

● ***What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?***

While the Portfolio promoted environmental and social characteristics, this Portfolio did not have a sustainable investment objective. However, the Portfolio held sustainable investments which promoted the environmental & social characteristics listed above.

The consideration of investments made by the Portfolio as sustainable investments was determined by reference to NB's sustainable investment framework. This framework included an assessment as to (i) whether the investment contributes to an environmental and/or social objective; (ii) whether the investment causes significant harm to those objectives as described below; and (iii) an assessment of a company's overall good governance rating to determine whether the company passes a good governance assessment.

Under this sustainable investment framework, the Sub-Investment Manager utilised multiple datapoints that measured the alignment of a company's economic activity with environmental or social characteristics.

The Sub-Investment Manager screened companies for controversies, significant harm and violations of minimum safeguards. If the companies passed this screen, the Sub-Investment Manager then proceeded to measure the companies' environmental or social economic contribution.

The Sub-Investment Manager measured this in two ways:

- Revenue alignment to the EU taxonomy (if any); and
- Revenue alignment to the Sustainable Development Goals ("**SDGs**").

Consideration of revenue alignment with the SDGs was limited by the availability of adequate, reliable and verifiable data coverage. To mitigate instances of poor data coverage, the Sub-Investment Manager utilised third-party data and proxy data along with internal research and qualitative analysis as part of NB's sustainable investment framework.

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

### ***How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?***

As part of the Sub-Investment Manager's sustainable investment framework, investments that cause significant harm to environmental or social objectives were excluded. To determine whether an investment caused significant harm, the Sub-Investment Manager considered significant harm with reference to certain principal adverse impact indicators and violations of minimum safeguards.

The Sub-Investment Manager considered the following principal adverse impacts indicators when determining whether the sustainable investments that the Portfolio made did not cause significant harm to any environmental or social sustainable investment objective: GHG emissions; carbon footprint; GHG intensity of investee companies; exposure to companies active in the fossil fuel sector; share of non-renewable energy consumption and production; energy consumption intensity per high impact climate sector; activities negatively affecting biodiversity-sensitive areas; emissions to water; hazardous waste and radioactive waste ratio; violations of UN Global Compact principles and OECD Guidelines for Multinational Enterprises; lack of processes and compliance mechanisms to monitor compliance with UN Global Compact Principles and OECD Guidelines for Multinational Enterprises; unadjusted gender pay gap, board gender diversity; and exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons) (the "PAIs").

Consideration of the PAIs was limited by the availability (in the Sub-Investment Manager's subjective view) of adequate, reliable and verifiable data coverage. The Sub-Investment Manager utilised third-party data and proxy data along with internal research to consider the PAIs.

From the 6 April 2022 onwards, the Sub-Investment Manager also considered violations of minimum safeguards. The Sub-Investment Manager did not invest in companies whose activities had been identified as breaching the OECD Guidelines, UNGC Principles, ILO Standards and UNGPs, captured through the Neuberger Berman Global Standards Policy.

The combination of all of these factors generated a quantitative validation for "sustainability" which was used to ensure the sustainable investments that the Portfolio made, did not cause significant harm to any environmental or social sustainable objective.

### ***How were the indicators for adverse impacts on sustainability factors taken into account?***

Consideration of the PAIs by the Sub-Investment Manager, when determining whether the sustainable investments that the Portfolio intended to make did not cause significant harm to any environmental or social sustainable investment objective of the Portfolio's sustainable investments, was through a combination of:

- Monitoring companies which fell below the quantitative and qualitative tolerance thresholds set for each PAI by the Sub-Investment Manager;
- Stewardship and/or setting engagement objectives with companies which fell below the quantitative and qualitative tolerance thresholds set for a PAI; and
- Application of the ESG exclusion policies referenced above, which included consideration of several of the PAIs.

— — — *Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:*

From 6 April 2022 onwards, the Sub-Investment Manager did not invest in companies whose activities had been identified as breaching the OECD Guidelines, UNGC Principles, ILO Standards and UNGPs, captured through the Neuberger Berman Global Standards Policy.

*The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.*

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

N/A - The Portfolio did not commit to holding Taxonomy-aligned investments.

### **How did this financial product consider principal adverse impacts on sustainability factors?**

A selection of the principal adverse impact indicators were considered directly (e.g. through the ESG exclusion policies listed above) and/or indirectly (e.g. as part of the Sub-Investment Manager's assessment of issuers) throughout the 2022 reference period.

The Sub-Investment Manager considered PAIs with respect to the Portfolio in two ways:

- i. All PAIs were considered when determining whether sustainable investments that the Portfolio made did not cause significant harm to any environmental or social sustainable investment objective as explained above.
- ii. From 28 November 2022 onwards, the Sub-Investment Manager considered the following principal adverse impacts on sustainability factors with respect to those investments within the Portfolio which promoted environmental or social characteristics, namely: GHG emissions, carbon footprint, GHG intensity, fossil fuel exposure, board gender diversity, UNGC Principles & OECD violations and controversial weapons (the “**Product Level PAIs**”).

Consideration of the Product Level PAIs was limited by the availability (in the Sub-Investment Manager’s subjective view) of adequate, reliable and verifiable data coverage,. The Sub-Investment Manager utilised third-party data and proxy data along with internal research to consider the Product Level PAIs.

Consideration of the Product Level PAIs by the Sub-Investment Manager was through a combination of:

- Monitoring the Portfolio, in particular where it fell below the quantitative and qualitative tolerance thresholds set for each Product Level PAI by the Sub-Investment Manager;
- Stewardship and/or setting engagement objectives where the Portfolio fell below the quantitative and qualitative tolerance thresholds set for a Product Level PAI; and
- Application of the ESG exclusion policies referenced above, which included consideration of several of the Product Level PAIs.

## What were the top investments of this financial product?

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 1 January 2022 - 31

The Sub-Investment Manager has used the EU statistical classification of economic activities (“**NACE**”) economic sector breakdown to identify the economic sectors of the Portfolio’s top 15 investments. The following data is as at 31 December 2022.

Largest investments	Sector	% Assets	Country
TELEDYNE TECHNOLOGIES INC	C - Manufacturing	4.7%	United States
MOTOROLA SOLUTIONS INC	C - Manufacturing	4.0%	United States
AIRBUS	C - Manufacturing	4.0%	France
INTELLIAN TECHNOLOGIES INC	C - Manufacturing	3.4%	Korea (South), Republic of
RAYTHEON TECHNOLOGIES CORP	C - Manufacturing	3.3%	United States
PLANET LABS CLASS A	C - Manufacturing	3.3%	United States
EUTELSAT COMMUNICATIONS SA	J - Information and communication	3.2%	France
ROCKET LAB USA INC	C - Manufacturing	3.2%	United States
DEERE & CO	C - Manufacturing	3.2%	United States
SINGAPORE TECHNOLOGIES ENGINEERING	C - Manufacturing	3.2%	Singapore

LEIDOS HOLDINGS INC	J - Information and communication	3.0%	United States
SAFRAN SA	C - Manufacturing	2.9%	France
TRANSDIGM GROUP INC	C - Manufacturing	2.8%	United States
THALES SA	C - Manufacturing	2.7%	France
CACI INTERNATIONAL INC CLASS A	J - Information and communication	2.7%	United States

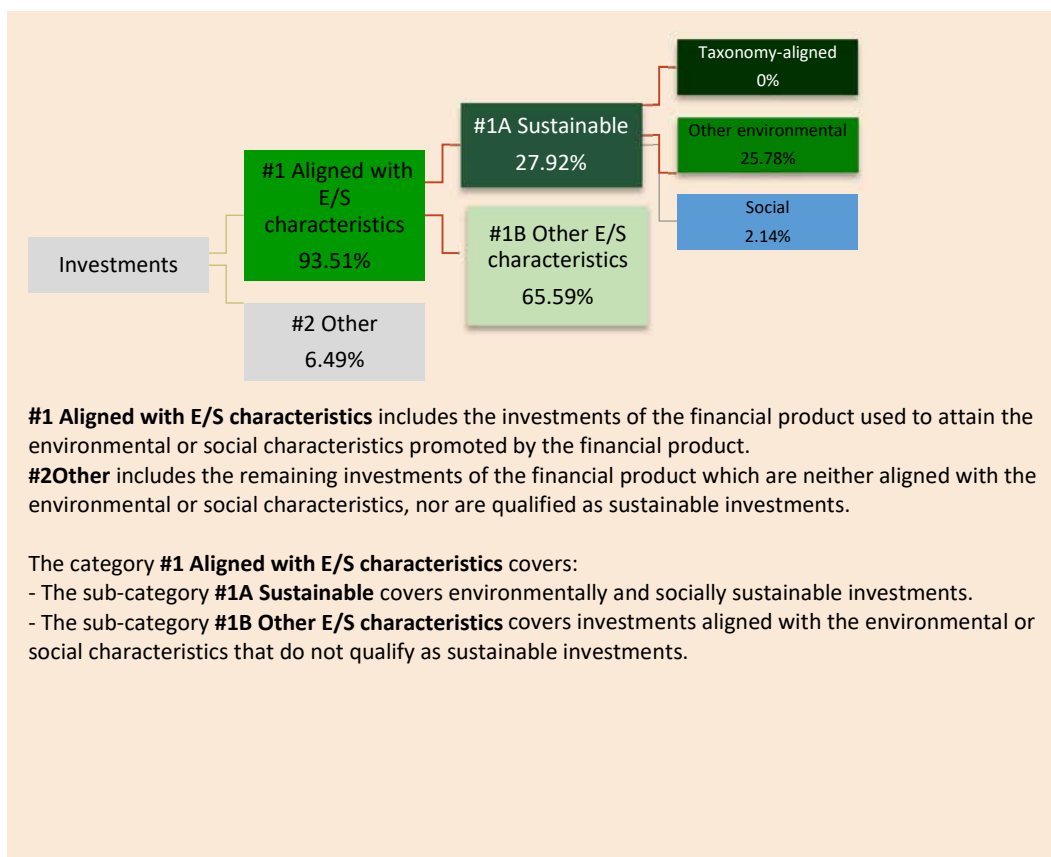

## What was the proportion of sustainability-related investments?

### ● *What was the asset allocation?*

The Sub-Investment Manager calculated the proportion of investments aligned with the environmental and/or social characteristics promoted by the Portfolio by reference to the proportion of companies in the Portfolio: i) that held either an NB ESG Quotient rating or a third-party equivalent ESG rating that was used as part of the portfolio construction and investment management process of the Portfolio; and/or ii) with whom the Sub-Investment Manager had engaged directly. This calculation was based on a mark-to-market assessment of the Portfolio and may rely on incomplete or inaccurate company or third-party data. For the 2022 reference period only, this calculation is based on the Portfolio's holdings as at 31 December 2022, being the only quarter end in the reference period that followed the publication of the Portfolio's SFDR Annex detailing its planned asset allocation. For all subsequent reference periods, this calculation will be based on the average of the four quarter ends.

**Asset allocation** describes the share of investments in specific assets.

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

***In which economic sectors were the investments made?***

Data as at 31 December 2022	
Economic Sector – NACE	% Assets
C - Manufacturing	69.93%
G - Wholesale and retail trade; repair of motor vehicles and motorcycles	2.02%
J - Information and communication	26.18%
M - Professional, scientific and technical activities	1.87%

**To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?**

The analysis and disclosure requirements introduced by the EU Taxonomy are very detailed and compliance with them requires the availability of multiple, specific data points in respect of each investment which the Portfolio made. The Sub-Investment Manager cannot confirm that the Portfolio invested in any investments that qualified as environmentally sustainable for the purposes of the EU Taxonomy. Disclosures and reporting on Taxonomy alignment will develop as the EU framework evolves and data is made available by companies. The Sub-Investment Manager will keep the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy under active review as data availability and quality improves.

● **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>2</sup>?**

- Yes:
- In fossil gas     In nuclear energy
- No

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

*The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

● **What was the share of investments made in transitional and enabling activities?**

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments

<sup>2</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

### **What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?**

25.78%

While the Portfolio invested in sustainable investments with an environmental objective, such sustainable investments did not commit to being Taxonomy-aligned investments.

### **What was the share of socially sustainable investments?**

2.14%

### **What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?**

“Other” included the remaining investments of the Portfolio (including but not limited to any derivatives or any security collateralized by a pool of similar assets or receivables listed in the Supplement for the Portfolio) which were neither aligned with the environmental or social characteristics, nor qualified as sustainable investments.

The “Other” section in the Portfolio was held for a number of reasons that the Sub-Investment Manager felt was beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover.

As noted above, the Portfolio was invested in compliance with ESG exclusion policies, on a continuous basis. This ensured that investments made by the Portfolio sought to align with international environmental and social safeguards such as the UNGC Principles, UNGPs, OECD Guidelines and ILO Standards.

The Sub-Investment Manager believes that these policies prevented investment in companies that most egregiously violate environmental and/or social minimum standards and ensured that the Portfolio could successfully promote its environmental and social characteristics.

The above steps ensured that robust environmental and social safeguards were in place.

### **What actions have been taken to meet the environmental and/or social characteristics during the reference period?**

ESG characteristics are considered at three different levels:

I. Integrating proprietary ESG analysis:

The NB ESG Quotient ratings were generated for company holdings in the Portfolio. The third-party or NB ESG Quotient rating for companies was utilised to help to better identify risks and opportunities in the overall assessment of a company, noting that the Portfolio focused investment in companies that drive Next Generation Connectivity.

By integrating the investment team's proprietary ESG analysis (the NB ESG Quotient) into the overall thematic and company view, there was a direct link between their analysis of material ESG characteristics and portfolio construction activities across their strategy.

Pursuant to this, the Sub-Investment Manager engaged with companies with a poor third-party or NB ESG Quotient rating with the aim to seek improvement in the underlying environmental and social characteristics (which make up the NB ESG Quotient) over time.

II. Engagement:

The Sub-Investment Manager engaged with companies through a robust ESG engagement program. They sought to prioritise constructive engagements and sought to engage on topics (including ESG topics) they determined to be financially material for the relevant company. The Sub-Investment Manager viewed this engagement with companies, as an important part of its investment process. Progress on engagement was tracked centrally in the Sub-Investment Manager's engagement tracker.

III. ESG sectoral exclusion policies:

To ensure that the environmental and social characteristics promoted by the Portfolio were attained, the Portfolio applied the ESG exclusion policies referenced above, which placed limitations on the investable universe.

## How did this financial product perform compared to the reference benchmark?

N/A – The Portfolio's benchmark has not been designated as a reference benchmark. Therefore, it is not consistent with the environmental or social characteristics promoted by the Portfolio.

● ***How does the reference benchmark differ from a broad market index?***

N/A

● ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***

N/A

● ***How did this financial product perform compared with the reference benchmark?***

N/A

● ***How did this financial product perform compared with the broad market index?***

N/A

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

**Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852**

**Product name:** Neuberger Berman Global Equity Megatrends Fund (the “Portfolio”)  
**Legal entity identifier:** 549300NOKC884YXB6S20

## Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

### Did this financial product have a sustainable investment objective?

**Yes**

It made **sustainable investments with an environmental objective:** \_\_\_%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective:** \_\_\_%

**No**

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of \_\_\_% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

### To what extent were the environmental and/or social characteristics promoted by this financial product met?

The following environmental and social characteristics were promoted by the Portfolio:

- **Environmental Characteristics:** air quality; biodiversity & land use; energy management; environmental risk exposure; fuel economy; greenhouse gas (“GHG”) emissions; opportunities in clean technologies; toxic emissions & waste; water management; packaging lifecycle management; materials sourcing; and product lifecycle management.
- **Social Characteristics:** access to finance; access to healthcare; community relations; data privacy & security; employee incentives & risk taking; health & nutrition; health & safety; human capital development; labour management; product safety & integrity; supply chain

labour standards; workforce diversity & inclusion; pricing transparency; and responsible marketing.

Performance in relation to these environmental and social characteristics was measured through the NB ESG Quotient, and are reported, in aggregate, below.

While the sustainable investments held by the Portfolio had either a social or an environmental objective, such sustainable investments do not qualify as environmentally sustainable investments (or Taxonomy aligned investments) as defined under the EU Taxonomy

### ● **How did the sustainability indicators perform?**

As part of the investment process, the Sub-Investment Manager considered a variety of sustainability indicators to measure the environmental and/or social characteristics promoted by the Portfolio. These sustainability indicators are listed below:

#### 1. The NB ESG Quotient:

Third-party data and the proprietary Neuberger Berman ESG rating system (the “**NB ESG Quotient**”) were used to measure the environmental and social characteristics promoted by the Portfolio. The NB ESG Quotient is built around the concept of sector specific ESG risk and opportunity, and produced an overall ESG rating for companies by assessing them against certain ESG metrics.

Foundational to the NB ESG Quotient is the proprietary Neuberger Berman (“**NB**”) materiality matrix, which focuses on the ESG characteristics that were considered to be the most likely to be the material drivers of ESG risk and opportunity for each sector. Each sector criteria is constructed using third-party and internally derived ESG data and supplemented with internal qualitative analysis, leveraging the Portfolio’s analyst team’s significant sector expertise. The NB materiality matrix enabled the Sub-Investment Manager to derive the NB ESG Quotient rating, to compare sectors and companies relative to their environmental and social characteristics.

The NB ESG Quotient assigned weightings to environmental, social and governance characteristics for each sector to derive the NB ESG Quotient rating for companies. Pursuant to this, the Sub-Investment Manager engaged with companies with a poor NB ESG Quotient or third-party rating with the aim to seek improvement in the underlying environmental and social characteristics (which made up the NB ESG Quotient) over time.

<b>31 December 2022</b>	<b>Rating</b>	<b>Combined coverage</b>
NB ESG Quotient	ES: C G: 2.5	92%
Third-party Data	5.4	

With regards to the NB ESG Quotient ratings, for environmental and social (ES) ratings, A – D quartiles are used, where A is the highest rating (top quartile) and D is the lowest rating (bottom quartile). For governance (G) ratings, 1 – 4 quartiles are used where 1 is the highest rating and 4 is the lowest rating. This Portfolio does not have a minimum NB ESG Quotient rating. The average NB ESG Quotient rating is a weighted average and is not a rating of the Portfolio strategy itself.

Third-party data was also used to measure the environmental and social characteristics promoted by the Portfolio. The third-party data ratings range from 0-10, with 0 being the lowest rating and 10 being the highest rating.

## 2. Climate Value-at-Risk:

Over the reference period, Climate Value-at-Risk (“**CVaR**”) measured the exposure to transition and physical climate risks. CVaR is a scenario analysis tool evaluating economic risks under various degree scenarios (i.e., the amount of warming targeted) and potential regulatory environments in varying countries.

CVaR is a type of scenario analysis which is defined as the present value of aggregated future policy risk costs, technology opportunity profits, and extreme weather event costs and profits, expressed as a percentage of a security or portfolio’s market value according to the warming scenario targeted.

By calculating the financial risks from climate change per security and per scenario, CVaR provides a framework that helps quantify and understand these risks. The CVaR metric provides insight into the climate-stressed valuation of assets based on specific degree scenarios, providing an assessment on how much a security may stand to lose or gain from the impact of climate change.

As at 31 December 2022, CVaR projected that a warming climate scenario could result in a depreciation of 27.91% in the valuation of assets under assessment.

This analysis is intended as a broad overview of the investment team’s style and investment process.

On a holistic basis, the results were evaluated by the Sub-Investment Manager’s portfolio managers and analysts. The scenario analysis served as a starting point for further bottom-up analysis and identifying potential climate-related risks to address through company engagement.

Due to data limitations, CVaR was not applied across all companies held by the Portfolio and was instead limited to the companies for which the Sub-Investment Manager had sufficient and reliable data. The Portfolio had a CVaR coverage of 94%.

The analysis from CVaR is reviewed at least once a year.

## 3. ESG exclusion policies:

To ensure that the environmental or social characteristics promoted by the Portfolio were attained, the Portfolio did not invest in companies whose activities breached, or were not consistent with, the Neuberger Berman Controversial Weapons Policy and the Neuberger Berman Thermal Coal Involvement Policy. In addition to the application of the Neuberger Berman Thermal Coal Involvement Policy, the Sub-Investment Manager prohibited the initiation of new investment positions in companies that (i) derived more than 25% of their revenue from thermal coal mining; or (ii) were expanding new thermal coal power generation. Furthermore, from 6 April 2022 onwards, investments held by the Portfolio did not invest in companies whose activities had been identified as breaching the Neuberger Berman Global Standards Policy which excluded identified violators of (i) the United Nations Global Compact Principles (“**UNGC Principles**”), (ii) the OECD Guidelines for Multinational Enterprises (“**OECD Guidelines**”), (iii) the United Nations Guiding Principles on Business and Human Rights (“**UNGPs**”) and (iv) the International Labour Standards (“**ILO Standards**”).

When applying ESG exclusions to the Portfolio, the Sub-Investment Manager used third-party data to identify companies in breach of the ESG exclusions listed above. Where possible, the Sub-Investment Manager sought to overlay this third-party data with qualitative expertise from their research analysts to establish a current and

holistic picture of the company. The Sub-Investment Manager discussed and debated the differences between the violators identified by the third-party data and those identified as a result of their research, which drew upon data from the NB ESG Quotient and direct engagements with the company.

● ***...and compared to previous periods?***

N/A – this is the first reference period.

● ***What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?***

N/A – the Portfolio did not commit to holding sustainable investments.

● ***How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?***

N/A – the Portfolio did not commit to holding sustainable investments

— — — ***How were the indicators for adverse impacts on sustainability factors taken into account?***

N/A

— — — ***Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

The Portfolio did not commit to holding sustainable investments, however, from 6 April 2022 onwards, the Sub-Investment Manager did not invest in companies whose activities had been identified as breaching the OECD Guidelines, ILO Standards, UNGC Principles and UNGPs, captured through the Neuberger Berman Global Standards Policy.

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

*The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.*

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

N/A - The Portfolio did not commit to holding Taxonomy-aligned investments.

### **How did this financial product consider principal adverse impacts on sustainability factors?**

A selection of the principal adverse impact indicators were considered directly (e.g. through the ESG exclusion policies listed above) and/or indirectly (e.g. as part of the Sub-Investment Manager’s assessment of issuers) throughout the 2022 reference period.

From 28 November 2022 onwards, the Sub-Investment Manager considered the following principal adverse impacts with respect to the Portfolio, namely: GHG emissions, carbon footprint, GHG intensity, fossil fuel exposure, board gender diversity, UNGC Principles & OECD violations and controversial weapons (the “**Product Level PAIs**”).

Consideration of the Product Level PAIs was limited by the availability (in the Sub-Investment Manager’s subjective view) of adequate, reliable and verifiable data coverage. The Sub-Investment Manager utilised third-party data and proxy data along with internal research to consider the Product Level PAIs.

The Product Level PAIs that were taken into consideration were subject to there being adequate, reliable and verifiable data coverage for such indicators. Where such data is not available the relevant Product Level PAI will not be considered until such time as the data becomes available. The Sub-Investment Manager will keep the list of Product Level PAIs they consider under active review, as and when data availability and quality improves.

Consideration of the Product Level PAIs by the Sub-Investment Manager was through a combination of:

- Monitoring the Portfolio, in particular where it fell below the quantitative and qualitative tolerance thresholds set for each Product Level PAI by the Sub-Investment Manager;
- Stewardship and/or setting engagement objectives where the Portfolio fell below the quantitative and qualitative tolerance thresholds set for a Product Level PAI; and
- Application of the ESG exclusion policies referenced above, which included consideration of several of the Product Level PAIs.

## What were the top investments of this financial product?

The Sub-Investment Manager has used the EU statistical classification of economic activities (“NACE”) economic sector breakdown to identify the economic sectors of the Portfolio’s top 15 investments. The following data is as at 31 December 2022.

Largest investments	Sector	% Assets	Country
ELEMENT FLEET MANAGEMENT CORP	K - Financial and insurance activities	6.2%	Canada
ALIBABA GROUP HOLDING ADR	G - Wholesale and retail trade; repair of motor vehicles and motorcycles	6.1%	China
REPRESEN			
PAYA HOLDINGS INC CLASS A	K - Financial and insurance activities	5.9%	United States
CRITEO ADR	M - Professional, scientific and technical activities	5.6%	France
REPRESENTING SA			
PETS AT HOME PLC	G - Wholesale and retail trade; repair of motor vehicles and motorcycles	5.6%	United Kingdom
PERRIGO PLC	S - Other services activities	5.2%	United States
STERICYCLE INC	E - Water supply; sewerage; waste management and remediation activities	4.9%	United States
SCHOLASTIC CORP	J - Information and communication	4.9%	United States
DELTA AIR LINES INC	H - Transporting and storage	4.8%	United States
EXPEDIA GROUP INC	N - Administrative and support service activities	4.7%	United States
AMDOCS LTD	J - Information and communication	4.6%	United States
CORNING INC	C - Manufacturing	4.6%	United States
MODIVCARE INC	H - Transporting and storage	4.4%	United States
VISTRA CORP	D - Electricity, gas, steam and air conditioning supply	4.1%	United States
ALPHABET INC CLASS A	J - Information and communication	4.1%	United States

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: 1 January 2022 - 31 December 2022

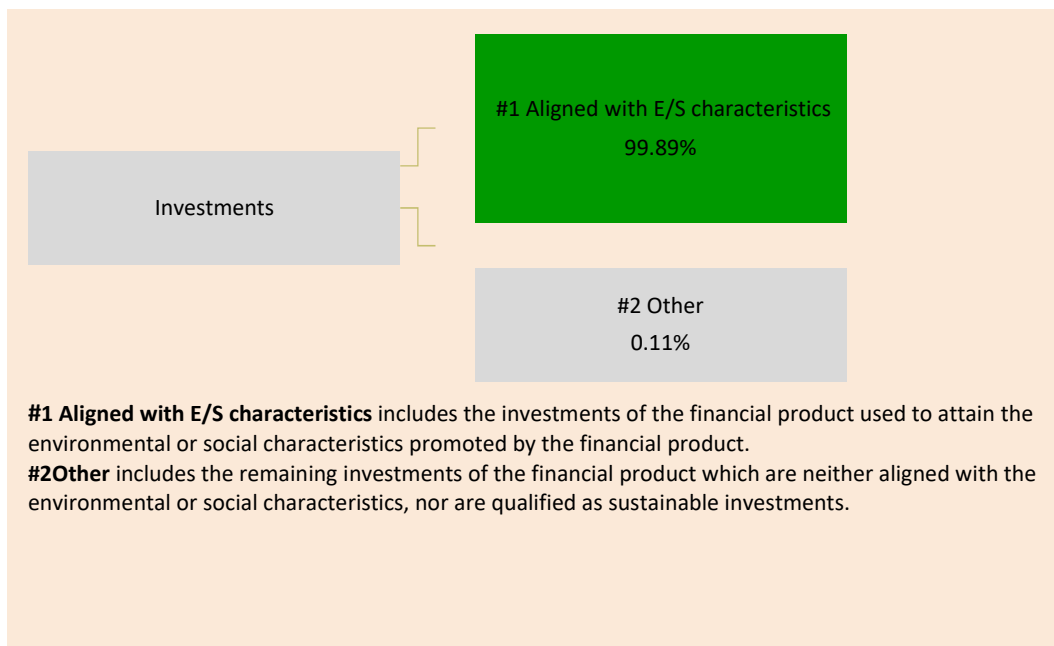

## What was the proportion of sustainability-related investments?

### ● What was the asset allocation?

The Sub-Investment Manager calculated the proportion of investments aligned with the environmental and/or social characteristics promoted by the Portfolio by reference to the proportion of companies in the Portfolio: i) that held either an NB ESG Quotient rating or a third-party equivalent ESG rating that was used as part of the portfolio construction and investment management process of the Portfolio; and/or ii) with whom the Sub-Investment Manager had engaged directly. This calculation was based on a mark-to-market assessment of the Portfolio and may rely on incomplete or inaccurate company or third-party data. For the 2022 reference period only, this calculation is based on the Portfolio’s holdings as at 31 December 2022, being the only quarter end in the reference period that followed the publication of the Portfolio’s SFDR Annex detailing its planned asset allocation. For all subsequent reference periods, this calculation will be based on the average of the four quarter ends.

**Asset allocation** describes the share of investments in specific assets.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

● **In which economic sectors were the investments made?**

Data as at 31 December 2022	
Economic Sector – NACE	% Assets
C - Manufacturing	11.64%
D - Electricity, gas, steam and air conditioning supply	4.10%
E - Water supply; sewerage; waste management and remediation activities	4.93%
F - Construction	2.91%
G - Wholesale and retail trade; repair of motor vehicles and motorcycles	11.70%
H - Transporting and storage	9.23%
J - Information and communication	20.21%
K - Financial and insurance activities	15.18%
M - Professional, scientific, and technical activities	7.42%
N - Administrative and support service activities	7.51%
S - Other services activities	5.16%

## To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

- Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?

Yes:

In fossil gas  In nuclear energy

No

*The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

The analysis and disclosure requirements introduced by the EU Taxonomy are very detailed and compliance with them requires the availability of multiple, specific data points in respect of each investment which the Portfolio made. The Sub-Investment Manager cannot confirm that the Portfolio invested in any investments that qualified as environmentally sustainable for the purposes of the EU Taxonomy. Disclosures and reporting on Taxonomy alignment will develop as the EU framework evolves and data is made available by companies. The Sub-Investment Manager will keep the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy under active review as data availability and quality improves.

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

● **What was the share of investments made in transitional and enabling activities?**

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments

**What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?**

N/A – the Portfolio did not commit to holding sustainable investments

**What was the share of socially sustainable investments?**

N/A – the Portfolio did not commit to holding sustainable investments

**What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?**

“Other” included the remaining investments of the Portfolio (including but not limited to any derivatives or any security collateralized by a pool of similar assets or receivables listed in the Supplement for the Portfolio) which were neither aligned with the environmental or social characteristics, nor qualified as sustainable investments.

The “Other” section in the Portfolio was held for a number of reasons that the Sub-Investment Manager felt was beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover.

As noted above, the Portfolio was invested in compliance with ESG exclusion policies, on a continuous basis. This ensured that investments made by the Portfolio sought to align with international environmental and social safeguards such as the UNGC Principles, UNGPs, OECD Guidelines and ILO Standards.

The Sub-Investment Manager believes that these policies prevented investment in companies that most egregiously violated environmental and/or social minimum standards and ensured that the Portfolio could successfully promote its environmental and social characteristics.

The above steps ensured that robust environmental and social safeguards were in place

## What actions have been taken to meet the environmental and/or social characteristics during the reference period?

ESG characteristics are considered at three different levels:

### I. Integrating proprietary ESG analysis:

The NB ESG Quotient ratings were generated for company holdings in the Portfolio. The third-party or NB ESG Quotient rating for companies was utilised to help to better identify risks and opportunities in the overall assessment of a company, noting that the Portfolio focused investment in companies that drive Next Generation Connectivity.

By integrating the investment team's proprietary ESG analysis (the NB ESG Quotient) into the overall thematic and company view, there was a direct link between their analysis of material ESG characteristics and portfolio construction activities across their strategy.

Pursuant to this, the Sub-Investment Manager engaged with companies with a poor third-party or NB ESG Quotient rating with the aim to seek improvement in the underlying environmental and social characteristics (which make up the NB ESG Quotient).

### II. Engagement:

The Sub-Investment Manager engaged with companies through a robust ESG engagement program. They sought to prioritise constructive engagements and sought to engage on topics (including ESG topics) they determined to be financially material for the relevant company. The Sub-Investment Manager viewed this engagement with companies, as an important part of its investment process. Progress on engagement was tracked centrally in the Sub-Investment Manager's engagement tracker..

### III. ESG sectoral exclusion policies:

To ensure that the environmental and social characteristics promoted by the Portfolio were attained, the Portfolio applied the ESG exclusion policies referenced above, which placed limitations on the investable universe.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

## How did this financial product perform compared to the reference benchmark?

N/A – The Portfolio's benchmark has not been designated as a reference benchmark. Therefore, it is not consistent with the environmental or social characteristics promoted by the Portfolio.

### ● *How does the reference benchmark differ from a broad market index?*

N/A

### ● *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?*

N/A

- ***How did this financial product perform compared with the reference benchmark?***

N/A

- ***How did this financial product perform compared with the broad market index?***

N/A

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Neuberger Berman Global Sustainable Equity Fund (the “Portfolio”)

Legal entity identifier: 549300XRT8BVEN8P0A74

## Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?	
<input checked="" type="radio"/> <input checked="" type="radio"/> <input type="checkbox"/> <b>Yes</b>	<input checked="" type="radio"/> <input type="radio"/> <input checked="" type="checkbox"/> <b>No</b>
<input type="checkbox"/> It made <b>sustainable investments with an environmental objective: ___%</b> <ul style="list-style-type: none"> <li><input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy</li> <li><input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</li> </ul>	<input checked="" type="checkbox"/> It <b>promoted Environmental/Social (E/S) characteristics</b> and while it did not have as its objective a sustainable investment, it had a proportion of 61.32%* of sustainable investments <ul style="list-style-type: none"> <li><input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy</li> <li><input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</li> <li><input checked="" type="checkbox"/> with a social objective</li> </ul>
<input type="checkbox"/> It made <b>sustainable investments with a social objective: ___%</b>	<input type="checkbox"/> It promoted E/S characteristics, but <b>did not make any sustainable investments</b>

\*Please refer to the "What was the proportion of sustainability-related investments?" question below for further detail in respect of the minimum proportion of sustainable investments which promoted the environmental or social characteristics.

Following guidance from the European Commission on Article 8 Portfolio and Article 9 Portfolio categorisations under Regulation (EU) 2019/2088 ("SFDR"), the Portfolio re-categorised as an Article 8 Portfolio from an Article 9 Portfolio on 19 August 2022. This periodic disclosure has therefore been prepared on the basis of the requirements applicable to an Article 8 Portfolio under SFDR.

## To what extent were the environmental and/or social characteristics promoted by this financial product met?

The following environmental and social characteristics were promoted by the Portfolio:

- **Environmental Characteristics:** air quality; biodiversity & land use; energy management; environmental risk exposure; fuel economy; greenhouse gas (“GHG”) emissions; opportunities in clean technologies; toxic emissions & waste; water management; packaging lifecycle management; materials sourcing; and product lifecycle management.

In aiming to align the Portfolio with a net-zero goal, the Manager will promote the reduction of the Portfolio’s carbon footprint across scope 1, 2, and material scope 3 GHG emissions<sup>1</sup>.

- **Social Characteristics:** access to finance; access to healthcare; community relations; data privacy & security; employee incentives & risk taking; health & nutrition; health & safety; human capital development; labour management; product safety & integrity; supply chain labour standards; workforce diversity & inclusion; pricing transparency; and responsible marketing.

Performance in relation to these environmental and social characteristics was measured through the NB ESG Quotient, and are reported, in aggregate, below.

While the sustainable investments held by the Portfolio had either a social or an environmental objective, such sustainable investments do not qualify as environmentally sustainable investments (or Taxonomy aligned investments) as defined under the EU Taxonomy.

### How did the sustainability indicators perform?

As part of the investment process, the Manager considered a variety of sustainability indicators to measure the environmental and/or social characteristics promoted by the Portfolio. These sustainability indicators are listed below:

1. The NB ESG Quotient:

Third-party data and the proprietary Neuberger Berman ESG rating system (the “**NB ESG Quotient**”) were used to measure the environmental and social characteristics promoted by the Portfolio. The NB ESG Quotient is built around the concept of sector specific ESG risk and opportunity, and produced an overall ESG rating for companies by assessing them against certain ESG metrics.

Foundational to the NB ESG Quotient is the proprietary Neuberger Berman (“**NB**”) materiality matrix, which focuses on the ESG characteristics that were considered to be the most likely to be the material drivers of ESG risk and opportunity for each sector. Each sector criteria is constructed using third-party and internally derived ESG data and supplemented with internal qualitative analysis, leveraging the Portfolio’s analyst team’s significant sector expertise. The NB materiality matrix enabled the Manager to derive the NB ESG Quotient rating, to compare sectors and companies relative to their environmental and social characteristics.

The NB ESG Quotient assigned weightings to environmental, social and governance characteristics for each sector to derive the NB ESG Quotient rating for companies. Pursuant to this, Manager engaged with companies with a poor NB ESG Quotient or third-party rating with the aim to seek improvement in the underlying environmental and social characteristics (which made up the NB ESG Quotient) over time.

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

<sup>1</sup> Scope 1 emissions: are direct emissions from a company’s owned or controlled sources (such as emissions created directly by the company’s business processes or from vehicles owned by the company). Scope 2 emissions: are indirect emissions from the generation of electricity, steam, heating and cooling consumed by the company. Scope 3 emissions: are all other indirect emissions that occur in a company’s value chain (such as emissions from products or services consumed by the company, disposal of its waste, employee commuting, distribution and transport of its products or its investments).

31 December 2022	Rating	Combined coverage
NB ESG Quotient	ES: B G: 2.24	100%
Third-party Data	7.23	

With regards to the NB ESG Quotient rating, for environmental and social (ES) ratings, A – D quartiles are used, where A is the highest rating (top quartile), and D is the lowest rating (bottom quartile). For governance (G) ratings, 1 – 4 quartiles are used where 1 is the highest rating, and 4 is the lowest rating. This Portfolio does not have a minimum NB ESG Quotient rating. The average NB ESG Quotient rating is a weighted average and is not a rating of the Portfolio strategy itself.

Third-party data was also used to measure the environmental and social characteristics promoted by the Portfolio. The third-party data ratings range from 0-10, with 0 being the lowest rating and 10 being the highest rating.

## 2. Climate Value-at-Risk:

Over the reference period, Climate Value-at-Risk (“**CVaR**”) measured the exposure to transition and physical climate risks. CVaR is a scenario analysis tool evaluating economic risks under various degree scenarios (i.e., the amount of warming targeted) and potential regulatory environments in varying countries.

CVaR is a type of scenario analysis which is defined as the present value of aggregated future policy risk costs, technology opportunity profits, and extreme weather event costs and profits, expressed as a percentage of a security or portfolio’s market value according to the warming scenario targeted.

By calculating the financial risks from climate change per security and per scenario, CVaR provides a framework that helps quantify and understand these risks. The CVaR metric provides insight into the climate-stressed valuation of assets based on specific degree scenarios, providing an assessment on how much a security may stand to lose or gain from the impact of climate change.

As at 31 December 2022, CVaR projected that a warming climate scenario could result in a depreciation of 5.0% in the valuation of assets under assessment.

This analysis is intended as a broad overview of the investment team’s style and investment process.

On a holistic basis, the results were evaluated by the Manager’s portfolio managers and analysts. The scenario analysis served as a starting point for further bottom-up analysis and identifying potential climate-related risks to address through company engagement.

Due to data limitations, CVaR was not applied across all companies held by the Portfolio and was instead limited to the companies for which the Manager had sufficient and reliable data. The Portfolio had a CVaR coverage of 99%.

The analysis from CVaR is reviewed at least once a year.

## 3. ESG exclusion policies:

To ensure that the environmental or social characteristics promoted by the Portfolio were attained, the Portfolio did not invest in companies whose activities breached, or were not consistent with, the Neuberger Berman Controversial Weapons Policy; the Neuberger Berman Thermal Coal Involvement Policy; the Neuberger Berman Sustainable Exclusion Policy; and the Neuberger Berman Enhanced Sustainable Exclusion Policy. In addition to the application of the Neuberger Berman Thermal Coal Involvement Policy, the Manager prohibited the initiation of new investment positions in companies that (i) derived more than 25% of their revenue from thermal coal mining; or (ii) were expanding new thermal coal power generation.

Furthermore, from 6 April 2022 onwards, investments held by the Portfolio did not invest in companies whose activities had been identified as breaching the Neuberger Berman Global Standards Policy which excluded identified violators of (i) the United Nations Global Compact Principles (“**UNGC Principles**”), (ii) the OECD Guidelines for Multinational Enterprises (“**OECD Guidelines**”), (iii) the United Nations Guiding Principles on Business and Human Rights (“**UNGPs**”) and (iv) the International Labour Standards (“**ILO Standards**”). From 19 August 2022 onwards, the Portfolio did not invest in companies that derived more than 5% of their revenue from fur and specialty leather manufacturers, or military contractors. The Portfolio also excluded companies from the investment universe that were involved in controversial activities and behaviour, such as gambling, alcohol and nuclear power. In addition, the Portfolio excluded companies involved in dictatorial regimes/ high ESG controversies; companies that exhibited very poor behaviours in terms of environmental pollution, human rights’ issues or governance controversies; and companies that were not transparent on ESG or score very poorly on ESG metrics overall.

When applying ESG exclusions to the Portfolio, the Manager used third-party data to identify companies in breach of the ESG exclusions listed above. Where possible, the Manager sought to overlay this third-party data with qualitative expertise from their research analysts to establish a current and holistic picture of the company. The Manager discussed and debated the differences between the violators identified by the third-party data and those identified as a result of their research, which drew upon data from the NB ESG Quotient and direct engagements with the company.

● ***...and compared to previous periods?***

N/A – this is the first reference period.

● ***What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?***

While the Portfolio promoted environmental and social characteristics, this Portfolio did not have a sustainable investment objective. However, the Portfolio held sustainable investments which promoted the environmental & social characteristics listed above.

The consideration of investments made by the Portfolio as sustainable investments was determined by reference to NB’s sustainable investment framework. This framework included an assessment as to (i) whether the investment contributes to an environmental and/or social objective; (ii) whether the investment causes significant harm to those objectives as described below; and (iii) an assessment of a company’s overall good governance rating to determine whether the company passes a good governance assessment.

Under this sustainable investment framework, the Manager utilised multiple datapoints that measured the alignment of a company’s economic activity with environmental or social characteristics.

The Manager screened companies for controversies, significant harm and violations of minimum safeguards. If the companies passed this screen, the Manager then proceeded to measure the companies’ environmental or social economic contribution.

The Manager measured this in two ways:

- Revenue alignment to the EU taxonomy (if any); and
- Revenue alignment to the Sustainable Development Goals ("SDGs").

Consideration of revenue alignment with the SDGs was limited by the availability of adequate, reliable and verifiable data coverage. To mitigate instances of poor data coverage, the Sub-Investment Manager utilised third-party data and proxy data along with internal research and qualitative analysis as part of NB's sustainable investment framework.

***How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?***

As part of the Manager's sustainable investment framework, investments that cause significant harm to environmental or social objectives were excluded. To determine whether an investment caused significant harm, the Manager considered significant harm with reference to certain principal adverse impact indicators and violations of minimum safeguards.

The Manager considered the following principal adverse impacts indicators when determining whether the sustainable investments that the Portfolio made did not cause significant harm to any environmental or social sustainable investment objective: GHG emissions; carbon footprint; GHG intensity of investee companies; exposure to companies active in the fossil fuel sector; share of non-renewable energy consumption and production; energy consumption intensity per high impact climate sector; activities negatively affecting biodiversity-sensitive areas; emissions to water; hazardous waste and radioactive waste ratio; violations of UN Global Compact principles and OECD Guidelines for Multinational Enterprises; lack of processes and compliance mechanisms to monitor compliance with UN Global Compact Principles and OECD Guidelines for Multinational Enterprises; unadjusted gender pay gap, board gender diversity; and exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons) (the "PAIs").

Consideration of the PAIs was limited by the availability (in the Manager's subjective view) of adequate, reliable and verifiable data coverage. The Manager utilised third-party data and proxy data along with internal research to consider the PAIs.

From 6 April 2022 onwards, the Manager also considered violations of minimum safeguards. The Manager did not invest in companies whose activities had been identified as breaching the OECD Guidelines, UNGC Principles, ILO Standards and UNGPs, captured through the Neuberger Berman Global Standards Policy.

The combination of all of these factors generated a quantitative validation for "sustainability" which was used to ensure the sustainable investments that the Portfolio made, did not cause significant harm to any environmental or social sustainable objective.

***How were the indicators for adverse impacts on sustainability factors taken into account?***

Consideration of the PAIs by the Manager, when determining whether the sustainable investments that the Portfolio intended to make did not cause significant harm to any environmental or social sustainable investment objective of the Portfolio's sustainable investments, was through a combination of:

- Monitoring companies which fell below the quantitative and qualitative tolerance thresholds set for each PAI by the Manager;
- Stewardship and/or setting engagement objectives with companies which fell below the quantitative and qualitative tolerance thresholds set for a PAI; and
- Application of the ESG exclusion policies referenced above, which included consideration of several of the PAIs.

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

From 6 April 2022 onwards, the Manager did not invest in companies whose activities had been identified as breaching the OECD Guidelines, UNGC Principles, ILO Standards and UNGPs, captured through the Neuberger Berman Global Standards Policy.

*The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.*

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

N/A – The Portfolio did not commit to holding Taxonomy-aligned investments.

## How did this financial product consider principal adverse impacts on sustainability factors?

A selection of the principal adverse impact indicators were considered directly (e.g. through the ESG exclusion policies listed above) and/or indirectly (e.g. as part of the Manager’s assessment of issuers) throughout the 2022 reference period.

The Manager considered PAIs with respect to the Portfolio in two ways:

1. All PAIs were considered when determining whether sustainable investments that the Portfolio made did not cause significant harm to any environmental or social sustainable investment objective as explained above.
2. From 28 November 2022 onwards, the Manager considered the following principal adverse impacts on sustainability factors with respect to those investments within the Portfolio which promoted environmental or social characteristics, namely: GHG emissions, carbon footprint, GHG intensity, fossil fuel exposure, board gender diversity, UNGC Principles & OECD Guidelines violations and controversial weapons (the “**Product Level PAIs**”).

Consideration of the Product Level PAIs was limited by the availability (in the Manager's subjective view) of adequate, reliable and verifiable data coverage,. The Manager utilised third-party data and proxy data along with internal research to consider the Product Level PAIs.

Consideration of the Product Level PAIs by the Manager was through a combination of:

- Monitoring the Portfolio, in particular where it fell below the quantitative and qualitative tolerance thresholds set for each Product Level PAI by the Manager;
- Stewardship and/or setting engagement objectives where the Portfolio fell below the quantitative and qualitative tolerance thresholds set for a Product Level PAI; and
- Application of the ESG exclusion policies referenced above, which included consideration of several of the Product Level PAIs.

### What were the top investments of this financial product?

The Manager has used the EU statistical classification of economic activities (“NACE”) economic sector breakdown to identify the economic sectors of the Portfolio’s top 15 investments. The following data is as at 31 December 2022.

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: 1 January 2022 – 31 December 2022

Largest investments	Sector	% Assets	Country
MICROSOFT CORP	J - Information and communication	5.9%	United States
ALPHABET INC CLASS A	J - Information and communication	5.4%	United States
AMAZON COM INC	G - Wholesale and retail trade; repair of motor vehicles and motorcycles	4.5%	United States
UNITEDHEALTH GROUP INC	K - Financial and insurance activities	4.4%	United States
THERMO FISHER SCIENTIFIC INC	C - Manufacturing	3.9%	United States
S&P GLOBAL INC	J - Information and communication	3.7%	United States
BAKKAFROST	A - Agriculture, forestry and fishing	3.3%	Faroe Islands
NIKE INC CLASS B	C - Manufacturing	3.2%	United States
3I GROUP PLC	K - Financial and insurance activities	3.2%	United Kingdom
NETFLIX INC	J - Information and communication	2.8%	United States
ALFEN NV	C - Manufacturing	2.8%	Netherlands
ELEVANCE HEALTH INC	K - Financial and insurance activities	2.7%	United States
BROWN & BROWN INC	K - Financial and insurance activities	2.7%	United States
MOODYS CORP	N - Administrative and support service activities	2.7%	United States
NASDAQ INC	K - Financial and insurance activities	2.7%	United States

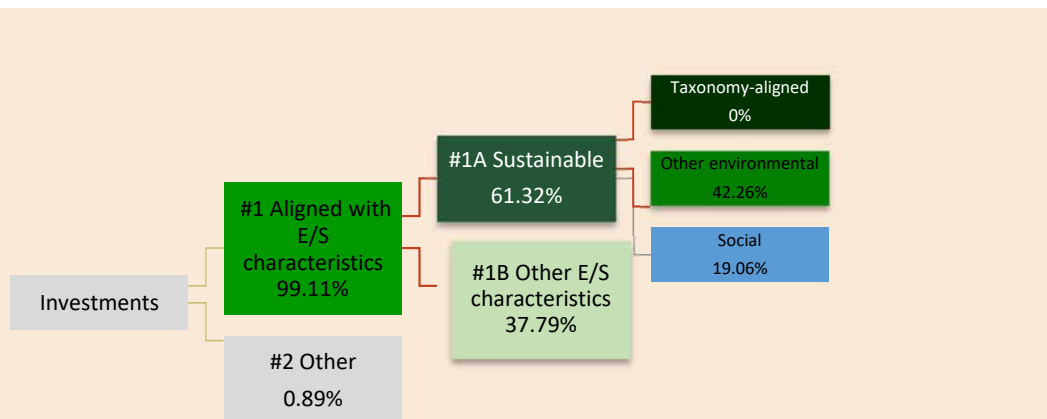

## What was the proportion of sustainability-related investments?

### Asset allocation

describes the share of investments in specific assets.

### What was the asset allocation?

The Manager calculated the proportion of investments aligned with the environmental and/or social characteristics promoted by the Portfolio by reference to the proportion of companies in the Portfolio: i) that held either an NB ESG Quotient rating or a third-party equivalent ESG rating that was used as part of the portfolio construction and investment management process of the Portfolio; and/or ii) with whom the Manager had engaged directly. This calculation was based on a mark-to-market assessment of the Portfolio and may rely on incomplete or inaccurate company or third-party data. For the 2022 reference period only, this calculation is based on the Portfolio's holdings as at 31 December 2022, being the only quarter end in the reference period that followed the publication of the Portfolio's SFDR Annex detailing its planned asset allocation. For all subsequent reference periods, this calculation will be based on the average of the four quarter ends.

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.

- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

● **In which economic sectors were the investments made?**

Data as at 31 December 2022	
Economic Sector – NACE	% Assets
A - Agriculture, forestry and fishing	3.31%
C - Manufacturing	31.55%
G - Wholesale and retail trade; repair of motor vehicles and motorcycles	8.71%
J - Information and communication	27.70%
K - Financial and insurance activities	23.43%
N - Administrative and support service activities	5.30%

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

- **Transitional activities are** activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

**To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?**

The analysis and disclosure requirements introduced by the EU Taxonomy are very detailed and compliance with them requires the availability of multiple, specific data points in respect of each investment which the Portfolio made. The Manager cannot confirm that the Portfolio invested in any investments that qualified as environmentally sustainable for the purposes of the EU Taxonomy. Disclosures and reporting on Taxonomy alignment will develop as the EU framework evolves and data is made available by companies. The Manager will keep the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy under active review as data availability and quality improves.

● **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>2</sup>?**

- Yes:
  - In fossil gas
  - In nuclear energy
- No

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

<sup>2</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

- ***What was the share of investments made in transitional and enabling activities?***

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments.

- ***How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?***

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities are** activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

- **What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?**

42.26%

While the Portfolio invested in sustainable investments with an environmental objective, such sustainable investments did not commit to being Taxonomy-aligned investments.

### What was the share of socially sustainable investments?

19.06%

### What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

“Other” included the remaining investments of the Portfolio (including but not limited to any derivatives or any security collateralized by a pool of similar assets or receivables listed in the Supplement for the Portfolio) which were neither aligned with the environmental or social characteristics, nor qualified as sustainable investments.

The “Other” section in the Portfolio was held for a number of reasons that the Manager felt was beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover.

As noted above, the Portfolio was invested in compliance with ESG exclusion policies, on a continuous basis. This ensured that investments made by the Portfolio sought to align with international environmental and social safeguards such as the UNGC Principles, UNGPs, OECD Guidelines and ILO Standards.

The Manager believes that these policies prevented investment in companies that most egregiously violated environmental and/or social minimum standards and ensured that the Portfolio could successfully promote its environmental and social characteristics.

The above steps ensured that robust environmental and social safeguards were in place.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

### What actions have been taken to meet the environmental and/or social characteristics during the reference period?

ESG characteristics are considered at three different levels:

- I. Integrating proprietary ESG analysis:

The NB ESG Quotient ratings were generated for company holdings in the Portfolio. The third-party or NB ESG Quotient rating for companies was utilised to help to better identify risks and opportunities in the overall assessment.

By integrating the investment team's proprietary ESG analysis (the NB ESG Quotient) into the overall company view, there was a direct link between their analysis of material ESG characteristics and portfolio construction activities across their strategy.

Pursuant to this, the Manager engaged with companies with a poor third-party or NB ESG Quotient rating with the aim to seek improvement in the underlying environmental and social characteristics (which made up the NB ESG Quotient).

II. Engagement:

The Manager engaged with companies through a robust ESG engagement program. They sought to prioritise constructive engagements and sought to engage on topics (including ESG topics) they determined to be financially material for the relevant company. The Manager viewed this engagement with companies, as an important part of its investment process. Progress on engagement was tracked centrally in the Manager's engagement tracker.

III. ESG sectoral exclusion policies:

To ensure that the environmental and social characteristics promoted by the Portfolio were attained, the Portfolio applied the ESG exclusion policies referenced above, which placed limitations on the investable universe.

**How did this financial product perform compared to the reference benchmark?**

N/A – The Portfolio's benchmark has not been designated as a reference benchmark. Therefore, it is not consistent with the environmental or social characteristics promoted by the Portfolio.

- ***How does the reference benchmark differ from a broad market index?***  
N/A
- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***  
N/A
- ***How did this financial product perform compared with the reference benchmark?***  
N/A
- ***How did this financial product perform compared with the broad market index?***  
N/A

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

---

**Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852**

**Product name:** Neuberger Berman European Sustainable Equity Fund (the “Portfolio”)

**Legal entity identifier:** 549300K7Y3HBTEX71857

## Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?	
<input checked="" type="radio"/> <input checked="" type="radio"/> <input type="checkbox"/> <b>Yes</b>	<input type="radio"/> <input type="radio"/> <input checked="" type="checkbox"/> <b>No</b>
<input type="checkbox"/> It made <b>sustainable investments with an environmental objective: ___%</b> <ul style="list-style-type: none"> <li><input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy</li> <li><input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</li> </ul> <input type="checkbox"/> It made <b>sustainable investments with a social objective: ___%</b>	<input checked="" type="checkbox"/> It <b>promoted Environmental/Social (E/S) characteristics</b> and while it did not have as its objective a sustainable investment, it had a proportion of 62.58* % of sustainable investments <ul style="list-style-type: none"> <li><input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy</li> <li><input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</li> <li><input checked="" type="checkbox"/> with a social objective</li> </ul> <input type="checkbox"/> It promoted E/S characteristics, but <b>did not make any sustainable investments</b>

\*Please refer to the "What was the proportion of sustainability-related investments?" question below for further detail in respect of the minimum proportion of sustainable investments which promoted the environmental or social characteristics.

Following guidance from the European Commission on Article 8 Portfolio and Article 9 Portfolio categorisations under Regulation (EU) 2019/2088 ("SFDR"), the Portfolio re-categorised as an Article 8 Portfolio from an Article 9 Portfolio on 19 August 2022. This periodic disclosure has therefore been prepared on the basis of the requirements applicable to an Article 8 Portfolio under SFDR.

## To what extent were the environmental and/or social characteristics promoted by this financial product met?

The following environmental and social characteristics were promoted by the Portfolio:

- **Environmental Characteristics:** air quality; biodiversity & land use; energy management; environmental risk exposure; fuel economy; greenhouse gas (“**GHG**”) emissions; opportunities in clean technologies; toxic emissions & waste; water management; packaging lifecycle management; materials sourcing; and product lifecycle management.

In aiming to align the Portfolio with a net-zero goal, the Manager will promote the reduction of the Portfolio’s carbon footprint across scope 1, 2, and material scope 3 GHG emissions<sup>1</sup>.

- **Social Characteristics:** access to finance; access to healthcare; community relations; data privacy & security; employee incentives & risk taking; health & nutrition; health & safety; human capital development; labour management; product safety & integrity; supply chain labour standards; workforce diversity & inclusion; pricing transparency; and responsible marketing.

Performance in relation to these environmental and social characteristics was measured through the NB ESG Quotient, and is reported, in aggregate, below.

While the sustainable investments held by the Portfolio had either a social or an environmental objective, such sustainable investments do not qualify as environmentally sustainable investments (or Taxonomy aligned investments) as defined under the EU Taxonomy.

### Sustainability indicators

measure how the environmental or social characteristics promoted by the financial product are attained.

## How did the sustainability indicators perform?

As part of the investment process, the Manager considered a variety of sustainability indicators to measure the environmental and/or social characteristics promoted by the Portfolio. These sustainability indicators are listed below:

1. The NB ESG Quotient:

Third-party data and the proprietary Neuberger Berman ESG rating system (the “**NB ESG Quotient**”) were used to measure the environmental and social characteristics promoted by the Portfolio. The NB ESG Quotient is built around the concept of sector specific ESG risk and opportunity, and produced an overall ESG rating for companies by assessing them against certain ESG metrics.

Foundational to the NB ESG Quotient is the proprietary Neuberger Berman (“**NB**”) materiality matrix, which focuses on the ESG characteristics that were considered to be the most likely to be the material drivers of ESG risk and opportunity for each sector. Each sector criteria is constructed using third-party and internally derived ESG data and supplemented with internal qualitative analysis, leveraging the Portfolio’s analyst team’s significant sector expertise. The NB materiality matrix enabled the Manager to derive the NB ESG Quotient rating, to compare sectors and companies relative to their environmental and social characteristics.

The NB ESG Quotient assigned weightings to environmental, social and governance characteristics for each sector to derive the NB ESG Quotient rating for companies. Pursuant to this, Manager engaged with companies with a poor NB ESG Quotient or third-party rating with the aim to seek improvement in the underlying environmental and social characteristics (which made up the NB ESG Quotient) over time.

<sup>1</sup> Scope 1 emissions: are direct emissions from a company’s owned or controlled sources (such as emissions created directly by the company’s business processes or from vehicles owned by the company). Scope 2 emissions: are indirect emissions from the generation of electricity, steam, heating and cooling consumed by the company. Scope 3 emissions: are all other indirect emissions that occur in a company’s value chain (such as emissions from products or services consumed by the company, disposal of its waste, employee commuting, distribution and transport of its products or its investments).

31 December 2022	Rating	Combined coverage
NB ESG Quotient	ES: B G: 2.52	100%
Third-party Data	7.92	

With regards to the NB ESG Quotient rating, for environmental and social (ES) ratings, A – D quartiles are used, where A is the highest rating (top quartile), and D is the lowest rating (bottom quartile). For governance (G) ratings, 1 – 4 quartiles are used where 1 is the highest rating, and 4 is the lowest rating. This Portfolio does not have a minimum NB ESG Quotient rating. The average NB ESG Quotient rating is a weighted average and is not a rating of the Portfolio strategy itself.

Third-party data was also used to measure the environmental and social characteristics promoted by the Portfolio. The third-party data ratings range from 0-10, with 0 being the lowest rating and 10 being the highest rating.

## 2. Climate Value-at-Risk:

Over the reference period, Climate Value-at-Risk (“**CVaR**”) measured the exposure to transition and physical climate risks. CVaR is a scenario analysis tool evaluating economic risks under various degree scenarios (i.e., the amount of warming targeted) and potential regulatory environments in varying countries.

CVaR is a type of scenario analysis which is defined as the present value of aggregated future policy risk costs, technology opportunity profits, and extreme weather event costs and profits, expressed as a percentage of a security or portfolio’s market value according to the warming scenario targeted.

By calculating the financial risks from climate change per security and per scenario, CVaR provides a framework that helps quantify and understand these risks. The CVaR metric provides insight into the climate-stressed valuation of assets based on specific degree scenarios, providing an assessment on how much a security may stand to lose or gain from the impact of climate change.

As at 31 December 2022, CVaR projected that a warming climate scenario could result in a depreciation of 6.23% in the valuation of assets under assessment.

This analysis is intended as a broad overview of the investment team’s style and investment process.

On a holistic basis, the results were evaluated by the Manager’s portfolio managers and analysts. The scenario analysis served as a starting point for further bottom-up analysis and identifying potential climate-related risks to address through company engagement.

Due to data limitations, CVaR was not applied across all companies held by the Portfolio and was instead limited to the companies for which the Manager had sufficient and reliable data. The Portfolio had a CVaR coverage of 99%.

The analysis from CVaR is reviewed at least once a year.

## 3. ESG exclusion policies:

To ensure that the environmental or social characteristics promoted by the Portfolio were attained, the Portfolio did not invest in companies whose activities breached, or were not consistent with, the Neuberger Berman Controversial Weapons Policy; the Neuberger Berman Thermal Coal Involvement Policy; the Neuberger Berman Sustainable Exclusion Policy; and the Neuberger Berman Enhanced Sustainable Exclusion Policy. In addition to the application of the Neuberger Berman Thermal Coal Involvement Policy, the Manager prohibited the initiation of new investment

positions in companies that (i) derived more than 25% of their revenue from thermal coal mining; or (ii) were expanding new thermal coal power generation. Furthermore, from 6 April 2022 onwards, investments held by the Portfolio did not invest in companies whose activities had been identified as breaching the Neuberger Berman Global Standards Policy which excluded identified violators of (i) the United Nations Global Compact Principles (“**UNGC Principles**”), (ii) the OECD Guidelines for Multinational Enterprises (“**OECD Guidelines**”), (iii) the United Nations Guiding Principles on Business and Human Rights (“**UNGPs**”) and (iv) the International Labour Standards (“**ILO Standards**”). From 19 August 2022 onwards, the Portfolio did not invest in companies that derived more than 5% of their revenue from fur and specialty leather manufacturers, or military contractors. The Portfolio also excluded companies from the investment universe that were involved in controversial activities and behaviour, such as gambling, alcohol and nuclear power. In addition, the Portfolio excluded companies involved in dictatorial regimes/ high ESG controversies; companies that exhibited very poor behaviours in terms of environmental pollution; human rights’ issues or governance controversies; and companies that were not transparent on ESG or score very poorly on ESG metrics overall.

When applying ESG exclusions to the Portfolio, the Manager used third-party data to identify companies in breach of the ESG exclusions listed above. Where possible, the Manager sought to overlay this third-party data with qualitative expertise from their research analysts to establish a current and holistic picture of the company. The Manager discussed and debated the differences between the violators identified by the third-party data and those identified as a result of their research, which drew upon data from the NB ESG Quotient and direct engagements with the company.

● **...and compared to previous periods?**

N/A – this is the first reference period.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

While the Portfolio promoted environmental and social characteristics, this Portfolio did not have a sustainable investment objective. However, the Portfolio held sustainable investments which promoted the environmental & social characteristics listed above.

The consideration of investments made by the Portfolio as sustainable investments was determined by reference to NB’s sustainable investment framework. This framework included an assessment as to (i) whether the investment contributes to an environmental and/or social objective; (ii) whether the investment causes significant harm to those objectives as described below; and (iii) an assessment of a company’s overall good governance rating to determine whether the company passes a good governance assessment.

Under this sustainable investment framework, the Manager utilised multiple datapoints that measured the alignment of a company’s economic activity with environmental or social characteristics.

The Manager screened companies for controversies, significant harm and violations of minimum safeguards. If the companies passed this screen, the Manager then proceeded to measure the companies’ environmental or social economic contribution.

The Manager measured this in two ways:

- Revenue alignment to the EU taxonomy (if any); and
- Revenue alignment to the Sustainable Development Goals (“**SDGs**”).

Consideration of revenue alignment with the SDGs was limited by the availability of adequate, reliable and verifiable data coverage. To mitigate instances of poor data

coverage, the Sub-Investment Manager utilised third-party data and proxy data along with internal research and qualitative analysis as part of NB's sustainable investment framework.

***How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?***

As part of the Manager's sustainable investment framework, investments that cause significant harm to environmental or social objectives were excluded. To determine whether an investment caused significant harm, the Manager considered significant harm with reference to certain principal adverse impact indicators and violations of minimum safeguards.

The Manager considered the following principal adverse impacts indicators when determining whether the sustainable investments that the Portfolio made did not cause significant harm to any environmental or social sustainable investment objective: GHG emissions; carbon footprint; GHG intensity of investee companies; exposure to companies active in the fossil fuel sector; share of non-renewable energy consumption and production; energy consumption intensity per high impact climate sector; activities negatively affecting biodiversity-sensitive areas; emissions to water; hazardous waste and radioactive waste ratio; violations of UN Global Compact principles and OECD Guidelines for Multinational Enterprises; lack of processes and compliance mechanisms to monitor compliance with UN Global Compact Principles and OECD Guidelines for Multinational Enterprises; unadjusted gender pay gap, board gender diversity; and exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons) (the "PAIs").

Consideration of the PAIs was limited by the availability (in the Manager's subjective view) of adequate, reliable and verifiable data coverage. The Manager utilised third-party data and proxy data along with internal research to consider the PAIs.

From 6 April 2022 onwards, the Manager also considered violations of minimum safeguards. The Manager did not invest in companies whose activities had been identified as breaching the OECD Guidelines, UNGC Principles, ILO Standards and UNGPs, captured through the Neuberger Berman Global Standards Policy.

The combination of all of these factors generated a quantitative validation for "sustainability" which was used to ensure the sustainable investments that the Portfolio made, did not cause significant harm to any environmental or social sustainable objective.

***How were the indicators for adverse impacts on sustainability factors taken into account?***

Consideration of the PAIs by the Manager, when determining whether the sustainable investments that the Portfolio intended to make did not cause significant harm to any environmental or social sustainable investment objective of the Portfolio's sustainable investments, was through a combination of:

- Monitoring companies which fell below the quantitative and qualitative tolerance thresholds set for each PAI by the Manager;
- Stewardship and/or setting engagement objectives with companies which fell below the quantitative and qualitative tolerance thresholds set for a PAI; and
- Application of the ESG exclusion policies referenced above, which included consideration of several of the PAIs.

***Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

From 6 April 2022 onwards, the Manager did not invest in companies whose activities had been identified as breaching the OECD Guidelines, UNGC Principles,

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

ILO Standards and UNGPs, captured through the Neuberger Berman Global Standards Policy.

*The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.*

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

N/A - The Portfolio did not commit to holding Taxonomy-aligned investments.

## How did this financial product consider principal adverse impacts on sustainability factors?

A selection of the principal adverse impact indicators were considered directly (e.g. through the ESG exclusion policies listed above) and/or indirectly (e.g. as part of the Manager’s assessment of issuers) throughout the 2022 reference period.

The Manager considered PAIs with respect to the Portfolio in two ways:

1. All PAIs were considered when determining whether sustainable investments that the Portfolio made did not cause significant harm to any environmental or social sustainable investment objective as explained above.
2. From 28 November 2022 onwards, the Manager considered the following principal adverse impacts on sustainability factors with respect to those investments within the Portfolio which promoted environmental or social characteristics, namely: GHG emissions, carbon footprint, GHG intensity, fossil fuel exposure, board gender diversity, UNGC Principles & OECD Guideline violations and controversial weapons (the “**Product Level PAIs**”).

Consideration of the Product Level PAIs was limited by the availability (in the Manager’s subjective view) of adequate, reliable and verifiable data coverage,. The Manager utilised third-party data and proxy data along with internal research to consider the Product Level PAIs.

Consideration of the Product Level PAIs by the Manager was through a combination of:

- Monitoring the Portfolio, in particular where it fell below the quantitative and qualitative tolerance thresholds set for each Product Level PAI by the Manager;
- Stewardship and/or setting engagement objectives where the Portfolio fell below the quantitative and qualitative tolerance thresholds set for a Product Level PAI; and

- Application of the ESG exclusion policies referenced above, which included consideration of several of the Product Level PAIs.

## What were the top investments of this financial product?

The Manager has used the EU statistical classification of economic activities (“NACE”) economic sector breakdown to identify the economic sectors of the Portfolio’s top 15 investments. The following data is as at 31 December 2022.

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: 1 January 2022 – 31 December 2022

Largest investments	Sector	% Assets	Country
3I GROUP PLC	K - Financial and insurance activities	5.6%	United Kingdom
NESTLE SA	C - Manufacturing	5.5%	Switzerland
ASML HOLDING NV	C - Manufacturing	5.0%	Netherlands
NOVO NORDISK CLASS B	C - Manufacturing	4.9%	Denmark
KERING SA	G - Wholesale and retail trade; repair of motor vehicles and motorcycles	4.7%	France
TECAN GROUP AG	C - Manufacturing	4.6%	Switzerland
BAKKAFROST	A - Agriculture, forestry and fishing	4.0%	Faroe Islands
EURONEXT NV	K - Financial and insurance activities	4.0%	Netherlands
ATLAS COPCO CLASS A	C - Manufacturing	3.9%	Sweden
SCHNEIDER ELECTRIC	C - Manufacturing	3.9%	France
PARTNERS GROUP HOLDING AG	K - Financial and insurance activities	3.9%	Switzerland
ASSA ABLOY CLASS B	N - Administrative and support service activities	3.9%	Sweden
LONDON STOCK EXCHANGE GROUP PLC	K - Financial and insurance activities	3.8%	United Kingdom
STRAUMANN HOLDING AG	C - Manufacturing	3.5%	Switzerland
SARTORIUS STEDIM BIOTECH SA	C - Manufacturing	3.4%	France

## What was the proportion of sustainability-related investments?

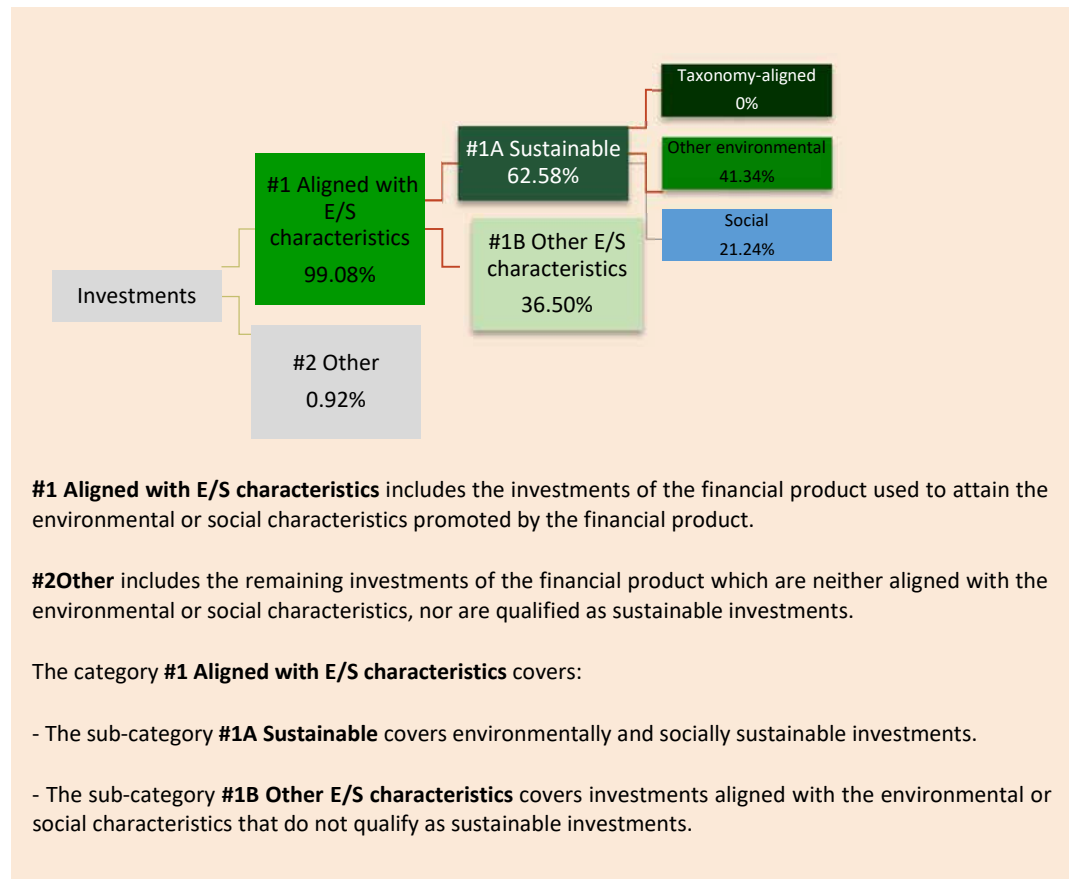

### What was the asset allocation?

The Manager calculated the proportion of investments aligned with the environmental and/or social characteristics promoted by the Portfolio by reference to the proportion of companies in the Portfolio: i) that held either an NB ESG Quotient rating or a third-party equivalent ESG rating that was used as part of the portfolio construction and investment management process of the Portfolio; and/or ii) with whom the Manager had engaged directly. This calculation was based on a mark-to-market assessment of the Portfolio and may rely on incomplete or inaccurate company or third-party data. For the 2022 reference period only, this calculation is based on the Portfolio's holdings as at 31 December 2022, being the only quarter end in the reference period that followed

**Asset allocation** describes the share of investments in specific assets.

the publication of the Portfolio's SFDR Annex detailing its planned asset allocation. For all subsequent reference periods, this calculation will be based on the average of the four quarter ends.

**In which economic sectors were the investments made?**

Data as of 31 December 2022	
Economic Sector – NACE	% Assets
A - Agriculture, forestry and fishing	4.09%
C - Manufacturing	48.65%
G - Wholesale and retail trade; repair of motor vehicles and motorcycles	10.36%
J - Information and communication	10.70%
K - Financial and insurance activities	19.86%
M - Professional, scientific and technical activities	2.43%
N - Administrative and support service activities	3.92%

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

- **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

## To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The analysis and disclosure requirements introduced by the EU Taxonomy are very detailed and compliance with them requires the availability of multiple, specific data points in respect of each investment which the Portfolio makes. The Manager cannot confirm that the Portfolio invested in any investments that qualified as environmentally sustainable for the purposes of the EU Taxonomy. Disclosures and reporting on Taxonomy alignment will develop as the EU framework evolves and data is made available by companies. The Manager will keep the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy under active review as data availability and quality improves.

### ● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>2</sup>?

Yes:

In fossil gas  In nuclear energy

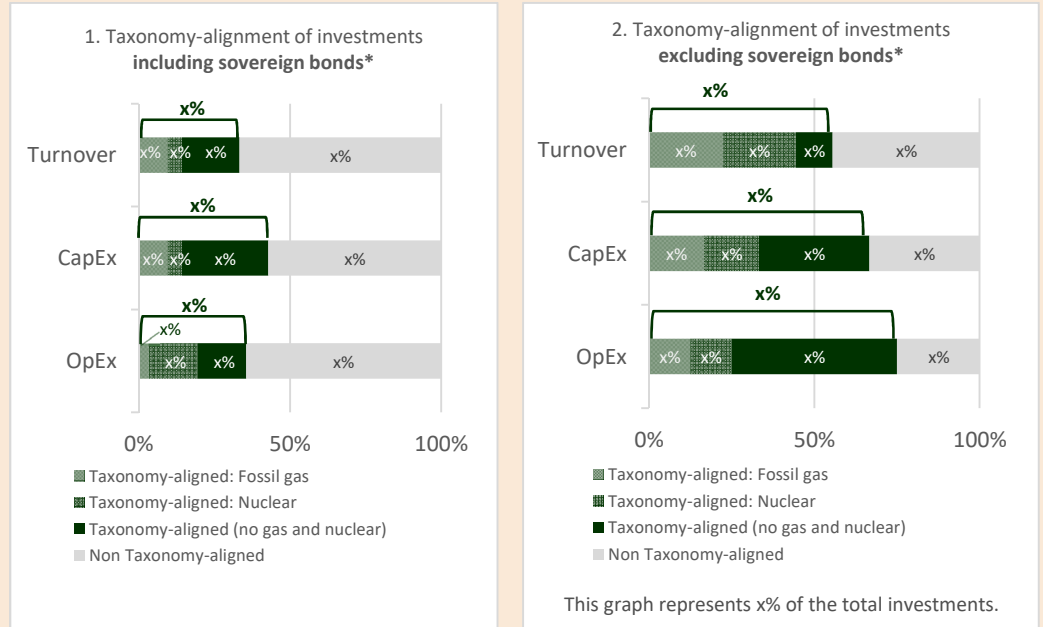

No

<sup>2</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

- **What was the share of investments made in transitional and enabling activities?**

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments.

- **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

N/A – the Portfolio did not commit to holding Taxonomy-aligned investments

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

### **What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?**

41.34%

While the Portfolio invested in sustainable investments with an environmental objective, such sustainable investments did not commit to being Taxonomy-aligned investments.

### **What was the share of socially sustainable investments?**

21.24%

### **What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?**

“Other” included the remaining investments of the Portfolio (including but not limited to any derivatives or any security collateralized by a pool of similar assets or receivables listed in the Supplement for the Portfolio) which were neither aligned with the environmental or social characteristics, nor qualified as sustainable investments.

The “Other” section in the Portfolio was held for a number of reasons that the Manager felt was beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover.

As noted above, the Portfolio was invested in compliance with ESG exclusion policies, on a continuous basis. This ensured that investments made by the Portfolio sought to align with international environmental and social safeguards such as the UNGC Principles, UNGPs, OECD Guidelines and ILO Standards.

The Manager believes that these policies prevented investment in companies that most egregiously violated environmental and/or social minimum standards and ensured that the Portfolio could successfully promote its environmental and social characteristics.

The above steps ensured that robust environmental and social safeguards were in place.

## What actions have been taken to meet the environmental and/or social characteristics during the reference period?

ESG characteristics are considered at three different levels:

### I. Integrating proprietary ESG analysis:

The NB ESG Quotient rating was generated for company holdings in the Portfolio. The third-party or NB ESG Quotient rating for companies was utilised to help to better identify risks and opportunities in the overall assessment.

By integrating the investment team's proprietary ESG analysis (the NB ESG Quotient) into the overall company view, there was a direct link between their analysis of material ESG characteristics and portfolio construction activities across their strategy.

Pursuant to this, the Manager engaged with companies with a poor third-party or NB ESG Quotient rating with the aim to seek improvement in the underlying environmental and social characteristics (which made up the NB ESG Quotient).

### II. Engagement:

The Manager engaged with companies through a robust ESG engagement program. They sought to prioritise constructive engagements and sought to engage on topics (including ESG topics) they determined to be financially material for the relevant company. The Manager viewed this engagement with companies, as an important part of its investment process. Progress on engagement was tracked centrally in the Manager's engagement tracker.

### III. ESG sectoral exclusion policies:

To ensure that the environmental and social characteristics promoted by the Portfolio were attained, the Portfolio applied the ESG exclusion policies referenced above, which placed limitations on the investable universe.

## How did this financial product perform compared to the reference benchmark?

N/A – The Portfolio's benchmark has not been designated as a reference benchmark. Therefore, it is not consistent with the environmental or social characteristics promoted by the Portfolio.

### ● ***How does the reference benchmark differ from a broad market index?***

N/A

### ● ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***

N/A

---

**Reference  
benchmarks**

are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- ***How did this financial product perform compared with the broad market index?***  
N/A

This document is issued by Neuberger Berman Asset Management Ireland Limited ("NBAMIL") which is authorised and regulated by the Irish Central Bank ("CBI") and is registered in Ireland, at 2 Central Plaza Dame Street, Dublin 2. In Switzerland the representative and paying agent is BNP Paribas Securities Services, succursale de Zurich, Selnaustrasse 16, 8002 Zurich, Switzerland. Both the place of performance and the place of jurisdiction for Shares in the Company's sub-funds offered or distributed in or from Switzerland shall be the seat of the Swiss representative. The prospectus, key investor information document, the company's articles of association, the latest audited annual accounts and any subsequent half-yearly accounts of the Company may be obtained free of charge from the representative in Switzerland.

Neuberger Berman Investment Funds plc (the "Company") is authorised by the Central Bank of Ireland (the "Central Bank") as an Undertaking for Collective Investment in Transferable Securities under the European Communities ("UCITS") Regulations 2011 (S.I. 352 of 2011) of Ireland, as amended.

This document has been provided for information purposes only to and/or directed only at persons who are professional clients or eligible counterparties. All information is subject to change without notice. No part of this document may be reproduced in any manner without the written permission of NBAMIL. Firm data, where relevant, including employee and assets under management figures, reflect collective data for the various affiliated investment advisers that are subsidiaries of Neuberger Berman Group LLC (the "firm"). Firm history/timeline information dates back to the 1939 founding of Neuberger & Berman (the predecessor to Neuberger Berman Group LLC), and highlights key business expansions, including those that resulted from acquisitions of the various affiliated investment advisers that now comprise the firm. Investment professionals referenced include portfolio managers, research analysts/associates, traders, and product specialists and team dedicated economists/strategists.

While Neuberger Berman believe that the information is correct at the date of production, no warranty or representation is given to this effect and no responsibility can be accepted by Neuberger Berman to the recipient of this document or end users for any action taken on the basis of the information contained herein. No reliance may be placed for any purpose on the information and opinions contained in this document or their accuracy or completeness. Opinions expressed herein reflect the opinion of Neuberger Berman and are subject to change without notice. The Company may not be eligible for sale in some countries and it may not be suitable for all types of investor for further information see the current prospectus. Please go to [www.nb.com/europe/literature.html](http://www.nb.com/europe/literature.html) for more information.

Fixed income securities are subject to the risk of an issuer's ability to meet principal and interest payments on the obligation (credit risk) and may also be subject to price volatility due to such factors as interest rate sensitivity, market perception of the creditworthiness of the issuer and general market liquidity (market risk). Fixed income securities are also exposed to the risk that their or their issuers' credit ratings may be downgraded, which can cause a significant drop in the value of such securities.

Lower rated or unrated (i.e. non-investment grade or high yield) securities are more likely to react to developments affecting market and credit risk than are more highly rated securities, which primarily react to movements in the general level of interest rates. Investors should carefully consider the relative risks of investing in high yield securities and understand that such securities generally are not meant for short-term investing. Investors who subscribe in a currency other than the base currency of the Company are exposed to currency risk. Fluctuations in these exchange rates may affect the return on investment.

Past performance is not indicative of future results. For details of the investment risks, which may include but are not limited to liquidity, interest rate, credit and currency risk, see the current prospectus. Please note that any dividends/interest which the Company may receive may be subject to withholding tax. The benchmark does not take into account the effects of tax and the deduction is therefore not reflected in the benchmark return illustrated herein. The investment objective and performance benchmark is a target only and not a guarantee of the Company performance. The index is unmanaged and cannot be invested in directly. Index returns assume reinvestment of dividends and capital gains and unlike fund returns do not reflect fees or expenses. Adverse movements in currency exchange rates can result in a decrease in return and a loss of capital. The investments of each Portfolio may be fully hedged into the Portfolio's base currency: this may reduce currency risks but may also expose the Portfolio to other risks such as the default of a counterparty. As noted above for further information relating to risks specific to this strategy please see the current prospectus.
